General HILLDRING. We go from the chairman of the board down to the janitor, Dr. Schimmel. Nobody is exempt from a screening. That is true not only in industry; in schools, for instance, we go from the principal of the school to the janitor; that is why I say this is a tremendous job.

Dr. SCHIMMEL. I am not thinking just now of determining who is a Nazi, but of determining rather who is in a position of industrial leadership in Germany. Do you stop at the board of directors, or do you go to the next level of plant managers who, in many cases, are the men who really run the company?

The CHAIRMAN. I think I can supply an answer from my own personal observation. I found that both Schmitz, the president of Farben, and his personal attorney were in custody. Much more information was being got out of the attorney than out of Schmitz.

Dr. SCHIMMEL. If I. G. Farben has 80 plants, that would mean picking up 80 plant managers? Are we doing that?

General HILLDRING. Yes.

The CHAIRMAN. The German schools have been closed pending a screening of the teachers.

General HILLDRING. I will leave the fragebogen with you.

(The document referred to was marked "Exhibit No. 5", and filed with the committee.)

General HILLDRING. Previously the military government officers had been furnished with directives to guide them in accomplishing the denazification program. Upon receipt of the questionnaires, they were evaluated by military government officers after supplementary intelligence checks of the personnel involved. The employees were then placed in three classes: (a) Satisfactory for employment; (b) to be removed; and (c) to be suspended pending further investigation.

After classifying the bank employees on the basis of their questionnaires, military government officers consulted with a special advisory committee of five local bankers, all of whom had clear records of unsympathetic relations with the Nazis and who had first been carefully screened and approved by intelligence officers. The assistance of this special advisory committee was very valuable in identifying Nazis who could not be identified as such on the basis of the questionnaires and in verifying the evaluation of the questionnaires. As a result of this screening it was possible to open the banks staffed with non-Nazi personnel. A continuing check of employees is being maintained in order that any Nazi who may have escaped detection in the first screening may be discovered.

The foregoing information serves to illustrate the important fact that military government in Germany has not yet reached what might be called the settled phase. Communication is still very difficult. Transportation remains badly disorganized. Public utilities are not yet providing light or power on a scale sufficient even to meet the most basic elemental needs. Side by side with the efforts I have described of searching out records and denazifying German institutions, we have had to concentrate on taking the necessary first steps to meet the acute emergency problems which were the inevitable effect of our military operations.

The coal situation in Europe is acute. Normally, the industry of Europe runs to a very large extent on German coal. Although Belgium and Holland are normally practically self-sufficient in coal, France normally imports more than 40 percent of her coal requirements. Italy has always been an importer of coal, and Denmark and Norway are now dependent completely upon imports. Despite the efforts of military government to increase coal production in Germany to alleviate this situation by the 2d of June, the last date as to which statistical reports have been received, production in the Ruhr and the Saar had only been raised to an annual rate of 13,250,000 tons, which may be compared with the annual production in these areas in the year 1938 of approximately 141,700,000 tons. In this connection it is significant to note that despite the small fraction of normal coal production which we have been able to obtain, coal production at the beginning of this month was still greater than the ability of the transportation system to carry it away from the mines.

The CHAIRMAN. The transportation problem in regard to coal is not generally understood here. It is a most terrific problem. River transportation was used extensively, and that has been largely blocked off by the very thorough way in which the Germans blew the bridges. The bridges are all down across the rivers. Plants were built near the mines, so far as possible, in order to have a minimum of transportation. With part of that shot out, and no river transportation, it is a very serious problem.

General HILLDRING. It is, Mr. Chairman, without a doubt.

The CHAIRMAN. Their wagons are only 20-ton ones, and their track is light and the curves are so bad that we couldn't put our long-type coal car on them. And, of course, a great bulk was handled on river barges and, as I have said, the rivers are blocked every 10 miles or so with a bridge down.

General HILLDRING. Or with a sunken ship or a barge or something else.

The CHAIRMAN. Transportation is a key problem in Europe.

General HILLDRING. Yes, sir; transportation and coal.

The CHAIRMAN. And you have to get the transportation before you can get the coal.

General HILLDRING. Before you can move the coal, that is right. There is this encouraging note: In the last month or 6 weeks, transportation has been improving. The situation is improving more rapidly than the coal production. There is a hopeful sign, but it is a tremendous job.

The CHAIRMAN. There is one other thing you have to look at: The average coal production of the mines in Europe is only 1 ton per man per day, as compared to our production of 6 or 7 tons per man per day.

Under that condition you have to get a new miner in for each ton of coal per day that you increase the production, and the shafts may not be able to handle many additional men.

General HILLDRING. And to get the man to go in the mines you have to give him more food than the average quota, and you have to give him clothes and shoes.

The CHAIRMAN. And under the Geneva Convention, he can't be put in a mine while he is a prisoner of war. He must be released before he can go into the mines, and then he must go in voluntarily.

Dr. SCHIMMEL. Is that necessarily so? Does the Geneva Convention apply after unconditional surrender?

The CHAIRMAN. It doesn't make any difference whether it is unconditional or conditional surrender, you can't use a prisoner of war for mining.

General HILLDRING. However that may be, we have been releasing German prisoners, as you know, Senator, to work in the mines.

All information which we have received indicates that as the result of battle damage, dislocation of transportation, and mass movement of the population, Germany's ability to feed herself through the next winter has been seriously impaired. In order, if possible, to solve this problem without the resort to imports, every effort is being made to stimulate German production. Seeds have been distributed, the available supply of farm labor is being increased by the demobilization of carefully screened German soldiers. Efforts have been made to restore food processing plants to production, and a system of strict rationing is being enforced.

Dr. SCHIMMEL. How does the food situation in Germany compare with other countries? Isn't the situation in Greece, for example, much worse than it is as a whole in Germany?

General HILLDRING. I can answer that out of recollection, Dr. Schimmel. As you probably know, the United States Army, with the British Army, established the relief system in Greece, Yugoslavia, and Albania after the liberation. Perhaps there was no area in Europe—so far as we know there was no area in Europe—that was as bad off as to food as was Greece. That activity in April was turned over to UNRRA, so on the condition of Greece today and on its self-sufficiency, I am not prepared to speak because we have been out there now for nearly 3 months.

Dr. SCHIMMEL. UNRRA submitted a very elaborate document to the committee, one so elaborate that it is difficult to see exactly what it shows, but it seems to show that the food situation in Germany is actually better than in most of the liberated countries. Germany is apparently getting the benefit of our efficient Army methods of increasing food production, while in other areas the food problem is complicated by the kind of situation that arises in UNRRA, so that it appears that the food situation in Germany may improve more rapidly than it will in Greece.

General HILLDRING. I am just asking the question, Dr. Schimmel. Is it objectionable to make the Germans produce the most food possible if the rationing controls are properly exercised in Germany so that we can drain off the surplus to help displaced persons and others who suffered from German aggression?

Dr. SCHIMMEL. I just wondered whether you had any facts which showed that the German food situation was actually superior to that in most of the liberated countries except Denmark.

General HILLDRING. It isn't superior, for instance, to Belgium, to France, or Denmark or Norway, but of course there are factors—

Dr. SCHIMMEL. How about urban France?

General HILLDRING. The fact is that we have imported large quantities of food into France, Belgium, Holland, and Norway. Our reports indicate that the food situation in urban Germany is much worse than in urban France.

The CHAIRMAN. One of the things which impressed me when I went into Germany was that our efforts were forcing them to get their own crops distributed to their own cities, while in other countries quite a different condition existed. As far as food for the individual German is concerned, the unconditional surrender of Germany was probably a godsend.

General HILLDRING. However, Senator, we know that on a calorie basis the ration in Germany is pretty low.

The CHAIRMAN. I know it is, but there is better distribution.

General HILLDRING. Of what they have, there may be better distribution.

The CHAIRMAN. That is the point I am getting at. In other countries, the ration is high in some sections and in others food is very hard to get. The poor distribution there, of course, is not our fault.

General HILLDRING. And I would rather not discuss that.

The CHAIRMAN. Certainly I agree that it should not be discussed by you.

Another thing, the section of Germany that we take over is probably the best equipped for food of all Germany, with the possible exception of the extreme eastern section.

General HILLDRING. That is correct, Senator. If we don't find there a large surplus population, I think within our zone we will find ourselves practically self-sustaining as to food but, of course, until we take a census and find out just how many Germans there are in the zone, we can't speak finally and authoritatively on that point.

One of the most serious complicating factors in the German food situation has been our policy of requiring that displaced persons to the maximum extent possible be fed from German resources. The advancing British and American Armies uncovered approximately 5,850,000 displaced persons in Germany. Many of these people were torn from their homes by the Germans and impressed as slave labor to support the Nazi war machine. Included in them are also those unfortunate persons who were persecuted because of their race or religious or political beliefs. Despite the critical transportation situation, Allied military authorities, by June 19, 1945, had repatriated 3,182,809 of these unfortunates. These people have been returned to their homes by all methods of transportation, including air. Repatriates include: 1,236,360 French, 138,527 of whom were transported by air; 1,357,399 Russians; and 412,406 Belgians and Dutch, of whom 11,383 were transported by air.

As of June 19, 1945, approximately 2,671,167 displaced persons remained in the areas occupied by the Allied Military Government. Of these persons, approximately 2,100,000 were in camps operated by military government with the balance outside of such camps. As facilities for returning repatriates at the rate of 250,000 per week are now available, it is expected that the displaced-persons problem will soon resolve itself into a question of the residuum of nonrepatriables

and stateless persons. For those persons able to eat ordinary foods, it has not been necessary to date to provide imported supplies except in emergency. However, many persons were found in the concentration camps, such as Buchenwald and Dachau, who were in such desperate physical condition that they could not eat normal food. To these people the Army brought by air, doctors, nurses, medical supplies, and special medical feeding equipment and supplies.

I have endeavored merely to illustrate the administrative problem which confronts the Army in Germany. No exhaustive or complete analysis is as yet possible. Further information which might be provided at this time would be equally as fragmentary as that set out above and would merely serve to reemphasize the fact that we are still feeling our way along a path which lies more in darkness than in light.

The Army and the War Department fully appreciate the responsibility which is theirs. We will do our utmost in our administration of Germany to carry out successfully such policies as have been and may be established by our Government, and such joint policies as may be established by the four powers which jointly will govern Germany.

The CHAIRMAN. General, I heard while over there a story of one chaplain's attempts to denazify Germany which were rather amusing. He happened to be chaplain of a field army. Every time they captured a city, the first thing he would do, with the Army commander's permission, was to round up the citizens, make them clean up and repair first the synagogue, then the biggest Catholic church, and then the biggest Protestant church. I know him and I asked him why he did that, and he said, well, he thought that was the first step in denazifying them. Then he would immediately call up a chaplain of each denomination and have them hold church for the soldiers, with the civilians looking on, and as he went through he rehabilitated the churches in every town, but he always made them clean up the synagogue first.

Dr. SCHIMMEL. I have here a statement from 30 precision instrument and optics manufacturing companies in New York, which, with the employees of these companies, appointed a committee which met with the chairman of the subcommittee yesterday. The statement is in that connection, Mr. Chairman, and with your permission it should be made part of the record.

The CHAIRMAN. It may be made part of the record.
(The document referred to follows:)

Thirty precision instrument and optics manufacturing companies engaged exclusively in supplying the armed forces have lodged a protest in Washington against the reported opening of German optical plants. Representatives of the companies and of more than 3,000 union laborers employed by them met yesterday at the Hotel Taft to appoint the committee which placed their findings before Senator Harley Kilgore and others investigating the status of German war industries.

Members of the committee include J. J. Shapiro, president of the Universal Camera Co.; M. J. Mayer, of the Mayberg Optical Co.; Thornton Lewis, Jr., of Rudolph Wendel, Inc.; R. L. Reich, of E. Leitz, Inc.; Theodore R. Nathan of Ultima Optical Corp.; Thelma Ostrow and Marcel Sherer, of Local 1225, United Electrical, Radio, and Machine Workers of America (CIO). Although all of the firms are in the New York area, the committee is reflecting the sentiment of optics and instrument manufacturers' throughout the country.

Full text of the statement is attached.

Thank you.

THEODORE R. NATHAN.

BRITISH INSTRUMENT MAKERS DEMAND BAN ON GERMAN RIVALS AS A PREVENTIVE OF WAR

(By wireless to the New York Times)

LONDON, June 5.—The Allies' authorities in Germany are following a "suicidal policy in permitting Germany to continue making optical instruments and photographic apparatus for the war against Japan," the Scientific Instrument Manufacturers Association of Great Britain charged here today.

So strongly does the organization feel on the question that its members have been urged to see that the matter is brought up for discussion in the House of Commons. F. Wakeham, the association's president, said that he had been informed that 6,500 persons in Germany were now producing optical goods for the allies under American supervision.

"We view with dismay the fact that German production in these vital industries should be allowed to continue," he said. "Germany knows very well that a country which could keep these industries in a healthy condition has the means to be aggressive or to fight aggression."

"By the formation of cartels and price rings abroad, Germany endeavored to cripple the optical glass and scientific instrument industry in all other countries and to make them dependent on German supplies. Deprived of her optical industry, Germany could find it practically impossible to fight another war, and the council of the British industry have, in the interest of Britain's survival, demanded that the production of optical glass in Germany shall cease for a period of at least 20 years."

Others recalled that after the First World War Germany had been permitted to manufacture optical glass for nonwar uses. To maintain her research in the martial optical field she set up a dummy corporation in the Netherlands and operated through it until the time came when all pretense of observing the Treaty of Versailles could be dropped.

Cartel agreements concluded between German companies and American optical houses provided the basis for an antitrust action by the American Department of Justice. At hearings on the question of cartels before a Senate committee, Government witnesses charged that the United States Navy's designs for a special type of periscope had been turned over by the American company to experts of the German company for study.

STATEMENT PREPARED BY JOINT COMMITTEE OF OPTICAL AND INSTRUMENT MANUFACTURERS AND UNITED ELECTRICAL, RADIO, AND MACHINE WORKERS UNION, N.Y.C.

Before the outbreak of hostilities in the Second World War, the United States depended almost solely on Germany for its supply of precision optics. Their superiority, at that time, was unquestioned and very little progress had been made toward the development of an adequate American optical industry.

The shock of war brought an immediate concentration of our optical engineering facilities. They were weighed in the balance of conflict and found desperately wanting. The industry had been prevented from developing in this country through cartel agreements. These cartel agreements between German companies and American houses have provided the basis for an antitrust action by our Department of Justice. At hearings on the question of cartels before a Senate committee, Government witnesses charged that the United States Navy designs for a special type of periscope had been turned over by an American company to a German company for study. Fortunately, the realization of optical and instrument shortcomings was followed by Government aid in the birth of small- and moderate-size plants within our own borders. These plants gave "eyes" to Uncle Sam, without which our armed forces could not have matched the fire-control devices of the enemy.

We broke the bottleneck of optics through the investment of vast sums for tooling and training. We broke it just in time by building an industry overnight where none had existed before. Are we going to abandon it now and permit German optical manufacture to resume at the point where it was interrupted by the bombs of our airmen? An outstanding contribution was made by small instrument and optical plants—American plants without foreign entanglements. A good section of these small plants are in New York.

Reports of trained observers disclose that despite the widespread destruction of Germany from the air, much of her industrial strength remains intact. Enough plants and machinery have been left undamaged to enable Germany to regain a

significant position in the manufacture of optics. This would not be desirable from either the economic or the military standpoint. And it can only come to pass if the occupation authorities permit the reemployment of German labor to reopen these centers that once placed us, optically speaking, at the mercy of the enemy.

If there be any doubt that we were, indeed, at their mercy, here are the words of the United States Ordnance Department report on optical glass in war:

"In industries of highly technical nature such as the optical and instrument industry, the Germans had established such effective control that at the beginning of the war we were seriously embarrassed because we did not manufacture those commodities and did not know how to make them."

That kind of "control" and that kind of "embarrassment" might well have lost us the war. Optical arts and skills were acquired by Germany and closely guarded for decades.

It was an outstanding miracle of American industry, labor, and government that plants were financed and tooled and that American labor learned so astonishingly swiftly the intricate skills required of optical craftsmen. It is a miracle that this was done in time.

In 1940, Fortune magazine stated that the Army considered the shortage in optical instruments as the fourth most serious bottleneck in our armament program. Today, in 1945, America's fledgling precision optical instrument industry has emerged victorious over an enemy whose optical ingenuity is legendary. Is the reward to be relegation to the scrap heap while the plants of Germany are solicitously propped up, perhaps for another blow against us in some future era?

Much rumor and some facts have seeped through from Europe, which indicate that the German optical industry has been given the green light by Allied occupation authorities. We hear, for example, that in Brunswick, Germany, they are producing 6 x 30 binoculars and that in other parts of Germany they are making the most important optical instruments of war, such as periscopes, bomb sights, gun sights and aerial cameras. If this is true, it is a tragic blunder and we submit our recommendation that the matter be sifted thoroughly so that all of the facts are brought to light. Our own optical plants and instrument plants are laying off thousands of workers each week, workers who have developed valuable technical skills. They fought the war at the grinding, polishing, and precision assembly benches. There are more than 30,000 of them in America.

Now that their part of the conflict is won, shall we reward them with the loss of their livelihood while German laborers are called back to remain the optical plants of Jena, Brunswick and Strasbourg? Are we to leave ourselves once again at the mercy of the cartels that had maneuvered us into a position where we in this country were without an optical industry?

Isn't this, in a way, reminiscent of how we scrapped our armaments after the last war while we helped our German "friends" get their house of hate in order?

We feel that no German should be employed to produce optics or precision instruments in Germany while American optical workers are losing their jobs through contract terminations or cut-backs.

We feel that, outside of munitions themselves, optics and precision instruments are a nation's most vital weapons of war. We are handing Germany a dagger that may one day be aimed at our own throat if we assist in the revival of her once world dominant optics industry.

We feel that American economic security and American military security demand that we maintain a strong, expanding native optical industry. The extent of cut-backs and curtailments in the industry is so great that we feel the entire industry is in danger of disappearing.

We feel that the resumption of German optical manufacture will prove a bitter fruit of sacrifice and victory to a laid-off American optical worker. His anguish and privation become the burden of hundreds of thousands of his dependents.

We ask that the facts be brought to light. We make the "eyes" through which our armed forces are looking ahead toward complete and final victory. We must go on making them to fortify us for the future. We must never be dependent on other lands for "eyes" through which we can aim our guns.

We may never need them; but let's be sure we have them. Let us never be blind not now, most of all.

Dr. SCHIMMEL. I would like to mention some of the points in that statement. They say:

We broke the bottleneck of optics through the investment of vast sums for tooling and training. We broke it just in time by building an industry overnight where none had existed before. Are we going to abandon it now and permit German optical manufacture to resume at the point where it was interrupted by the bombs of our airmen?

The CHAIRMAN. Their kick, General, is that they are informed that German optical plants are now being rehabilitated, whether by us or the English, and are furnishing optical instruments for the Army which may shut down our own plants. They want to find out from the Army if this is the case.

General HILLDRING. With respect to that particular complaint, I don't know, Mr. Chairman. I have received no report in the War Department that indicates that any optical plant is producing equipment for the United States Army, but I will immediately investigate it and will file a report with the committee, if that is agreeable.

Dr. SCHIMMEL. Mr. Chairman, in view of the fact that there have been numerous complaints of this type, could we prepare an over-all statement of these various complaints and then get a full report on the entire picture?

General HILLDRING. Yes, Mr. Chairman.

The CHAIRMAN. I want to state that abroad I did check certain plants, like the Ford, that were being used to fill a need we couldn't fill in this country, but I found nothing over there that was being used to compete with this country. Of course, if there is we want to know about it.

General HILLDRING. That is right, sir.

The CHAIRMAN. And we must take steps to stop it if such a thing exists.

General HILLDRING. The War Department wants to know it, too, Mr. Chairman.

Dr. SCHIMMEL. Is there any pressure to get war production out of German plants, either by any of the American agencies, not only the War Department, but Navy and other agencies?

General HILLDRING. We have only one case that I know of pending, Dr. Schimmel, and no decision has been made on that one, but it is similar to the question of Ford trucks that I mentioned here. I understand there is no possibility of getting this particular commodity in the United States. That is being investigated, and for that reason no final action has been taken with respect to this other matter.

The CHAIRMAN. I found, also, that in Italy they were trying to get some parts made for repair and rehabilitation of our trucks—made locally, if they could get the mechanics from among the Italians to do it, and they were trying the same in Germany because the parts were unavailable from the United States, but I found no evidence of an endeavor to build up a competing industry.

General HILLDRING. I know of none, either.

The CHAIRMAN. But if there is such a thing we want to find out. Someone with typical American enthusiasm and desire to exploit what he has might do it without the knowledge of the War Department.

General HILLDRING. That is right, and I would be glad to investigate and will report to the committee as soon as we find anything.

The CHAIRMAN. Thank you very much, General Hilldring, for this carefully prepared evidence.

We will recess until Monday at 10:30. At that time Senator Thomas will preside, and the Treasury Department will present evidence which has been gathered by their own representatives abroad.

(Whereupon, at 11:45 a. m., the hearing adjourned until 10:30 a. m., Monday, July 2, 1945.)

EXHIBIT No. 4

REPORT OF THE GERMAN REICHSMINISTRY FOR ARMAMENTS AND WAR PRODUCTION, 1944

FACTORY MANAGERS AND ADMINISTRATIVE STAFF

The total achievement in armaments and war production, as shown in the following report of performance was significant in the year 1944, despite the difficult conditions.

The thanks for this great achievement is due first and foremost to the millions of munition-making women and men and to the factory managers. With unreserved devotion and without consideration of their own health or their families' they have, in the last year of labour, under the most difficult living and working conditions, given their best to supply the fighting front.

The morale and success of our people engaged in production compel us to observe that in 1944 the German worker has fulfilled his duty to the utmost.

With this observation my thanks go out to all those who have cooperated with me and who, with me have in the last 3 years brought German armaments and war production up to this level. This circle of genuine and solid professional men, formed in the rigorous testing time of the most recent war years provides by its unbreakable faith in our work and by its success an example to labour; by its knowledge it constitutes an important factor in the preservation of our nation's strength.

In this hardest hour of our nation I ask all of the factory managers, workers, and administrative staff: Be conscious of your duty at all times and in all circumstances assist unreservedly and with all your strength in this struggle on which lies the fate of our nation. Continue to help, all of you, united in comradeship—trusting in a higher justice—to conquer fate so that the essentials for the future of our nation may be safeguarded.

The production of basic industry was maintained in the first part of 1944, but in the last quarter it fell off as a result of air-raid damage and loss of territory. Nevertheless, it was still possible to keep the armament industry continuously supplied with the necessary material, a task which could be fulfilled only by drastic measures of control.

Many instructions which had to be issued for this purpose were naturally incomplete. In general, however, they have achieved their purpose: That of placing at the disposal of the German armament industry those quantities which it required.

DEVELOPMENT IN BASIC INDUSTRY

The most difficult task was to obtain the necessary coal. The falling off in coal output is due in the main to reduced transport facilities and, to a lesser extent, to the loss of coal-producing areas.

Taking the basis of 100 percent, in 1942, hard-coal production in 1943 was 104 percent, in 1944, 93 percent.

On the same basis, brown-coal production was 105 percent in 1943 and 96 percent in 1944.

Production of crude steel in 1943 increased by 8 percent, as compared with 1942. In 1944 it was 11 percent less than in 1942.

The production of aluminum in 1943 increased by 3 percent as against 1942, and in 1944 by a further 11 percent, so that the target for 1944 was not merely fulfilled but exceeded by 2 percent.

CHEMICAL INDUSTRY AND MINERAL-OIL PRODUCTION

The chemical industry has been the main objective of enemy air attack since May. Every effort was made to repair and rebuild the plants which had been damaged. In spite of air-raid damage we succeeded to some extent in continuing the production of synthetic oil.

The most urgent requirements of the armed forces and of the civilian population for aviation spirit, motor fuel, and Diesel oil have been met up to the present by the output of finished products and by withdrawals from reserves.

Production in other chemical fields has likewise been badly affected by air raids. It was nevertheless possible to carry on partial production, which up to now has still covered urgent requirements.

We must here refrain from quoting figures in detail.

For the maintenance of the fighting power of our troops the production of powder and explosives is of the greatest importance.

In spite of air attacks on the chemical industry, extensive measures or reorganization and the sacrifice of other important chemical products has enabled us to increase production of powder and explosives.

If the production of powder in 1942 be considered as 100 percent, it increased in 1943 to 158 percent and reached 171 percent in 1944.

Forty-five percent more explosives was produced in 1943 and 75 percent more in 1944 than in 1942.

SUBCONTRACTING

Since 1942 subcontractors have by quiet, tenacious, and insufficiently recognized work made possible the final assembly of armaments.

Looking back over the year 1944 it must be pointed out that without the extraordinary performance by those who were responsible for the supply of components and parts, including the intermediate processing of iron and steel, output of all armaments would have fallen considerably by the end of the year.

At the beginning of 1942 the supply of parts and components was the bottleneck in all forms of German armament production. By the autumn of 1944 sufficient reserve of material had been accumulated, with the result that, in spite of more difficult conditions in the basic industry and also among subcontractors, output of armaments was able to be maintained and in some cases even increased.

PRODUCTION OF GENERAL EQUIPMENT

General equipment in 1944 has to give way to the production of armaments. Nevertheless astonishing achievements were attained in this field.

1. Electro-technical articles: The number of condensers produced rose by 85 percent. Five percent more radio valves were produced than in 1943. Output of portable radio sets was 50 percent greater than in 1943. On the other hand, the number of field transmitters fell by 30 percent. Aircraft radio sets increased by 31 percent, searchlights, 150 cm. diameter, by 50 percent, those with a 200 cm. diameter by 245 percent. Output of the 60 cm. searchlight on account of its minor importance was reduced by 17 percent.

2. Precision and optical instruments are contributing substantially to the equipment of German armaments. The following percentages give some idea of the increase in important products, taking 100 percent as the basis in 1943: Telescopic sights for tank turrets increased to 152 percent; telescopic sights for self-propelled guns to 245 percent; telescopic rifle sights 4x to 790 percent; reflector sights for aircraft armament to 245 percent; machine-gun sights M. G. Z., .40 to 360 percent; gun sight, 35 to 200 percent; scissor telescopes, 14 to 195 percent; and panoramic sight, 36 to 370 percent.

3. Remarkable achievements have also been attained in other fields of general equipment without special priorities for manufacture. These products have had to be supplied together with the rest in order to meet the urgent requirements of the Armed Forces, the essential services, the armament industry, and last but not least, the civil population.

It was possible to meet fully the requirements for all kinds of fortification tools in 1944:

	1943	1944
Shovels and spades.....	22,000,000	20,670,000
Steel pickaxes.....	3,240,000	3,130,000

The following were produced in addition:

	1943	1944		1943	1944
Scythes and sickles.....	8,060,000	5,960,000	Textiles for working clothes.....M.	50,000,000	37,200,000
Forks.....	5,640,000	4,886,000	Cloth for uniforms do.....	40,600,000	24,000,000
Rakes.....	2,140,000	1,803,000	Blankets.....	30,500,000	23,000,000
Large and small field kitchens.....	13,100	13,200	Leather working shoes pairs.....	17,400,000	15,750,000
Field and R. A. D. cooking stoves.....	16,800	18,700	Wooden working shoes do.....	43,500,000	37,100,000
R. A. D. bottles.....	57,000	48,500	Leather walking shoes do.....	54,000,000	26,640,000

¹ Not ascertained.

PRODUCTS FROM WOOD

Production in 1944 based on 1943—100 percent, nitrocellulose, 110 percent; fibrous cellulose, 60 percent; plywood (total), 71 percent; aircraft boards, 185 percent; light boards of wood wool, 101 percent; hard boards of wood-fibre, 101 percent; plates of wood fibre, 95 percent.

STONE AND EARTHEN GOODS

	1943	1944
Roof tiles.....	864,000,000	886,000,000
Cement.....mill. tons.....	11.3	11
Fireproof bricks.....do.....	2.7	2
Sheet glass.....mill. sq. metres.....	64.6	66.5

Although it has not been possible to deal fully with all aspects of general equipment, it must be agreed that great achievements have been made. Only in certain essential products for the civil population has there been a reduction in output as a result of the assumption of control of all production by the Rustungs Ministerium. In the main this falling off of output has been caused by lack of raw materials (shoes). Although the necessity of replacing goods destroyed in air raids had outstripped our ability to supply from the resources which were still left at our disposal, our performance in this sphere of war production should not be in any way minimized.

POWER

For years past the supply of power has not been able to keep pace with increasing demand due to the extension of armaments and war production. The additional demands on factory power stations has led to a falling off in efficiency and as a result it has not been possible since 1941 to meet fully the demands for power which come in the peak period of the winter.

In spite of all the difficulties of new construction, additional power plant was made available in 1944 and there was an increase in the output of power, by far the greater part of which went into armaments and war industry. Output of electricity in 1943 was 1.3 percent greater than in 1942 and in 1944 it was 2.4 percent greater than in 1943.

BUILDING TRADE

Within the framework of armaments and war production, building activity has had to be switched to an increasing extent from new building to industrial bomb-damage repairs, to improvisations and to railway repairs.

Toward the end of 1944 additional restrictions were placed on building in order to permit the transfer of labour, plant, and transport to actual armaments and war production.

The most decisive and important task of the Reich Ministry for Armaments and War Production is the maintenance and increase of weapons and equipment for the German armed forces.

In 1943 Grossadmiral Doenitz decided to entrust the arming of the Navy to us. The more important phases of aircraft production were transferred to us on March 1, 1944, and the whole of it on August 1.

The basis was thus created for joint planning of all armament production. This occurred at a time when owing to the difficulties caused by air-raid damage, advance planning could no longer be carried out, with the result that we had continually to rely on improvisation. That it has been possible to attain an increase in production is due to the efficiency of the industrial staff and personnel.

The details of quantities produced are given below. Only those taken over by ordnance depots are included:

Weapons	1944	1940	1941	1942	1943
Carbines and self-loading rifles (total)	191	100	100.5	101	166
Machine guns	490	100	150	148	300
Machine carbines	450	100	210	204	235
Automatic infantry weapons (total)	461	100	190	185	255
Mortars (total)	705	100	97	223	524
2-cm. A. A. guns	388		100	203	286
3.7-cm. A. A. guns	692		100	180	343
Aircraft armament	2,540		100	300	890
A. A. and automatic aircraft armament (total)	1,401		100	248	571
ARTILLERY FROM 7.5-CM. UPWARDS AND HEAVY A. A.					
7.5-cm. antitank guns, model 40 on wheels	790			100	539
8.8-cm. antitank guns, model 43, on wheels	240				
Light infantry howitzer	567	100	131	140	231
Medium infantry howitzer	520	100	159	135	278
Mountain gun, model 36	651	100	120	309	346
16.5-cm. gun-howitzers on wheels	640	100	84	89	256
16-cm. long-barrelled gun	2,003	100	309	386	1,297
Medium field howitzers	407	100	89	110	134
17-cm. long-barrelled guns on howitzer mounting	44		100	138	86
21-cm. howitzer, model 18	37	100	61		36
21-cm. long-barrelled gun, model 39, 39/40, and 42	189	100	244	33	122
8.8-cm. A. A. gun, model 18, 36, 37, and 41	525	100	166	255	391
Heavy A. A. guns	620	100	176	260	520
Heavy A. A. guns from 7.5-cm. upwards (total)	740	100	129	218	489

If guns built into tanks had been included in the above, the gun production should have been:

1944	938
1940	100
1941	136
1942	240
1943	600

ARMoured FIGHTING VEHICLES

In order to compare our production of A. F. V.'s with that of the enemy it is necessary to include the armoured troop-carrying vehicles which, in armament, armour, and cross-country mobility, can be regarded as equal to the light tanks of the Americans still being built today, since they are now all provided with a 7.5-cm. gun.

In detail, the following production was attained:

Number of vehicles	1944	1940	1941	1942	1943
Light armoured fighting vehicles:					
1-ton troop-carrying vehicles	126			100	216
3-ton troop-carrying vehicles	2,241	100	272	342	1,221
Armoured reconnaissance vehicles	240	100	236	358	376
Pz Kpfw. I and II	78	100	2,589	3,400	856
Pz Kpfw. 38 (t)	45	100	254	71	32
Light armoured fighting vehicles (total)	1,259	100	285	455	997
Medium armoured fighting vehicles:					
Pz Kpfw. III		100	206	285	38
Pz Kpfw. IV	1,202	100	171	344	1,097
Assault gun III/IV and Pz Jager 38	5,014	100	299	450	1,804
Self-propelled equipments	100			100	213
Medium armoured fighting vehicles (total)	890	100	212	411	691

Number of vehicles	1944	1940	1941	1942	1943
Extra heavy armoured fighting vehicles:					
"Panther".....	226				100
"Jagd Panther".....					
"Tiger I".....					
"Tiger II".....					
"Jagd Tiger".....	162				100
Extra heavy armoured fighting vehicles.....	210				
Armoured fighting vehicles (grand total).....	1,269	100	239	431	100

A better idea of the increase in armoured fighting vehicle production in the last few years is obtained if the weights are compared with one another; the weight being the criterion of fighting strength.

Weights	1944	1940	1941	1942	1943
Light armoured fighting vehicles:					
1-ton troop-carrying vehicles.....	126			100	216
3-ton troop-carrying vehicles.....	2,241	100	218	342	1,221
Armoured reconnaissance vehicles.....	522	100	253	398	486
Pz Kpfw I and II.....	78	100	2,593	3,406	858
Pz Kpfw 38 (t).....	45	100	254	71	32
Light armoured fighting vehicles (total).....	1,119	100	277	370	810
Medium armoured fighting vehicles:					
Pz Kpfw III.....		100	206	285	39
Pz Kpfw IV.....	1,202	100	171	344	1,098
Assault guns III/IV.....	4,595	100	299	450	1,803
Pz Jager 38.....					
Self-propelled equipments.....					
Medium armoured fighting vehicles (total).....	174			100	303
Extra heavy armoured fighting vehicles:	994	100	212	364	649
"Panther".....	226				100
"Jagd Panther".....					
"Tiger I".....					
"Tiger II".....					
"Jagd Tiger".....	1,310			100	829
Extra heavy armoured fighting vehicles (total).....	2,550				
Armoured fighting vehicles (grand total).....	5,486			100	100
	1,730	100	225	375	2,638

AIRCRAFT PRODUCTION

Aircraft production had to cope with particularly difficult conditions in 1944; in the first place it was subjected to concentrated air raids and in the second place had to carry out the adaptation to new types already prepared and planned by the Director-General of Equipment (Generalluftzeugmeister).

At the end of 1944 the serial output of the new types is in general assured.

In considering numbers produced the fact must of course be considered that heavy and very heavy aircraft could in the main be eliminated from production and a greater number of light aircraft be produced.

	1944	1940	1941	1942	1943
Fighters.....	Percent	Percent	Percent	Percent	Percent
Night fighters.....	1,128	100	167	252	514
Fighter bombers.....	871			100	247
Bombers.....	767	100	107	169	435
Reconnaissance aircraft.....	155	100	113	149	169
Operational aircraft (total).....	426	100	108	99	104
Training aircraft.....	195	100	118	160	273
Military aircraft (total) (without gliders).....	370	100	108	143	246

MUNITIONS

Munitions production is extremely sensitive to all fluctuations in deliveries as there is only a short production period.

Despite this, it was again possible to attain considerable achievements in 1944, which were very difficult to carry out as a result of the decreasing steel production.

	1944	1940	1941	1942	1943
Ammunition for infantry weapons:					
Rifle and revolver ammunition, machine carbine ammunition	182	100	45	45	108
Rifle grenades	387			100	273
Mines	3,400	100	72	510	1,438
Hand grenades	244	100	89	91	300
"Faustpatronen" projectiles	1,610				100
"Panzerschreck" projectiles	1,100				100
Mortar bombs	480	100	20	83	210
Infantry ammunition (total) (without rifle and revolver ammunition)	580	100	67	136	403
Ammunition for light A. A. and aircraft armament:					
2-cm. A. A. German	220	100	78	105	179
3.7-cm. A. A. German	488	100	174	122	187
Ammunition for machine gun M. G. 131	700		100	182	318
Ammunition for machine gun M. G. 151	450		100	431	494
Ammunition for light A. A. aircraft armament (total)	340		100	168	254
Artillery ammunition from 7.5-cm. upwards:					
7.5-cm. antitank gun	225			100	246
7.5-cm. tank gun	559	100	50	104	435
Light infantry howitzer	342	100	31	132	301
8.8-cm. antitank gun	114				100
8.8-cm. A. A. gun	440	100	386	417	402
10.5-cm. gun-howitzer	348	100	32	169	269
Long-barrelled 10-cm. gun	220	100	24	62	137
10.5-cm. A. A. gun	390	100	121	168	229
12.8-cm. A. A. gun	9,900	100	200	500	6,100
Medium infantry howitzer	460	100	90	130	450
Medium field howitzers, including 12.2 and 15.2 cm. (r)	280	100	90	170	290
17-cm. long-barrelled gun	1,080		100	340	960
21-cm. howitzer	165	100	98	86	160
Nebelwerfer	1,400	100	301	780	810
Total of projectiles above 7.5 cm.	400	100	100	210	344
Of which for—					
Antitank and tank	1,116	100	50	302	1,036
A. A.	500	100	420	455	455
Field artillery	330	100	46	160	276
Nebelwerfer	191	100	110	180	180

According to calculations in tons agreed with the "Quartermaster General" (General quartiermeister) the following deliveries of all kinds of ammunition were made:

	Percent
1944	390
1940	100
1941	65
1942	150
1943	290

A picture is thus provided of the performance of the German armament industry in 1944 which clearly shows to all concerned in the work the achievements reached in this field in spite of all the difficulties. They would certainly have been better if the basic and subcontracting industries had not been continually attacked from the air and if transport had been easier.

While basic production sank in the fourth quarter of 1944, it was possible, by means of drastically restrictive measures in all other economic spheres, to avoid a corresponding decrease in armament production.

A comparison between the monthly average of 1944 and that of the fourth quarter provides the following:

	Increase in percentage as against 1944
Carbines (K 98, K 41, K 43)	-3
Automatic infantry weapons (machine guns and machine pistols)	+60
Mortars	+42
Light A. A. and weapons mounted on aircraft	+20
Guns from 7.5 cm. upwards	+22
Of which—	
Antitank	+9
A. A.	+4
10.5-cm. gun-howitzers	+16
Medium field howitzers	+16
Tanks	+8

	<i>Increase in percentage as against 1944</i>
Of which—	
Light tanks.....	- 14
Medium tanks.....	+ 33
Extra heavy tanks.....	- 7
Fighters.....	+ 36
Night fighters.....	+ 7
Fighter bombers.....	- 19
Operational aircraft (total).....	+ 11
Military aircraft (total).....	+ 9

This summary shows that some inroads were made in the production of basic materials. These did not, however, reduce the high output of the weapons and equipment required by the troops.

ELIMINATION OF GERMAN RESOURCES FOR WAR

MONDAY, JULY 2, 1945

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
SUBCOMMITTEE ON WAR MOBILIZATION,
Washington, D. C.

The subcommittee met at 10:40 a. m., pursuant to adjournment on June 29, 1945, in room 357, Senate Office Building, Senator Elbert D. Thomas, Utah, presiding.

Present: Senator Elbert D. Thomas, Utah.

Also present: Dr. Herbert Schimmel, chief investigator.

Senator THOMAS. The hearing will come to order.

Mr. Schmidt, for the record, will you state what you want to have appear about yourself, please?

TESTIMONY OF ORVIS A. SCHMIDT, DIRECTOR OF FOREIGN FUNDS CONTROL, TREASURY DEPARTMENT

Mr. SCHMIDT. Surely. My name is Orvis A. Schmidt, Director of Foreign Funds Control, in the Treasury Department. I have recently been serving as a technical assistant to the United States Group C. C. in the European theater.

Senator THOMAS. What is the United States Group C. C.?

Mr. SCHMIDT. United States Group Control Council.

That is part of the planning staff in the American zone. It is a branch that does the planning and helps execute the policy in the American zone of Germany.

Senator THOMAS. And the funds you mentioned?

Mr. SCHMIDT. I am Director of Foreign Funds Control, which is the branch of the Treasury which has exercised controls over the frozen assets within this country, and has been responsible for this country's financial controls since 1940.

Senator THOMAS. That is, this country's financial controls of foreign money?

Mr. SCHMIDT. Of foreign money, and of all international financial transactions.

Senator THOMAS. Will your control extend to German finances as we capture them?

Mr. SCHMIDT. Our control here extends to all frozen assets in this country, including the German. The control of German assets within Germany will be exercised by the American Military Government, with which I am serving as a technical assistant.

Senator THOMAS. Are those assets both public and private?

Mr. SCHMIDT. That is correct.

Senator THOMAS. For instance, are the great gold hoards which our Army has picked up handed over to the fund control organization?

Mr. SCHMIDT. No. Foreign Funds Control has jurisdiction over the assets of blocked countries which are held in the United States. The gold and other assets found in Germany are handed over for custody to the Finance Division of the United States Group C. C., where they are presently held.

Senator THOMAS. Do you have the same function that the Alien Property Custodian had in the last war?

Mr. SCHMIDT. No, Senator; our functions have been a little broader. The division between the Alien Property Custodian's property responsibilities and the responsibilities of the Treasury Department has been spelled out by Executive Order 9193 as amended. The Alien Property Custodian has responsibility for certain categories of enemy assets. The Treasury Department has responsibility for the assets of the other blocked countries and for all international financial transactions.

The division of responsibility has recently been somewhat changed. The responsibility to vest all German and Japanese assets in the United States has been delegated to the Alien Property Custodian.

The Foreign Funds Control was established in 1940 by Executive Order 8389, when the Germans went into Denmark and Norway. At that time, all the assets in this country held by Norwegians and Danes were frozen. Subsequently, as the Germans extended their aggression to other countries, it became necessary to extend our freezing operations until finally controls were established with respect to the funds and all international transactions with respect to most of the world, with the exception of the British Empire and Latin America.

We have thus been waging an aggressive and protective financial warfare to prevent the Germans from using our financial facilities against us, and also assisting our own armed forces in the financial front.

The Treasury has been administering the United States wartime program of financial controls under the Trading With the Enemy Act through Foreign Funds Control. In its administration of Foreign Funds Control, the Treasury has acquired considerable insight into German methods of financial penetration directed toward the establishment of an economic base for world domination. This activity began well in advance of the military aggression which Germany unleashed against the world in 1939. In fact, it can be said that the German penetration into the industry and finance of foreign countries was employed, within a few years after the last war, as a forward echelon of the Wehrmacht.

I. GERMAN PENETRATION IN UNITED STATES AFTER WORLD WAR I

There is no need for me here to repeat the well-known techniques used by the Germans to penetrate the industrial life of this country. You are familiar with the story of General Aniline & Film, the first German firm investigated by the Treasury Department, which got under way in this country as early as 1925. You may have read the recent press story of the Westermann Book Shop, which, as early as

1926, was acquired by the then chairman of the Krupp works, Alfred Hugenberg—

Senator THOMAS (interposing). Didn't the German interference with our shipping come earlier than that?

Mr. SCHMIDT. I believe they were working on all fronts, Senator, but we have highlighted here the things which we regard as the most telling points in their financial warfare program.

The book shop, for example, was acquired by the chairman of the Krupp Works, Alfred Hugenberg, to serve as an outlet in this country for German propaganda and as a vehicle for the transmission of vital military information to Germany.

Senator THOMAS. Tell us more about the book store. Where was it?

Mr. SCHMIDT. This was a book store used in New York as a front for the Nazi propaganda machine.

Senator THOMAS. What is its name?

Mr. SCHMIDT. The Westermann Book Shop. I believe that story has been made public, and I cite it merely in passing.

Senator THOMAS. Is it part of our hearings?

Mr. SCHMIDT. I am not sure.

Senator THOMAS. Is it still running?

Mr. SCHMIDT. No; it was closed by the Treasury Department in the early days of the war, immediately after our entry into the war.

Senator THOMAS. Did they publish?

Mr. SCHMIDT. I don't recall, but primarily it was a book store which served as a cover for German sabotage.

Senator THOMAS. Had it been a book store before?

Mr. SCHMIDT. Yes; it was a very old book store which was acquired in 1926 by a leading German industrialist to be used as part of Germany's international propaganda organization.

Senator THOMAS. When was the book store established? Was it of long standing?

Mr. SCHMIDT. It was established in 1848.

Senator THOMAS. Then it was in existence during the First World War.

Mr. SCHMIDT. Yes; but it was not then under German control. It was taken over as a front for propaganda in 1926.

Senator THOMAS. My point there is, if you date German activities from 1926 you have a lot of history to go back over, haven't you?

Mr. SCHMIDT. That is correct, Senator. They began as soon as they were able to organize after the First World War. We will present other examples of the manner in which they operated during the two decades.

Dr. SCHIMMEL. Mr. Chairman, may I say that Mr. Crowley gave us a very detailed statement of German activity going back to 1918. The Treasury Department is supplying some highlights.

Mr. SCHMIDT. I have some up-to-date information that I brought with me direct from Germany, Mr. Chairman. However, I thought this background would give a better understanding of the things which we are now uncovering in our investigations within Germany itself.

Senator THOMAS. Go ahead, Mr. Schmidt.

Mr. SCHMIDT. You are fully aware of the extensive infiltration of German agents during the late twenties and thirties into such firms

as General Aniline & Film, Rohm & Haas, Schering, American Bosch, and so forth, to revive and strengthen the German interest in the apparent American business firms. Exhibit 1 sets forth a typical case of German infiltration into American business in the form of the full report of the Treasury investigation of General Aniline & Film Corp.

I would like to give this to the committee for its confidential use for the time being, pending our ability to release it for publication after clearance with other agencies who are handling and winding up the particular case.

Senator THOMAS. If it is something that is still confidential, you had better keep it and let representatives of the committee read it down at the Treasury Department.

Mr. SCHMIDT. All right, we will be glad to do that.

The extent of known German investments in the United States has, I believe, been fully reported by the office of the Alien Property Custodian. There is every indication, however, that we do not as yet have the complete story. To illustrate: Swiss banking facilities have expanded considerably since the last war. Whereas in 1914 there were 295 Swiss banks with deposits of about 7,000,000,000 Swiss francs, in 1942 there were 372 banks with deposits of over 16,000,000,000 Swiss francs.

Senator THOMAS. Were those banks in Switzerland?

Mr. SCHMIDT. In Switzerland.

In addition, these banks hold billions of dollars of investments outside of Switzerland for accounts of their unnamed clients, of which about \$500,000,000 to \$600,000,000 is held in the United States alone. The attraction of Swiss banking facilities for non-Swiss subjects is considerably enhanced by the Swiss secrecy law which makes it a crime for a banking institution to reveal to anyone, even to the Swiss Government itself, any financial and commercial information of a confidential character.

In fact, Foreign Funds Control investigation of the agencies of Swiss banks in the United States, made early in 1942, disclosed that the concealment of ownership through the use of so-called omnibus accounts by using numbers and initials to indicate different undisclosed owners was part of a pattern, consistent with Swiss practice, to avoid being required to reveal to a foreign government the ownership of assets within the jurisdiction of that government. Some extracts from the evidence uncovered by this investigation are incorporated as exhibit No. 2.

These are extracts taken in the course of our investigation.

(Exhibit No. 2 appears on p. 659.)

Mr. SCHMIDT. Thus there has been an open invitation to the Germans to utilize Swiss facilities to conceal their assets throughout the world. That invitation is still open. Even at this late date, the Swiss Government is loath to take the necessary steps to force banks and other cloaking institutions to disclose the owners of assets held in or through Switzerland. This means that German assets held in or through Switzerland will not be identified. Thus, the true picture of German financial and industrial penetration throughout the world will be kept a secret. By the same token, Swiss banks will continue to profit by protecting, through their secrecy laws, Germany's war potential—the hidden assets of its financiers and industrialists.

Your committee has already heard testimony and reported on the intricate arrangements between Germans and United States firms which had the disastrous effect of throttling United States production of strategic materials. I refer, for example, to the arrangements between Aluminum Corp. and I. G. Farben which restricted production of magnesium in this country; the 1937 agreement between Siemens & Halske and the Beryllium Corp. of America, which restricted the production of beryllium in the United States; the 1930 agreements between American Bosch and Robert Bosch, whereby our production of Diesel engines suffered to such an extent that we could not meet the 1942 German submarine menace; the 1929 tetracene agreement between Remington Arms and I. G. Farben, whereby we were prevented from supplying Great Britain, in 1941, with this important chemical compound used in priming machine guns, rifle and pistol armaments. In connection with interrelations between German and American industries we have prepared, in exhibit 3, a statement of the extent of the investments by American firms in various types of German industries and of the types of American concerns which are known to have had substantial interests in German industry.

(Exhibit No. 3 appears on p. 660.)

Mr. SCHMIDT. This exhibit also sets forth the types of industries in the United States in which German interests are known to have been present.

II. GERMAN PENETRATION IN EUROPE AFTER WORLD WAR I

We know now that immediately after World War I an important segment of Germany's physical war-plant facilities and technicians were moved to other countries to provide a nucleus for a new German effort at world conquest. We know now that, to avoid the provisions of the Versailles Treaty, the German Zeiss optical firm organized a subsidiary in Holland and continued the manufacture of military optical instruments; that branches of Krupp were established in Holland and Sweden; that the Dornier Airplane Co. commenced operations in Switzerland, while Junkers and Heinkel built planes in Sweden; that the Rohrbach plant commenced activities in Denmark; and that the Dutch concern, Siderus Smit, was organized in Holland to manufacture cannons, machine guns, tanks, and so forth; that it was managed by former Krupp officials and operated with capital contributed by the armament stocks transferred by Krupp to this company to avoid the effect of the Versailles Treaty.

The undercover expansion of German industry throughout Europe was an integral part of similar activity within Germany under the very nose of the Inter-Allied Control Commission. For example, the Reichsverband der Deutschen Industrie (RVDI) was organized in 1919 as the central organization of German industry which very quickly embarked upon a policy of long-term planning, both within and without Germany, skillfully integrated to Germany's future military needs. Through this organization, secret subsidies were paid by the German Government to various firms for research and experimentation adaptable to military uses.

The RVDI had a secret department which collaborated closely with the Ministry of Defense in planning the manufacture and perfection

of armaments of the types forbidden by the Treaty of Versailles, including such items as heavy guns, tanks, and airplanes. According to the then Nazi-controlled *Pariser Zeitung*, it was disclosed not so long ago that the beginnings of the construction of the famed Tiger tank dated back to about 1927.

That this was all part of the German underground military movement immediately after World War I was corroborated in a recent speech by Karl Waninger, director of Rheinmetall-Borsig, one of the great metallurgical and armament combines. He outlined, step by step, the manner by which his organization secretly retained a technical staff and developed construction models, under the eyes of the Allied Control Commission, which made possible the earlier resumption of artillery manufacture after World War I.

Senator THOMAS. May I stop you there a minute, Mr. Schmidt? In your investigations, did you find and have you got in the records of the Treasury Department, evidence of German influence during reparations proceedings and the Dawes plan, the Young plan?

Mr. SCHMIDT. We have evidence to the effect that all the while the Germans were alleging their inability to pay—and it is a point I was coming to—they did have substantial assets cloaked abroad; while saying they had no funds and getting us to put up the money, they were hiding their own.

Senator THOMAS. That part is pretty well known and was known even then, but I am wondering if in the negotiations themselves you have run into anything which would help us understand the position which men like Mr. Dawes and Mr. Young found themselves in, because there probably will be some negotiations in the future, will there not?

Mr. SCHMIDT. There will, and I will say we will be delighted to check on that and see if there is anything further we could supply other than what I will have to say today.

As soon as the last World War was over, German military and industrial leaders sent huge sums of money abroad not only to avoid Allied controls, but to finance these postwar activities. In fact, Swiss newspapers reported in 1919 that Germany had cached 35,000,000,000 marks in Switzerland. Fortune, in 1933, stated that 80 percent of all Liechtenstein corporations were organized as cloaks for German funds. We know that Panamanian and Luxemburg companies served the same purpose.

The magnitude of German economic penetration in the neutrals is indicated by a preliminary study which reveals that German industry still owns or controls approximately 750 subsidiaries and affiliates in the four European neutrals, Portugal, Spain, Sweden, and Switzerland, and in Turkey and Argentina.

These are listed in exhibit 4.

(Exhibit No. 4 appears on p. 662.)

Mr. SCHMIDT. This is in addition to vast amounts of securities, bank deposits, patent rights and other forms of assets which the Germans are known to be holding in these countries.

German penetration into the Dutch banking system was fairly extensive. We have prepared, in connection with our Foreign Funds Control program for Dutch assets in this country, a study of some of the Dutch banks which appear to be sponsored and/or controlled by German interests. It is submitted here as exhibit 5.

(Exhibit No. 5 appears on p. 687.)

Mr. SCHMIDT. I have added as exhibit 6 some of the more notorious examples of German penetration into the banking and industrial system of other European countries occupied by the Germans, and, as exhibit 7, preliminary reports of three German banks which, among other things, illustrate how such financial institutions were vehicles for the industrial and financial penetration of the European economy.

(Exhibit No. 6 appears on p. 734, and exhibit No. 7 appears on p. 738.)

III. GERMANY HAD HIDDEN RESOURCES TO FINANCE A NEW WAR

Mr. SCHMIDT. There is already evidence not only from the published speeches of Germans and records of meetings, but from the extent of their infiltration into the foreign countries even before VE-day, that the Germans intend to preserve this vast economic structure and to follow the same pattern after this war.

The danger does not lie so much in the fact that the German industrial giants have honeycombed the neutrals, Turkey and Argentina, with branches and affiliates which know how to subvert their commercial interests to the espionage and sabotage demands of their government. It is significant, but not all-important, that I. G. Farben has 8 subsidiaries in Argentina, 3 in Portugal, 4 in Sweden, 6 in Switzerland, and 14 in Spain.

I might say those were ones we knew about even before we began to investigate in Germany. And AEG has six subsidiaries in Argentina, one in Portugal, two in Spain, and three in Sweden; and Siemenschuckertwerke has seven subsidiaries in Argentina, two each in Portugal and Sweden, four in Spain, and five in Switzerland, and Vereinigte Stahlwerke has seven subsidiaries in Argentina, three affiliates in Spain, and four in Sweden; and so on almost ad infinitum.

It is important and dangerous, however, that many of these branches, subsidiaries, and affiliates in the neutrals and much of the cash, securities, patents, contracts, and so forth, are ostensibly owned through the medium of secret numbered or rubric accounts, trusts, loans, holding companies, bearer shares, and the like by dummy persons and companies claiming neutral nationality and all of the alleged protection and privileges arising from such indentity. The real problem is to break the veil of secrecy and reach and eliminate the German ability to finance another world war. We must render useless the devices and cloaks which have been employed to hide German assets. Illustrative of some of these neutral cloaks are the following:

I. G. Farbenindustrie A. G., the world's largest manufacturer of chemicals, anilines, and dyes, has set up an elaborate system of cloaks in the hope of establishing neutral identity for its numerous foreign subsidiaries and affiliates. Two of its more important cloaks are I. G. Chemie and H. Sturzenegger & Cie., both of Basle, Switzerland. The former was established by I. G. Farben in 1928 to hold foreign assets. I. G. Chemie's first president, Hermann Schmitz, was chairman of the board of directors of I. G. Farbenindustrie and a director of the German steel combine, Vereinigte Stahlwerke. He was an early supporter of Hitler. Other members of the original I. G. Chemie board of directors were also closely affiliated with I. G.

Farben interests. It was through I. G. Chemie that I. G. Farben attempted to cloak its ownership of General Aniline & Film Corp., as our investigation reported in exhibit 1 disclosed. I. G. Chemie still claims to be a Swiss company. Sturzenegger & Cie. is a private bank reportedly owned by a Swiss national, Hans Sturzenegger, and the Industrie Bank A. G., of Zurich. Sturzenegger & Cie. acts as general trustee and banker for I. G. Farben's foreign interest, concentrated mainly in I. G. Chemie, and has been used to organize other I. G. holding companies and to act as intermediary for fictitious transfers of stock between various I. G. Farben subsidiaries.

Schering A. G., Berlin, one of the principal German pharmaceutical firms, has also established a network of cloaks, two of which are Chepha, a holding company for Schering subsidiaries in the United Kingdom and United States, and Forinvent which, in 1939, took over the nominal ownership of Schering subsidiaries in Latin America and in other parts of the world in an effort to "neutralize" the entire Schering organization.

Sofindus is one of the largest German companies in Spain. It is owned by two Berlin firms and acts as the official German purchasing agency. Although capitalized at only 3 million pesetas, it is estimated to control over 500 million pesetas in Spain through more than 25 subsidiaries and affiliates, all of which are separately incorporated under Spanish law which requires that 75 percent or more of the stock ownership be held (at least nominally) by Spanish citizens.

The German industrialists and financiers have made no great secret of their plans to capitalize on their hidden reserves outside of Germany. Your committee has already referred to the meetings held at Strasbourg in August 1944, which were attended by representatives of the Nazi Party and leading industrial concerns such as Krupp, Messerschmitt, Rohling, Rheinmetall, and so forth.

Another report states that in orders, dated January 22, 1945, Himmeler informed all gauleiters that certain party men in whom Hitler had confidence would be sent abroad for special missions; in February 1945, 345 party members received orders to prepare to leave Germany. Again, Ernst Wilhelm Bohle, head of the Nazi Ausland organization, was reportedly engaged in setting up an extensive number of foreign bureaus, particularly in the neutrals, to assist Hitlerite ringleaders in fleeing from Germany. Gen. Otto Stupenagel, sometime prior to VE-day, admitted that Germany was turning her booty into deposits in neutral countries and that she would plead poverty until the time comes for her to try again.

Senator THOMAS. How many of these men got out?

Mr. SCHMIDT. Not many of them. Some of them we have in custody now and we are in position where we can begin to question them and examine their personal files and records.

Marshal Von Mannstein directed, in a confidential circular to brigade commanders in September 1943 that they should procure commodities of little weight but representing great value, such as jewelry, precious stones, and so forth, so that they can be sold easily and transformed into monetary deposits to be held in "inviolable" places.

On that point I would like to give you exhibit 8, which documents some of them.

(Exhibit No. 8 appears on p. 836.)

Senator THOMAS. That goes back to '43, you say?

Mr. SCHMIDT. Their recent plans go back to the time they were sure they were going to lose this war, which I think is generally the time the United States got in. From that, there is ample evidence, that in many respects their foreign exchange control worked backward in reverse, to assist in hiding funds and getting them out of Germany to prepare for the day when we would be coming in to establish controls and attempt to prevent their again being able to carry on war.

Senator THOMAS. How long has the Treasury known about some of these things?

Mr. SCHMIDT. The Treasury, through Foreign Funds Control, has been watching as closely as we can for the last 4 years, even before we got into the war. Much of our information goes back to a very early date. Of course, whenever we were in a position to do so, we took steps to block, to freeze, their assets, to interfere as much as we could with their operation.

Senator THOMAS. Did the Treasury know anything about this, for example, when Mr. Hoover recommended a moratorium?

Mr. SCHMIDT. At that point I wasn't around, Mr. Chairman. I am a little better prepared to speak with respect to our activities in the last 5 years.

Senator THOMAS. Does it look as if we were completely innocent of all of these things when the Dawes plan and the Young plan and then the moratorium and all those things were indulged in? Is there no one down there that seems to be a little bit suspicious?

Mr. SCHMIDT. I am not fully familiar with the attitude and knowledge of the various people within the Government at that time.

However, it is my personal opinion that there was little consciousness in the Government at that time of the extent and significance of German economic penetration throughout the world. I believe the same is true of their external financial operations. It was not until the establishment of Foreign Funds Control, in 1940, by the Treasury that this Government actively began to focus on the extent and implications of German economic aggression throughout the world.

Dr. SCHIMMEL. Would you have access to old Treasury records which you could study to answer the chairman's question?

Mr. SCHMIDT. Surely. We would be glad to look into that.

We have done some of that in connection with our investigations of companies here, and we have found, Mr. Chairman, one of the things that has disturbed us is that the companies which our Alien Property Custodian in the last war took over and which were ostensibly Americanized were all back in German hands about 10 years after the war was over. We have found one of the best leads to German interests in the United States in this war has been to check back and see what was German in the last war. Part of our operation has been to see that the German interests are really uncovered this time, and that appropriate measures are taken to see that that does not happen again.

IV. GERMAN FINANCIERS AND INDUSTRIALISTS WILL AGAIN LEAD GERMAN UNDERGROUND

The extensive plans for an underground movement can only be successful if the Germans can utilize the reserves already accumulated abroad and presently being added to by various devices.

If these resources are left uncontrolled, we can expect the reemergence of a powerful Germany again seeking world domination. The personnel of this new underground movement will not, in all probability, be the marked officials and members of the Nazi Party. The greatest danger will come from those who are not so easily identifiable as Nazis. It will come from the group of people about whom the Nazis have cast a smoke screen to disguise their true character. It will come from those representatives of industry and finance who may not have been enrolled members of the Nazi Party but who participated and aided in the rise of Hitler following World War I.

I have already indicated how, by well laid schemes, the close of World War I left German heavy industry with strength unimpaired and the ranks of German industrial organization unbroken. The great industrial leaders, still determined in spite of military defeat to attain world supremacy, cast about for a political figurehead which would enable them to achieve their objectives. There is evidence that even in the early days of the Republic they were seeking a government which could free the country from reparation demands, and embark upon a second attempt at world conquest.

By 1919 Krupp was already giving financial aid to one of the reactionary political groups which sowed the seed of the present Nazi ideology. Hugo Stinnes was an early contributor to the Nazi Party (National Socialistische Deutsche Arbeiter Partei). By 1924 other prominent industrialists and financiers, among them Fritz Thyssen, Albert Voegler, Adolph Kirdorf, and Kurt von Schroeder, were secretly giving substantial sums to the Nazis. In 1931 members of the coal-owners' association which Kirdorf headed pledged themselves to pay 50 pfennigs for each ton of coal sold, the money to go to the organization which Hitler was building.

A substantial part of the money contributed by the German industrialists was given for the explicit purpose of financing Nazi propaganda. In 1925, Hugo Stinnes' sons and heirs supplied the funds for converting the Nazi weekly paper, the *Volkischer Beobachter*, into a daily publication. In 1926 Alfred Hugenberg, then building up a world-wide intelligence network, gained control through his publishing firm, August Scherl, of Berlin, of the B. Westermann Book Shop of New York City, to which I have already referred.

The I. G. Farbenindustrie, while financing Nazi publications, attempted to gain an ascendancy over the republican government. It followed a policy of infiltration into the Bruening administration through several of its leading officials, appointed to Government posts. Hermann Schmitz is said to have been one of Bruening's principal advisers. Two Farben men, Moldenhauer and Warnbold, served, respectively, as Ministers of Economics and Finance. Other Farben representatives were placed in the Foreign Office and the War Ministry.

In 1932 Krupp and other big industrialists supported Franz von Papen for the Chancellorship and thus ousted Bruening. Only a few months later Von Papen was able to organize a campaign which resulted in the election of Hitler to the Chancellorship in January 1933.

After the Nazis had actually assumed power, they no longer needed to beg for money. At a meeting called by the President of the

Reichstag, who happened to be no other than Goering, the industrialists' financial support for the Nazi Party was ordered. Dr. Hjalmar Schacht presided, and a group of some 20 prominent industrialists attended. Hitler himself appeared to shake hands with each of the industrialists attending the meeting. Among those present were Krupp von Bohlen, of the great armament works; George von Schnitzler, of I. G. Farben; and Albert Voegler, of the steel combine, Vereinigte Stahlwerke. Schacht stated that a campaign fund of Rm. 3,000,000 was required. Quotas were fixed according to the size of the contributing enterprises. I. G. Farben's subscription was estimated at 10 percent of the total. Other firms apparently subscribed in proportion. Exhibit 9 is a statement made by Georg von Schnitzler, member of the central committee of the I. G. Farben group of directors, to the finance section of General Eisenhower's headquarters about the February 1933 meeting at which the financing of the Nazi Party by German industrialists was discussed.

This was written by Mr. von Schnitzler, who is at present in custody in connection with our present investigation.

(Exhibit No. 9 appears on p. 837.)

Mr. SCHMIDT. Continued financial, political, and moral support by the big industrialists facilitated Hitler's further advance to complete political supremacy. There are reports of later meetings and additional subscriptions to the Nazi war chest. As the older industrialists, such as Karl Duisberg, Karl Bosch, Adolf Kirdorf, and Otto Wolff, died, younger representatives of the same families or industries took their places in supporting the Nazi movement. As military preparations got under way, rewards for loyal adherence to the party took the form of profitable orders. Soon, many of the industrialists identified themselves completely with the Nazi drive for conquest and war and occupied many leading positions in the economic, political, and administrative hierarchy which the Nazis built up. Honors, jobs, and profits accumulated. Every shred of democracy was abolished. The industrialists had a field day.

A description of the background of a few of these persons is set forth in the attached exhibit 10. Unless we stop them, they and their descendents are ready to carry on.

I also have attached exhibit 11, which bears on that point and points up the necessity of beating them on this front and preventing them from again waging war and building up the financial resources to carry it on.

(Exhibit No. 10 appears on p. 838, and exhibit No. 11 appears on p. 886.)

Mr. SCHMIDT. I might say in that connection, Mr. Chairman, that I have here, which I can read for the record, a statement which was made by one of the Farben people in connection with our investigations in Germany. This is a statement which contains information which he gave out in the course of questioning of him, and he was later willing, when it was typed, to write his name to it, and I have it here, written in German and in English in his own handwriting and signed by him, which has been typed up.

The exact statement is as follows:

To my knowledge, I. G. Farben, its directors and officers, fully approved the Nazi aggression against Poland, Czechoslovakia, and France. I. G. profited considerably from these conquests. I. G. Farben did not approve of the attack

on Russia and the Hitler declaration of war against the United States, because we were well aware of the American power.

I. G. Farben, its directors and officers, are therefore responsible, and it is my belief that the Allied Powers must take adequate measures to so control Germany that these acts cannot be repeated again.

Senator THOMAS. How did you get that?

Mr. SCHMIDT. As I say, this is something which the I. G. Farben man himself wrote out after he had been questioned by one of our men.

Senator THOMAS. This is dated June 12, 1945?

Mr. SCHMIDT. Yes, sir.

Senator THOMAS. And where was it taken?

Mr. SCHMIDT. This was given in Frankfurt, Germany.

Senator THOMAS. Frankfurt-am-Main?

Mr. SCHMIDT. Yes, sir. It is an example of the type of information that we are beginning to find in the course of our investigations. I might say that in the course of our investigations we are also finding the close manner in which I. G. Farben worked hand in glove with the members of the German High Command in assisting them to carry out their espionage and subversive activities throughout the world. If you would like me to, I should like to read some of the letters which we have found in the I. G. Farben files, which show the manner in which representatives of I. G. Farben did the espionage work for the German High Command.

For example, I have a letter here dated March 15, 1943, from Colonel Piekenbrock, of the General Staff, chief of counterespionage section I, Wehrmacht Supreme Command, to Dr. Georg von Schnitzler, which reads as follows—you may remember that von Schnitzler was referred to earlier in my statement:

DEAR HERR DR. VON SCHNITZLER: I would like to inform you that I am shortly leaving Berlin and my present office, to take over a command at the front. I feel particularly urged to thank you for the valuable cooperation which you have extended to my office. I shall always retain pleasant memories of the personal and official collaboration with you.

I should like to take this opportunity of asking you to give the same support to my successor, Lieutenant Colonel Hansen.

With many thanks and heil Hitler, I remain,

Yours very devoted,

PIEKENBROCK.

Senator THOMAS. Who was he?

Mr. SCHMIDT. He was the chief of the counterespionage section I of the Wehrmacht Supreme Command, and Von Schnitzler was the manager of the foreign department of I. G. Farben.

Senator THOMAS. Where is this man now?

Mr. SCHMIDT. Von Schnitzler is in custody in Frankfurt.

Senator THOMAS. Where is the other?

Mr. SCHMIDT. I don't know where Piekenbrock is. He was in the Army, and I assume he is a prisoner.

I might say that we also have the answer that Dr. Von Schnitzler gave to Piekenbrock. He replied:

DEAR COLONEL: I thank you very much for your kind note of March 15 and take the liberty of expressing my best wishes for your front command.

I and my colleagues working here at Frankfurt on foreign business have always considered it a duty of honor to be always at your disposal for your special tasks. This will, of course, be the same in the future after your successor, Lieutenant Colonel Hansen, has taken over.

With cordial regards and heil Hitler, I remain,

Yours very devoted,

V. SCHNITZLER.

We have additional examples as evidence on the point.

I have a letter here dated March 30, 1940, from Von der Heyde to Von Schnitzler. These are two I. G. Farben people writing to each other, and I will read the exact translation:

Senator THOMAS. What was the date?

Mr. SCHMIDT. The date of this letter is March 30, 1940. He writes:

As you know, the OKW (which refers to the Supreme Command of the Wehrmacht) has repeatedly expressed its request for all possible help in placing its "Vertrauensleute" (which are confidential agents, or spies) abroad. The OKW has approached us in regard to cases in which it was desirable to incorporate permanently into our foreign organization a trustworthy person in regard to cases where temporary backing for confidential agents on individual trips abroad of limited duration was needed. As I explained at the last meeting of the commercial committee, not only the OKW but also the Reichssicherheitshauptamt (which is the Reich security main office) has such desire and pursues its specific aims in accord with the OKW.

And Von Schnitzler on April 3, 1940, wrote to Von der Heyde:

I recently had occasion in Berlin to discuss with Major Block, of the OKW, another matter pertaining to this subject, i. e., whether and to what extent the OKW wants to use the services of the Gesellschaft für Verkaufsförderung Association for Sales Promotion, which is under the management of Messrs. Kunzler and Von Puttkaner.

That is, he asked whether and to what extent the OKW wants to use the services of this sales agency, which is under the management of Kunzler and Von Puttkaner.

This company is particularly well suited for the intended camouflaging maneuvers, since the failure of one of its emissaries will never lead to a catastrophe; if worst comes to worst, this company might have to cease operating in some particular country and would have to confine its activities to the other neutral countries.

In other words, they are picking one which they feel they could easily close up in that particular country as long as it can operate elsewhere.

We have another interesting one of November 9, 1943, from the Wirtschaftspolitische Abteilung of the German Government to Dr. Oberhoff, of I. G. Farben, and I will quote the letter:

Lieutenant Colonel Bocher is shortly going to Spain on orders of the ABwehr (which was the Wehrmacht Intelligence). However, since it is not supposed to be known there that he is attached to this agency, he is to be camouflaged by becoming part of some firm. Since Bocher is a wool merchant by trade, it was first thought advisable to place him with a wool purchasing firm from Sofindus. For special reasons this is not possible, and the RMW is now inquiring whether the I. G. would be able to find a place for Mr. Bocher.

All the way through, our findings are that I. G. Farben, with its vast networks of foreign holdings, was regarded as one of the mainstays of the Wehrmacht in placing confidential agent spies abroad and in financing propaganda and other activities desired by the German Government.

We have found an I. G. Farben list of its own companies abroad and at home—a secret list hitherto unknown—which names over 700 companies in which I. G. Farben has an interest. You can understand, from the size of that list, its ability to assist the war machine in carrying on its foreign activities.

I might also say that it was a practice of I. G. Farben to have its own agents—I think they call them *verbindungsleute*—which are its own set of spies and confidential agents abroad as a regular thing. This was done not only to check up on how its own agencies were operating, but to report for I. G. Farben's use on political, economic, military developments in countries all over the world. It was sort of a foreign service of I. G. Farben similar to the whole network of foreign-service agencies maintained by many sovereign countries. So valuable was the assistance of I. G. Farben that we find from our investigation that several different agencies of the German High Command fought with each other to see who would have primary access and first call on the resources of I. G. Farben.

We also have found ample evidence indicating that the agencies abroad were required to contribute to local Nazi and Fascist organizations throughout the world, particularly in Latin America. We find correspondence from the firms abroad saying, "We ought to do it this way so that our relationship with I. G. Farben won't be exposed," or else arguing about which accounts the funds that are given to the local Nazi Party should be credited to. I think as our investigations continue we will be able to show more and more the character of I. G. Farben and the manner in which it not only worked in helping the Nazi Party come to power, but actively assisted the High Command in carrying on all aspects of the war.

I might say also that as the German military power was able to overcome various European countries, I. G. Farben profited.

We find that in every country which the Germans succeeded in occupying, I. G. Farben promptly took over for itself the whole chemical industry of that country and absorbed it into part of its own domain.

You might also be interested in knowing, Mr. Chairman, that the top I. G. Farben people and others, when we questioned them about these activities, were inclined at times to be very indignant. Their general attitude and expectation was that the war was over and we ought now to be assisting them in helping to get I. G. Farben and German industry back on its feet. Some of them have outwardly said that this questioning and investigation was, in their estimation, only a phenomenon of short duration, because as soon as things got a little settled they would expect their friends in the United States and in England to be coming over. Their friends, so they said, would put a stop to activities such as these investigations and would see that they got the treatment which they regarded as proper and that assistance would be given to them to help reestablish their industry.

Senator THOMAS. I have some questions here I would like to ask, Mr. Schmidt.

Is the investment of approximately one-half billion dollars unnamed Swiss accounts in the United States now blocked or frozen by the Treasury Department?

Mr. SCHMIDT. Yes, Senator. All Swiss assets in the United States, which total approximately one billion four hundred million, are subject

to our freezing control. The assets which are held in unnamed accounts are frozen very tightly, and practically no transactions are authorized unless and until the true owners of such accounts are identified.

Senator THOMAS. Is not the Swiss investment a very large one, considering that Switzerland is a small country?

Mr. SCHMIDT. Yes. The Swiss assets in this country would be large even for a very large country. Switzerland ranks along with France, for example, and is among the first five of the foreign countries in the importance of its financial holdings within the United States.

Senator THOMAS. You pointed out German influences in Swiss investments. What about the Italian influences in Swiss investments?

Mr. SCHMIDT. We find that Italy also was accustomed to working through Switzerland and the other neutrals, but I doubt if it was ever as powerful a force.

Senator THOMAS. And the French?

Mr. SCHMIDT. It is my understanding that the French people were accustomed to holding their assets in Switzerland on a large scale, for various reasons, one of the popular ones being to avoid payment of taxes, as I understand it.

Senator THOMAS. Where are the League of Nations assets now?

Mr. SCHMIDT. I don't know exactly where they are being held. I could check on that, though, if you would like.

Senator THOMAS. Do you plan to unblock or unfreeze Swiss assets in the United States held in unnamed accounts?

Mr. SCHMIDT. Senator, we don't see how we can unfreeze assets that are held in unnamed accounts until either they are satisfactorily identified or until we receive adequate assurance from the Swiss Government, on the basis of their investigation, that no one other than strictly Swiss persons has a beneficial interest in these accounts. We don't feel that we can release funds which are not identified and take the chance that we may thus be permitting our enemies to hold assets in this country through neutral cloaks.

Senator THOMAS. The Treasury has an actual policy on this matter, has it?

Mr. SCHMIDT. It has.

Senator THOMAS. It has been developed?

Mr. SCHMIDT. It has been developed.

Senator THOMAS. And is understood by all the subordinate officers?

Mr. SCHMIDT. It is indeed, and it is being very actively carried out.

Senator THOMAS. Since your studies show that Switzerland has acted as one of the main channels for German economic penetration, should not the United States endeavor to get common action by all the United Nations in identifying German interests in Swiss holdings in their respective countries?

Mr. SCHMIDT. Senator, I don't know as it is my responsibility to suggest the type of action that all countries should take, but I think you have a very fine point and that it is in the interest of all of us to have a parallel and cooperative policy designated to uncover all German assets, which means to insure that hidden funds are identified before they are released.

Senator THOMAS. Last week, testimony was introduced to show that an agreement was reached with the Swiss Government for taking a census of German assets. I believe this testimony referred to the

Currie Mission, of which I understand you were a member. To what extent has the agreement been carried out today? I suggest you be very, very careful with your answer to that question, because probably it should be off the record, and maybe I am out of order in asking it.

Mr. SCHMIDT. On that point, Senator, I would like to say that, according to the most recent reports we have received, the Swiss have been proceeding very reluctantly to require that the names of persons who are holding assets in Switzerland be submitted to the Swiss Government.

They have already issued a decree of May 29, which, as I understand it, does not require that the names in all cases be submitted. As a person who has had some familiarity with this type of operation, I might state that it is my opinion that a census which does not require the various banks and financial institutions to submit the names of the persons for whom they are holding the funds cannot be entirely effective in unearthing and digging out the true holders of the funds.

Senator THOMAS. Have you done any work in Switzerland yourself?

Mr. SCHMIDT. I was a member of the Currie Mission, as you suggested.

Senator THOMAS. When did you start going to Switzerland?

Mr. SCHMIDT. We arrived in Switzerland in very late January of this year, and, as has been indicated, the Swiss Government then took action to freeze German assets and agreed to take an effective census to uncover all German and foreign-held assets; that is, assets held by countries occupied by Germany.

Senator THOMAS. Do you have any evidence that would show that other neutral or formerly neutral countries, including Sweden, Turkey, Spain, Portugal, also acted as channels for German economic penetration to a sufficient extent to require joint action by the United Nations similar to that suggested for Swiss assets? I may say here, in asking this question, if it shouldn't be answered, please don't answer it.

Mr. SCHMIDT. Senator, the Germans used all of the neutral countries to cloak their interests in the United States, and we find as we examine the cases that have been vested by the Alien Property Custodian, that many of them were cloaked through other neutral countries. In my estimation, that indicates that the same problem exists with respect to all of them, but in varying degrees depending on their financial position.

Senator THOMAS. You have found enough evidence of that in the Swiss investigation, I suppose, to make you feel sure that what you have said is true?

Mr. SCHMIDT. I am not sure I understand the question.

Senator THOMAS. I say, you found enough evidence in Switzerland—

Mr. SCHMIDT (interposing). My trip to Switzerland was not an investigation, but I was there as a member of the Currie Mission and negotiating with the Swiss Government.

Senator THOMAS. How did you find out about this work being done in other neutral countries? How did you get this information?

Mr. SCHMIDT. That is what we in Foreign Funds Control have been doing for the last 4 years, trying our best to dig out the information with respect to assets hidden and cloaked by the Germans in neutral

countries. Many of our tactics, I might say, are what we would regard as professional secrets, but we have had the assistance of all other Government agencies, including the Office of Censorship. It has been a governmental attack on the problem of finding out what our enemies have been doing financially in neutral and other foreign countries during the war, contrary to our war interests.

Dr. SCHIMMEL. In other words, by reading the mail you very often came across tips which you could then follow through.

Mr. SCHMIDT. Very often information coming from such sources provided very valuable leads.

Senator THOMAS. In your exhibit 3 you show that American firms had very substantial investment in German industry. Could you tell us to what extent these were war or war-convertible industries which presumably will have to be eliminated as part of the economic disarmament of Germany?

Mr. SCHMIDT. On the question of the nature of the industries in which America invested in Germany, I might say that the preliminary information which we have prepared for the subcommittee shows that there is approximately \$260,000,000 invested in German manufacturing firms and \$90,000,000 in the petroleum production, refining, and distribution industry. A substantial portion of this would appear to be what you might call war-convertible industries; 8 million of it is in chemicals, 33 million in electrical industries, approximately 180 million in automobiles, machinery, and other metal products industries and light industries.

Senator THOMAS. In your statement you referred to the approximately 750 German subsidiaries and affiliates in European neutrals and in Turkey and Argentina. Could you give us further information as to the break-down of these German firms by countries?

Mr. SCHMIDT. Yes, Senator; I could do that. I have a summary here showing that the number of firms listed for each of these countries is as follows:

Portugal, 58; Spain, 112; Sweden, 233; Switzerland, 214; Turkey, 35; and Argentina, 98, giving you a total of approximately 750. I might say these are figures which we had even before we were able to go into Germany and make our investigations. I think that not only the Treasury, but other agencies, such as the State Department, FEA, who are all working in a coordinated effort on this program, are discovering new German firms which would, of course, increase the total.

Senator THOMAS. You say that you have evidence that German interests have penetrated some Dutch banks. If foreign-funds control is lifted from Dutch assets, can't these banks act as vehicles for German penetration in the United States in the future? In other words, isn't the United States likely to become the largest safe haven for German assets?

Mr. SCHMIDT. We are very conscious of that danger, Senator, and we are working very closely with the governments of countries such as Holland and other of the United Nations to insure that before foreign funds controls are lifted, adequate steps will be taken within those countries to eradicate the German interests in any of the institutions located within those countries and that such action is taken before the assets are unfrozen here or before any of those institutions are allowed freedom to carry on financial transactions.

It is a point of which we have been extremely conscious. We have discussed that point with representatives of blocked countries, and we expect full cooperation of such countries in programs to be carried on by them for investigating and unearthing of German influence in institutions within their territories and for making certain that no assets in this country are released until we are assured by the proper authorities that there is no German or other enemy interest.

Senator THOMAS. Do we have to make any changes in American law in order to control these things?

Mr. SCHMIDT. No; nothing that has not already been done, Mr. Chairman.

We are operating under legislation passed by Congress, which gives us full powers necessary to operate effectively, and we think we can handle this aspect of the problem under present legislation.

Senator THOMAS. That is wartime legislation, though, is it not?

Mr. SCHMIDT. It is effective not only in time of war but also during any other period of national emergency declared by the President.

Senator THOMAS. But most of your troubles started in peacetime, do they not?

Mr. SCHMIDT. Yes; as I believe we have brought out, they started in peacetime, and I am sure that all the agencies, and Congress, will want to take measures to see that we do not permit active financial and economic warfare against us in the future under the guise of peacetime financial operations.

Senator THOMAS. I was very much interested in your testimony which showed how German industrialists not only operated through their association of industries in preparing for Germany's war of aggression but also financed the Nazi Party directly. What special significance do you attach to the pledge made by the German Coal-Owners Association in 1931 to pay a royalty to the Nazi Party for each ton of coal sold?

Mr. SCHMIDT. In my estimation, Mr. Chairman, this shows that by 1931 one of the most powerful cartel groups in Germany was openly financing the Hitler party. The German coal industry is one of the most important basic industries in Germany. The German coal cartel has always been closely allied with the major heavy industry cartels, such as the chemical, iron and steel, and armaments cartel. Many leading figures, the Thyssens, the Krupps, the Ilgners, the Rochlings, the Von Schroeders, were already at that time secretly contributing to the Nazi Party, and this instance shows they even went so far as, in effect, to levy a tax to provide funds for the Nazi Party.

Senator THOMAS. Did this donation go to the Nazi Party for coal that was exported to foreign countries?

Mr. SCHMIDT. I believe it was made on all coal that was produced and sold.

Senator THOMAS. In other words, if France bought coal, she contributed to the development of the party that was to destroy France, is that it?

Mr. SCHMIDT. That would be my understanding, Mr. Senator. The manner in which the Germans succeeded in making others contribute to the preparation of their war effort is quite fantastic. For example, we have found even in the case of an American-controlled company such as the Ford Co., a memorandum prepared by the

German director of Ford of Cologne in which he was presenting to his German superior the advantages of having Ford of Cologne continue as an American company, and the advantages of having a majority interest held by Ford of Detroit. Among the advantages cited was the fact that they were able, that is, the German Government was able, to force Ford of Cologne to export parts to the United States in return for rubber and critical materials that were needed in '38 and '39, and that they would not have been able to do that if Ford had not been owned by the United States.

They also pointed out that as a result of being part of an American company, Ford of Germany was more easily able to step in and dominate the Ford holdings throughout Europe and weld them into one gigantic enterprise, whereas they pointed out if it hadn't all been owned by one foreign or American company, it wouldn't have been so easy.

You might be interested in an amusing aspect. We find—I am not sure of the exact date, sometime in '41 or '42—the two top German men of Ford Co. in Cologne got into such a bitter argument about which one of them was to control Ford of England that one of them finally got up and left the room in disgust.

Senator THOMAS. Have you got that memorandum?

Mr. SCHMIDT. I do not have it with me, Mr. Senator, but it will be sent back.

Senator THOMAS. Will it be available for the record?

Mr. SCHMIDT. I am not in a position to place that in the record.

Senator THOMAS. If it is available, will you put that letter in the record, please?

Mr. SCHMIDT. I will see if it can be made available.

(The memorandum referred to follows:)

[Copy to Mr. R. H. Schmidt, president of the board of Ford-Werke A. G.—Confidential]

BERLIN, November 25, 1941.

Initialed: HFA (Dr. H. F. Albert)

MEMO CONCERNING FORD-WERKE A. G., AS TO WHETHER A COMPLETE GERMANIZATION WOULD BE NECESSARY OR ADVISABLE

1. In the past 7 years Ford-Werke A. G. have been transformed into a German company, to an increasing extent. Not only are all vehicles and their parts produced in Germany, by German workers using German materials under German direction; above that an export into the European and overseas sales territories of the United States of America and Great Britain has been made possible, amounting to many millions in the last year of peace.

In connection with this all needed foreign raw materials were obtained through the American company (rubber, nonferrous metals) to cover the production needs of the German plant and above that in part for the whole industry.

Already during the peace the American influence had been more or less converted into a supporting position (Hilfsstellung) for the German plant. At the outbreak of the war Ford-Werke placed themselves immediately at the disposal of the armed forces for armament purposes.

2. During the capital increase made in the beginning of 1941 the question of a Germanization of the capital had been discussed with the authorities concerned (GBK, RWM: Head of Motor Vehicle Industry, Reich Ministry of Economics), which let to the reduction to 52 percent of the American majority, a majority which in agreement with the authorities remained at that percentage.

3. Among the reasons speaking against a complete Germanization of the capital the first one is the excellent sales organization which, thanks to its connection with the American company, is at the disposal of the German Ford-Werke. According to their productivity the German company can export to all countries of the world, and in this they are protected and supported in the matter

of pricing by the American company. In some countries this has led to **make the** German export of German Ford cars possible, even though the rest of the **German** industry was unable to find a solid footing. This limits, or keeps away, purely American competition to some extent.

4. As long as Ford-Werke A. G. have an American majority, it will be possible to bring the remaining European Ford companies under German influence, **namely** that of Ford-Werke A. G., and thus to execute the greater European policies in this field too. As soon as the American majority is eliminated, each Ford company in every country will fight for its individual existence. The just now successfully accomplished joining of the potentiality of the non-German, **European** companies to the potentiality of Ford-Werke A. G., and with this to the general war potentiality of Germany, would thus collapse more or less by itself. **Amsterdam, Antwerp, Paris, Budapest, Bucharest, Copenhagen, etc., are concerned.**

5. A majority, even if it is only a small one, of the Americans is **essential for** the—actually free—transmittal of the newest American models as well as **for the** insight into American production and sales methods. Since Americans are without a doubt particularly progressive in this field, the maintenance of this connection is in the German interest. Through license fees or **contractual** stipulations this cannot be accomplished. With the abolition of the **American** majority this advantage, as well as the importance of the company for the obtaining of raw materials and exports would be lost. The plant would **practically** only be worth its own machine capacity.

(Translated by Pfc. George Lobbenberg.)

Mr. SCHMIDT. I might say, Mr. Senator, that the investigations we are now conducting are being conducted by the Army under the War Department, to which I am attached as a technical expert; that the Army and General Clay have afforded all facilities necessary to carry on these investigations, have taken steps to see that the information will be gotten back to the United States for use by the civilian agencies, and have afforded every cooperation and facility to see that the investigations into the Germans' holdings of foreign assets abroad will be a success and that they will be uncovered.

Chairman THOMAS. Thank you. This will close the hearing not only for today but will close the series of hearings on this subject which the subcommittee has been carrying on. We stand adjourned.

(Whereupon, at 11:45 a. m., the subcommittee adjourned subject to call of the chairman.)

EXHIBITS

(Exhibit No. 1, report on the Treasury investigation of General Aniline & Film Corporation, was filed with the committee.)

EXHIBIT No. 2

SOME EXTRACTS OF EVIDENCE UNCOVERED BY FOREIGN FUNDS CONTROL IN CONNECTION WITH NEW YORK AGENCIES OF SWISS BANKS

Our investigation of one Swiss bank disclosed that the general manager wrote to its New York agency, shortly after war broke out in Europe, that

"If your client does not wish to have his name disclosed to anybody, you will refer him to our nearest European office for further information. By doing so you will avoid any possible remonstrance from clients who might feel at a later moment that you should have given them more ample information on the working of the account and the legal dispositions requiring the disclosure of the name of the holder to the controllers."

In connection with another matter the New York agency wrote to the home office at about this time that

"It is naturally understood that the name of (Mr. Blank) is not to be mentioned in any communications from your bank."

In fact, the New York office complained when, by inadvertence, the home office in Switzerland indicated the name of the owner and thus required the New York office to report to the United States Treasury the pertinent facts, as follows:

"One of our branches (in Switzerland) transferred to another branch a substantial number depot. The securities were held in New York and the branch in question * * * indicated in order to draw our attention to the importance of the client, the owner * * *. The result was that we had to report and freeze these assets. Had we known only the number no one would have been any the wiser."

In our investigation of another New York office of a Swiss bank, we found specific evidence in a form of a memorandum indicating that there was a deliberate plan to conceal the true ownership of securities accounts held by it in the United States. This memorandum pointed out:

"A number of the proposals (involving the protecting securities and cash of foreign banking clients 'from the effect of possible governmental decrees or other actions') involved advice to us that the cash or securities which are held for the foreign client are not owned by our client but by customers of our client. In some instances, open advice to this effect would not be given but sealed envelopes would be lodged with us in which such advices would be contained. If we are advised, actually, or constructively that securities in our custody are, in fact, owned by foreign customers of our banking client, a number of serious problems may, at least in certain circumstances, be raised, which present material risks, not only to us but to our foreign client and his customers."

This same agency was advised by its home office in Switzerland as to the practice to be set up for the establishment of Rubric accounts, that is, accounts in the name of the home office but subdivided into many small accounts designated by numbers or initials. The New York office was told:

"I am writing you about this matter, with the agreement of General Manager Merian privately, so that no correspondence concerning it shall be found in the files of Swiss American Corporation. We have also refrained from informing the company officially that use was made of the arrangement as agreed upon and that since there is now a difference in the designation of the Rubric accounts and envelopes I hope that every precautionary measure has been taken to obliterate traces of any connection between envelopes and Rubric accounts."

This same New York office was especially careful in replying to this advice to make it clear that they did not want to be put on notice of any facts indicating who the real owners might be. In discussing the use of letters instead of numbers as a mark of distinction for Rubric accounts, New York replied:

"It would, of course, be another matter if the letters represented the initials of the true owner. In this case we would have to request you to refrain from using them."

EXHIBIT No. 3

AMERICAN INTERESTS IN GERMAN INDUSTRY—GERMAN INTERESTS IN AMERICAN ENTERPRISES

AMERICAN INTERESTS IN GERMAN INDUSTRY

Controlling interests in German industry owned by 171 United States corporations amounted to \$420,600,000 as of May 31, 1943.¹ Generally, control was held through the ownership of 100 percent of the voting stock of the German enterprises although holdings as low as 25 percent were included under this heading. The interests also took the form of capital and earned surplus, preferred stock and bonds, advances, and intercompany accounts.

Approximately \$259,000,000 was invested by American corporations in 122 manufacturing enterprises in Germany. (See table 1.) This was concentrated very largely in the automotive and machinery fields. The machinery manufactured was of many types, including particularly agricultural, business, and special industrial machines. Petroleum production, refining, and distribution followed the manufacturing industry in size. Interests in trading enterprises were both wholesale and retail; the former were owned by American manufacturing companies. In some cases these enterprises were established to facilitate the sale of goods manufactured in the United States while in other cases they marketed the products of a foreign manufacturing subsidiary. Typical United States retail establishments were included.

American manufacturing companies held interests in German industry totaling \$262,000,000. (See table 2.) Slightly more than 90 percent of this was in manufacturing enterprises and most of the remainder in sales subsidiaries. The German investments of American petroleum companies were almost entirely in the petroleum business. Certain American companies which are engaged in two types of business, such as communications companies which also manufacture equipment, account for some of the differences between the business engaged in at home and abroad because the companies were classified according to their major activity.

These controlling interests in German industry were acquired at various times, mostly before 1931, several before 1914. Purchases of the voting stock of existing German companies were an important means by which control was acquired. In other instances new companies were established by the American corporation. In a few instances the German enterprises were direct branches of the American company, that is, unincorporated enterprises.

¹ Preliminary tabulation of values as reported on Form TFR-500. Ownership was held on May 31, 1943, but the values were generally as of 1939 or 1940 because later data were not available on the date reports were prepared and filed.

TABLE 1.—Book or estimated value of American corporate investments in German industry and the number of enterprises controlled thereby, by type of business of the German enterprises, as of May 31, 1943

[Values in millions of dollars]

Type of business	Number of German enterprises	Value of American investments
Manufacturing:		
Foodstuffs	19	12.1
Chemicals	21	7.9
Electrical	12	32.6
Automobiles and equipment	5	62.2
Machinery and equipment	15	88.9
Other metal products	14	32.0
Other manufactures	36	23.0
Total manufacturing	122	258.7
Petroleum production, refining, and distribution	27	93.5
Finance	25	9.8
Trade	54	51.7
Miscellaneous	50	6.9
Total, all types	278	420.6

NOTE.—Preliminary tabulation of values as reported on Form TFR-500. Ownership was held as of May 31, 1943, but the values were generally as of 1939 or 1940.

TABLE 2.—Book or estimated value of American corporate investments in German industry and the number of corporations involved, by type of business of the American corporations, as of May 31, 1943

[Values in millions of dollars]

Type of business	Number of American corporations	Value of investments in German industry
Manufacturing:		
Foodstuffs	11	20.2
Chemicals	17	6.4
Electrical	9	15.7
Automobiles and equipment	4	63.4
Machinery and equipment	20	86.6
Other metal products	16	36.4
Other manufactures	26	33.4
Total manufacturing	103	262.1
Petroleum production, refining, and distribution	11	93.4
Finance	16	19.0
Trade	12	26.7
Miscellaneous	20	19.4
Total, all types	171	420.6

NOTE.—Preliminary tabulation of values as reported on Form TFR-500. Ownership was held as of May 31, 1943, but the values were generally as of 1939 or 1940.

GERMAN INTERESTS IN AMERICAN ENTERPRISES

German corporations and individuals controlled 170 enterprises in the United States involving interests amounting to \$105,000,000 as of June 14, 1941. These interests were concentrated principally in the chemical industry and in certain companies organized to hold foreign assets. The latter were classified in the finance group with certain personal holding companies (see table 3).

German interests in American enterprises, to the extent of about \$88,000,000, were held for German account by corporations and individuals in other foreign countries, particularly in Netherlands and Switzerland.

These values were in large part based on the market value of securities of the United States companies and the estimated value of other obligations. To a

lesser extent they were based on the book value of the German interests in the American enterprises.

The values given in table 3 are not comparable with those of the Alien Property Custodian because the Custodian used book values only and values as of the dates of vesting which were considerably later than June 14, 1941.

TABLE 3.—*Value of German interests in United States corporations, by industrial groups, as of June 14, 1941*

Chemicals.....	\$50, 200, 000
Other manufacturing.....	6, 600, 000
Total manufacturing.....	56, 800, 000
Finance.....	22, 200, 000
Trade.....	15, 000, 000
Miscellaneous.....	11, 000, 000
Total.....	105, 000, 000

NOTE.—The above amounts are based on market values and are substantially less than other similar data computed on book value. If the market value was not available, an estimated book value was substituted. Based on reports to the Treasury Department on Form TFR-300.

GERMAN OWNED OR CONTROLLED FIRMS IN PORTUGAL, SPAIN, SWEDEN, SWITZERLAND, TURKEY, AND ARGENTINA

PORTUGAL

- Aachener und Munchener Feuer-Versicherungs Ges., Aachen:
Aachener und Munchener Feuer-Verscherungs, Praca dos Restauradores 13-2, Lisbon—Agency.
- Allgemeine Elektrizitaets-Gesellschaft, Berlin:
A. E. G. Lusitana de Electricidade, Rua dos Fanqueiros 12, Lisbon, and Oporto—Subsidiary.
- Beken, O.:
Beken, Hedwich Herold:
Delbruck, Helena Herold:
17 percent interest in Estabelecimentos Herold Ltda., Rua dos Douradores 7, Lisbon—General merchants and cork manufacturers; capital, 2,000,000 esc.
- Deutsche Kohlen Depot, Hamburg:
(a) Empresa Fornecedora D'Agua e Navegacao Ltda., Funchal, Madeira—Subsidiary.
(b) Insulana de Transportes Maritimos Ltda. (SITMA) Soc. Praca Duque de Ta Terceira 24, Lisbon, and Funchal, Madeira—Subsidiary.
- Deutsche Lufthansa A. G., Berlin:
Deutsche Lufthansa A. G., Av. 24 de Julho 34, Lisbon—Operates in Portugal as Servicos Aereos Portugueses Ltda.
- Einhart & Co., Hamburg:
(a) Einhart Ltda., Rua Eugenio dos Santos 179, Lisbon—Branch; commission agents.
(b) Nacional Filmes Ltda., Praca dos Restauradores 44, Lisbon—Film company; capital 150,000 esc.
- Elektrometallurgie—Dr. Paul Gruenfeld, Berlin:
(a) Mineira do Norte de Portugal Cia., Rua 31 de Janeiro 109, Oporto (part of Minero-Silvicola group)—Owners of wolfram and tin mines.
(b) Empresa Mineira de Sabrosa Ltda., Rua Trindade Coelho 1, Oporto (part of Minero-Silvicola group)—Owners of wolfram and tin mines; capital, 3,000,000 esc.
(c) See also Rowak Handelgesellschaft m.b.H.

Farbenindustrie, I. G., Frankfurt:

(a) Anilinas Ltda., Soc. de, Travessa das Pedras Negres, Lisbon—Subsidiary.

(b) Bayer Ltda., Largo de Barao de Quintela 11, Lisbon, and Rua do Bolho 61, Oporto—Subsidiary; dealers in pharmaceutical products.

(c) Fabrica Lusitana de Corantes e Productos Quimicos (Lusacor), Rua Jose Falcao 199, Oporto—Dealers in chemicals.

Greiner & Soehne, C. A., Nurtigen:

Greiner Ltda., Faro—Cork exporters; capital, 1,500,000 esc.

Gruen & Bilfinger, A. G., Mannheim:

(a) Gruen & Bilfinger, S. A., Lisbon—Branch; public works contractors.

(b) Metropolitana e Colonial de Construccoes Ltda. (SOMEC), Lisbon—Subsidiary; public works contractors; capital, 3,000,000 esc.

Hingste, Hermann Zum, Bremen:

(a) Bender Ltda., Quinta da Maceda, Barreiro—Cork exporters.

(b) Ferreira Filipe Ltda., Rua da Madalena 18, Lisbon, and Barreiro—Cork manufacturers and exporters.

(c) Hingste Hermann sum, Rua da Madalena 18, Lisbon—Cork exporters.

(d) Meyer Ltda., Fritz W., Rua Vasco da Gama 1-5, Lisbon—Tool and machinery importers.

Hiros Handelges, Berlin:

(See Rowak Handelgesellschaft m. b. H., Berlin.)

Holzmann A. G., Philip, Hamburg and Frankfurt:

Construtora e Comercial Ltda., Soc., Ave. Almirante Reis 1, Lisbon and Ponte Delgada, Azores—Subsidiary; building contractors.

Jurgens, Heinrich, Hamburg:

55 percent interest in Empresa Comercial Jurgens Ltda., Travessa da Fabrica 2, Oporto—Import and export merchants.

Kamerun-Eisenbahn-Gesellschaft, Berlin:

Agricola e Fabril da Guine, Cia., Lisbon and Budaque, Bissages Isles, Portuguese Guinea—Palm oil manufacturers.

Kloeckner-Humboldt-Deutz A. G., Cologne:

(g) La Plata Ozalid S. de R. L., Buenos Aires—Partly owned by (c); photographic supplies.

(h) Weyland, Sigfrido, Buenos Aires—Owned by (c); chemicals and drugs.

Ferrostaal A. G., Essen:

Ferrostaal S. A., Buenos Aires—Branch; iron and steel goods; net worth, 145,000 pesos (1942); capital, 100,000 pesos (1944).

Genschow A. G. G., Hamburg:

"Geco" Cia. Industrial y Comercial S. A., Buenos Aires—Branch; munitions manufacturer; capital, 100,000 pesos (1941).

Grun & Bilfinger Aktiengesellschaft, Mannheim:

Gruen y Bilfinger, Soc. de Responsabilidad Ltda., Buenos Aires—Construction work; 96 shares out of a total of 100 shares owned by above; capital, 1,500,000 pesos.

Guderian (a German general), Germany:

Denubio—A textile firm owned by above and Count Galeazzo Ciano; capital, 2,000,000 pesos.

Hardt, A. G., Berlin:

Hardt y Cia., R., Buenos Aires—Branch; importers and exporters of general merchandise.

Herder, Sohne, Solingen:

Herder, F. A. (Sohn), Buenos Aires—Branch; importers and exporters of general merchandise; assets, 66,050 pesos (1943).

Holzman, A. G., Philip, Frankfurt:

(a) General de Construcciones S. A. Cia., Buenos Aires—Branch; building contractors and dealers in construction materials; capital, 1,000,000 pesos (1939).

(b) "GEOPE" Compania General de Obras Publicas, Soc. Anon., Buenos Aires—45 percent interest; building contractors and dealers in construction materials; capital, 4,000,000 pesos (1944).

Klockner Werke A. G., Dusseldorf:

(a) Establecimientos Klocker S. A. Industrial Argentina, Buenos Aires—Branch; iron and steel; capital, 1,000,000 pesos (1943); reserves, 4,000,000 pesos (1943).

(b) Maldonado y Cia.—Iron and steel.

(c) Manuella y Cia., Rosario—Owned by (a); iron and steel.

(d) Ferrocal S. de R. L., Rosario and Buenos Aires—Branch; manufacture of quick lime; capital, 50,000 pesos (1941).

(e) "Deutz Otto" Legitimo, S. A., Compania Argentina de Motores, Buenos Aires and various branches in Argentina—Capital, 1,500,000 pesos; reserves, 1,119,000 pesos (1943).

"Knoll" A. G. Ludwigshafen:

Oficina Cientifica Knoll, Buenos Aires—Capital, 300,000 pesos.

Mannesman Roehrenwerke, Dusseldorf:

(a) Tubos Mannesmann Ltd., Soc., Buenos Aires and various branches in Argentina—Subsidiary; capital, 5,000,000 pesos (1943); reserves, 2,800,000 pesos (1943).

(b) Morsetto S. A. Establecimientos Metalurgicos, Buenos Aires—Subsidiary of (a); iron and steel.

(c) Sica, Soc. de Resp., Ltda.—Combined capital of "Sica" and (b); 5,000,000 pesos (1944).

Mannheimer Versicherungs-Gesellschaft, Mannheim:

(a) "La Internacional," Cia. de Seguros S. A., Buenos Aires—Insurance; capital, 1,000,000 pesos.

(b) "La Mannheim," Cia. de Seguros, Buenos Aires—Insurance.

Merck, E., Darmstadt:

Merck Quimica Argentina S. A., Buenos Aires—Branch; drugs; capital, 1,250,000 pesos.

Meyer, Arnold Otto, Hamburg:

(a) Stinnes, Ltda. Soc. Anon. Comercial e Industrial, Hugo, Buenos Aires—Automobile service, formerly import of motortrucks and steel and export of hides, skins and wool; capital, 1,000,000 pesos.

(b) Stinnes Maritima, Soc. Anon. Hugo, Buenos Aires—Steamship agents; capital, 500,000 pesos.

Minag Muhlenbau und Industrie A. G., Braunschweig:

Amme, Giesecke y Konegan S. de R. L.—Machinery.

Neus Baugesellschaft, Wayss & Freytag A. G., Frankfurt:

Wayss & Freytag S.A., Buenos Aires—Branch; building contractors and dealers in construction materials; capital, 200,000 pesos; reserves, 810,000 pesos (1943).

Norddeutscher Lloyd, Bremen:

Lloyd Norte Aleman, Buenos Aires—Branch; steamship agents.

Orenstein & Koppel-Arthur Koppel A. G., Berlin:

Orenstein & Koppel S. A., Buenos Aires—Branch; manufacturers of railway equipment; reserves, 450,000 pesos (1943).

Osram G. m. b. H., Berlin:

"Osram" Cia. Argentina de Lampares Electricas S.A., Buenos Aires and various branches in Argentina—Branch; electrical goods; capital, 500,000 pesos (1943); reserves, 300,000 pesos (1943).

Rheinmetall-Borsig A. G., Berlin:

(a) Rheinmetall-Borsig Cia. Argentina de Maquinas S. de R. L., Buenos Aires—Branch; iron and steel; capital, 4,000,000 pesos (1943); reserves, 1,500,000 pesos (1943).

(b) "Cadema" Cia. Argentina de Maquinas, S. de R. L., Buenos Aires—Believed controlled by (a); iron and steel.

Rienisch-Westfallische Kohlen Syndicat, S.G., Dusseldorf:

"Riberna del Plata," Compania Sudamericana de Comercio S. A., Buenos Aires and various other branches in Argentina—Partly controlled by German principal; dealers in coal, wood, and coke and repair of naval vessels; capital, 2,080,000 pesos (1944).

S. E. C. Alemena Gunther Wagner, Hanover:

Gunther Wagner, S. R. L.—Manufacturing stationery supplies; net worth, 400,000 pesos (1944).

Schering A. G., Berlin:

(a) "Arcofina" Cia. Argentina de Comercio y Finanzas S.A., Buenos Aires—Holding company owned by (b); capital, 50,000 pesos.

(b) Schering S. A., Quimica, Buenos Aires—Owned by Forinvent, Switzerland, holding company for German principal; chemicals and drugs; capital, 2,000,000 pesos.

Schmidt, F. H., Hamburg:

- (a) General de Construcciones, Soc. Anon., Cia., Buenos Aires—Branch; construction business; capital, 2,000,000 pesos.
- (b) Rhenania, S.A., Comercial y Financiera, Buenos Aires—Affiliate of (a).
- (c) SAEMA, S.A. Explotacion Maderera y Anexos, Buenos Aires—Affiliate of (a).
- (d) SAERA, S.A. Explotaciones Rurales y Anexos, Buenos Aires—Affiliate of (a).
- (e) Establecimientos Vitivinícolas Escorihuela, S.A., Buenos Aires—Affiliate of (a).
- (f) Cia. de Seguros La Mercantil Andina, Mendoza—Affiliate of (a).
- (g) Cia. Inmobiliaria de Buenos Aires, S.A., Buenos Aires—Affiliate of (a).

Siemens-Schuckert, Berlin:

- (a) Siemens-Schuckert S.A., Cia. Platense de Electricidad, Buenos Aires, and various branches in Argentina—Branch; electrical goods; assets, 31,000,000 pesos (1944); net worth, 6,950,000 pesos (1942).
- (b) Siemens y Halske A.G., Buenos Aires—Branch; electrical goods; net worth, 11,410,000 pesos (1942).
- (c) Siemens-Bauunion, Cia. Platense de Construcciones, S.A., Buenos Aires—Subsidiary of (a); building contractors; capital, 5,000,000 pesos; reserves, 5,376,000 pesos (1943).
- (d) "INAG" Fabricas Reunidas de Utiles Sanitarios S.A., Buenos Aires—Subsidiary; surgical and laboratory equipment distributors; net worth, 550,000 pesos (1944).
- (e) Compania Internacional de Telefonos, Argentina—Controlled by (b) and financed by (a).
- (f) "Fenix" Sociedad Argentina de Ceramica, Buenos Aires—Subsidiary of (a); manufactures bricks; capital, 220,000 pesos.
- (g) Agrin Metal S. de R.L. Argentina—Believed owned by (d); surgical appliance manufacturers; capital, 50,000 pesos (1942).

Springer & Moeller, Leipzig:

Springer y Moeller S.A., Buenos Aires—Branch; chemicals and drugs.

Stahlwerke Roechling-Buderus A.G., Saar:

Aceros Roechling Buderus S.A., Buenos Aires—Branch; iron and steel; net worth, 250,000 pesos (1942).

Staudt y Cia., Berlin:

- (a) Staudt y Cia., S.A.C., Buenos Aires and 61 branches in Argentina—Manufacturers of cotton and wool goods, hides, and other varied interests; capital, 25,000,000 pesos (1944).
- (b) Bromberg y Cia., S.A.C., Buenos Aires and various branches in Argentina—Owned by (a); import and export of machinery; capital, 4,500,000 pesos (1940).
- (c) E. Pallavicini y Cia., Buenos Aires—Branches at Tucuman, Cordoba, and Mendoza; owned 60 percent by (a); sugar sales organization; capital, 6,000,000 pesos (1944).
- (d) Jobke y Niedig, Buenos Aires—Owned by (b); machinery and construction.
- (e) Atanor S.A., Argentina—Owned and controlled by (a); chemical firm; capital 4,500,000 pesos (1944).
- (f) "Unitas" Compania Financiera Argentina, S.A., Buenos Aires—Holding company for Staudt interests; capital, 10,000,000 pesos.
- (g) "La Querencia" S.A., Compania Inmobiliaria y Financiera, Buenos Aires—Holding company for Staudt interests; capital, 10,000,000 pesos (1944).
- (h) Panificadora de Cordoba S.R.L., Cordoba—Interest held by (b).

Vereinigte Boehlerstalwerke A.G., Germany:

Casa Denk-Aceros "Boehler" S.A. Comercial e Industrial, Buenos Aires—Iron and steel; capital, 500,000 pesos (1939).

Vereinigte Stahlwerke, Dusseldorf:

- (a) "Thyssen-Lametal," Cia. Industrial y Mercantil Thyssen Ltda., Buenos Aires and various branches in Argentina—Iron and steel; capital, 5,000,000 pesos (1943); reserves 5,850,000 pesos (1943).
- (b) Arbizu y Cervino S.A. Industrial y Comercial, Buenos Aires—Subsidiary of (a); capital, 2,000,000 pesos (1942).

- (c) Crefin S.A., Creditos y Financiaciones, Buenos Aires—Subsidiary of (a); iron and steel; capital, 5,000,000 pesos (1942).
 (d) La Union Bulonera Argentina, S. de R.L., Avellaneda—Financed by (a); steel and iron; capital, 150,000 pesos (1942).
 (e) Speratti Romanelli S. de R.L., Buenos Aires—Building contractors; believed owned by (a).
 (f) "Sudamsteel," S. de R.L., Argentina—Believed owned by (a); iron and steel; capital, 5,000 pesos (1941).
 (g) TAEM, Talleres Argentinos Electro-Mecanicos, Buenos Aires—Mechanical workshop—Believed owned by (a).
 Wella-Franz Stroher A.G., Apolda:
 Wella-Sudamericana, S.A., Buenos Aires—Manufactures hairdressing equipment; capital, 20,000 pesos (1941).
 Wilckens & Sohn, M., Gluckstadt:
 Wilckens, German Guillermo (Wilckens Hnos.), Buenos Aires—Importers and exporters of general merchandise; capital, 140,000 pesos (1938).
 Zeiss-Jena, Jena:
 Zeiss, Carl, Buenos Aires—Subsidiary; manufactures optical instruments and photographic materials; net worth, 440,000 pesos (1942).

EXHIBIT No. 5

DUTCH BANKS SPONSORED AND/OR CONTROLLED BY GERMANS

HANDEL-MAATSCHAPPIJ H. ALBERT DE BARY & Co., N. V.

A. LOCATION, UNITED STATES CORRESPONDENTS

Address: 450 Heerengracht, Amsterdam.

United States correspondents: Chase National Bank, National City Bank, New York Trust Co., Guaranty Trust Co., Bank of the Manhattan Co.

B. NATURE OF BUSINESS

Handel-Maatschappij H. Albert de Bary & Co., N. V., hereinafter referred to as HADB, was established as a Dutch company in 1919 to continue the business formerly handled by an Antwerp firm of the same name. At the time of organization its business consisted of general merchandising as well as banking, but in 1920 its merchandising features were eliminated. The inauguration of HADB as a purely banking enterprise was sponsored by the Deutsche Bank, Berlin, which from that time on, at least, was intimately associated with, and also held a large financial interest in HADB. Since 1929 HADB has been regarded as the Amsterdam agent of the Deutsche Bank. It is known that the greater part of its business is German and that it has relatively few Dutch clients.

HADB is a general or "mixed" bank, including in its functions, in addition to the short-term credit operations of ordinary commercial banking, the activities of an investment bank, purchasing participations in other enterprises, and dealing in securities. It is closely associated with two "administratiekantoren," the offices which in Holland act as custodians for securities, issue interim certificates for foreign securities, etc. Through one of these administration offices HADB had close connections with the Dutch and German coal and rayon industries.

HADB is believed to have suffered serious set-backs in 1939, in part through losses incurred through the failure of Mendelssohn & Co., Dutch branch of the German banking house of the same name; and in part through the enmity of the Dutch population toward it, because of its German control, at a time when feeling was strong because of German aggression in Europe.

C. SIZE AND IMPORTANCE

HADB is regarded as one of the most important of Holland's foreign-controlled banks. It is well known in foreign financial centers, and its operations were international in scope. Its directorate includes the names of financiers prominent both in Germany and Holland.

1. Relation to other enterprises or banking institutions in Holland or the Dutch colonies

(a) *N. V. Gemeenschappelijk Bezit van Aandeelen Maatschappij H. Albert de Bary & Co., N. V.*

Address: Amsterdam.

Capital: Fl. 9,000,000.

Business: Holding company.

Interests: HADB owns Fl. 5,000,000 of the capital stock of the above-mentioned holding company, which in turn owns about Fl. 9,000,000 of the shares of HADB. This holding company was organized in September 1939, ostensibly "to preserve the Dutch character of HADB, and to prevent the control from falling into foreign hands. Its establishment, however, was generally regarded as an attempt to conceal the German control of the bank, due to the increasing feeling against Germany on the part of the Dutch public.

(b) *N. V. Beleggings Societeit*

Address: Amsterdam.

Capital: Fl. 5,000,000 authorized (Fl. 3,500,000 paid-in).

Business: General investment and finance company.

Interest: HADB is reported to own all the ordinary shares and 85 percent of the preferred shares of the above-mentioned investment company. The remaining interest was held by officials of HADB, namely E. M. Kreef, who was a director of HADB in 1939, and Willy Redelmeier and W. Pannenburg, who were managers in that year.

(c) *Internationale Accountants en Trusteekantoor.*

Address: Vosdijk 2, Arnhem.

Capital: Fl. 25,000 authorized (Fl. 5,000 paid-in).

Business: Acts as custodian and administrator of securities and trades in international markets. It was headed by Fentener van Vlissingen, arch-collaborationist under the German occupation, who is prominent in the Dutch coal industry and the head of Algemeene Kunstzijde Unie (AKU) the Dutch rayon combine which is closely affiliated with the German concern Vereinigte Glanzstoffen A. G.

Interest: HADB has an interest in Internationale Accountants Trusteekantoor.

(d) *West-Europese Beleggings Bank*

Interest: This bank, which is understood to have been established by a former Austrian who was domiciled in Switzerland for many years, was managed by HADB.

2. Relation to other enterprises or banking institutions in countries other than Holland or the Dutch colonies

(a) *Deutsche Bank*

Address: Berlin.

Capital: RM. 160,000,000.

Business: Largest German commercial bank.

Interest: HADB was the Dutch subsidiary of the Deutsche Bank, and was reported at one time to be almost 100 percent owned by the latter. In 1938 and 1939 efforts were made through the transfer of shares, and the formation of a holding company with nominal Dutch owners, to conceal the German ownership.

3. Activities under the occupation—German connection

HADB has been intimately associated with the Deutsche Bank since 1920, when its trading functions were eliminated and its establishment as a purely banking institution is reported to have been sponsored by the Deutsche Bank. In 1929 HADB absorbed the Amsterdam office of the Deutsche Bank and thereafter acted as the agent of the Deutsche Bank in Amsterdam. Up to 1936 it was generally understood that the Deutsche Bank held approximately 100 percent control of HADB. About that time, however, an attempt was made through what were believed to be nominal transfers of stock, and later when there was a threat that HADB would be placed upon the British blacklist through the formation of a holding company, N. V. Gemeenschappelijk Bezit Aandeelen Maatschappij Albert de Bary, N. V., to conceal the German interest in HADB and give it the appearance of being an entirely Dutch concern. To further strengthen the outward appearance of Dutch control a number of Germans were dismissed from the staff of HADB. Coincidentally with this move, however, came the

dismissal of all non-Aryan Dutch members of the staff. The Deutsche Bank, as late as 1938, continued to list HADB as one of their principal foreign participations. HADB was blacklisted by the British in February 1940, apparently because of the enemy interest in it.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

Management

Board of directors:

Dr. E. Heldring, chairman and/or
president
Herman J. Abs
Dr. A. van Doorninck

G. A. Kessler
Dr. Robert Pferdmenges
Dr. E. Enno Russell
J. G. Wiebenga

Managers:

E. M. Brändlin
Hendrik Müller

W. Pannenburg
W. Redelmeier

Assistant Managers:

J. F. Kutzleb

K. Lefor

Holders of procuration:

F. Beck
K. W. Becker
J. Bennett
W. H. J. de Boer
W. Böse
M. J. Brandner
Chr. Bürger
Jhr. J. P. Crasborn
H. Dennerlein
G. Flierl
H. Folzer
F. Fomm
Ch. Gatterer
C. Jungblut
M. Katz
C. Krieb
A. Lochner
H. E. Nitsch

J. Salm
G. Schuitman
H. Seckler
H. Stabenow
C. Stockman
F. Streiter
J. S. Theijse
K. A. H. Wüsteney

M. van Dijck
H. Eikeln
J. S. Frank
P. Grotz
E. Messmer
C. O. Möhle
A. Mooi
D. C. Nefkens
A. von Türk

2. Subsequent to occupation

Between 1939 and 1941 the directorate was reduced in number from 7 to 4, the management from 6 to 1, and the holders of procuration from 37 to 21. Herman J. Abs took E. Heldring's post when the latter resigned in February 1940 after HADB was placed on the British blacklist. The three new members of the board are all Nazi sympathizers: E. Bechtolf is a German and a director of Deutsche Bank, Berlin; J. M. Honig and T. J. Twijnstra, both members of H. L. Woltersom's collaborationist Committee for Industrial Organization (CO), are Dutch-Nazis.

Management

Board of directors:

Herman J. Abs, chairman
E. Bechtolf, delegate

J. M. Honig
T. J. Twijnstra

*Biographies of some members of the management group**Herman J. Abs*

Abs is a German banker and industrialist whose business ties are not primarily with Dutch concerns. However, his two connections aside from the chairmanship he holds with Handel-Maatschappij H. Albert de Bary and Co., N. V., established in Holland since 1939, are with internationally prominent Dutch concerns, namely, Algemeene Kunstzijde Unie (A. K. U.—Rayon) and Lever Bros. and Unilever, N. V.

Herman Abs' rise to prominence within the Nazi economy has been phenomenal. There is no record of his participation in commercial undertakings prior to 1938 when it was first reported that he was a member of the management committee of the Deutsche Bank and a member of the Creditanstalt-Bankverein. His success within the next 4 years is the more remarkable in the light of his having begun his career as secretary to Cardinal Schulte, the Archbishop of Cologne.

Between 1938 and 1942, his connections extended through 40 of the most important banks and industries in Germany. It may be that he is merely a figurehead for the Government or the protector of the interests of the Deutsche Bank. In the field of banking also his influence has expanded from affiliation with only the Deutsche Bank and the Creditanstalt-Bankverein (controlled by the Deutsche Bank) to that of director of an imposing list of Deutsche-Bank-controlled financial institutions in the Balkans.

Abs is on the board of numerous enterprises in the field of utilities, heavy industries, munitions, machine tools, etc. He is a director of I. G. Farben, Metallgesellschaft, Deutsche Solvay-Werke and others. He is on the boards of 26 important industrial companies and 14 banking institutions.

Herman Abs is about 48 years of age. He is one of the prominent lay Catholic leaders in Germany and rumors persist that he is a potential leader of the Catholic opposition in the country. However, no references to his political activities is available and it may be concluded that his preoccupation arising from affiliation with 40 banks and commercial enterprises has prevented any appreciable contribution to the work of the opposition.

His banking and commercial connections were the following in 1942:

Banking.—Handel-Maatschappij H. Albert de Bary & Co., N. V., Amsterdam (Deutsche Bank's interest in this Dutch bank was extended to a full control during the occupation of Holland by the Nazis)—Chairman of board of directors.

Deutsche Bank, Berlin (total assets in 1941, RM 7,500,000).—Member of the management committee; also in charge of the bank's foreign department.

Creditanstalt-Bankverein, Vienna (51 percent owned by Deutsche Bank and 25 percent owned by VIAG)—Deputy chairman of board of directors.

Allgemeiner Jugoslavischer Bank-Verein A. G., Belgrade (majority control held by Creditanstalt-Bankverein, above, which founded this bank)—Member of management committee.

Landesbank für Bosnien und Herzegovina, Sarajevo (majority control held by Creditanstalt Bankverein, above, which founded this bank)—Member of management committee.

Bohmische Union Bank, Prague (59 percent owned by Deutsche Bank and 35 percent owned by Creditanstalt-Bankverein, above)—Member of management committee.

Kreditbank, Sofia (50 percent owned by the Deutsche Bank)—Chairman of board of directors.

Banca Commerciala Romana, Bukarest (59 percent owned by Deutsche Bank and 30 percent owned by Bohmische Union Bank, above)—Deputy chairman of advisory board.

Deutsch-Asiatische Bank, Shanghai-Berlin (organized by the six "Berliner Grossbanken" for the purpose of expanding trade in China)—Deputy chairman of board of directors.

Generalbank Luxembourg A. G., Luxembourg (large participations by Deutsche Bank)—Deputy chairman of board of directors.

Luxemburger Unionbank Anon. Ges., Luxembourg—Director.

Rheinisch-Westfälische Boden-Credit-Bank, Cologne (specializes in second mortgages)—Director.

Deutsche Ueberseeische, Berlin—Chairman of board of directors.

Deutsche Reichsbank, Berlin—Member of advisory board.

Industrial.—Rayon: Algemeene Kunstzijde Unie N. V., Arnheim, Holland—Director.

Vereinigte Glanzstoff-Fabriken A. G., Elberfeld (rayon—in 1935 Algemeene Kunstzijde Unie N. V. (AKU) and Vereinigte Glanzstoff-Fabriken A. G. consolidated their interests. AKU is capitalized at RM 76,500,000. Among its subsidiaries are the North American Rayon Corporation of Tennessee, the American Bemberg Corporation of Tennessee, and the British Bemberg Corporation, Ltd., of London)—Chairman of board of directors.

Margarine, fats, oils, etc.: Lever Bros. & Unilever N. V. (Lever Bros. & Unilever [international margarine, fats, oils, etc., holding company] through the shareholdings of its operational company, Van den Bergh en Jurgens' Fabriken N. V., is connected with Norddeutsche und Vereinigte Elbeschiffahrt A. G., Hamburg [a shipping company operating on the Elbe-Moldau inland waterways] and with Margarine Verkaufs Union, Ltd., Berlin [presumably the German branch of the English end of the Unilever concerns])—Member of board of advisers.

Iron and steel works: Metallgesellschaft A. G., Frankfurt/Main (subsidiary of I. G. Farben; it is the dominant industrial concern of the Metal Trust in the field of nonferrous metals and related industrial spheres. Major shareholders are the British Metal Corp. and the Schweizerische Gesellschaft für Metal-werke)—Director.

Neunkircher Eisenwerk A. G., vorm. Gebr. Stumm, Neunkirchen/Sarr (large trading and manufacturing company producing iron products. It is capitalized at RM 40,000,000 and its major shareholders are the Stumm Bros. and Otto. Wolff¹)—Director.

Pittler Werkzeugmaschinenfabrik A. G., Leipzig-Wahren (machine tools, capitalized at RM. 5,000,000, majority owned by the Commerz Bank and the Dresdner Bank)—Chairman of board of directors.

Walther-Staubtechnik G. m. b. H., Köln-Dellbrück (manufacturing concern for boilers and heavy shell equipment)—Director.

Mining.—Bergwerksgesellschaft Dahlbusch, Gelsenkirchen (subsidiary of Deutsche Solvay-Werke A. G., below. Capitalized at RM. 15,000,000, it specializes in coal and belongs to the Rheinisch-Westfälische Kohlensyndikat. In 1936 it was owned jointly by Deutsche Solvay-Werke A. G., below, and the Libbey-Owens concern)—Chairman of board of directors.

Schlesische Bergwerks-und Hütten A. G., Beuthen (majority controlled by Metallgesellschaft A. G., above, and Schweizerische Gesellschaft für Metallwerte. It is capitalized at RM. 16,200,000)—Chairman of board of directors.

Erft-Bergbau A. G., Brüggen/Erft (mining contractors)—Director.

Utilities.—Compania Hispano-Americana de Electricidad, Madrid (holding company for foreign utilities, particularly in Argentina, France, and Belgium. Its directorate is predominantly Spanish and British)—Director.

Rheinisch-Westfälisches Elektrizitäts-Werke A. G., Essen (subsidiary of Vereinigte Industrie-Unternehmungen A. G.)—Director.

Munitions.—Accumulatoren-Fabrik A. G., Berlin (storage batteries, 75 percent owned by E. Günther Quandt. It is capitalized at RM. 21,250,000 and participates in other electrical enterprises. Maintains many important affiliates in Hungary, Sweden, Finland, Yugoslavia, and Holland)—Chairman of board of directors.

Deutsche Waffen-und Munitions-fabriken A. G., Berlin (ammunition works, probably affiliated with Accumulatoren-Fabrik, above, whose majority stockholder Quandt, is also chairman of the board of directors of Deutsche Waffen-und Munitions-fabriken)—Director.

Chemicals and dyes.—I. G. Farbenindustrie A. G., Frankfurt/Main (this huge German Dye Trust was capitalized in 1939 at RM. 730,000,000, and had total assets of RM. 1,900,000,000)—Director.

Deutsche Solvay-Werke A. G., Bernburg (capitalized at RM. 55,000,000, it is controlled by the Belgian Solvay family)—Director.

Kontinentale Oel A. G., Berlin—Director.

Cement works.—Portland-Cementwerke Heidelberg A. G., Heidelberg (capitalized at RM. 27,100,000)—Deputy chairman of board of directors.

Dyckerhoff Portland-Zementwerke A. G., Amonsburg (capitalized at RM. 20,000,000, its majority shareholder is the Dyckerhoff family)—Director.

Cellulose.—Aschaffenburg Zellstoffwerke A. G., Berlin (cellulose, capitalized at RM. 23,200,000, it maintains affiliates in Holland and Finland).—Director.

Photographic equipment and precision instruments.—Zeiss Ikon A. G., Dresden (majority stockholder is the huge Carl Zeiss concern)—Deputy chairman of board of directors.

¹ Deceased 1939 or 1940.

Transportation.—Compania de Ferrocarriles Suramericanos Gran Ferrocarril de Benezuela, Madrid—Director.

Real estate and construction.—Philipp Holzmann A. G., Frankfurt/Main (capitalized at RM. 12,900,000, it owns extensive storage and factory structures and maintains construction works in South America, Greece, and Turkey)—Chairman of board of directors.

Leather.—Norddeutsche Lederwerke A. G., Berlin—Chairman of board of directors.

Glass works.—Deutsche Libbey-Owens Gesellschaft für Maschinelle glas Herstellung (33½ percent owned by Bergwerksgesellschaft Dahlbusch, above; glass manufacturing with patents held by Libbey-Owens. Capitalized at RM. 11,500,000—Director.

Miscellaneous (business not ascertained).—Mechanik G. m. b. H., Buchlitz, Leipzig-Wahren—Chairman of board of directors.

H. F. & Ph. F. Reemtsma, Hamburg-Behrenfeld—Member of advisory board

W. Ackermann

W. Ackermann was appointed to the position of holder of procuration in Handelsmaatschappij H. Albert de Bary & Co., N. V., after the occupation of Holland when the Deutsche Bank was still endeavoring to conceal its controlling participation in and at the same time strengthen its hold upon Handelsmaatschappij H. Albert de Bary & Co., N. V. Whether or not W. Ackermann is a Dutch or German citizen is not known.

Erich Bechtolf

He was appointed to the board of directors of Handelsmaatschappij H. Albert de Bary & Co., N. V., after 1939 as a result of changes effected in this bank's management in order to carry out its "aryanization" policy. Bechtolf is also a director of the Deutsche Bank, Berlin, the German bank which sponsored the establishment of Handelsmaatschappij H. Albert de Bary & Co. in 1920 and still holds an extensive participation in it.

Erich Bechtolf was born on April 8, 1891, at Hamburg. In addition to his position with the Deutsche Bank, the largest of Germany's commercial banks, he is also connected with a number of German financial, industrial, and insurance concerns which for the most part are located in Hamburg.

His last known address is Adolphsplatz 8, Hamburg.

His business connections as of 1942 were as follows:

Banking.—Handelsmaatschappij H. Albert de Bary & Co., N. V./Amsterdam (a general "mixed" bank and the Dutch banking agent for the Deutsche Bank)—Manager.

Deutsche Bank Filiale, Hamburg—Manager.

Hanseatische Wertpapierboerse, Hamburg (the Hanseatic Securities Exchange Board, Hamburg)—Member of the management committee.

Liquidationskasse in Hamburg A. G., Hamburg (Hamburg Clearinghouse)—Director.

Zulassungstelle an den Boerse zu Hamburg (Office for the Hamburg Stock Exchange)—Member.

Industrial.—Stader Lederfabrik A. G., Stade (leather industry at Stade)—Chairman of the board.

Tretorn Gummi und Asbestwerke A. G., Hamburg (rubber and asbestos industry)—Chairman of the board of directors.

Triton Werke A. G., Hamburg—Chairman of board of directors.

Portland-Cementfabrik Hemmoor, Hemmoor—Director.

Guanowerke A. G., formerly Ohlendorffsche und Mercksche Werke (guano works), Hambrg—Director.

Norddeutsche Affinerie, Hamburg—Director.

Shipping companies.—Hamburg Suedamerikanische Dampfschiffahrts Gesellschaft, Hamburg (South American Steamship Co.)—Deputy chairman of the board.

Hamburg Amerikanische Packetfsahrt A. G./ Hamburg (Hamburg-American Steamship Packet Lines) (HAPAG)—Director.

Insurance.—Norddeutsche Versicherungs Gesellschaft, Hamburg (North German Insurance Co.)—Director.

Nord-Deutsche Lebensversicherungs A. G., Hamburg (North German Life Insurance Co.)—Director.

Franz Beck

Franz Beck, a German, is a holder of procuration for Handelsmaatschappij H. Albert de Bary & Co., N. V., which is controlled by Deutsche Bank, Berlin. Aside from this Dutch connection, Franz Beck's principal affiliations are with German concerns. He has a power of attorney for the iron and steel firm Neunkircher Eisenwerk, Neunkirchen, whose principal shareholders are the Stumm Bros. and Otto Wolff¹ and is also a member of the management committee of the iron concern Jul. u. Edm. Kronenberg A. G., Leichlingen, which is controlled by the Neunkircher Eisenwerk.

Beck was born on June 19, 1884, in Burgau. His last known address was Neunkircher Eisenwerk, Neunkirchen/Saar, and his known connections are the following:

Banking.—Handelsmaatschappij H. Albert de Bary & Co., N. V.—holder of procuration.

Industrial.—Neunkircher Eisenwerk, Neunkirchen (iron and steel. Has several subsidiaries and affiliates. Gebr. Stumm G. m. b. H. and Otto Wolff are the principal shareholders. Capital RM. 40,000,000.)—Power of attorney.

Jul. u. Edm. Kronenberg A. G., Leichlingen (iron, controlling interest held by Neunkircher Eisenwerk, Neunkirchen. Capital, RM. 400,000)—Member of management committee.

Erzbergbaugesellschaft-Saar m. b. H., Saarbrücken (mining)—Manager.

K. W. Becker

K. W. Becker was a holder of procuration for Handelsmaatschappij H. Albert de Bary in 1939 but by 1941 his connections with this bank had been severed. His separation from Handelsmaatschappij H. Albert de Bary, which is largely controlled by the Deutsche Bank, may well have been in connection with the extensive personnel changes which took place in this Dutch bank between 1938 and 1940 for the twofold purpose of concealing the degree of its German interests and to "aryanize" it as a bow to German nazism.

K. W. Becker's business interests seem to be restricted to banking and finance and as of 1941 his connections with institutions of this kind were as follows:

Financial institutions.—Beleggingsmaatschappij "Zaandam" N. V. (an investment company)—Manager.

N. V. Trust Maatschappij Heerengracht, Amsterdam (a trust company)—Manager.

N. V. Algemeene Handels en Bankinstelling (a general credit institution in liquidation)—Liquidator.

N. V. Noord Nederlandsche Exploitatie en Financieele Maatschappij (finance company in liquidation)—Liquidator.

W. H. J. De Boer

W. H. J. de Boer has been a holder of procuration in the Handelsmaatschappij H. Albert de Bary & Co., N. V., at least since 1939. Aside from his other official financial connection as a director of Beleggings Societeit N. V., an investment company in which Handelsmaatschappij H. Albert de Bary holds an extensive participation, De Boer appears to have no other prominent business affiliations.

Eugeno Max Brändlin

E. M. Brandlin has held the position of manager of Handelsmaatschappij H. Albert de Bary & Co. N. V., at least since 1939. Together with Hendrik Muller, formerly also a manager of Handelsmaatschappij H. Albert de Bary & Co. N. V., Brandlin founded in 1939 a holding company, N. V. Gemeenschappelijk Bezit van Aandelen Maatschappij H. Albert de Bary & Co., to conceal part of the shares of Handelsmaatschappij H. Albert de Bary & Co. N. V.

E. M. Brandlin's connections are principally with financial concerns in Holland. As of 1941 these connections were as follows:

Handelsmaatschappij H. Albert de Bary & Co. N. V. (a banking house in which Deutsche Bank, Berlin, holds a major participation)—Manager.

N. V. Amsterdamsche Trustmaatschappij "FIDES" (a trust company)—Director.

Vereeniging voor den Wisselhandel (a foreign exchange dealers' association)—Treasurer.

¹ Deceased 1939 or 1940.

D. Bruins

D. Bruins was appointed a holder of procuration for Handelsmaatschappij H. Albert de Bary & Co., N. V., subsequent to 1939, the period when the Deutsche Bank, which controls this Dutch bank, was making drastic changes in the management personnel of Handelsmaatschappij H. Albert de Bary & Co., N. V., in order to conceal the extent to which it is under German domination. This attempt at concealment of the character of Handelsmaatschappij H. Albert de Bary & Co., N. V., was for the purpose of avoiding its being placed on the British Black List. In February of 1940, however, this Dutch bank was blacklisted by the British governmental authorities.

Ernst Heldring

Ernest Heldring, a director of Nederlandsche Bank and President of Nederlandsche Handelsmaatschappij, was also president of Handelsmaatschappij H. Albert de Bary (a Dutch commercial banking house controlled by the Deutsche Bank, Berlin) until February 1940 when he reportedly resigned because this bank was placed on the British Black List. In addition he is actively connected with Dutch shipping, steel, and grain industries.

Because of his position with Handelsmaatschappij Albert de Bary, he knows the Germans, Herman J. Abs, of the Deutsche Bank, and Dr. Robert Pferdmenges, director of the Deutsche Centralbodenkreditbank A. G., both of whom are the German representatives on the Board of Handelsmaatschappij H. Albert de Bary. Ernst Heldring also knows Willy Redelmeier who was the moving power of the Handelsmaatschappij H. Albert de Bary until 1939 when he left Holland because he is non-Aryan. Mr. Redelmeier now resides in Canada.

Ernest Heldring was born on September 21, 1871, in Amsterdam. He was 30 years of age when he became president in the field of Dutch banking and industry. In 1932 he was given an honorary degree at the University of Amsterdam. His last known Holland address is Delaïressestraat 96, Amsterdam.

The following is a list of his business affiliations as of 1941:

Banking.—Nederlandsche Bank N. V.—Director.

Handelsmaatschappij H. Albert de Bary—Chairman (1937-40).

Amsterdam Bankers Association—Director.

Nederlandsche Handelsmaatschappij—President (succeeded D. Crena de Jongh's to this office on October 23, 1939).

After the occupation of Holland the head office of this bank was transferred to Batavia and placed under the control of the British Netherlands Trading Co. East, Ltd. The Banque de l'Indo-Chine acquired substantial participations in this bank during 1941. After the occupation of the Netherlands East Indies the Japanese ordered all the Netherlands East Indies branches of Nederlandsche Handelsmaatschappij to liquidate.

Commercial (shipping).—Java-China Japan Steamship Co.—Director.

N. V. Nederlandsche Scheepvaart Unie—Director.

Stoomvaartmaatschappij "Nederland"—Director.

South African Steamship Company—Director.

Koninklijke Nederlandsche Stoombootmaatschappij—Manager (1889-1937).

Industrial.—Koninklijke Nederlandsche Hoogovens on Staalfabrieken—Director (steel).

N. V. Stoommeelfabriek Holland (flour)—Director (1925).

Business organizations.—Chamber of Commerce, Amsterdam—President.

J. M. Honig.

J. M. Honig, a director of H. Albert de Bary & Co. N. V. in 1941, was not connected with that institution prior to the German invasion of Holland.

Honig appears to have taken a prominent part in aiding the occupation authorities in gaining control of the Dutch economy. He was a member of the Committee of Industrial Organization, formed in November 1940 to organize Dutch industry in such a manner that it might more easily be taken under German control.

Honig is also connected with a large Dutch brewing company and is a member of the advisory board of Lever Bros. & Unilever N. V., an international soap cartel which has many close German ties.

Honig's business and financial connections as of 1941 are listed below:

Banking.—Handel-Maatschappij H. Albert de Bary & Co., N. V. (German-controlled)—Director.

Industrial.—Lever Bros. & Unilever N. V. (international soap cartel with many German ties)—Member of advisory committee.

N. V. Heineken's Bierbrouwerij Maatschappij, Amsterdam (brewery with many participations and affiliated enterprises in Holland as well as in other countries such as: Brasserie Leopold S. A., Brussels; Malayan Breweries Ltd., Singapore; Heineken's Nederlandsch Indische Bierbrouwerij Maatschappij, Sourabaya, and N. V. Koloniale Brouwerijen "Cobra," Amsterdam, the latter with important participations in the S. A. des Bieres Bomonti and Pyramides, Cairo; Crown Brewery, Alexandria; Societe Internationale de Brasserie "Interbra," Brussels. The latter company has big interests in the Brasserie Union Messine, Metz (Alsace) and Brasserie de Leopoldville, at Leopoldville (Congo) as well as in the Heineken's Curacaosche Bierbrouwerij at Willemstad)—Manager.

Political.—Committee of Industrial Organization (organized after the German occupation of Holland)—Member.

K. Lefor

K. Lefor was an employee of Handel-Maatschappij H. Albert de Bary & Co. until 1939, and was said to have worked very closely with W. Redelmeier, one of the managers of the bank. After the beginning of World War II, but prior to the German invasion of Holland, Lefor was one of about 60 employees, either Germans or non-Aryans, dismissed from the bank. The dismissal of German employees was reportedly part of a plan to give the bank at least the outward appearance of being an entirely Dutch institution.

Dr. Robert Pferdmenges

Dr. Robert Pferdmenges, a German, was a director of Handelsmaatschappij H. Albert de Bary & Co., N. V. (a Dutch bank controlled by Deutsche Bank, Berlin) until late 1939 or early 1940. To conceal the German interests in this Dutch bank and to dispel the existing threat of its being placed on the British Blacklist the Deutsche Bank during the period 1938-40 as one of its cloaking devices gradually dismissed a number of German persons from the management personnel of Handelsmaatschappij H. Albert de Bary & Co., N. V. and by so doing hoped to make the bank appear to be a Dutch concern. Robert Pferdmenges was one of the Germans dismissed. This incident was of small moment in Pferdmenges' career since he has numerous important banking and industrial connections in Germany and is also prominent in German social circles. He is co-owner of Pferdmenges & Co., of Cologne, one of the leading private banking houses in Germany which, following the aryanization of Jewish enterprises, became the legal successor of the closely connected firms, A. Levy, and Sal. Oppenheim Jr. und Cie., both of Cologne.

On the board of the Deutsche Centralbodenkreditbank, Pferdmenges is associated with Count Hans Bedo von Alvensleben, president of the exclusive Herrenklub; known to have been instrumental in helping Hitler to gain the confidence of the Rhineland industrialists. Also on the board of the bank is the Duke of Saxe-Coburg, the most prominent member of the German nobility to have cooperated actively with the Nazis.

In the field of German industry his Pferdmenges connections tie him up closely with Allgemeine Elektrizitäts-Gesellschaft and Vereinigte Stahlwerke A. G., two of the largest of Germany's industrial combines.

In the field of insurance, Dr. Pferdmenges' affiliations are with companies closely connected by common interests. He is chairman of the advisory board of Rückversicherungs-Aktiengesellschaft Colonia, of Cologne, and holds important official positions on the boards of companies connected with it.

Dr. Pferdmenges is deputy chairman of the advisory board of the Schoeller'sche Kammgarnspinnerei Eitorf A. G., Eitorf, a worsted mills company majority of shares of which are owned by the Schoeller family in Zurich, Switzerland and Düren, Germany.

Dr. Pferdmenges was born on March 27, 1880, in M. Gladbach, and his last known address is 250 Coltsteinerstrasse, Cologne. His commercial and financial affiliations are shown below:

Banking.—Handelsmaatschappij H. Albert de Bary & Co., N. V.—Director.

Bankhaus Pferdmenges & Co., Cologne (large private banking institution)—Co-owner and member of board of directors.

Insurance.—Rückversicherungs-Aktien-Gesellschaft Colonia, Cologne (reinsurance company, capitalized at RM. 1,000,000, with interests in three other insurance companies)—Deputy chairman of advisory board.

"Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs A. G. (insurance company, 25 percent owned by Rückversicherungs-Aktien-Gesellschaft Colonia)—Chairman of executive committee.

Kölnische Rückversicherungs-Gesellschaft, Cologne (reinsurance company, 27 percent owned by "Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs A. G.)—Deputy chairman of advisory board.

Kölnische Glas-Versicherungs A. G., Cologne (small glass insurance company, 100 percent owned by "Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs A. G.)—Chairman of the executive committee.

Nordstern Allgemeine Versicherungs A. G., Berlin (general insurance company)—Director.

Gladbacher Feuerversicherungs A. G., M. Gladbach (fire insurance)—Chairman of board of directors.

"Concordia" Lebensversicherungs A. G., Cologne (life insurance, Kölnische Rückversicherungs-Gesellschaft the principal shareholders)—Deputy chairman of board of directors.

Industrial.—Gladbacher Wollindustrie A. G. vorm. L. Josten, M. Gladbach (woolen industry, R.M. 4,000,000 capital)—Deputy chairman of advisory board.

Kabelwerk Rheyt A. G., Rehyd (cables and wires company, R.M. 12,000,000 capital; owns a 93.3 percent interest in the Deutsche Kabelwerke A. G.)—Deputy chairman of the advisory board.

Klöckner-Werke A. G., Duisburg (an important mining and smelting corporation owning numerous mines and foundries; it has interests in 12 other companies; capital, R.M. 105,000,000)—Deputy chairman of the advisory board.

Schoeller'sche Kammgarnspinnerei Eitorf A. G., Eitorf (worsted mills, capital R.M. 2,440,000; majority of shares owned by the Schoeller family in Zurich and Duren)—Deputy chairman of the advisory board.

Allgemeine Elektrizitäts-Gesellschaft, Berlin (large electrical German combine) Director.

Deutsche Kabelwerke A. G., Berlin (production of electric connections and cables; it has six subsidiaries and is more than 93 percent owned by Kabelwerk Rheyd A. G.)—Director.

Demag A. G., Duisburg (a large machinery concern capitalized at R.M. 26,500,000; this company has a large number of subsidiaries both in Germany and abroad, as for example in Poland, Italy, England, and Spain; its board of directors includes some of the most influential individuals in Germany's financial and industrial life, among which it should be mentioned Vögl of the Vereinigte Stahlwerke; Finck of Germany's largest private banking house, Merck Finck & Co.; Kimmich of the Deutsche Bank and Rudolf Stahe of the Deutsch Gold und Silberscheide Anstalt)—Director.

Felten & Guillaume Carlswerk A. G., Cologne (a very large company capitalized at R.M. 64,500,000 and specialized in the manufacture of cables and other wires for electric industry. It also trades in and manufactures all kinds of machinery and deals in iron, coal, and other mining products, and participates in official and private enterprises; it has many important subsidiaries, and through a Luxemburg company, the Arbed Konzern, which is its major stockholder, penetrates into Hungary, Argentina, and Poland)—Director.

Harpner Bergbau A. G., Dortmund (a large coal-mining corporation capitalized at R.M. 60,000,000 operating many mines with numerous subsidiaries or interests in other companies; its principal shareholders are Eisenwerke Gesellschaft, Maximilianshütte, which has the majority of the shares and F. Fentner Van Vlissingen, Utrecht who holds 10 percent. Very powerful figures in Germany's financial and industrial life are found on its board of directors as, for instance, Ernst Tengelmann, who is alleged to have played an important part in bringing Hermann Goering and Flick together when the Nazis came into power; Kurt von Schröder, the notorious German banker and financier, and Kimmich, of the Deutsche Bank)—Director.

Mitteldeutsche Stahlwerke A. G., Berlin (a very large steel and iron producing enterprise with a capital of R.M. 28,000,000. This company is generally assumed to be the main company in the Flick group. It is also 100 percent owned by Flick's holding company, the Friedrich Flick Kommandit-Gesellschaft)—Director.

Rheinische Kunstseide A. G., Krefeld (artificial silk company capitalized at R.M. 7,400,000)—Director.

Vereinigte Stahlwerke A. G., Düsseldorf (a very large and most important German steel trust, capitalized in 1939 at R.M. 460,000,000)—Director.

Willy Redelmeier

Willy Redelmeier resigned as a manager of Handelsmaatschappij H. Albert de Bary & Co., N. V., on January 27, 1940, but remained with this bank as a director for a time thereafter. Shortly before or after the occupation of Holland, he

emigrated and at present resides in Canada. Redelmeier, a Dutch citizen and a non-Aryan, is reported to have fled from Holland because of the persecution of his brother by the Nazis; and it is said that Willy Redelmeier also incurred the disfavor of the present Nazi German Government, which back in 1938 tried to eliminate him as the leading figure of Handelmaatschappij H. Albert de Bary & Co., N. V., by forcing the Deutsche Bank, which has a control in Handelmaatschappij H. Albert de Bary & Co., N. V., to call Redelmeier's personal loan against his stockholdings in Handelmaatschappij H. Albert de Bary & Co., N. V. Redelmeier, however, before leaving Holland, is said to have repaid the loan with the assistance of a number of his Amsterdam friends.

As far back as 1936 Redelmeier reportedly bought many of the shares held by the Deutsche Bank in Handelmaatschappij H. Albert de Bary, N. V., which were sold in that year.

T. J. Twijnstra

T. J. Twijnstra, a pro-Nazi Dutchman, was appointed a director of Handelmaatschappij H. Albert de Bary & Co., N. V., subsequent to 1939 and has, because of this position, associations with such persons as the German, Herman J. Abs, and J. M. Honig, the latter of whom is a member of H. L. Wolterson's Committee for Industrial Organization (C. O.), which was formed by the Nazis for the purpose of reorganizing Dutch industry to meet the needs of the German war machine. T. J. Twijnstra himself is a member of this committee, in connection with which he is associated with Karel P. van der Mandele (also a C. O. member), who in turn is a director of U. Twijnstra Oliefabrieken (vegetable oil and cattle feed), Utrecht, in which company T. J. Twijnstra has at least a directorship interest.

In view of the political proclivities of two of its directors, van der Mandele and Twijnstra, and a probable ownership interest in Twijnstra Oliefabrieken by T. J. Twijnstra, it is possible that this vegetable oil and cattle feed company has lent its support to the Nazi schemes for the coordination of Dutch industries to fit Nazi wartime production needs.

A. van Doorninck

A. van Doorninck, a director of the Nederlandsch Indische Handelsbank, N. V., is also officially connected with the Netherlands Railroad Co., and with a munitions factory.

In 1940 he was a director of the banking house, Handelmaatschappij H. Albert de Bary & Co. This firm, in 1929, absorbed the Dutch branch of the Deutsche Bank, and thereafter was considered the Deutsche Bank's agent for commitments in Holland. The business of H. Albert de Bary was largely German, and it had very few Dutch clients. Van Doorninck apparently did not retain this connection in 1941.

Van Doorninck is reported to have held the post of Treasurer General of the Ministry of Finance, which was a civil post and not a political appointment. Later sources mention his dismissal by the German authorities in July 1944 from the board of directors of the F. J. Spanjaard Steam Spinning Co., Ltd. (cotton mills), at Borne, together with four other officials, all of whom were replaced by Germans. At the same time the name of the enterprise was changed to "Westland Stoomspinnerijen."

Dr. van Doorninck's affiliations as of 1941 were reported as follows:

N. V. Nederlandsch Indische Handelsbank (colonial commercial bank)—Director.

N. V. Crediet en Effectenbank (bank primarily dealing in credit and securities)—Director.

N. V. Maatschappij voor Industrie-financiering (company to finance industrial enterprises)—Director.

N. V. Nederlandsche Spoorwegen (state railroads)—Director.

N. V. Nederlandsche Springstoffenfabrieken te Amsterdam (ammunition factory)—Director.

Friedrich H. Fentener van Vlissingen

F. H. Fentener van Vlissingen, a leading Dutch industrialist and arch-collaborationist, is head of the Internationale Accountants en Trustkantoor, a Dutch administration office which handles securities and trades in international markets. Handelmaatschappij H. Albert de Bary has a financial interest in Trustkantoor.

In Holland, together with members of the van Beuningen family, van Vlissingen is the leading power in Allgemene Kunstzijde Unie (AKU), the largest rayon

cartel of the Netherlands which in 1935 consolidated with Vereinigte Glanzstoff A. G., the German rayon cartel.

In the United States this Dutch rayon cartel is tied up with American Enka, American Bemberg and North American Rayon; in Germany it owns a subsidiary company, the Phrix-Werke (one of the largest cellulose producing concerns on the board of which are high ranking Nazi Party officials and big industrialists), and has control of Phrix-Verfahrenverwertung A. G., a company organized by the Phrix-Werke to take care of certain of its foreign interests.

In addition to his German industrial holdings maintained through AKU, van Vlissingen also owns the Administratiekantoor Unitas, Utrecht, the administration office which furnished all of the capital for the Combined Investment Corp., United States of America, and also held other important investments in the American Wine Corp., of St. Louis, a United States company, vested by the United States Alien Property Custodian in 1943.

During the period 1928-38 van Vlissingen was a director of Vereinigte Stahlwerke A. G. (German Steel Trust) and at the outbreak of the present war was still connected through business and personal ties with Steenkohlenvereeniging N. V. (a coal outlet company tied up with German Ruhr mining interests), managed by his son, J. M. Fentener van Vlissingen, and his close friend, Daniel G. van Reuningen.

Van Vlissingen's German business ties are further complicated by German marriage relationships. Through the marriage of a daughter van Vlissingen has personal ties with the Henkel family, prominent German wine producers. Because of these relations van Vlissingen knows Joachim von Ribbentrop, Reich Minister for Foreign Affairs, who also married into the Henkel family. It has been reported that van Vlissingen's daughter, Leiny, married a prominent Nazi after the death of her first husband, Stefan K. Henkel, in 1940.

From 1933 to 1937 van Vlissingen was president of the International Chamber of Commerce. On the strength of this office held in the past van Vlissingen, according to a recent United States broadcast statement (December 1944), had set up in Switzerland an illegal organization and named it the International Chamber of Commerce.

Under the occupation, as early as 8 weeks after the Dutch capitulation, July 5, 1940, van Vlissingen gave his services or at least lent his name to collaborationist activities by heading up the National Committee for Economic Collaboration made up of other prominent Dutch industrialists. This committee apparently unsuccessful was superseded by the Committee for Industrial Organization (C. O.), headed by the known collaborator, H. L. Woltersen, which had as its admitted task the gearing of Dutch economic production to the needs of the German war machine in Holland.

In February of 1937 Rollins College, Florida, gave van Vlissingen an honorary LL. D.; in July of the same year Adolf Hitler decorated him with the Starred Merit Cross of the German Eagle.

Van Vlissingen's Holland address is Maliebaan 42, Utrecht, and his known connections as of 1941 were:

Banking

Internationale Accountants en Trustkantoor—Head.
Administratiekantoor Unitas—Owner.

Industrial

Allgemeene Kunstzijde Unie N. V. (AKU) (largest Dutch rayon cartel; in the United States tied up with American Enka, American Bemberg, and North American Rayon)—Chairman of board of directors.

Werkspoor N. V.—Director.

N. V. Nederlandsche Maatschappij tot Ontginning van Steenkohlvelde—Chairman of board of directors.

Koninklijke Nederlandsche Hoogovens & Staalfabrieken—Director.

N. V. Nederlandsche Vliegtuigenfabriek Fokker—Director.

N. V. Hollandsche Kunstzijde Industrie (HKI)—Director.

The International Viscose Co.—Member of board of directors.

Steenkohlvereeniging N. V.—Director.

J. G. Wiebenga

J. G. Wiebenga, as of 1939, was a member of the board of directors of Handel-Maatschappij H. Albert de Bary & Co. N. V., but does not appear to have retained this connection in 1941. He had formerly served as general manager of that bank. Wiebenga was one of the Dutch members of the board who in 1939 was appointed a

director of a holding company formed to cloak the German interests in Handel-Maatschappij H. Albert de Bary & Co., N. V. Wiebenga's connections as of 1941 were listed as follows:

N. V. Gemeenschappelijk Bezit von Aandeelen Maatschappij H. Albert de Bary & Co. N. V.—director.

Dordrechtsche Onderlinge Credietvereniging N. V., Dordrecht (mutual credit institution)—director.

N. V.'s Gravenhaagsch Kantoor-Mulie & Co. (administration office for securities and other assets)—director.

N. V. Nationale Maatschappij voor Kasgeldleeningen-Mulie & Co. (company for cash loans; interlocking directorates with N. V. 'sGravenhaagsche Kantoor-Mulie & Co. (see above))—director.

N. V. Administratie en Cultuurbank, Amsterdam (administration office for agricultural shares)—manager.

N. V. Administratiekantoor (Hagam) (Administration office)—director.

N. V. Administratiekantoor voor Publiek Fonds en andere Waarden (Apfond) (administration office for public and other securities; connected with N. V.'s Gravenhaagsch Kantoor-Mulie & Co. and N. V. Nationale Maatschappij voor Kasgeldleeningen (see above) through the interlocking directorates in the persons of G. E. F. M. van der Schriek, R. van Steeden, and J. G. Wiebenga)—director.

N. V. Internationale Beleggings Unie (Interunie) (investment company, managed by N. V. 'sGravenhaagsch Kantoor-Mulie & Co.)—Director; member of the supervisory committee.

N. V. Kooy & Co.'s Administratiekantoor, Amsterdam (administration office, connected with Nederlandsche Handel Maatschappij (see report on this bank))—director delegate.

N. V. Suikerfabriek (Krian), Amsterdam (development of the sugar factory of the same name in Sourabaya, Java)—manager.

N. V. Nederlandsch Indische Suiker Unie (NISU) The Hague (holding company for sugar enterprises in the Netherlands Indies)—director.

Suikercultuur Maatschappij N. V., Amsterdam (development and acquisition of sugar estates in Netherlands East Indies)—manager.

CONTINENTALE HANDELSBANK N. V.

A. ADDRESS, BRANCH OFFICE, CORRESPONDENTS

Address: 492-496 Keizergracht, Amsterdam.

Branch office: Rotterdam.

Correspondents:

New York City, United States of America, New York Trust Co.

Berlin, Germany, Reichs-Kredit-Gesellschaft A.G.

Brussels, Belgium, Banque de Bruxelles.

Copenhagen, Denmark, Den Danske Landmandsbank Hypothek-og Vekselbank.

Milan, Italy, Banca Commerciale Italiana.

Oslo, Norway, Den Norske Creditbank.

Paris, France, Credit Lyonnais.

Stockholm, Sweden, Skandinaviska Kreditaktiebolaget; Stockholms Enskilda Bank.

Zurich, Switzerland, Swiss Bank Corporation (Schweizerischer Bankverein); and Union de Banques Suisses (Schweizerische Bankgesellschaft).

B. NATURE OF BUSINESS

The Continentale Handelsbank N. V., hereinafter referred to as C. H. B., was established in 1919 by Hope & Co., private banking house of Amsterdam, and the Deutsche Kalisyndikat, the German potash syndicate, one of the strongest cartels in Germany. Its function has been to finance the foreign trade of the German interests in the Franco-German potash cartel and its activities, other than this, were of minor importance. It did participate to some extent in the investment market, and controlled three administration offices for handling securities which normally trade in international financial centers.

C. SIZE AND IMPORTANCE

From the point of view of capital size, C. H. B. is one of the smaller Dutch banks. Its importance lies in its direct connection with the Deutsche Kalisyndikat, and the important international group of enterprises, industrialists, and financiers associated with that cartel.

1. Relation to other banks or enterprises in Holland or the Dutch colonies

- (a) Hope & Co.
Address: 659 Postbus, Amsterdam.
Business: Private bankers.
Interest: Hope & Co. participated in the establishment of C. H. B. and is believed to hold an interest in it. Hope & Co. has two representatives on the board of C. H. B.
- (b) Kali Transport Gesellschaft G. m. b. H.
Address: Amsterdam.
Business: Transport company concerned with the shipment of potash.
Interest: C. H. B. is connected with this company through Deutsche Kalisyndikat.
- (c) Rembours-en-Industriebank N. V.
Address: 320-4 Heerengracht, Amsterdam.
Capital: Fl. 10,000,000.
Business: Acts as bank and financial agent in Holland for Societe Commerciale des Potasses d'Alsace, the distributing agency of the French potash syndicate, which through agreements and sales agencies is closely connected with the Deutsche Kalisyndikat.
Interest: Rembours-en-Industriebank is an affiliate of C. H. B.
- (d) N. V. Potash Export Mij.
Address: Amsterdam.
Business: This is a Dutch company organized by the Franco-German potash cartel, to handle potash sales in the United States.
Interest: C. H. B. was connected with this company through Deutsche Kalisyndikat.
- (e) Trustmaatschappij Curaçao II N. V.
Address: Keizersgracht 577-581, Amsterdam.
Capital: Fl. 15,000 (Fl. 11,400 paid in).
Business: Trust company.
Interest: Trustmaatschappij Curaçao II is connected with C. H. B. through interlocking directors, Jhr. H. M. van Loon and E. J. Dommering.
- (f) N. V. Internationale Wissel Bank
Address: Amsterdam.
Capital: Fl. 50,000.
Business: Commercial banking, and foreign exchange activities.
Interest: C. H. B. controls the Internationale Wissel Bank.
- (g) Administratiekantoor "Securitas"
Address: Amsterdam.
Capital: Authorized, G. 50,000; paid in, G. 5,000.
Business: Administration office for securities, acts as custodian, issues interim certificates, etc.
Interest: C. H. B. controlled this company, which has a subsidiary, the York Commercial Co., New York City.
- (h) Administratiekantoor "Feralde"
Business: Administration office for securities.
Interest: C. H. B. controls this company.
- (i) Administratiekantoor "Trubeka"
Business: Administration office for securities.
Interest: C. H. B. controls this company.
- (j) N. V. Aziatische Handelsmij. voor Meststoffen
Address: Amsterdam.
Capital: G. 200,000.
Business: Exportation of chemical fertilizer to the Netherland East Indies.
Interest: C. H. B. is reported to be closely connected with this enterprise, which is believed to be owned by the Deutsche Kalisyndikat.

(k) Consortium voor Internationale Financieringen (Confisi)

This is a holding company for approximately 490,000 shares of stock of an enterprise known as the American Potash & Chemical Co. The stock had been sold by the Consolidated Goldfields of South Africa. The capital of Confisi, amounting to Fl. 20,000, was paid by C. H. B., but three German potash companies, Wintershall A. G., Salzdstfurth, and Burbach Kaliwerke A. G., obtained an option to buy Confisi by creating with C. H. B. a time deposit equal to Confisi's capital. No information is available as to whether or not this transaction was consummated. Until 1940 C. H. B. was also connected with Burbach Kaliwerke, A. G., by way of an interlocking directorate in the person of Dr. Gerhard Korte.

2. *Relation of other banks or enterprises in countries other than Holland or the Dutch colonies*

(a) Deutsche Kalisyndikat

C. H. B., as stated above, was organized by Deutsche Kalisyndikat, and is controlled by it. The Deutsche Kalisyndikat is dominated by the Reich Government through the State of Prussia, one of the largest potash producers.

(b) Reichs-Kredit-Gesellschaft

Address: Berlin.

Capital: R.M. 50,000,000 (as of 1942).

Business: Reichs-Kredit-Gesellschaft is one of the large Berlin commercial banks, Government-owned.

Interest: C. H. B. had close relations with the Reichs-Kredit-Gesellschaft, through common control by the Reich.

(c) Wintershall A. G.

Address: 139 Hohengellenstraat, Kassel, Germany.

Capital: R.M. 150,000,000.

Business: The largest German potash producer and the most important single factor in the German potash cartel.

Interest: C. H. B. is reported to be closely connected with Wintershall A. G. Dr. August Diehn (deceased, 1942) who was a director of C. H. B. in 1940, was formerly chairman of Wintershall and until his death, was general manager of Deutsche Kalisyndikat.

3. *Activities under the occupation—German connections*

There are conflicting statements as to the distribution of control of C. H. B., but the general opinion is that the majority interest is held by Deutsche Kalisyndikat, and that minor participations are held by the Dutch private banking house, Hope & Co., which has close German connections, and by the Otto Wolff interests.

Control of C. H. B. is actually held by the Reich Government, which dominates Deutsche Kalisyndikat through the State of Prussia, one of the largest potash producers. In spite of its close connection with the Nazi government C. H. B. had, up to the time of the German invasion of Holland, a number of Jewish officials who, it was suspected, were allowed to hold office to conceal the Nazi character of C. H. B. and thus guard this bank against unpopularity. Following the invasion, Jewish managers were retired from the board, and were replaced by A. W. A. Meyer, a partner of the private banking firm of Hope & Co., Amsterdam, and a prominent Dutch financier.

Business of C. H. B. was at a low ebb during the German occupation as a result of the cessation of the export trade in German potash.

D. MANAGEMENT PERSONNEL

1. *Prior to occupation, 1939*

Management

Board of directors:

Jhr. H. M. van Loon, chairman.

Dr. A. Diehn.

O. Fleck.

E. Baron van Heerdt tot Eversberg.

Dr. Gerhard Korte.

E. J. Dommering.

Managers:

E. Frohnknecht.

Max L. Philippsohn.

Holders of procuration:

J. Mathot.

J. Querido.

P. J. Schmidt.

P. W. Vermeulen.

W. Benischek.

J. van Buuren.

G. Peter Fleck.

Ch. F. de Roo van Alderwerelt, Jr.

F. B. Wijchers.

2. Subsequent to occupation, 1940

The following changes took place subsequent to occupation. The board of directors and management personnel were reduced from eight to six, O. Fleck, Dr. G. Korte, and Max L. Philippssohn (a non-Aryan) being replaced by A. W. A. Meyer, a partner of Hope & Co., who acts both as delegate-director and manager. The retention of Dr. A. Diehn until the time of his death by C. H. B. kept the bank under the control of the Deutsche Kalisyndikat, while the appointment of A. W. A. Meyer provided a strong link with Hope & Co. The number of holders of procuration was reduced from nine to four retaining J. A. B. Mathot, J. van Buuren, Ch. F. de Roo van Alderwerelt, Jr., and F. B. Wijchers.

Board of directors:

Jhr. H. M. van Loon

Dr. A. Diehn (deceased, 1942)

E. Baron van Heerdt tot Eversberg.

E. J. Dommering.

A. W. A. Meyer (delegate)

Managers:

A. W. A. Meyer.

E. Frohnknecht.

Holders of procuration:

J. A. B. Mathot.

J. Van Buuren.

Ch. F. de Roo van Alderwerelt, Jr.

F. B. Wijchers.

3. Biographies of some members of the management group

E. J. Dommering

E. J. Dommering is a director of Continentale Handelsbank N. V., the Dutch bank for the International German Potash Syndicate, the Deutsche Kali-Syndikat. E. J. Dommering, together with another director of Continentale Handelsbank N. V., A. W. A. Meyer (Meijer), is also an official of Trust Maatschappij Curaçao, a N. W. I. company in which Continentale Handelsbank has an interest. The above-mentioned A. W. A. Meyer was appointed a director of Continentale Handelsbank N. V. a few months after the Nazi occupation of Holland. (See below for biography on A. W. A. Meyer).

E. J. Dommering, in addition to his connections discussed above, had as of 1941 affiliations with the following companies:

N. V. Landbouw Maatschappij "Batoe Djamoës" (holding company of rubber estates in Java)—Director.

N. V. Nederlandsche Indische Houtaankap-Maatschappij in liquidatie (lumber and logging company in Netherland Indies)—Member of board of liquidators.

Ernst S. Frohnknecht

Ernst S. Frohnknecht, manager of the Continentale Handelsbank, N. V., the Dutch bank of the German potash syndicate, is of German-Jewish origin. He went to Holland in 1899 and was naturalized in 1924. He is connected with a number of enterprises associated with the potash cartel.

In March 1940 Frohnknecht entered the United States on a visitor's visa but in February 1941 went to Canada and reentered the United States during the same month on an immigration visa. During his stay in the United States Frohnknecht was engaged in organizing the York Commercial Corp., a holding company for assets of the German potash syndicate.

Ernst Frohnknecht is now 75 years old. As of 1943 his address was given as 11 Broad Street, New York City.

His financial connections as of 1941 were reported as follows:

Continentale Handelsbank N. V. (connected with Deutsche Kalisyndikat)—Manager.

Internationale Wissel-Bank N. V. (international exchange bank)—Manager.

N. V. Administratie en Trustkantoor (Securitas) (administration office and trust company connected with Internationale Wissel Bank N. V. through interlocking directorates in the persons of E. Frohnknecht and J. W. Lansink)—Manager.

Administratie Maatschappij (Feralda) N. V. (administration office)—Manager.
Trust en Beleggingskantoor (Trubeka) N. V. (trust and investment company)—

Manager.
"Franubo" Handels en Beleggingskantoor N. V., Amsterdam (investment company)—Owner.

Algemeene Maatschappij voor Financiële Zaken "Algema," Amsterdam (personal holding company)—Sales manager and director, owning 50 percent interest.

N. V. Financiële Mij. "Torlowja," Amsterdam (personal investment company)—Holds controlling interests.

Verrekeningskantoor "Leata" N. V., Amsterdam (an accounting bureau for foreign exchange accounts for the German potash producing companies)—Manager.

J. A. B. Mathot

J. A. B. Mathot, in addition to being a holder of procuration for the Continentale Handelsbank N. V. in 1939 for both the main offices and branches, is manager of the German company (Ferlowja) (finance company).

A. W. A. Meyer (Meijer)

A. W. A. Meyer, a Dutch citizen, subsequent to 1939 became a deputy director of the Continentale Handelsbank N. V., German-controlled Dutch bank for the international potash syndicate which includes the Deutsche Kalisyndikat. In his other ties which are primarily in the field of finance and banking the name of A. W. A. Meyer is repeatedly associated with those of such persons as Jhr. H. M. van Loon, J. H. Scheepmaker and the German, Dr. A. Igleseder.

As of 1941 these connections of A. W. A. Meyer were as follows:

Continentale Handelsbank N. V.—Director.

Hopam Trust Compagnie N. V.—Director. This trust company, which is under the custodianship of the German, Dr. A. Igleseder, is connected with N. V. Trust Maatschappij Curacao I through an interlocking directorate in the persons of Jhr. H. M. van Loon, A. W. A. Meyer, and J. H. Scheepmaker.

N. V. Trust Maatschappij Curacao I—Director. This trust company is connected with Hopam Trust Compagnie N. V. through an interlocking directorate in the persons of Jhr. H. M. van Loon, A. W. A. Meyer, and J. H. Scheepmaker.

N. V. Tweede Administratiekantoor van Binnen en Buitenlandsche Fondsen—Director. This is an administration office for domestic and foreign securities connected with Hopam Trust Compagnie and N. V. Trust Maatschappij Curacao I through an interlocking directorate in the persons of Jhr. H. M. van Loon, A. W. A. Meyer, and J. H. Scheepmaker.

Hope & Company—Holder of procuration. This is a Dutch private banking house which has German financial connections in addition to its connections with Hopam Trust Compagnie N. V., N. V. Trust Maatschappij Curacao I, and N. V. Tweede Administratiekantoor van Binnen en Buitenlandsche Fondsen through an interlocking directorate in the persons of Jhr. H. M. van Loon, J. H. Scheepmaker, and A. W. A. Meyer.

Max L. Philippssohn

Max L. Philippssohn, as of 1939, was one of the managers of Continentale Handelsbank N. V., the Dutch bank of the German potash syndicate. In 1940, however, Philippssohn was removed from this position as a non-Aryan, and according to latest reports is in New York City. Until 1940 Philippssohn, in addition to his connection with Continentale Handelsbank, was managing director of the Internationale Wissel-Bank and of the securities company, Administratie en Trustkantoor "Securitas," both of which were controlled by Continentale Handelsbank.

E. Baron van Heerdt Tot Eversberg

E. Baron van Heerdt Tot Eversberg was a director of Continentale Handelsbank N. V. in 1939 and continued to act in this capacity as of 1941. This is the Dutch bank for the German potash syndicate.

Eversberg was also officially connected with a number of Dutch industrial organizations. He is a member of the old Dutch nobility, but without financial means, who reportedly has made his living by holding directorships to represent German interests in Dutch companies. One of the interests which he is said to represent in this manner, in addition to the Continentale Handelsbank N. V.,

is N. V. Wodan Handel-Maatschappij of Rotterdam, a strongly German enterprise closely connected with the large German steel combine, Vereinigte Stahlwerke A. G. of Essen. Eversberg's official connections as of 1941 were reported as follows:

Continentale Handelsbank N. V.—Director.

N. V. Staalwerken "De Maas," Maastricht—Director. A company engaged in the manufacture of iron and steel piping by the "Schweissen" (welding) process.

N. V. Vereenigde Blikfabrieken, Amsterdam—Secretary to the board of directors. This company, which manufactures tinware, was established in 1912 as a result of a merger of the following Dutch tin factories: Verwer's Fabrieken, N. V. Zaanlandsche Blikfabriek, and N. V. Weesper Blikfabrieken; and as of 1941 it controlled (1) Dordrechtsche Metaalwarenfabriek, formerly Widow J. Bekkers & Son, (2) N. V. de Vereenigde Automatenfabrieken VAF, the latter of which was active as an outlet company for automat equipment.

N. V. Cultuur Maatschappij "Tjilangkap," Amsterdam—Director. A tea and rubber plantation.

Holland Dakota Landbouw Compagnie N. V., Amsterdam—Director. A concern which handled real estate in North Dakota, United States, and also dealt in the promotion of agricultural and industrial enterprises.

N. V. Nederlandsche Tramweg-Maatschappij, Heerenveen—Director. A company operating tramways and bus lines in the northern provinces of Holland.

HUGO KAUFMANN & Co.'s BANK N. V.

(Liquidated under anti-Jewish laws, and replaced in 1942 by the newly created Rijnsche Handelsbank)

A. LOCATION, BRANCH OFFICES, NEW YORK CORRESPONDENTS

Address: 8-10 Vijgendam, Amsterdam.

New York correspondents: New York Trust Co., Bank of the Manhattan Co., Chase National Bank, Irving Trust Co., National City Bank, Manufacturers Trust Co.

B. NATURE OF BUSINESS

Hugo Kaufmann & Co.'s Bank N. V., hereinafter referred to as H. K. C., did a general banking and investment business. It controlled several security administration offices (Administratiekanteren), and was active in normal times in the purchase and sale of securities. In 1939 H. K. C. sustained serious losses occasioned by the drop in prices of European securities, following the outbreak of war. As shown below, its assets were reduced, in that year, by nearly Fl. 7,000,000.

C. SIZE AND IMPORTANCE

H. K. C. was a relatively small bank, important chiefly for its close connections in British and German financial centers.

1. Relation to other enterprises or banking institutions in Holland or the Dutch colonies

(a) *Rijnsche Handel-Maatschappij* (or Handelsbank)

Address: 8-10 Vijgendam, Amsterdam.

Business: This institution was established in 1942 as a subsidiary of the Commerz Bank of Berlin, and located in the building of H. K. C. When the latter was liquidated under the anti-Jewish laws, Rijnsche Handelsbank took over such part of H. K. C.'s business as was not transferred elsewhere.

(b) *N. V. Administratiekantoor "Austria"*

Address: Hermietenstraat 3, Amsterdam.

Capital: Fl. 500,000 authorized (Fl. 100,000 paid in).

Business: Administration office (as the name indicates probably dealing with securities of Austrian enterprises).

Interest: Was controlled by H. K. C. and connected with it through an interlocking directorate in the persons of H. Kaufmann and L. Berliner.

(c) 's Gravenhaagsch Kantoor-Mulie & Co.

Address: Parkstraat 30, The Hague.

Capital: Fl. 100,000 authorized (Fl. 50,000 paid in).

Business: Banking house (trust company and securities brokerage house).

Interest: Connected with Hugo Kaufmann & Co.'s Bank N. V. through interlocking directorate in the persons of G. E. F. M. van der Schriek, R. van Steeden, and J. G. Wiebenga.

(d) *Administratiekantoor "Gaudium"*

Address: 1 Hermietenstraat, Amsterdam.

Capital: Fl. 10,000.

Business: Administration office for securities.

Interest: H. K. C. controlled this enterprise, which was directed by Hugo Kaufmann.

(e) *Administratiekantoor "Oranje-Nassau"*

This administration office for securities was controlled by H. K. C.

2. Relation to other enterprises or banking institutions outside of Holland or the Dutch colonies

(a) *Commerz Bank*

Address: Berlin.

Capital: RM. 100,000,000.

Business: Commercial bank.

Interest: Prior to the commencement of World War II it was reported that the Commerz Bank, together with the Dresdner Bank, owned a 48-percent interest in H. K. C. It was later stated, however, that this interest had been transferred to S. Japhet & Co., Ltd., of London, in exchange for blocked Reichsmarks. S. Japhet & Co., however, was reported to be only the nominal owner, while Rothschild interests were the actual owners. The Rijnsche Handelsbank, which was created to take over the business of H. K. C. when the latter was liquidated in 1942, however, is called a subsidiary of the Commerz Bank. This would appear to indicate that the Commerz Bank had retained an interest in H. K. C.

(b) *Dresdner Bank*

Address: Berlin.

Capital: RM. 150,000,000.

Business: Commercial banking.

Interest: The Dresdner Bank, together with the Commerz Bank, was reported to hold a 48-percent interest in H. K. C. (see statement above, under heading Commerz Bank).

(c) *S. Japhet & Co., Ltd.*

Address: London.

Capital: £1,300,000 (paid in).

Business: Private bankers.

Interest: It was reported, prior to World War II, that H. K. C. was a controlled subsidiary of S. Japhet & Co., Ltd. This control would appear, however, to have been an attempt to cloak the German interest in H. K. C.

3. Activities under the occupation—German connections

For a long period of time H. K. C. appears to have had very close business relations with the Commerz Bank of Berlin. As late as 1936 it was reported that the Commerz Bank and Dresdner Bank together held a 48-percent interest in H. K. C. A later report was to the effect that this interest had been sold to S. Japhet & Co. Ltd., banking house of London, which had made the purchase with blocked reichsmarks. Other reports stated that S. Japhet & Co. was only the nominal owner of H. K. C., although the London house was operating H. K. C. as a subsidiary, and that the Rothschild interests of London were the real owners.

It would appear possible that the reports regarding British ownership represented an attempt to cloak the German interest in H. K. C. That the Commerz Bank at least had retained some interest in H. K. C. is indicated by the fact that in 1942 the Commerz Bank established a subsidiary, the Rijnsche Handelsbank, with offices in the building of H. K. C., to take over a part of the business of the latter, which was being gradually liquidated under the anti-Jewish laws. In H. K. C., as in other German-controlled banks in Holland, the retention of Jewish officials until after the occupation, appears to have been another means through which it was sought to conceal German interest. There is known to have been a strong feeling on the part of the public against German ownership of certain institutions, particularly after the beginning of German aggressions in Europe.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

Management

Board of directors:

P. Lindenberg, chairman.
H. van Beek
M. Fontheim

Sir William Max-Muller
G. E. F. R. van der Schriek
J. C. C. Baron van Till

Mangers:

H. Kaufmann
L. Berlinger

G. Lust

Assistant managers:

Dr. H. L. Heiden-Heimer
P. J. Reinstra

K. J. H. Verschoof.

Holders of procuration:

W. Gerath
H. Hartmann
E. Schadek
B. Schuster
R. Spiegel

W. Steiner
R. Yntema
H. J. Weverink
R. J. Lak

2. Subsequent to occupation 1941

After the occupation of Holland certain changes took place in the management personnel of H. K. C.; G. Lust, H. K. C.'s representative in New York City, was replaced by A. E. Meckmann; P. J. Reinstra was dismissed from his post as an assistant manager, and W. Malletke was appointed by German authorities to the then newly created office of Custodian for Enemy Property.

Board of directors:

P. Lindenberg, chairman
H. van Beek
M. Fontheim

Sir William Max-Muller
G. E. F. M. van der Schriek
J. C. G. Baron van Till

Managers:

H. Kaufmann
L. Berliner

A. E. Meckmann

Assistant managers:

Dr. H. L. Heiden-Heimer

K. J. H. Verschoof

Holders of procuration:

W. Gerath
H. Hartmann
E. Schadek
D. Schuster
R. Spiegel

W. Steiner
R. Yntema
H. J. Weverink
B. J. Lak

Custodian for Enemy Property (appointed by German authorities):

W. Malletke

3. Biographies of some members of management group

L. Berliner

L. Berliner, a manager of Hugo Kaufmann & Co.'s Bank N. V., was appointed to this office in 1933. Formerly he was a director of the large German bank, Commerz & Privatbank, A. G. Berlin, as well as of N. V. Handelsmaatschappij "Britannica" (Britannica Trading Co.).

As of 1941 his financial interests in Holland were as follows:

Hugo Kaufmann & Co.'s Bank N. V. (private bank connected with Commerz Bank and/or Dresdner Bank interests through Rijnsche Handelsbank)—**Manager.**

N. V. Administratiekantoor "Austria" (administration office which is connected with Hugo Kaufmann & Co.'s Bank N. V. by way of an interlocking directorate in the persons of H. Kaufmann, L. Berliner, and K. J. H. Verschoof)—**Director delegate.**

Max Fontheim

Max Fontheim is a director of Hugo Kaufmann & Co.'s Bank N. V. which, since the occupation, has been under the control of the Rijnsche Handelsbank, a subsidiary established by the Commerz Bank in 1942; and according to certain reports the title of Kaufmann & Co.'s Bank N. V. has been changed to Rijnsche Handelsbank.

Max Fontheim is also a managing director of S. Japhet & Co. which, according to certain reports, bought up a percentage of the German holdings in Kaufmann & Co.'s Bank N. V. and for a time operated this Dutch bank as a subsidiary on behalf of the real owners, the Rothschild interests of London.

Hugo Kaufmann

Hugo Kaufmann was, in 1939 and 1941, manager of the Hugo Kaufmann & Co.'s Bank N. V.

Hugo Kaufmann's financial affiliations, as of 1941, were reported as follows:

Banks.—Hugo Kaufmann & Co.'s Bank N. V. (private bank under German custodianship)—Manager.

N. V. Administratiskantoor (Austria) (securities administration office connected with Hugo Kaufmann & Co.'s Bank N. V. through interlocking directorates in the persons of H. Kaufmann, L. Berlinger, and E. J. H. Verschoof)—Director delegate.

N. V. Administratiekantoor (Gaudium) (securities administration office)—Manager.

N. V. Industriele Trust en Handelmaatschappij (trust company for industrial and commercial enterprises, under custodianship of W. Malletke, appointed by occupation authorities)—Manager.

N. V. Trust en Administratiekantoor (Fortuna) (trust company and administration office)—Manager.

Paul Lindenberg

Paul Lindenberg was chairman of the board of Hugo Kaufmann & Co.'s Bank N. V. in 1939 and continued to hold this post in 1941 until the bank was put into liquidation and the major part of its assets taken over by Rijnneche Handels Bank (Rhine trading bank), a subsidiary of the Commerz Bank of Berlin. Lindenberg also acted as managing director of S. Japhet & Co., Ltd., of London, which before its liquidation reportedly held at least the nominal control of the Kaufmann Bank.

Prior to the outbreak of World War II, Lindenberg was connected with a number of foreign industrial and financial enterprises. As of 1941, however, his only connection other than that with the Kaufmann Bank was with Nederlandsche Crediet en Financiering Maatschappij, finance and credit institution, of which he was a director.

Georg Lust

Georg Lust, formerly a director of the Commerz Bank of Berlin, became a general manager of Hugo Kaufmann & Co.'s Bank in 1938, and continued to hold that post until 1941. In September 1939 he came to the United States, apparently to take part as a representative of the Kaufmann Bank in the establishment of the American-Dutch Trading Co., Inc., at 52 Broadway, New York City. He served as vice president and treasurer of that enterprise, which was established to handle certain affairs for the bank in the United States. Lust was still in this country as late as December 1941 and receiving mail for the Kaufmann Bank. By that time, however, Hugo Kaufmann & Co.'s was being gradually liquidated and the major part of its assets taken over by the Rijnneche Handels-maatschappij, a subsidiary of the Commerz Bank of Berlin.

W. Malletke

W. Malletke is the custodian appointed by the German authorities in 1941 for Hugo Kaufmann & Co.'s Bank. As of 1941 Malletke was serving in this same capacity for the banks and securities companies listed below:

N. V. Algemeene Beleggings Maatschappij, The Hague (a general investment company).

N. V. Amsterdamsche Beheerscompagnie A. B. C., Amsterdam (a company managing securities of French and Luxembourg enterprises).

N. V. Bank en Handelmaatschappij (Oliemolen) Amsterdam (a credit institution connected with Hamburger & Co.'s Bankierskantoor).

N. V. Bank voor Belegging op langen Termijn, Amsterdam (a credit institution for long-term loans).

Bax' Bank N. V., The Hague (a private bank).

N. V. Centrale Maatschappij voor Fondsenhandel, Amsterdam (a securities brokerage house connected with Hamburger & Co.'s Bankierskantoor through interlocking directorates in the persons of G. Hamburger, A. Hamburger, H. Hamburger, and C. F. Hamburger).

N. V. Commissie en Handelsbank, Amsterdam (a credit institution and commission house).

N. V. Effecten en Trust Maatschappij, Amsterdam (a securities and trust company, connected with Hamburger & Co.'s Bankierskantoor through interlocking directorates of G. Hamburger, A. Hamburger, C. F. Hamburger).

Arnold Gilissen's Bank N. V., Rotterdam (a private banking house).

N. V. Hamburger & Co.'s Bankierskantoor, Amsterdam (a private banking house).

N. V. Handelmaatschappij (de Amstel), Amsterdam (a commercial credit institution, connected with Hamburger & Co.'s Bankierskantoor through interlocking directorates in the persons of G. Hamburger, A. Hamburger, and L. Hamburger).

N. V. Internationale Beleggings Maatschappij Amsterdam (an investment company for foreign securities, connected with the Hamburger & Co.'s Bankierskantoor through interlocking directorates in the persons of G. Hamburger and A. Hamburger).

N. V. Internationale Maatschappij voor Financiële Zaken "IMAFIZA," Amsterdam (an international finance company).

Labouchere & Co. N. V., Amsterdam (a banking house).

Westersche Bank N. V. Amsterdam (controlled by the wealthy French Jewish family de la Meurthe).

Administratiekantoor voor Publieke Fondsen en andere Waarden "NOBRA" N. V., Breda (an administration office, connected with the private banking house, Van Mierlo en Zoon N. V., through interlocking directorates in the persons of A. A. J. van Mierlo and G. E. F. M. van der Schriek).

N. V. Fondsen en Trust Maatschappij, Amsterdam (a securities and trust company, connected with Hamburger & Co.'s Bankierskantoor through interlocking directorates in the persons of G. Hamburger and A. Hamburger).

N. V. Industriële Trust en Handelmaatschappij, Amsterdam (a trust company handling securities of industrial and commercial enterprises, connected with Hugo Kaufmann & Co.'s Bank N. V. through its manager, Hugo Kaufmann).

Vereenigde Kantoor voor Administratie N. V., Amsterdam (associated administration offices, connected with Hamburger & Co.'s Bankierskantoor through interlocking directorates in the persons of G. Hamburger, A. Hamburger, and H. Hamburger of Paris).

Sir William Grenfell Max-Muller

Sir William Grenfell Max-Muller was a member of the board of directors of Hugo Kaufmann & Co.'s Bank N. V. from 1935 to 1941, inclusive.

Max-Muller was formerly a director of the Corporation of Foreign Bondholders and affiliated with a number of foreign companies including the Bagdad Light & Power Co., Ltd., and the British & Polish Trade Bank, A. G.

A. E. Meckmann

A. E. Meckman, who in 1941 was one of the managers of Hugo Kaufmann & Co.'s Bank, N. V., had been appointed to that post in 1940. Meckman was formerly with the Credit Anstalt of Vienna and later with the banking firm, Labouchers & Co.

H. van Beek

H. van Beek in 1941 was a director of the German-controlled institution, Hugo Kaufmann & Co.'s Bank N. V., a position to which he had been elected in 1933. Van Beek was a partner of A. L. van Beek, wholesale tobacco dealers of Rotterdam and may still retain this connection.

G. E. F. M. van der Schrieck

G. E. F. M. van der Schrieck has been a director of Hugo Kaufmann & Co.'s Bank (now known as the Rijnsche Handelsbank and a subsidiary of the German Commerz Bank) since 1939.

As of 1940 van der Schrieck's known business connections which were in the field of banking and finance were as follows:

Van Mierlo & Zoon N. V., Breda (private banking house)—Director.

Nationale Maatschappij voor Kaskeldelingen-Mulie & Co., N. V. (financial clearing house)—Director.

'sGravenhaagsch Kantoor voor Fondsen en Vermogensbeheer (a securities administration office)—Director.

Administratiekantoor voor Publieke Fondsen en Andere Waarden "Apfond," N. V. (a securities administration office)—Director.

Administratiekantoor voor Publieke Fondsen en Andere Waarden "Gelfo" (a securities administration office)—Director.

Administratiekantoor voor Publieke Fondsen en Andere Waarden "Nobra," N. V., Breda (a securities administration office)—Director. Under the occupation the German, W. Malletke was appointed Custodian of this administration office. (See biography on W. Malletke.)

Baron J. C. C. van Till

Aside from his associations maintained as a director of Hugo Kaufmann & Co.'s Bank N. V., Baron van Till's primary business connection is with the private banking house of Oppenheim & van Till, of which he is a partner. This firm is located at The Hague.

N. V. HOLLANDSCHE KOOPMANSBANK

A. LOCATION, UNITED STATES CORRESPONDENTS

Address: 674 Keizersgracht, Amsterdam (in June 1940 the bank's domicile was transferred to Willemstad, Curacao).

New York correspondents: Central Hanover Bank & Trust Co., Bank of the Manhattan Co., Guaranty Trust Co.

B. NATURE OF BUSINESS

N. V. Hollandsche Koopmansbank, hereinafter referred to as N. V. H. K., is a small commercial bank which even before the German occupation of Holland functioned chiefly in financing German trade and industrial enterprises.

C. SIZE AND IMPORTANCE

N. V. H. K. is one of the smaller commercial banks of Holland. Its importance lay in its close connection with powerful international financial interests, and in its strong directorate.

1. Relation to other banks or enterprises in Holland or the Dutch colonies

(a) *Amsterdamsche Bank N. V.*

Address: 595 Heerengracht, Amsterdam.

Capital: Fl. 55,010,000 (paid in).

Business: Large commercial bank.

Interest: The Amsterdamsche Bank participated in the reestablishment of N. V. H. K. after the failure of the Kreuger interests, the founders of N. V. H. K. At one time the Amsterdamsche Bank was reported to hold a 25-percent interest in N. V. H. K.

(b) *Gebroeders Wolff Hzn. & Co.*

Address: 674 Keizersgracht, Amsterdam.

Business: Securities brokerage house.

Interest: Gebroeders Wolff Hzn. & Co. is connected with N. V. H. K. through interlocking directors in the persons of G. M. Fritze and H. F. van Meer.

(c) *Algemeene Societeit voor Administratie en Trustzaken*

Address: 674 Keizersgracht, Amsterdam.

Capital: Fl. 50,000.

Business: Administration office and trust company.

Interest: This enterprise is connected with N. V. H. K. through interlocking directors in the persons of G. M. Fritze and H. F. van Meer.

(d) *Handelsbank-Unie, Amsterdam*

Address: 674 Keizersgracht, Amsterdam.

Capital: Authorized, Fl. 1,000,000; paid in, Fl. 700,000.

Business: This is the Dutch subsidiary of the Berliner Handels-Gesellschaft.

Interest: The Handelsbank-Unie is believed to have acted for the Berliner Handels-Gesellschaft in the reorganization of N. V. H. K. in 1935, and it is possible that the Berliner Handels-Gesellschaft may control N. V. H. K. through Handelsbank-Unie.

2. *Relation to other banks or enterprises outside of Holland or the Dutch colonies*

(a) *Berliner Handels-Gesellschaft*

Address: Berlin, Germany.

Capital: R.M. 28,000,000.

Business: Commercial bank; the smallest of the large Berlin banks.

Interest: The Berliner Handels-Gesellschaft was one of a group of banks which reorganized N. V. H. K. in 1935 after the failure of the Kreuger interests which prior to that time had controlled N. V. H. K. Reports as to the extent of the Berliner Handels-Gesellschaft's interest in N. V. H. K. vary greatly but it is believed to represent an important percentage of control. This control is believed to have been increased since the German occupation of Holland, either through the acquisition of additional amounts of the stock of N. V. H. K. or through closer supervision of N. V. H. K. by officials of the Berliner Handels-Gesellschaft.

(b) *Stockholms Enskilda Bank Aktiebolag*

Address: Stockholm, Sweden.

Capital: Kr. 45,000,000 (paid in).

Business: Commercial bank with extensive international connections.

Interest: Stockholms Enskilda Bank participated in the reorganization of N. V. H. K. in 1935 and has maintained a close connection with it.

(c) *I. G. Farbenindustrie A.G.*

Address: Frankfurt, Germany.

Capital: R.M. 720,000,000 (1940).

Business: Chemical combine.

Interest: N. V. H. K. is known to have very close business relations with I. G. Farben, and is said to be the principal Dutch banking connections of the Farben group. We have received reports that G. M. Fritze, a prominent member of the board of N. V. H. K., is the confidential agent throughout Europe of I. G. Farbenindustrie.

(d) *Deutsche Golddiskontbank (Dego)*

Address: Berlin.

Capital: R.M. 600,000,000.

Business: This is a private corporation and a subsidiary of the Deutsche Reichsbank, the German central bank, which owns the greater part of its capital stock. It supplements the activities of the Reichsbank, taking up foreign credits, holding capital participations in large German credit institutions, etc.

Interest: We have received reports that through G. M. Fritze, a director of N. V. H. K. and reportedly the European agent of the I. G. Farbenindustrie, N. V. H. K. became the Dutch agent for the Deutsche Golddiskontbank.

(e) *Holland American Merchants Corporation*

Address: New York City, N. Y.

Interest: It was announced by the Royal Netherlands Legation in June 1940 that the above-mentioned enterprise had been established to take over funds transferred from N. V. H. K. In 1941, however, G. M. Fritze, delegate on the board of N. V. H. K., was appointed agent in the United States, with offices at 20 Exchange Place, New York City.

3. *Activities under the occupation—German connections*

The entire history of N. V. H. K. is primarily tied up with German interests, although it was originally established in 1922 by the Kreuger interests. In 1935, after the Kreuger failure, N. V. H. K. was reorganized under the auspices of Handels-Unie, a Dutch subsidiary of the Berliner Handelsgesellschaft. It functioned chiefly, even before German occupation, in financing German trade and business in Holland.

It has been said that the condition of N. V. H. K. after the Kreuger and Toll debacle was good; its position was further strengthened in 1937 by the absorption of the Internationale Bank N. V. of Amsterdam. In taking over this bank N. V. H. K. added several of the Internationale Bank's officials to its directorate and is said in this way to have acquired an extremely strong board.

As in the case of several of the reportedly German-controlled banks in Holland there have been a number of conflicting stories as to the controlling interests in N. V. H. K. So far as can be ascertained, however, the majority control rests in the hands of the Berliner Handelsgesellschaft which, according to one report, held in 1941 a very substantial participation in N. V. H. K. It was reported in

1943 that after the occupation of Holland the Berliner Handelsgesellschaft broaden its influence in N. V. H. K.

It is known also that N. V. H. K. has long been very close to I. G. Farbenindustrie and has handled a large part of this firm's business in Holland. It is possible that the participation in N. V. H. K., which is nominally held in the name of Berliner Handelsgesellschaft, actually belongs to I. G. Farbenindustrie. Berliner Handelsgesellschaft, known as the Bankers' Bank, has always had close association with I. G. Farbenindustrie.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

Management:

Board of directors:

S. de Vries.	Ph. Mees.
G. M. Fritze.	H. A. van Nierop.
P. Hofstede de Groot.	Maur. Philipson.
H. Furstenberg.	Hans Weltzien (a German, ap-
H. F. van Leeuwen.	pointed an official of N. V. H. K.
W. M. Houwing.	during 1939).
Robert May.	

Manager:

H. F. van Meer.

Holders of procuration:

J. R. Asser.	A. E. Rahusen.
J. H. Druyff.	O. Rosenberg.
J. Eskens.	Chr. Schwencke.
P. Klokkemeyer.	K. V. Testa.

2. Subsequent to occupation, 1941

Between 1939 and 1941 the following changes were effected in N. V. H. K.'s management personnel: H. Furstenberg, Robert May, and H. A. van Nierop and S. de Vries were dismissed from the board of directors. S. de Vries remained with the bank as a holder of procuration and J. Eskens, a holder of procuration, was promoted to the office of assistant manager.

Holders of procuration:

J. R. Asser.	Chr. Schwencke.
J. H. Druyff.	K. V. Testa.
A. E. Rahusen.	S. de Vries.
O. Rosenberg.	

3. Biographies of some members of management group

G. M. Fritze

G. M. Fritze, an official of N. V. Hollandsche Koopmansbank, is a former German national who became a naturalized citizen of Holland at sometime prior to 1938. Fritze is well known in Dutch commercial and banking circles and has established and maintained important connections in Germany.

We have received reports that before the outbreak of World War II, Fritze became confidential agent in Europe of the I. G. Farbenindustrie, and it is believed that he is largely responsible for having formed the close ties which exist between that firm and Hollandsche Koopmansbank. Fritze and the Koopmansbank hold interests in enterprises on behalf of I. G. Farben. For example, one of the companies in which Fritze and the Koopmansbank hold 85 percent of the shares in Mapro (N. V. Maatschappij tot Bevordering van de Fabricatie van en den Handel in Producten der Chemische Industrie in Nederland en v Kolonien, Amsterdam), a Dutch company which assists in the distribution of the products of I. G. Farben. In March 1940 Fritze was present at a special meeting of the board of directors of Ozalid Corp., a General Aniline & Film subsidiary in the United States. At that meeting Ozalid decided to export its products to the licensees of the German company, Kalle & Co., which could no longer be supplied from Germany.

Fritze is also credited with having arranged for the Hollandsche Koopmansbank to act as the chief Dutch agent of the Deutsche Golddiskontbank of Berlin, subsidiary of the German central bank.

Following the German invasion of Holland, Fritze was appointed representative of Hollandsche Koopmansbank in New York, and remained in or around New York until 1944 when he left the United States and went to Madrid. It is reported that he recently returned to this country.

Fritze's financial connections were reported as follows in 1942:

Financial.—N. V. Hollandsche Koopmansbank (connected with Berliner Handelsgesellschaft)—director delegate.

Algemeene Societeit voor Administratie en Trustzaken N. V. (administration office and trust company)—director.

Gebroeders Wolff Hzn & Co. (securities brokers, connected with Hollandsche Koopmansbank and Algemeene Societeit voor Administratie en Trustzaken (see above) through interlocking directorates in the persons of G. M. Fritze and H. F. van Meer Meet)—manager.

Hans Furstenberg

Hans Furstenberg, a managing partner in the Berliner Handelsgesellschaft and a manager of N. V. Hollandsche Koopmansbank in June 1939, came to Holland sometime in the 1930's and was presumably connected with the Handels-Unie, Dutch subsidiary of the Berliner Handelsgesellschaft. He appears to have been active in arranging for the taking of a participation by the Berliner Handelsgesellschaft in Hollandsche Koopmansbank, and it was believed at one time that he himself might have a financial interest in the Dutch Bank.

Furstenberg as well as G. M. Fritze, confidential agent in Europe for I. G. Farbenindustrie and also an official of Hollandsche Koopmansbank, was believed to have been active in securing German business for the Dutch institution.

P. Hofstede de Groot

P. Hofstede de Groot, the general manager of the Amsterdamsche Bank N. V., has held this post for 8 or 9 years prior to 1939. He has been chairman of the managing committee since 1936 and when a merger of the Amsterdamsche Bank N. V. with the Rotterdamsche Bankvereeniging was contemplated in 1939 he was reported determined to remain the general manager of the Amsterdamsche Bank N. V. In December 1939 however, the post went to G. M. Verrijn Stuart, who took the place left vacant by the dismissal of H. A. van Nierop (see biography on van Nierop).

Hofstede de Groot had not only numerous banking connections but had also interests in the shipping and brewery industries. His connections as of 1941 were as follows:

Amsterdamsche Bank N. V.—Manager.

Valuta-Kas N. V. (bank)—Director.

Hollandsche Koopmansbank N. V. (in 1941 the large German bank Berliner Gesellschaft had a controlling participation).

Bank van Doijer & Kalff N. V. (private banking house)—Director.

Bank van Haffmans & Steegh N. V. (private banking house)—Director.

Noord Hollandsche Landbouwercredit N. V. (agricultural credit institution)—Director.

N. V. Financiële Maatschappij voor Nijverheids Ondernemingen (finance company for industrial enterprises)—Member of management committee.

Rijkspostspaarbank (State Postal Savings Bank)—Member of advisory committee.

N. V. Administratiekantoor van vijf percents Cumulatieve Preferente Aandeelen Serie B in the American Smelters Securities Co. (company for the administration of 5 percent cumulative preferred shares, series B, of the American Smelters Co.)—Member of management committee.

N. V. Nederlandsche-Amerikaansche Stoomvaart Maatschappij (shipping)—Vice chairman of the board.

Van Vollenhoven's Bierbrouwerij N. V. (brewery)—Director.

Wesselius Marcus Houwing

Wesselius Marcus Houwing, a manager of the Amsterdamsche Bank, N. V., began his career with this institution in 1919 and was appointed to his present post in 1932. Houwing is an important figure in the Dutch financial world and in 1929 was Amsterdamsche Bank's representative on the board of Amsterdamsche Trust Compagnie, which has connections with Bank für Handel und Industrie, Berlin. His business and financial connections as of 1941 were as follows:

Amsterdamsche Bank N. V.—Manager.

Amsterdamsche Bankiersvereeniging (bankers association)—Manager.

Vereeniging voor Deviezenbanken (association of banks holding "deviezen" accounts)—Manager.

Commissie voor Incassozaken (committee to handle cash accounts)—Amsterdamsche Bankiersvereniging's delegate on this committee.

Vereeniging voor den Wisselhandel (association dealing in drafts and acceptances)—Manager.

Hollandsche Koopmansbank N. V. (Berliner Handelgesellschaft acquired a controlling participation in this bank in 1941)—Director.

N. V. Financieele Maatschappij voor Nijverheids Ondernemingen (an industrial finance company)—Director.

N. V. Administratiskantoor van vijf Percents Preferente Aandeelen in de Missouri Pacific Railroad Co. (an administration office which manages 5 percent preferred shares of Missouri Pacific Railroad)—Director.

Waarborg en Trustmaatschappij N. V. (guaranty and trust company)—Director.

N. V. Magazyn "De Bijenkorf" (one of Holland's largest chain department stores)—Director.

Robert May

Robert May was a director of N. V. Hollandsche Koopmansbank in 1939, but ceased to hold this position after the occupation of Holland; he was also a manager of Lippmann, Rosenthal & Co. until this Dutch Jewish private banking firm was taken over by the German Civil Administration authorities, aryanized, placed in charge of the German A. Flesche (formerly of the notoriously Nazi collaborationist bank, Rhodius Koenigs Handelsmaatschappij, N. V.) and designated as the Holland Bank to act as the reception center for confiscated Jewish assets.

Although the name of Robert May appears on 1941 directorate listings for Lippmann, Rosenthal & Co. as well as for other Dutch financial institutions and enterprises, it has been reported that he was sent to a concentration camp at the time of the reorganization of Lippmann, Rosenthal & Co. and another member of his family. Paul May, who was also an official of the same bank as of 1939, killed his wife and himself.

Robert May, the son of an old and socially prominent Dutch family, was born in 1873 in Amsterdam. After attending trade school in that city he continued his education abroad and returned to become a manager of Lippmann, Rosenthal & Co.

His last known address is Huize Zandbergen, Huister Heide bij Zeist.

As of 1941 Robert May's listed connections were as follows:

Lippmann, Rosenthal & Co.—Director.

N. V. Rouppe van der Voort's Industrie en Metaalmaatschappij (articles of lead and tin and iron)—Director-president.

Amstelhotel—Director.

Levers' Zeep Maatschappij—Director.

Westersche Bank N. V.—Director.

N. V. Hollandsche Assurantie Societeit von 1841 (insurance)—Director.

N. V. Maatschappij "Het Nederlandsche Sportpark" (ball park)—Director.

Philipp Mees

Philipp Mees, a director of Hollandsche Koopmansbank in 1941, has held that position at least since 1938. Mees is a partner of R. Mees & Zonen, one of the oldest and most important of the Dutch private banks and one of the few institutions in this category which was favored by the German authorities by being authorized to act as a foreign exchange bank, a privilege otherwise reserved to the eight largest banking corporations.

Mees is prominent in Amsterdam banking circles; is connected with a number of industrial and financial enterprises, and a member of the Bankers Association of Amsterdam. His affiliations as of 1941 were as follows:

Hollandsche Koopmansbank—Director.

R. Mees & Zonen (private bankers)—Partner.

Rotterdamsche Hypotheekbank voor Nederland (mortgage bank)—Director.

Bankers Association of Amsterdam—Member.

N. V. Nederlandsche Gist-en Spiritusfabriek (yeast and alcohol factory)—Director.

N. V. Nederlandsche Scheepvaart-Unie (shipping association)—Director.

A. E. Rahusen

A. E. Rahusen, as of 1939, was a holder of procurator for the German-controlled bank, *Hollandsche Koopmansbank*, and continued to act in this capacity in 1941. Rahusen is also acting as liquidator of the private banking house, *N. V. Bankierskantoor Lisser en Rosenkranz*.

H. F. van Meer

H. F. van Meer was a director of the German-controlled *N. V. Hollandsche Koopmansbank* as of 1939 and continued to serve in this capacity as of 1941. Van Meer was officially connected as well with several securities companies, two of which were associated with *Hollandsche Koopmansbank* through interlocking directorates. His affiliations as of 1941 are listed below:

N. V. Hollandsche Koopmansbank (connected with *Berliner Handelgesellschaft*)—Manager.

Algemeene Societeit voor Administratie en Trustzaken N. V. (administration office and trust company, connected with the *N. V. Hollandsche Koopmansbank* through interlocking directorates in the persons of G. M. Fritze and H. F. van Meer)—Manager.

Amsterdamsche Standaard Administratie Compagnie N. V. (administration office)—Director.

Amsterdamsche Standaard Trust Compagnie N. V. (trust company)—Director.

Hendrik Abraham van Nierop

Hendrik van Nierop, a manager of *Amsterdamsche Bank* since 1916, was dismissed from the bank in 1939 because of the failure of the *Rotterdamsche-Amsterdamsche* merger plan. Van Nierop had been connected with the *Wresy-chinski* case which ended up in the Dutch courts, and certain high ranking officials of *Amsterdamsche Bank* felt that van Nierop's connections with the case contributed substantially to the failure of the merger plan. Van Nierop's successor on the board of *Amsterdamsche Bank* was G. M. Verrijn Stuart.

Formerly van Nierop had a long list of financial connections. As of 1939 he was a director of *N. V. Hollandsche Koopmansbank*, in which *Berliner Handelsgesellschaft, Berlin*, has a major financial control, and a director of *Amsterdamsche Standard Trust Compagnie*, which is connected with *Bank für Handel und Industrie, Berlin*.

In 1941, however, he is reported as affiliated only with the four enterprises shown below:

Prolongatie Vereeniging (association for long-term credits)—Chairman of the board.

N. V. Noordhollandsche Landbouwc rediet (agricultural credit institution)—Director.

N. V. Maatschappij tot Exploitatie van Limburgsche Steenkolen (coal mining enterprise)—Director.

N. V. Koninklijke Nederlandsche Hoogovens en Staalfabrieken (blast furnaces and steel foundries in which the German *Vereinigte Stahlwerke* reportedly has held a controlling interest since 1941)—Director.

Dr. Hans Weltzien

Dr. Hans Weltzien, a German, became a director of *Hollandsche Koopmansbank* in 1939. This Dutch bank, under the occupation, is controlled by the *Berliner Handelsgesellschaft*, in which Weltzien is a partner. This German bank is one of the smallest of the great Berlin commercial banks. Aside from his connection with *Hollandsche Koopmansbank N. V.*, Weltzien appears to have no other Dutch financial or industrial connections. In Germany, however, he has an extremely large number of important connections. He was formerly State Financial Councillor and in addition to his partnerships in *Berliner Handelsgesellschaft* he is also a director of the *Badische Bank, Karlsruhe*, which is connected with *Berliner Handelsgesellschaft*, and which, through the *Allgemeine Elsassische (Alsace) Bank-Gesellschaft*, controls the majority of Alsatian business.

Weltzien holds the important office of member of the advisory board of the *Deutsches Reichsbank*, the central bank of Germany, and is also a member of the money market committee of the *Deutsche Reichsbank* and of the credit committee of the *Deutsche Bank*.

In the industrial field, Dr. Weltzien is closely connected with several large German corporations operating in the electrical, iron and steel, mining, and chemical fields. He is deputy chairman of the advisory board of the *Allgemeine Elektrizitäts Gesellschaft*, one of the largest German electric enterprises, and of the *Metallgesellschaft A. G.* and of the *Rheinische Stahlwerke*, both subsidiaries

of the I. G. Farbenindustrie. The Metallgesellschaft A. G., has two large stockholders, viz, the Amalgamated Metal Corp., London, and the Schweizerische Gesellschaft für Metallwerk, a Swiss company, which has numerous affiliates in Paris and London.

Until 1943, Weltzien was a director of Berliner Kraft & Licht (Bewag) A. G. (Berlin Power & Light Corporation), but sometime during that year was removed from the board in accordance with the recommendation of the Reich Minister of Economy that the number of board members be reduced for the duration of the war.

Dr. Weltzien was born on October 11, 1899, in Berlin. His last known address is 32-33 Behrenstrasse, Berlin W 8. His semiofficial, financial, and industrial affiliations, as of 1942, were reported as follows:

Semiofficial.—Industrie und Handelskammer, Berlin (Chamber of Commerce and Industry)—Member of the advisory board.

Berliner Börse, Abt. Wertpapierbörse, Berlin (Berlin Stock Exchange, Securities Division)—Member of the management committee.

Reichsgruppe Banken (National organization of German banks)—Member of the advisory board.

Banking.—Berliner Handelsgesellschaft, Berlin (one of the largest German banking institutions)—Head or business partner.

Deutsche Reichsbank, Berlin—Member of the advisory board.

Kapitalmarktausschuss der Deutschen Reichsbank (money market committee of the Reichsbank)—Member of the committee.

Kreditausschuss der Deutschen Reichsbank (credit committee)—Member.

Deutsch-Asiatische Bank, Shanghai (6.2 percent held by the Schantung-Handels A. G., which is 70 percent held by Bankhaus Joh. Witzis & Co., Munich)—Member of the executive committee.

Badische Bank, Karlsruhe (State of Baden holds majority of shares (see first paragraph))—Director.

Allgemeine Transportmittel-Finanzierungs A. G., Berlin (finances transportation at home and abroad—the capital of RM 4,000,000 is in American, Belgian, and German hands)—Chairman of the board of directors.

Industrial.—Allgemeine Elektrizitäts-Gesellschaft, Berlin—Deputy chairman of the advisory board.

Gesellschaft für Elektrische Unternehmungen A. G., Berlin (has numerous affiliates, one in Switzerland, one in Portugal, one in Brussels, and one in Spain)—Director.

Rheinische A. G. für Braunkohlenbergbau und Brikettfabrikation, Köln (99 percent held by Rheinisch Westfälische Elektrizitäts Werke A. G.)—Director.

Rheinische Stahlwerke, Essen (44.9 percent held by I. G. Farbenindustrie)—Director.

Metallgesellschaft A. G., Frankfurt/Main (metal works; subsidiary of I. G. Farbenindustrie)—Director.

Mitteldeutsche Stahlwerke A. G., Riesa (steel corporation; 98 percent held by Siegener Eisenindustrie A. G. of the Flick family)—Director.

Felten & Guillaume Carlswerk A. G., Köln-Mulheim (iron and steel corporation; principal shareholder, Arbed-Konzern, Luxemburg)—Director.

Eisenbahn-Verkehrsmittel A. G., Berlin (manufacturer of transport machinery and parts, is a subsidiary of Oesterreichische Eisenbau-Verkehrs-Anstalt (Austria railway transport company of Vienna), which also has affiliations in Poland, Rumania, Hungary, and Switzerland. The chief shareholders are Ste. Generale de Belgique, Brussels, and Banque Belge pour l'Etranger, Brussels. In accordance with the new regulations of the Vienna Bank Verein the majority of the shares are transferred to a group of Belgian banks in combination with a Belgian industrial firm)—Deputy chairman of the advisory board.

Berliner Maschinenbau A. G., vormals L. Schwartzkopff, Berlin (machine builders; Bank für Industriewerke A. G., Berlin, holds all the preferred stock)—Chairman of the board of directors.

Westfälische Drahtindustrie, Hamm/Westf. (wire factory; Friedrich Krupp A. G. holds 56 percent of common stock and 100 percent of preferred shares)—Director.

Schering A. G., Berlin (mining and chemical products)—Director.

Kamerum-Eisenbahn-Gesellschaft, Berlin (railway company owns 100 percent interest in the Companhia Agricola e Fabril de Guine' (Agrifa), Lisbon, Portugal)—Deputy chairman of the advisory board.

Harpener Bergbau A. G., Dortmund (mining company—has 100 percent interest in a Swiss coal trading company; Eisenwerk Gesellschaft Maximilianshütte holds majority of shares)—Director.

Braunkohlen- und Brikett-Industrie A. G., Bubiag, Berlin (lignite and briquet company)—Director.

Christian Dierig A. G., Langenbielau (cotton manufacturer; Dierig family owns 75 percent interest)—Director.

Kontinentale Oel A. G., Berlin (oil-producing company)—Director.

Feldmühle, Papier- und Zellstoffwerke A. G., Stettin/Odermunde (paper, cellulose, etc.; has many affiliates throughout Germany)—Chairman of the board of directors.

A. G. für Glasindustrie vorm. Friedr. Siemens, Dresden (glass of all kinds; 38.39 percent held by Schultheiss-Patzenhofer Brauerei A. G., Berlin)—Chairman of the board of directors.

Allianz Lebensversicherungs A. G., Berlin (the most important German life insurance company)—Director.

AMSTERDAMSCH E CREDIET MAATSCHAPPIJ

A. LOCATION, UNITED STATES CORRESPONDENTS

Address: Amsterdam.

B. NATURE OF BUSINESS

The Amsterdamsche Crediet Maatschappij, hereinafter referred to as A. C. M., was originally established as a limited private banking business, to represent certain German interests, but was later reestablished under its present title. It carried on a commercial and investment banking business, and was active in foreign exchange transactions. The bank is now in process of liquidation.

C. SIZE AND IMPORTANCE

A. C. M. is a small bank, important only because of its connection with prominent German enterprises.

1. Relation to other banks or enterprises in Holland or the Dutch colonies

(a) N. V. Trustmaatschappij Rokin

Address: 92-96 Rokin, Amsterdam.

Capital: Authorized, Fl. 250,000; paid in, Fl. 50,000.

Interest: Subsequent to the German occupation of Holland, the management of A. C. M. was given over to N. V. Trustmaatschappij Rokin, which presumably was to act as liquidator.

2. Relation to other banks or enterprises outside of Holland or the Dutch colonies

(a) August Thyssen Bank

Address: Berlin.

Capital and reserves: RM. 17,500,000.

Business: This is the bank of the Thyssen steel interests which finances the activities of that group.

Interest: There appears to have been some connection at one time between the August Thyssen Bank and A. C. M., possibly through the von der Heydt family.

(b) Friedrich Krupp A. G.

Address: Essen, Germany.

Capital: RM. 160,000,000.

Business: Armaments, etc.

Interest: As of 1936, Friedrich Krupp A. G. was reported to hold nine-tenths of the capital of A. C. M.

3. Activities under the occupation—German connections

A. C. M. was established in 1920 as von der Heydt-Kersten's Bank, a private limited company, and presumably the Dutch affiliate of the German private banking firm von der Heydt Kerstein & Soehne, located in Wuppertal-Elberfeld, Germany, which was connected with the Commerz Bank of Berlin, and with a private banking firm known as von der Heydt's Bank, which was established both in Amsterdam and Berlin. Von der Heydt-Kersten's Bank in Amsterdam was connected with von der Heydt's Bank in the same city through an interlocking directorate in the persons of members of the von der Heydt family.

In 1924, von der Heydt-Kersten's Bank assumed its present name, Amsterdamsche Crediet Maatschappij (A. C. M.), and broadened its scope to include a greater number of commercial banking activities. There was presumably a close connection between the von der Heydt and Thyssen interests, and in 1930 the name of von der Heydt's Bank in Berlin was changed to the August Thyssen Bank, and it became the banking subsidiary for the Thyssen heavy industry group. Von der Heydt's Bank in Amsterdam, however, has continued to function under its original name, and it is not known whether the Thyssen group acquired any interest in it, or through it, in the former von der Heydt-Kersten's Bank, now A. C. M.

At various times several other important German interests have acquired and held for a time, at least, participations in the A. C. M. As of 1936 it was stated that the armament enterprise Friedrich Krupp A. G. held about nine-tenths of the capital of A. C. M. and that Simon Hirschland, a banking corporation of Essen, Germany, was also a stockholder.

This latter interest was sold in connection with the German Aryanization program, which even prior to the German occupation of Holland attempted in some instances to extend the purge into the Dutch banking structure at points where German banking institutions had interests.

It was stated that the German Government at that time demanded of A. Busemann, a Krupp representative, that two Jewish officials of A. C. M. be removed, but that no action was taken and these two individuals, Messrs. Kahn and Frankfurter, were still on the directorate of A. C. M. as of 1938. Krupp, it is reported, was able to ignore the order to Aryanize A. C. M. because of the usefulness of that institution in supplying the Nazi Government with foreign exchange.

At present A. C. M. is in process of liquidation, and has been put under the management of N. V. Trustmaatschappij Rokin, a trust company. It is reported that the liquidation was made necessary because of pressure brought to bear upon the bank by some shareholders, particularly certain shareholders residing in the United States.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

Management:

Board of directors:

J. Limburg, chairman.
Dr. A. Busemann.
E. Fuld.

J. Woltman.
K. M. Hirschland.

Managers:

J. Kahn.

A. Frankfurter.

Assistant managers:

J. Winkler.

P. Reinisch.

Holders of procuration:

S. van Gelder.
W. van Hammersveld.
A. Harrer.

E. von Seeler.
E. Suppas.
M. Tuvy.

2. Subsequent to occupation, 1941

After the occupation the management of A. C. M. was placed in the hands of Trustmaatschappij Rokin, Amsterdam, a small trust company, the personnel of which is composed of four persons, no one of whom was an official of A. C. M.

Management:

N. V. Trustmaatschappij Rokin, Amsterdam.

Managers:

W. R. Nijkerk.
P. S. Frenkel.

H. G. Stibbe.

Holder of procuration:

K. Abraham.

3. Biographies of some members of management group

Dr. Alfred Busemann

Dr. Alfred Busemann, a German, was formerly a director of *Amsterdamsche Crediet Maatschappij*. This Dutch bank, which was nine-tenths owned by *Friedrich Krupp A. G.*, Essen, went into liquidation in October 1939.

At present Alfred Busemann is a manager of *Friedrich Krupp A. G.* and a member of the management committee of the holding company for Krupp participations in mining, iron, and steel enterprises. He is also director of the *Deutsche Ueberseeische Bank*, Berlin, Deutsche Bank subsidiary which controls the 21 branches of the Deutsche Bank in Latin America. His prominence in German industrial and economic life is signified by the fact that he is a director of *Industriefinanzierungs A. G. Ost*, Berlin, a joint enterprise of the six Berliner Grossbanken, established originally for financing German exports to Russia.

Busemann holds the degree of doctor of jurisprudence. His address is given as Friedrichstrasse 14, Essen, and his known connections are as follows:

Political.—*Rheinisch-Westfälische Börse zu Düsseldorf* (Düsseldorf Stock Exchange)—Member of management committee.

Banking.—*Deutsche Ueberseeische Bank*, Berlin (owned by Deutsche Bank, Berlin; supervises Latin American branches of Deutsche Bank; capitalization 1938, RM. 36,000,000)—Director.

Banco Aleman Transatlantico (one of the South American branches of Deutsche Ueberseeische Bank, Berlin)—Director.

Industriefinanzierungs-A. G. Ost, Berlin (joint enterprises of the German Grossbanken, established to finance exports to Russia; became outstanding acceptance institution)—Director.

Westfalenbank A. G., Bochum (only important regional bank in the Rhineland-Westphalia region not absorbed by the German Grossbanken; majority of shares held by the Wintershall A. G., German potash group)—Director.

Industrial.—*Fried. Krupp A. G.*, Essen (leading German armaments combine)—Manager.

A. G. für Unternehmungen der Eisen- und Stahlindustrie, Berlin (subsidiary of *Fried. Krupp A. G.*; holding company for Krupp participations in mining, iron, and steel enterprises; capitalization 1938, RM. 12,000,000)—Member of management committee.

National-Krupp-Registrier-Kassen G. m. b. H., Berlin (manufacture of cash registers; presumably affiliated with Krupp organization)—Member of executive committee.

P. S. Frenkel

P. S. Frenkel is an official of *N. V. Trust Maatschappij Rokin*, a small trust company of Amsterdam. This trust company was put in charge of *Amsterdamsche Crediet Maatschappij*, presumably for liquidation of the latter, after the German occupation of Holland.

K. M. Hirschland

K. M. Hirschland, who was a director of *Amsterdamsche Crediet Maatschappij* prior to the German invasion of Holland, and until that bank was put under the direction of the *N. V. Trustmaatschappij Rokin* by the German authorities, presumably for liquidation, is a leading partner of Simon Hirschland, an extremely wealthy German banking corporation located at Essen, Germany.

The Simon Hirschland firm held an interest in the *Amsterdamsche Crediet Maatschappij* but the Hirschland interests were aryanized and the firm was taken over by Burkhardt & Co. in October 1938. K. M. Hirschland, however, appears to have remained on the board of the Dutch bank after the aryanization of the Simon Hirschland corporation.

Julius Kahn

Kahn was born in 1878 at Darmstadt, Germany, and was educated at the Lyceum and at the Free University.

Kahn has had considerable banking experience. From 1906 to 1910 he was manager of a branch office of the *Disconto-gesellschaft* in Berlin; from 1910 to 1913 he was manager of the *Kredietbank* at Sofia, Bulgaria. In 1914 he became assistant manager of the *Discontogesellschaft*, Frankfurt, but left this position to serve as an officer in the German Army during World War I.

After the close of the war, Kahn served as assistant manager of *A. Schaffhausen'scher Bankverein* at Cologne until 1924 when he became a manager of the *Amsterdamsche Crediet Maatschappij* in Amsterdam. In addition to his connection

with the Amsterdamsche Crediet Maatschappij, Kahn was formerly associated with several small securities companies in Amsterdam.

According to latest information Kahn's residence is at 163 de Lairesestraat, and his office at 433 Heerengracht, Amsterdam.

W. R. Nijkerk

W. R. Nijkerk is one of the managers of N. V. Trustmaatschappij Rokin. This is the institution which was put in charge of the liquidation of Amsterdamsche Crediet Maatschappij after the German occupation of Holland.

Nijkerk is also a director of N. V. Meelfabrieken der Nederlandsche Bakkerij. This is a flour-milling enterprise which has interests in a number of the larger Dutch bakery companies and holds participations in enterprises allied with the grain trade such as grain elevator companies, central sales organizations, etc.

H. G. Stibbe

H. G. Stibbe is a manager of the trust company, N. V. Trustmaatschappij Rokin, which since the German occupation of Holland has been put in charge of the Amsterdamsche Crediet Maatschappij during the liquidation of the latter institution.

Stibbe is also manager of the investment company, N. V. Beleggingsmaatschappij (Ingela).

THE AERO BANK

Formerly Hollandsche Buitenland Bank N. V. (Holland Foreign Bank)

A. LOCATION, UNITED STATES CORRESPONDENTS

Address: 68 Javastraat, The Hague.

New York Correspondent: Guaranty Trust Co. of New York.

B. NATURE OF BUSINESS

This institution, as the Hollandsche Buitenland Bank (hereinafter referred to as H. B. B.) was engaged primarily in the financing of international trade. As the Aero Bank, subsidiary of the Bank der Deutsche Luftfahrt, the Bank of the German Air Ministry, its nominal function is to finance contracts let in Holland for equipment, supplies, etc., for the German air force.

C. SIZE AND IMPORTANCE

Hollandsche Buitenland Bank was one of the smaller Dutch commercial banks.

1. Relation to other banks or enterprises in Holland or the Dutch colonies

(a) Hollandsche Bank Unie

Address: Amsterdam (transferred to Willemstad, Curacao after June 22, 1940).

Capital: Fl. 6,000,000.

Business: Foreign trade bank operating principally in South America.

Interest: H. B. B. was connected with Hollandsche Bank Unie through interlocking directors in the persons of J. P. van Tienhoven and G. H. de Marez Oyens.

2. Activities under the occupation—German connections

Even before the German invasion of Holland, H. B. B. had close connections with Germany, through its directors; and it is believed also to have had close business relations with German banks and enterprises. In 1940 the bank openly became a Nazi institution when the Bank der Deutschen Luftfahrt, the Bank of the German Air Ministry, took a major participation in it. As a subsidiary of the Bank der Deutsche Luftfahrt, H. B. B. in May 1942 was renamed the Aero Bank. Its nominal function was to finance purchases made for the German air force. It has been reported, however, that branches of the Aero Bank in occupied countries concerned themselves also with acquiring participations in enterprises engaged in manufacturing aircraft, machinery, machinery parts, etc.

In 1942 the management of H. B. B., now the Aero Bank, was completely turned over to German officials, with the exception of one Hollander, the Dutch-Nazi F. W. A. DeKock van Leeuwen, who remained on the board.

D. MANAGEMENT PERSONNEL

1. *Prior to occupation, 1939**Management*

Board of directors:

G. H. de Marez Oyens, chairman.	Dr. J. P. van Tienhoven.
F. W. Koenigs.	Prof. Dr. G. M. Verrijn Stuart.
H. R. van Maasidjk.	

Manager:

Dr. H. Brunck.

Holders of procuration:

H. M. de Vries.
H. J. von Eicke.

2. *Subsequent to occupation, 1941*

Between 1939 and 1941 two changes took place in the management personnel of H. B. B. F. W. Koenigs and Prof. G. M. Verrijn Stuart left the board of directors and no new appointments were made to replace these two men.

Management

Board of directors:

G. H. de Marez Oyens, chairman.
H. R. van Maasidjk (delegate).
Dr. J. P. van Tienhoven.

Manager:

Dr. H. Brunck.

Holders of procuration:

H. M. de Vries.
H. J. von Eicke.

3. *Changes as of May 1942*

At the annual meeting of H. B. B. held at The Hague, May 1942, H. B. B. became Aero Bank and only one Hollander, F. W. A. De Kock van Leeuwen was kept on the board. All other officials of Aero Bank are now Germans.

4. *Biographies of some members of the management group***F. W. A. De Kock van Leeuwen**

F. W. A. De Kock van Leeuwen was appointed an official of Hollandsche Buitenland Bank N. V. at the meeting held at The Hague in May 1942, at which time this bank's name was changed to Aero Bank; all Dutch officials were removed from the management personnel with the exception of De Kock van Leeuwen; and the bank became officially a subsidiary of the German Bank der Deutschen Luftfahrt with the nature of its functions redefined, so that from that date they have been directed to the financing of production contracts in Holland for the German Air Ministry.

That De Kock van Leeuwen should have retained his place on the Dutch Aero Bank when all other Hollanders were dismissed is due to his political affiliations. Until January 1944, when he made known his resignation from the Dutch Nazi Party in an open letter printed in a Dutch daily newspaper, De Kock van Leeuwen was considered a bona fide member of the Dutch National Socialist Party and in addition held the title of "adviser" to Anton Mussert, the leader of the Dutch Nazi Party. In this latter capacity under the sponsorship of the German Nazi Party De Kock van Leeuwen made a tour in 1942 of the areas east of Germany proper, which at that time were under German domination (these areas visited were most probably the section of Poland known as the Warthegau and the Ostgebiete).

In presenting his resignation De Kock van Leeuwen did not disavow in toto his allegiance to his party. In his open letter he reaffirmed his adherence and belief in National Socialist principles and restated his long-standing feelings of loyalty toward Mussert, and he gave as his reasons for leaving the party his opinion that

in Holland national socialism had failed to bring under its aegis the most able of Holland's leading industrial personages, and that the National Socialist Party had placed in key positions only members of the party and in this way had sacrificed the will of the Netherlands people as a whole to a demonstration of power just to prove that the party's will could be imposed upon the Netherlands people.

Gerard Hendrik de Marez Oyens

Gerard Hendrik de Marez Oyens, a director of Hollandsche Bank Unie, the principal Dutch bank operating in South America, is also senior manager of H. Oyens & Sons, of Amsterdam. This was an old private banking firm, converted into a corporation in 1932, and said to have suffered serious losses in recent years. The enterprise is apparently connected with Hollandsche Bank Unie, as in addition to the interlocking tie through de Marez Oyens, there is another through N. E. Rost Onnes, a director of H. Oyens & Sons, who is a general manager of Hollandsche Bank Unie.

De Marez Oyens was, in 1941, the chairman of the board of the Hollandsche Buitenland Bank, which was later taken over by the German Bank der Deutschen Luftfahrt and under the title Aero Bank was presumably to finance purchases in Holland for the German air force. De Marez Oyens is reported to have become entangled with pro-Nazi elements in Holland but it cannot be ascertained whether or not this reputation was gained through his possible connections with the above-mentioned transaction.

De Marez Oyens was formerly affiliated with Nederlandsch Indische Handelsbank and with N. V. Philips Gloeilampenfabriek.

De Marez Oyens was born on July 31, 1873, in Amsterdam. His affiliations as of 1941 were reported as follows:

N. V. Hollandsche Buitenland Bank (connected with the Bank der Deutschen Luftfahrt)—Chairman of the board.

N. V. Oyens & Zonen (banking corporation)—Senior manager.

N. V. Maatschappij voor Hypotheek Crediet in Nederland (company for mortgage credit)—Director and member of the advisory board.

N. V. Maatschappij tot Beheer van het Administratiekantoor van Amerikaanse Fondsen (company for the administration of the administration office of American securities)—Manager.

H. M. de Vries

H. M. de Vries, in 1939, was the holder of procuration for the Hollandsche Buitenland Bank N. V. and continued to serve in this capacity until 1941. It is not known, however, whether de Vries' connection with this bank was continued after it was reorganized as the Aero Bank, subsidiary of the Bank der Deutschen Luftfahrt, the bank of the German Air Ministry.

De Vries' connections as of 1941 are shown below:

Banks.—Hollandsche Buitenland Bank N. V.—Holder of procuration.

N. V. Bank voor Nederlandsche Gemeenten (Bank for Netherlands Municipalities)—Director.

N. V. Handel en Credietmaatschappij (Hancred) (trade and credit company)—Manager.

Henri Robert van Maasdijk

H. R. van Maasdijk is a deputy director of Hollandsche Buitenland Bank N. V., a Dutch bank which since 1942 has been known as Aero Bank, and as a subsidiary of Bank der Deutschen Luftfahrt.

As of 1942 van Maasdijk as an official of the Nazi Chamber of Commerce in Holland (Handelskammer) under the sponsorship of the German Government visited the territories east of Germany (presumably the Warthegau and Ostgebiete).

A number of van Maasdijk's business connections, which appear to be primarily in the field of banking and insurance, as of 1941 were as follows:

Hollandsche Buitenland Bank N. V.—Director.

N. V. Nederlandsche Bankinstelling voor Waarden Belast Met Wruchtgebruik en Periodieke Uitkeeringen (an institution for administration of interest and time loans)—Manager.

N. V. Orange-Nassau-Hypotheekbank (a mortgage bank)—Director.

N. V. Zuider Hypotheekbank (a mortgage bank)—Director.

N. V. Zee en Brandassurantie Maatschappij (De Oosterling) 1865 (a company handling all kinds of insurance, excepting life insurance)—Director.

N. V. Binnenlandsche Vaart Risico Societeit (a company handling transportation insurance primarily)—Director.

Ongevallen Verzekering Maatschappij van "De Nederlanden" van 1845 (a company handling various kinds of insurance, excepting life insurance)—Director.

N. V. Haagsche Assurantie Compagnie voor Brand enz van 1805 (a company handling various kinds of insurance, excepting life insurance)—Director.

N.V. Labor Bedrijfsverzekering Maatschappij van "de Nederlanden" van 1845 (an enterprise and credit insurance corporation)—Director.

N.V. Levensverzekering Maatschappij van "de Nederlanden" van 1845 (a life insurance company)—Director.

N.V. Nederlandsche Hervverzekerij Maatschappij (a fire insurance company)—Director.

N.V. Nederlandsche Maatschappij voor Levens-Hervverzekerij (a life insurance company)—Director.

Nederlandsch Indische Zee en Brand Assurantie Maatschappij (a fire and transportation insurance company)—Director.

N.V. Tweede Koloniale Zee en Brand Assurantie Maatschappij (a fire and transportation insurance company)—Director.

N.V. Zee en Brand Assurantie Maatschappij de Oosterling (a fire and transportation insurance company)—Director.

Johannes Pieter van Tienhoven

Johannes Pieter van Tienhoven, for the past 9 years, at least, has been a director of the Hollandsche Bank Unie, a Dutch overseas bank operating principally in South America. In 1941 van Tienhoven was also on the board of the Hollandsche Buitenland Bank, which institution has since been taken over by the German Bank der Deutschen Luftfahrt and has been renamed the Aero Bank. Presumably it was intended to function as a means for financing contracts made in Holland for the German air force.

Van Tienhoven is also connected with a marine and casualty insurance company, and with a building supply enterprise.

He was born on December 31, 1876, and had his elementary education in Amsterdam and received his doctor's degree in law and political science in 1904 from the University of Utrecht. He has been an outstanding figure in various cultural and scientific societies. Before the Anschluss he represented Austria as consul general at Amsterdam.

Van Tienhoven's last known address is 5 Emmaplein, Amsterdam.

His affiliations, as of 1941, were as follows:

Hollandsche Bank Unie N.V. (a Dutch bank dealing principally with South American business)—Director.

N.V. Hollandsche Buitenlandbank (controlled by the Bank der Deutschen Luftfahrt)—Director.

N.V. Standaardverzekering Maatschappij, Amsterdam (marine transportation, accident, and reinsurance company)—Director.

N. V. Hollandsche Beton Maatschappij (reinforced concrete company)—Director.

Dr. Gerard Marius Verrijn Stuart

Gerard Marius Verrijn Stuart, general manager of the Amsterdamsche Bank N.V., came into this position in December 1939. He was formerly connected with the Nederlandsche Bank N.V., the central bank; with the Rotterdamsche Bankvereniging N.V.; and with the Hollandsche Buitenland Bank, which in 1942 was taken over by the Bank der Deutschen Luftfahrt and its name changed to Aero Bank.

Verrijn Stuart held various positions with the Rotterdamsche Bankvereniging N.V. and was sent by that institution to the Netherlands Indies to explore the possibilities of setting up a branch, with the result that he became general manager of the Bank voor Indie at Batavia. He returned to Holland in 1925 and since his return has been a professor of money, credit, and banking, first at the Netherlands Trade University, and later at the University of Utrecht. He has written and published many articles and books on the banking system in Netherlands East Indies, on colonial banking problems, money and credit, etc.

His business and financial connections as of 1941 were as follows:

Amsterdamsche Bank N.V.—General manager.

N.V. Bank voor Nederlandsche Gemeenten (Bank for municipal credit)—Director.

N.V. Waarborg en Trustmaatschappij (guaranty and trust company)—Director.

N.V. Gebroeders Gerzon's Nodemagazijnen (department stores)—Director.

RHODIUS KOENIGS HANDEL-MAATSCHAPPIJ N. V.

A. LOCATION, UNITED STATES CORRESPONDENT

Address: Kreizergracht 121, Amsterdam.

New York correspondent: J. Henry Schroeder Banking Corp.

B. NATURE OF BUSINESS

Rhodium Koenigs Handel-Maatschappij N. V. (hereinafter referred to as RKHM) established in 1920 by Delbrueck Schickler & Co., Berlin, is one of the smaller of the Dutch general "mixed" banks which were set up in Holland as subsidiaries of German banking institutions during the inflationary period in Germany after the close of World War I.

In its capacity as a general "mixed" bank, RKHM has been active in the field of Dutch industrial investments having bought heavily into the stock of N. V. Werktuigbouw, an operational plant closely connected with one of Holland's largest and most important wartime ship and airplane construction industries.

As a subsidiary of a German banking house, RKHM has played hand in glove through its management personnel with the Nazis in their undertakings to aryanize Dutch banks and to sequester the liquid as well as other assets of non-aryan Dutch nationals.

C. SIZE AND IMPORTANCE

RKHM, although a small bank, is important because of its German origin and connections, and because of the collaborationist role it has played through its manager during the occupation of Holland by the Nazis.

1. *Relation to other banks or enterprises in Holland or the Dutch colonies*(a) *N. V. Werktuigbouw*

Address: Amsterdam.

Capital: Fl. 40,000.

Business: A machinery construction plant, established in 1938, and most probably engaged in production of parts for ships and airplanes.

Interest: RKHM, as of 1938, held 75 percent of the capital stock of this plant and N. V. Koninklijke Maatschappij (De Schelde) (see below) held 10 percent.

(b) *N. V. Koninklijke Maatschappij (De Schelde)*

Address: Glacisstraat 165, Vlissingen.

Capital: Fl. 5,000,000 authorized; Fl. 2,000,000 paid in.

Business: De Schelde is one of the largest and most important shipbuilding concerns in Holland and through its holding company, N. V. Nationaal Bezit van Aandeelen Koninklijke Maatschappij (De Schelde) (organized to insure the national character of the operational plant De Schelde) De Schelde has been subsidized by the State. Under the present wartime economy De Schelde plays a major part in Dutch naval production as well as in the construction of refrigeration machinery vital to the production of ice, ammonia, and methylchloride.

In addition De Schelde also controls a significant part of Holland's airplane output through its ownership of the airplane division of H. Pander & Zonen and its one-fourth ownership control of N. V. Nederlandsche Vereenigde Scheepsbouw Bureaux, The Hague, a company which prior to the 1940 invasion was responsible for the production of a large percentage of all planes used by the Dutch Navy.

Interest: RKHM is tied up with N. V. Koninklijke Maatschappij (De Schelde) because of the respective interests each of these concerns holds in N. V. Werktuigbouw (see above).

(c) *Lippman Rosenthal & Co.*

Address: Spiegelstraat and/or Sarphatistraat, Amsterdam.

Business: A private Jewish banking firm; taken over by the Nazis, aryanized and used by the occupation authorities as the reception center whereby Nazi decree Jewish funds, cash, bank deposits, securities, etc., had to be delivered and forfeited.

Interest: A. Flesche, until late 1941, the German manager of RKHM was appointed as the new Nazi partner of Lippman, Rosenthal & Co. after this bank was confiscated by the Germans. Also, RKHM, through a transaction engineered by a member of A. Flesche's family, A. Rhodius, who is still top official of RKHM, acquired on the market the "stolen" shares of the old Lippman Rosenthal & Co., after all non-Aryans had been forced to liquidate their interests in this bank. (See biography on A. Flesche.)

(d) Metafina

Business: A holding company established in Holland after World War I to protect the personal holdings of Friedrich Flick. Friedrich Flick is a member of the Deutsche Reichsbank and the person who individually controls a large part of the steel production of the Reich, possibly including the vast Thyssen industrial holdings in the Rhine-Ruhr area. During the inflationary period in Germany in the 1920's Flick transferred a considerable amount of his assets to Holland and Switzerland.

Interest: Until 1941, when Franz Koenigs ceased to be a manager of RKHM, there was a tie-up between Metafina and RKHM because of Koenigs' personal and business relations with Friedrich Flick. These two men are intimate friends and working together they succeeded in gaining control of a great number of the old Rheinische Westfaelische Werke.

2. Relation to other enterprises or banking institutions in countries other than Holland or the Dutch colonies

(a) Delbrueck Schickler & Co.

Address: 32 Französische, Berlin.

Business: A private banking house established in 1857.

Interest: RKHM is a subsidiary of this German banking firm; also Franz Koenigs, a manager of RKHM until 1941, is a member of Delbrueck Schickler & Co.

(b) Dutch/German interlocking directorate connections

Through A. Rhodius, A. Flesche, and F. W. Koenigs, RKHM had (and in the case of A. Rhodius still has) German financial and industrial affiliations. (For the specific tie-ups see personnel notes on these persons.)

3. Activities under the occupation—German connections

RKHM has been closely associated with Delbrueck Schickler & Co. ever since its establishment in 1920 by this German firm. After the occupation of Holland the German control of RKHM was strengthened when at that time Delbrueck Schickler & Co. increased its participation to a substantial amount.

RKHM's involvements with Lippman Rosenthal & Co. (discussed above and in the personnel notes on certain of its officials) were begun after the occupation, when the officials of this bank gave their full support to carrying out the Nazi methods and procedures for purging and gaining control of the Dutch banking system.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

*Management***Board of directors:**

A. Rhodius.	H. Delss.
A. Delbrück.	Dr. Imre von Palm.
F. Rhodius.	C. Heinrich.
Dr. A. Frese.	

Managers:

A. Flesche.
F. W. Koenigs (reported killed in railway accident, 1941).

Holders of procuration:

W. Boelen.	H. Paetz.
K. Froehlich.	J. J. Schiltkamp.
Th. Delbrück.	P. Sorgdrager.

2. Subsequent to occupation, 1941

Between 1939 and late 1941 significant changes took place in RKHM. All members of the board of directors excepting A. Rhodius resigned or were dismissed. The managers were changed, A. Flesche, the German Nazi, going over to the Aryanized Lippman Rosenthal & Co., and the holders of procuration, K. Froehlich and J. J. Schiltkamp, were replaced by H. Bourgonje and A. H. Knauff.

Management

Chairman of the board of directors: A. Rhodius.

Managers:

R. E. Duin.
L. Steinenböhmer.

Holders of procuration:

W. Boelen.	P. Sorgdrager.
Th. Delbrück.	H. Bourgonje.
H. Paetz.	A. H. Knauff.

3. *Biographies of some members of managerial group*

Adelbert Delbrueck

Adelbert Delbrueck, a German, was a director of Rhodius Koenigs Handel Maatschappij in 1939 but was released from this position between the years 1939 and 1941, presumably in connection with the drastic personnel changes which took place between these years in this bank for the reported twofold purpose of concealing the extent of German domination of the bank, on the one hand, and of "organizing" it, on the other, to meet the demands of the Nazi aryanization policy which was being enforced in those financial and business enterprises in which German interests were large enough to warrant the attempt.

Adelbert Delbrueck is a partner of the Bankhaus Delbrueck, Schickler & Co., Berlin, which established Rhodius Koenigs Handel Maatschappij in 1920 and by 1941 had acquired a participation amounting to a controlling interest in this Dutch bank.

A possible family relationship between Adelbert Delbrueck and one Th. Delbrueck, who is still an official of Rhodius Koenigs Handel Maatschappij, is discussed in the biography on the latter person.

In addition to the partnership he holds in Bankhaus Delbrueck Schickler & Co., Berlin, Adelbert Delbrueck is connected with other German financial, insurance, railroad, coal mining, grain mill, and trading enterprises.

Delbrueck's last known address is Berlin, Germany.

His financial and business connections as of 1942 were:

Banking.—Bankhaus Delbrueck Schickler & Co., Berlin (banking house)—Partner. This bank's financial participation in Rhodius Koenigs Handel Maatschappij is larger than this Dutch bank's paid-in capital of Fl. 6,000,000.

Delbrueck von der Heydt & Co., Koeln (banking house)—Partner.

Bank des Berliner Kassen Vereins, Berlin (banking association)—Director.

Internationale Bank in Luxemburg (international Luxemburg bank)—Director.

Insurance.—Tela Versicherungs A. G., Berlin (insurance)—Chairman of board of directors.

Railroad.—Deutsche Eisenbahns Betriebs Gesellschaft A. C. (railroad company)—Director.

Waggonfabrik L. Steinfurt A. G. Koenigsberg, Prussia (railroad rolling stock company)—Director.

Coal mining.—Schlesische Bergwerke und Huetten A. G., Beuthen (Silesian mining company)—Director.

Grain mill.—Magdeburger Muehlenwerke A. G. Magdeburg (Magdeburg grain works)—Director.

Trading.—Deutsch Ostafrikanische Gesellschaft, Berlin (East African trading company)—Director.

Th. Delbrueck

Th. Delbrueck has been a holder of procuration of Rhodius Koenigs Handel Maatschappij since at least 1939. Prior to 1941, one Albert Delbrueck, a German and a partner of the famous German banking house of Delbrueck, Schickler & Co., Berlin, which had a controlling participation in Rhodius Koenigs Handel Maatschappij, was a director of Rhodius Koenigs Handel Maatschappij. There is no information available to substantiate the fact of a family relationship between Th. Delbrueck and A. Delbrueck or that Th. Delbrueck is connected with the banking house of Delbrueck Schickler & Co., Berlin; but that such relations exist is quite possible. If this is the case then Rhodius Koenigs Handel Maatschappij has not only financial ties but also personal ties through its directorate with that German banking house.

Th. Delbrueck in addition to his position with Rhodius Koenigs Handel Maatschappij is also a director of Tuchfabrik, formerly Fischer & Schnabl, A. G. Sommerfeld, Germany, a cloth manufactory.

His last known address is Amsterdam, Holland.

R. E. Duin

R. E. Duin, as of 1941, was one of the managers of the banking firm, Rhodius Koenigs Handel Maatschappij N. V., a private bank under German control which played an active part in carrying out the Aryanization measures in Holland. Duin was not connected with this firm as of 1939.

His financial connections are shown below:

Rhodius Koenigs Handel Maatschappij (private bank under German control)—Manager.

N. V. Handel en Trust Maatschappij (Amsterdam) (trust company)—Holder of procuration.

N. V. Administratiekantoor (Ergo), Amsterdam (administration office; custodian appointed by occupation authorities, H. Fruitema)—Manager.

N. V. Maatschappij tot Beheer van Financieele Waarden (Lepta), Amsterdam (company for the administration of securities; custodian appointed by occupation authorities, J. D. Knab)—Manager.

N. V. Nederlandsche Administratie en Financierings Kantoor (Nedafi) (administration office and finance company)—Manager.

Bankierskantoor Eduard Vis. N. V. (securities company)—Manager.

A. Flesche

Alfred Flesche, president of the German Chamber of Commerce for Holland, played a prominent part in furthering the spread of Nazi control and is known as the financier of the fifth column movement in Holland. He served as chairman of the banking and insurance committee set up in Holland to coordinate Dutch banking along lines which would conform with the Reich banking system.

Flesche is the new German Nazi partner who was installed in the private banking house, Lippman, Rosenthal & Co., after the Jewish partners had been removed under the aryanization measures and the firm was permitted to continue whatever remained of its ordinary business. Flesche was made commissar of a department of the firm from which even the non-Jewish partners of the old firm were excluded, and which was used by the occupation authorities as the reception center for all Jewish liquid funds—cash, bank deposits, securities, etc. In 1943, when practically all Netherlands Jews had been killed or deported, all insurance companies were compelled to pay to the firm of Lippman, Rosenthal & Co., the insurance sums or cash values of life policies held by Jews. The occupation authorities stipulated that payment had to be made even if no legal document could be presented showing either the death or the survival of the insured. The firm worked in close connection with Auswanderstelle, the emigration office, for the purpose of swindling refugees and in particular Jewish refugees in Holland.

Flesche was, until 1941, also a manager of the banking firm Rhodius Koenigs Handel-Maatschappij, and father-in-law of A. Rhodius, a partner in that firm. When Jewish interests had been purged from the firm of Lippman, Rosenthal & Co. and Jewish interests liquidated, the German controlled bank, Rhodius Koenigs Handel-Maatschappij, bought up the "stolen shares" on the market. A. Rhodius who appears to have handled this transaction, received, in return for his activities in buying up the shares of Lippman, Rosenthal & Co., a silver cup from Reich Commissioner Seyss-Inquart "for services rendered."

Flesche's last-known address is 4 Florapark, Haarlem/Holland. His financial affiliations, as of 1942, were reported as follows:

Semipolitical—German Chamber of Commerce, Amsterdam—President.

Committee on Banking and Insurance—Chairman.

Banking—Lippman, Rosenthal & Co., Amsterdam (banking firm)—Partner.

Administratiekantoor van Lippman, Rosenthal & Co. (administration office handling securities of Lippman, Rosenthal & Co.)—Custodian appointed by the German authorities.

Rhodius Koenigs Handel-Maatschappij, Amsterdam (Dutch banking firm with close German connections)—Manager.

N. V. Engelsch-Hollandsche Trust Maatschappij (Anglo-Dutch Trust Co., managed by the Engelsch-Hollandsche Bank en Handel-Maatschappij, reportedly a pro-Nazi concern)—Custodian appointed by the German authorities.

Bank für Westeuropäische Wirtschaft, N. V., Amsterdam (Bank for West European Trade)—Manager for Holland.

Commercial and industrial—Golf-Hotel und Hotel Kurhaus A. G., Oberhof, Thuringen, Germany (hotel and restaurant operating company)—Deputy chairman of the board.

Internationaler Maratti Maschinenverkauf, A. G., Berlin (selling agency for Maratti knitting machines, an organization with international affiliations; Rhodius Koenigs Handel-Maatschappij is one of the principal stockholders)—Director.

Mechanische Baumwollspinnerei und Weberei, Kaufbeuren, Germany (cotton mills)—Director.

J. D. Riedel-E. de Haën A. G., Berlin (chemicals and pharmaceuticals)—Director.

A. Rhodius

A. Rhodius is a partner and director of the German-controlled Rhodius Koenigs Handel-Maatschappij. By marriage he is related to the German, A. Flesche, who is the new German Nazi partner of the private banking house of Lippman, Rosenthal & Co. which was aryanized by the Nazis and subsequently used as a reception center for the Nazi schemes to divest Dutch-Jewish refugees of their assets by employing the refugee visas swindle. (See biography on A. Flesche.)

After the old Lippman, Rosenthal & Co. was purged of its Jewish partners and its Jewish interests had been liquidated, Rhodius Koenigs Handel-Maatschappij bought up the stolen shares on the market. It is reported that A. Rhodius handled this transaction for his own firm and for his efforts was rewarded by the Reichscommissar, Arthur Seyss-Inquart with a silver cup "for services rendered."

As of 1940 he also had connections with the following German concern and maintained an address at 119 Keizersgracht, Amsterdam.

Woll-Waescherei und Kaemmerei at Hannover/Doehren—Director. This wool-washing and carding company has a 27.5 percent participation in Wilhelmsburger Wollkaemmerei A. G., Harburg, Wilhelmsburg, and has on its board of directors such German persons of interest as Paul Narges (Commerz & Privat Bank) and Dr. Rasche (Berlin).

L. Steinenböhmer

L. Steinenböhmer, as of 1941, was one of the managers of the German-controlled bank, N. V. Rhodius Koenigs Handel-Maatschappij of Amsterdam, but does not appear to have been connected with that institution prior to the German invasion of Holland.

Steinenböhmer was also a member of the banking and insurance committee which was formed under the German occupation to organize Dutch banking in such a way that it could more easily cooperate in financing the German war effort and in facilitating German control of Dutch commercial and financial institutions.

BANK VOOR HANDEL EN SCHEEPVAART, N. V.

A. LOCATION, UNITED STATES CORRESPONDENTS

Address: Zuidblaak 18, Rotterdam.

New York correspondents: Guaranty Trust Co. of New York, Union Bank Corp.

B. NATURE OF BUSINESS

Bank voor Handel en Scheepvaart, hereinafter referred to as BHS, is a general commercial bank which was formed in 1918 as an affiliate of the August Thyssen Bank, Berlin, which in turn is a subsidiary of the German Thyssen group, the large German steel industry. Its activities are highly specialized, being restricted to financing the trade and shipping of the Ruhr-Rhine heavy industry in which the Thyssen firm is prominent.

C. SIZE AND IMPORTANCE

BHS is one of the largest of the Dutch general commercial banks which are controlled by German financial or industrial interests.

In addition to the powerful position it holds as the bank for the August Thyssen group in Holland, BHS also holds an important place in the field of international investments because of its control of the Hollandsche-Amerikaansche Beleggings Maatschappij-American Investment Corp., an important investment corporation for Dutch and American securities.

1. Relation to other enterprises or banking institutions in Holland or Dutch colonies

(a) *Den Bandt and Gouds*

Address: Damrak 95/96, Amsterdam.

Business: Securities brokers.

Interest: Has an interlocking directorate with BHS through A. den Bandt.

(b) *Rotterdamsch Trustee Kantoor N. V.*

Address: van Vollenhovenstraat 36, Amsterdam.

Capital: Fl. 100,000 (paid in, Fl. 10,000).

Business: A Dutch administration and trust office which has a financial participation in the Cedar Swamp Road Realty Corp., United States of America.

Interest: This firm has an interlocking directorate with BHS through J. Groeninger, H. J. Kouwenhoven, M. van Rossen.

(c) *N. V. Handels en Transport Maatschappij (Vulcaan)*

Address: Rotterdam.

Business: A trade and transport company with German connections.

Interest: BHS held 50 percent of the shares of the Deposito Bank, Holland, for the account of Vulcaan.

(d) *Hollandsche-Amerikaansche Beleggings Maatschappij*

Address: Veerkade 5, Rotterdam.

Capital: Fl. 2,000,000 authorized (Fl. 1,000,000 paid in).

Business: An investment corporation for Dutch and American securities.

Interest: BHS holds financial control of this corporation and certain members of its own board hold offices in this corporation; they are: H. J. Kouwenhoven, M. van Rossen, D. C. Schutte.

(e) *Nederlandsche Handelsmaatschappij*

Address: Amsterdam.

Capital: Fl. 400,030,000 paid in as of December 31, 1939.

Business: Largest Dutch colonial bank.

Interest: BHS, together with Mendelssohn & Co., Amsterdam (failed, 1939), bought a large block of the new capital amounting to Fl. 15,000,000 which was issued by this Dutch commercial colonial bank in 1935. Whether or not BHS still retains this financial interest is not known.

2. Relation to other banks or enterprises outside of Holland or the Dutch colonies(a) *August Thyssen Bank, A. G., Berlin (Until 1930 known as von der Heydt's Bank, A. G.)*

Address: Berlin.

Capital: R.M. 16,000,000 (total assets, R.M. 60,700,000) as of 1941.

Business: German bank for the August Thyssen Rhine-Ruhr heavy industry group (steel).

Interest: BHS was created by and is a subsidiary of this German bank and is represented on its board by H. J. Kouwenhoven.

(b) *Union Banking Corp.*

Address: New York City.

Capital: \$3,000,000 as of the year ending December 31, 1940.

Business: An investment company which transacts business primarily with BHS.

Interest: BHS holds approximately \$2,285,959 in bonds and in accounts receivable in this New York bank, and is also connected with it by way of an interlocking directorate in the person of H. J. Kouwenhoven, who in turn personally owns securities in this New York City corporation.

(c) *Holland American Trading Co.*

Address: New York City.

Interest: BHS has an interest in this company by way of an interlocking directorate in the person of H. J. Kouwenhoven.

(d) *Press und Walzwerke*

Address: Reisholz, Dusseldorf, Germany.

Capital: R.M. 5,690,000 as of 1936.

Business: Rolling mills.

Interest: BHS is the custodian of the stock held by these rolling mills in the Seamless Steel Equipment Corp. which amounted to 50 percent of all shares issued. As of 1935 the entire stock of Press und Walzwerke was owned by members of the Thyssen family.

(e) Seamless Steel Equipment Corp.

Address: New York City.

Interest: BHS is connected with this corporation through its financial relations with Press und Walzwerke (see above) and also by way of an interlocking directorate in the person of H. J. Kouwenhoven.

(f) Vereinigte Stahlwerke, A. G.

Address: Germany.

Capital: R.M. 460,000,000 as of 1939.

Business: One of the largest and most important German steel works.

Interest: The Thyssen group which BHS represents is affiliated with this German steel corporation; also, H. J. Kouwenhoven of BHS was a member of Vereinigte Stahlwerke A. G.'s executive council.

(g) Bremer Vulkan Schiffbau und Maschinenfabrik

Address: Bremen-Vegesack.

Capital: R.M. 10,000,000 as of 1938.

Business: A shipbuilding company.

Interest: The Thyssen group, of which BHS is a subsidiary, is the principal holder in this German shipbuilding industry. J. Groeninger, a German director of BHS, is an official of Bremer Vulkan Schiffbau und Maschinenfabrik.

(h) Flensburger Schiffbau Gesellschaft

Address: Flensburg, Germany.

Capital: R.M. 2,650,000 as of 1938.

Business: A shipbuilding company.

Interest: The Thyssen group, of which BHS is a subsidiary, holds a 60 percent interest in this German shipbuilding concern. BHS is also connected with this concern by way of an interlocking directorate in the person of the German, J. Groeninger.

(i) August Thyssen-Hütte, A. G.

Address: Duisberg-Hamborn, Germany.

Capital: R.M. 100,000 as of 1938.

Business: One of the largest German foundries.

Interest: Through J. Groeninger BHS has official ties with this German concern which is 100 percent owned by Vereinigte Stahlwerke, A. G.

3. Activities under occupation

On the basis of financial statements indications are that there has been no appreciable step-up in BHS's business under the occupation. It may be assumed that the lack of increase in volume of business is due to the fact that the Rhine-Ruhr Thyssen steel industry, being geared to fill the needs of production for the German war machine, was not in a position, even if it were so inclined, to trade with Holland.

In regard to any business negotiations which BHS might wish to carry on with German financial and industrial concerns it has in the person of its German director, J. Groeninger, a convenient channel for establishing contacts and concluding negotiations.

D. MANAGEMENT PERSONNEL

1. Prior to occupation, 1939

Management

Board of directors:

A. den Bandt.

Johann Groninger.

Managers:

D. C. Schutte.

H. J. Kouwenhoven.

Holders of procurator:

J. J. Kortmulder.

H. F. Grimeyer.

M. van Rossen.

G. J. Maly.

2. Subsequent to occupation, 1941

There have been no changes in management personnel of BHS between 1939 and 1941.

Management

Board of directors:

A. den Bandt.

Johann Groninger.

Managers:

D. C. Schutte.

H. J. Kouwenhoven.

Holders of procuration:

J. F. Kortmulder.

H. F. Grimeyer.

M. van Rossen.

G. J. Maly.

3. Biographies of some members of the management group

A. den Bandt

A. den Bandt was a director of the Bank voor Handel en Scheepvaart N. V., the bank for trade and shipping, in 1939 and continued to hold this position in 1941. Den Bandt is also a partner in the firm of A. den Bandt en Gouda, securities brokers.

Johann Groninger

Johann Groninger, a German, has numerous industrial and financial affiliations all of which are directly or indirectly with the August Thyssen Group. In Holland he is associated with Bank voor Handel en Scheepvaart, the subsidiary of August Thyssen Bank, Berlin (formerly known as von der Heydt's Bank A. G., Berlin). Most of Groninger's connections, however, are with Thyssen concerns in Germany which in turn are affiliated with the steel trust, Vereinigte Stahlwerke. Perhaps his most important connection is his directorship of August Thyssen-Hütte, A. G., Duisburg-Hamborn, which is the second most important firm in the combine.

Groninger's last known address is 5 Veerkade, Rotterdam.

His known connection are the following:

Financial.—Bank voor Handel en Scheepvaart N. V., Rotterdam (principal function was financing the export of the products of the Rhine-Ruhr industry. Subsidiary of the Thyssen group. Controls the Holland-American Investment Corp., Rotterdam, and participates in the Rotterdamsch Trustees Kantoor)—Director.

Industrial.—Shipbuilding: Bremer Vulkan Schiffbau und Maschinenfabrik, Bremen-Vegesack (principal shareholder is the Thyssen group; capital in 1938 was R.M. 10,000,000)—Deputy chairman of board of directors.

Flensburger Schiffbau-Gesellschaft, Flensburg (60 percent interest held by Thyssen-Konzern; 25 percent interest held by the city of Flensburg; capital in 1938 was R.M. 2,650,000)—Deputy chairman of board of directors.

Foundry: August Thyssen-Hütte, A. G., Duisburg-Hamborn (completely owned by Vereinigte Stahlwerke; second most important unit in the steel trust; capital in 1938 was R.M. 100,000,000)—Director.

J. F. Kortmulder

J. F. Kortmulder was a holder of procuration for the Bank voor Handel & Scheepvaart in 1939 and continued in this capacity in 1941 after the German occupation of Holland.

Hendrik Jozef Kouwenhoven

Hendrik Jozef Kouwenhoven, managing director of Bank voor Handel & Scheepvaart N. V., of Rotterdam, a subsidiary of the August Thyssen Bank of Berlin, is officially connected through this association with the Union Banking Corp. and the Holland-American Trading Co., both of New York City. As of 1938, Kouwenhoven was a member of the board of directors of Vereinigte Stahlwerke A. G., a large German steel combine. His last known address is given as 102 Oostende Voorburg, Holland.

His affiliations as of 1941 are listed below:

Bank voor Handel en Scheepvaart N. V. (created by August Thyssen Bank)—Manager.

N. V. Hollandsch Amerikaansche Beleggings Maatschappij (Holland-American Investment Corp., connected with the Bank voor Handel en Scheepvaart through interlocking directorates in the persons of N. J. Kouwenhoven, M. van Rossen, and D. C. Schutte)—Manager.

N. V. Rotterdamsch Trustee's Kantoor N. V. (trust company, connected with Bank voor Handel en Scheepvaart through interlocking directorates in the persons of J. Groninger, H. J. Kouwenhoven, M. van Rossen)—Manager.

Union Banking Corp., New York—Director.

D. C. Schutte

D. C. Schutte in 1939 was one of the managers of the Bank voor Handel en Scheepvaart N. V., and continued to hold this position as of 1941. Schutte is also the director of an investment corporation, N. V. Hollandsch Amerikaansche Beleggings Maatschappij, which is closely connected with the Bank voor Handel en Scheepvaart N. V. through interlocking directorates.

BANK VOOR NEDERLANDSCHEN ARBEID (BANK FOR NETHERLANDS LABOR)

A. LOCATION, BRANCH OFFICES

Address: Amsterdam.

Branches: Rotterdam, Utrecht.

B. NATURE OF BUSINESS—GERMAN CONNECTIONS

The Bank voor Nederlandschen Arbeid, created since the occupation of Holland, is the Dutch subsidiary of the German Bank der Deutschen Arbeit, which is the bank of the German Labor Front, the official organization of the Nazi Party, formed in 1933 when German labor unions were dissolved, following the Nazi Party's rise to power. Only political personalities are represented on the board of the German bank, which is patronized by public and party organizations, and has many semipublic functions.

C. SIZE AND IMPORTANCE

The Bank voor Nederlandschen Arbeid was, as indicated above, of importance largely as a political factor in financing the dissemination of the Nazi ideology in Holland, and strengthening the Nazi Party in that country.

D. MANAGEMENT PERSONNEL

1. Directors and officers

Board of directors:

Rud. Lencer.

H. Reitbauer.

H. Garbrecht.

F. Hohrmann.

Johs. Koch.

Manager:

J. F. Kutzleb.

Holders of procuration:

U. Bruns.

W. C. D. Müller.

2. Biographies of some members of management personnel

Johannes Koch

Johannes Koch, a German, is a director of the Bank voor Nederlandschen Arbeid N. V. (labor bank), the Dutch subsidiary of the Bank der Deutschen Arbeit (owned by the German Labor Front organization headed by the Nazi, Robert Ley). Aside from his connection with Bank voor Nederlandschen Arbeid, Koch's affiliations are with German financial and industrial enterprises.

Koch was born on June 1, 1857, in Frankfurt/Oder. His last known address is 40 Obere Renschgasse (Schonhohe), Guben.

His known connections are the following:

Financial.—Bank voor Nederlandschen Arbeid N. V.—Director.

Niederlausitzer Bank A. G., Cottbus (affiliate of the Deutsche Bank; capital in 1938 was RM. 2,220,000)—Director.

Industrial.—Berlin-Gubener Hutfabrik A. G., Guben (manufacture and sale of hats; 75 percent interest held by a group headed by the Baron de Telepnef, London; capital in 1938 was RM. 6,300,000)—Director.

W. Quade, G. m. b. H., Maschinenfabrik und Eisengiesserei, Guben (production of machines for the hat and cloth industry; 77 percent interest held by the Berlin-Gubener Hutfabrik A. G., Guben, above; capital in 1938 was RM. 240,000)—Chairman of board of directors.

J. F. Kutzleb

Kutzleb is reported to be a member of the Nazi Party. He is also the custodian appointed by the occupation authorities for the Dutch finance company, N. V. Financiële Maatschappij (Egoro).

Rudolf Lencer

Rudolf Lencer, a German Nazi, is a director of Bank voor Nederlandschen Arbeid N. V. (labor bank) with offices at Amsterdam and Utrecht. This bank was created in 1941 as the Dutch subsidiary of the Bank der Deutschen Arbeit, Germany (owned by the German Labor Front organization headed by the Nazi, Robert Ley) for which Lencer acts as general manager. Aside from the directorship he holds in Bank voor Nederlandschen Arbeid, Lencer's political, financial, and business affiliations are with German organizations. Rudolf Lencer is one of the Nazis who has benefited greatly since his party's rise to power.

Before 1933 he was a leader and an extremist in the National Socialist Trade Union of Bank Employees which had been developed in competition with the already established Social Democratic Unions. In this position Lencer is reported to have been unusually sharp and aggressive and to have made frequent attacks upon the banking administrations.

At the time, his paid position was only that of a subordinate employee of the Deutsche Bank. Following Hitler's rise to power in 1933 Lencer's situation changed abruptly. He became head of the Nazi bank employees and manager in the German Labor Front which had expropriated all the "free" trade unions. In this position he was strategically placed to deal with the banks and bankers which he had formerly criticized.

Subsequently, his party zeal was further rewarded when he was transferred to the post of manager of the Bank der Deutschen Arbeit which formerly had been an instrumentality of the free German labor unions, and a comparatively small bank. Under the Nazis, it experienced tremendous expansion, so that by 1936 it had become the third largest bank in Germany and one of the so-called Berliner Grossbanken. In spite of its ostensibly private character it is to all intents and purposes a Government bank, a fact which is indicated by its origin and by its having three-fourths of its total assets invested in Reich securities. Bank der Deutschen Arbeit is also reported to be one of the institutions which provides good and well-paid jobs for long-time "party hacks." In respect to this latter statement it should be noted that there are reports that a law was passed in Germany in 1944 forbidding party functionaries to have paid or unpaid jobs in private industry. Whether this decree affects this institution is not known.

Lencer is also a member of the advisory board of the Deutsche Reichsbank, the German central bank, the Kreditausschuss Reichsbank, or the credit division of the Reichsbank.

Lencer is prominent in the Reich's official organization of the insurance field, holding the position of chief of the division of bank and insurance in the German Labor Front. He is also a director of several small insurance companies, control of which is held by the Labor Front through the Bank der Deutschen Arbeit.

Background.—Lencer was born on August 10, 1901 in Germany. After a relatively limited education, he became an apprentice in a branch of what is now the Commerz Bank.

After serving his apprenticeship he held various jobs with banks and business firms but soon became actively interested in the Nazi Socialist movement and eventually became a speaker in Berlin. In the party he rose quickly and by March 12, 1933, was elected a State and district representative from Berlin as well as the State councilor of the Trechlow district. By April 11, 1933, he was appointed chairman of the German Bank Employees' Union and was charged with bringing all bank employees under the jurisdiction of the party unions.

Shortly afterward he was made the Reich leader for banks and insurance.

Up to this time, Rudolf Lencer's affiliations with the party had been in strictly organizational posts, but between 1933 and 1936 he received a more substantial appointment, namely, general manager of the aforementioned Bank der Deutschen Arbeit. By 1938 Hitler personally proposed him as a member of the Reichstag, and in 1942 he was made an official of conquered Latvia.

Rudolf Lencer is reported to reside at 5, Lindenalle, Berlin-Westend. His known connections were as follows in 1942:

Banking.—Bank voor Nederlandschen Arbeid—Director.

Bank der Deutschen Arbeit A. G., Berlin—Member of the management committee.

Ostdeutsche Privatbank A. G., Danzig—Member of board of directors.

Deutsche Reichsbank, Berlin—Member of the advisory board.

Kreditausschuss Reichsbank, Berlin (member of the credit division of the Reichsbank)—Member of the advisory board.

Insurance.—Deutsche Sachversicherung A. G., Hamburg (casualty insurance in the life field; capitalized at RM. 1,000,000; owned jointly by Bank der Deutschen Arbeit and the Treuhandgesellschaft für Wirtschaft Unternehmungen m. b. H.)—Director.

Beamtenversicherungsverein der Deutschen Bank und Bankiergewerbes A. G., Berlin (bank employees' insurance)—Director.

Deutscher Ring Transport und Fahrzeug-Versicherungs A. G., Hamburg (life insurance company; capitalized at RM. 2,500,000, entirely owned by the German Labor Front, member of the Ring Konzern)—Director.

Deutscher Ring Lebensversicherungs A. G., Hamburg (another ring member, which has a small interest in Deutscher Ring Transport-und Fahrzeug Versicherungen A. G. (see above); capitalized at RM. 3,000,000)—Director.

Industrial.—Vereinigte Textilwerke A. G., Hanover (textiles)—Member of board of directors.

Wilhelmshütte Eisen- u. Emaillewerke A. G., Sprottau (small processed iron and enamel products factory, owned jointly by the Deutsche Bank and city of Sprottau)—Director.

Semipolitical.—Fachamt Banken und Versicherungen der Deutschen Arbeitsfront—Chief, division of banking and insurance, in the German Labor Front.

Akademie für Deutsches Recht, Berlin; Ausschuss für Versicherungsrecht Ausschuss für Genossenschaftsrecht (Academy of German Law, Berlin, Division of Insurance Law and Division of Citizens' Rights)—Member.

Reichsversicherungsausschuss, Berlin (Reich Insurance Division, Berlin)—Member.

HANDELSTRUST WEST N. V.

A. ADDRESS, BRANCH OFFICE

Address: 569-571 Keizersgracht, Amsterdam.
Branch office: The Hague.

B. NATURE OF BUSINESS

This is a subsidiary of the Dresdner Bank of Berlin, established by that bank in October 1939. Its functions include the administration of estates, banking and commission business, and trustee activities. It is believed that Handelstrust West may have taken over the business of the banking firm Hamburger & Co. in which the Dresdner Bank formerly had an interest, but which was liquidated because of its Jewish connections.

C. SIZE AND IMPORTANCE

The capital of Handelstrust West N. V. was reported as Fl. 1,000,000 in 1941.

D. MANAGEMENT PERSONNEL

Management personnel of Handelstrust West N. V. was reported as follows in 1941:

Managers:

C. Brandes.

F. Dellschow.

Dr. H. Knobloch.

Holders of procuration:

D. Blom.

H. F. Lensen.

2. Biographies of some members of the management group

F. Dellschow

In addition to his position with Handelstrust West, F. Dellschow is also a member of the advisory committee for banking and insurance formed during the occupation of Holland by the German Chamber of Commerce for the Netherlands. This committee had as its object the promotion of German economic interests in the Netherlands in the branches of banking and insurance. The duty of this

advisory committee was to advise the German Chamber of Commerce in the Netherlands and to give its full support to German firms located and operating in the Netherlands.

BANK VOOR WESTEUROPAEISCHE HANDEL (BANK FOR WESTERN EUROPEAN TRADE)

A. LOCATION

Address: Amsterdam.

B. NATURE OF BUSINESS

The large German banks, under the leadership of the Deutsche Bank and Dresdner Bank, founded the Bank voor Westeuropaeische Handel. It was presumably intended to finance international trade but no information is available concerning its operations.

BANK VOOR NORD NEDERLAND

A. LOCATION

Address: Groningen.

B. NATURE OF BUSINESS

The Bank voor Nord Nederland is a purely local institution, organized by the Dresdner Bank after the German occupation of Holland. The Oldenburger Landesbank, a subsidiary of the Dresdner Bank, contributed 40 percent of the capital. It is believed that the establishment of the Bank voor Nord Nederland may have had a political motive. The Germans had at one time made a determined attempt to win over to the Nazi ideology the northern provinces of Holland, which were nearest to Germany, not only geographically, but also in traditions and customs.

C. SIZE AND IMPORTANCE

The capital of the Bank voor Nord Nederland was reported as Fl. 100,000 in 1941.

EXHIBIT No. 6

SOME EXAMPLES OF GERMAN PENETRATION IN EUROPE, EXCLUSIVE OF NEUTRALS

AUSTRIA

Creditanstalt-Bankverein, Vienna.—Following the occupation of Austria, the majority of the capital acquired by VIAG, the Reich holding company, which turned it over to the Deutsche Bank.

Länderbank Wien A. G., Vienna.—Created by the Dresdner Bank out of the Mercurbank, its Austrian affiliate, and the Austrian branches of several foreign banks, including the Banque des Pays de l'Europe Centrale.

Reichswerke A. G. für Alpine-Montanbetriebe "Hermann Göring".—Controlling interest acquired by the Göring combine in 1939. This company formerly known as the Oesterreichische Alpine-Montangesellschaft and formerly partly owned by the Vereinigte Stahlwerke.

Steir-Daimler-Puch A. G.—Majority of shares acquired by the Göring combine in 1938.

Erste Donau Dampfschiffahrts-Gesellschaft.—Affiliated with the Göring combine since 1938.

Donau Chemie A. G.—Controlling interest acquired by the I. G. Farbenindustrie in 1938. This company was formerly known as the Pulverfabrik Skodawerke Wetzler A. G.

BELGIUM

Continental Bank S. A., Brussels.—Established by the Dresdner in 1941.

Banque Hanseatique, Brussels.—Established by the Commerzbank in 1941.

Banque de l'Ouest, Brussels.—Established by the Bank der Deutschen Arbeit in 1941.

Krupp-Brussels S. A.—Formed to represent the interests of Fried. Krupp A. G. in Belgium.

S. A. d'Ougree-Marihaye.—During the German occupation, brought into the sphere of influence of the Otto Wolff concern.

BULGARIA

Deutsch-Bulgarische Kreditbank, Sofia.—Controlled by German interests since its establishment in 1905. Became affiliated with the Deutsche Bank in 1929. In 1942-43 absorbed the Sofia branch of the Anglo-Prager Kreditbank.

Bulgarische Handelsbank, Sofia.—Concluded a working agreement with the Dresdner Bank and its Austrian affiliate, the Länderbank Wien A. G., Vienna.

Steyr-Skoda Bulgarische A. G. für Automobilehandel, Sofia.—Joint-enterprise of the Steyr-Daimler-Puch, Vienna, and the Skodawerke, Pilsen, Czechoslovakia, both affiliates of the Göring combine.

Thrazische Bergwerks A. G.—Founded in 1941 by the Afrika Berbau Dr. Friedrich Zöller & Co., Berlin, to exploit mining concessions received from the Bulgarian state.

CZECHOSLOVAKIA

Böhmische Union-Bank, Prague.—Controlling interest acquired by the Deutsche Bank in 1939 from an international group under the leadership of the Banque de la Societe Generale de Belgique.

Böhmische Escompte-Bank, Prague.—Controlling interest acquired by the Dresdner Bank in 1939.

Union-Bank Pressburg A. G., Bratislava.—Created in 1940 out of the Slovakian branches of several other Czechoslovak banks, including the Böhmische Union-Bank. Controlling interest held by the Deutsche Bank through the Creditanstalt-Bankverein, Vienna.

Deutsche Handels- und Kreditbank, Bratislava.—Reorganized in 1939 out of the Bratislavaer Handels- und Kreditbank A. G. and several smaller institutions. Affiliated with the Dresdner Bank and its subsidiary, the Länderbank Wien A. G., Vienna.

A. G. vorm. Skoda-Werke, Pilsen.—Acquired by the Göring combine in 1938 from the French Schneider steel interests.

Verein für Chemische und Metallurgische Produktion.—Affiliated with I. G. Farbenindustrie.

Prager Eisen-Industrie Gesellschaft.—Participation held by the Mannesmann Röhrenwerke.

FRANCE

Aero-Bank S. A., Paris.—Established in 1941 by the Bank der Deutschen Luftfahrt.

Societe de Credits et d'Investissements, Paris.—Apparently affiliated with a German state financial institution.

Societe Anonyme de Matieres Colorantes et Produits Chimiques Francolor.—Founded in 1941 with I. G. Farbenindustrie taking the majority of the capital.

Societe France Rayonne.—Established during the occupation; the Deutsche Zellwolle- und Zunstseide Ring G. m. b. H. obtained an important participation in this company.

Les Petits Fils de Francois de Wendel.—The Göring combine acted as trustee of this important steel enterprise during the occupation of France.

Union des Consommateurs de Produits Metallurgiques et Industriels.—Placed under the trusteeship of the Göring combine during the occupation of France.

GREECE

Banque Nationale de Grece, Athens.—Concluded a working agreement with the Deutsche Bank in 1941.

Banque Commerciale de Grece, Athens.—Concluded a working agreement with the Commerzbank in 1941.

Banque d'Athenes, Athens.—Concluded a working agreement with the Dresdner Bank in 1941.

Griechisch-Deutsche Finanzierungs-Gesellschaft A. G.—Established in 1941 with the Dresdner Bank and the Banque d'Athenese each taking 50 percent of the capital.

Societe des Poudreries et Cartoucheries Helleniques.—Control seized by the German occupying authorities in Greece and most of the heavy machinery in its factories removed to Germany.

Handels- und Schiffahrtsgesellschaft "Heos-Poseiden" A. G.—Founded during the occupation under German impetus to take over steamship and machine construction companies.

Sudostropa Deutsch-Italienische A. G. für Seide.—Established by German and Italian interests to exploit the Greek silk industry. The German share of the capital was taken up by Heinrich Schneider, a German businessman not further identified.

HUNGARY

Ungarische Allgemeine Kreditbank, Budapest.—Minority interest acquired by the Dresdner Bank in 1941.

Wechselstuben A. G. "Mercur," Budapest.—Controlled by the Länderbank Wien A. G., Vienna, an affiliate of the Dresdner Bank.

"Hungaria," Chemische und Hütten Werke A. G.—Affiliated with I. G. Farben through the Verein für Chemische und Metallurgische Produktion, Prague.

Deutsche-Ungarische Mineralöl-Industrie G. m. b. H.—Founded by a German group with the Wintershall A. G., Berlin, at the head.

"Metallochemia" Hüttenwerk, Chemische Industrie und Metallhandels A. G.—Interest acquired by the Otto Wolff combine.

LATVIA

Handels- und Kreditbank A. G., Riga.—Controlling interest held by the Dresdner Bank.

Hansabank, Riga.—Majority of stock in the possession of the Commerz Bank.

LUXEMBOURG

Banque Generale du Luxembourg, Luxembourg.—Deutsche Bank acquired an important minority interest in 1940.

Banque Internationale a Luxembourg, Luxembourg.—Dresdner Bank, which held a minority participation before the war, acquired the controlling interest in 1940. Pferdenges & Co., Cologne, and Delbrück, Schickler & Co., Berlin, also hold participations.

Acieries Reunies de Burbach-Eich-Dudelange (ARBED).—The Deutsche Bank is said to have acquired a small participation in this company.

Hauts-Fourneaux Acieries Differdange Saint-Ingbert Rumelange (HADIR).—Vereinigte Stahlwerke was made trustee of this steel company.

THE NETHERLANDS

Handel-Maatschappij H. Albert de Bary & Co., N. V., Amsterdam.—Controlled even before the war by the Deutsche Bank, which in 1940 substantially increased its interest.

Hollandsche Koopmansbank, Amsterdam.—In 1940 the Berliner Handels-Gesellschaft increased its prewar minority interest to a controlling one.

Rijnsche Handelsbank N. V., Amsterdam.—Controlled by Commerz Bank.

Bank voor Nederlandschen Arbeid, Amsterdam and Rotterdam.—Established in 1941 with the Bank der Deutschen Arbeit taking one-half of the capital.

Handelstrust West N. V., Amsterdam.—Established in 1940 with the majority interest in the possession of the Dresdner Bank.

Bank voor Noord Nederland, Groningen.—Established in 1942 with a substantial minority interest taken by the Dresdner Bank through the Oldenburgische Landesbank.

Aero-Bank N. V., Amsterdam.—Majority interest taken by the Bank der Deutschen Luftfahrt A. G.

Bank voor Handel en Scheepvaart N. V., Rotterdam.—Prewar affiliate of the Thyssen interests.

Bank voor West-Europese Handel, Amsterdam.—Founded in 1940 under the leadership of the Deutsche Bank and the Dresdner Bank.

Nederlandsche Hoogovens en Staalfabrieken N. V.—Participation acquired by Vereinigte Stahlwerke.

Algemeene Kunstzijde Unie N. V. (AKU).—Sizable participation in this textile concern acquired by the Deutsche Bank. The Phrix combine also holds an interest in this company.

Siderius A. G.—Controlled jointly after 1940 by Fried. Krupp A. G. and Dutch collaborationist interests.

NORWAY

A. S. Sydvaranger.—The Norddeutsche Bank, Hamburg, acting as the representative of the large German steel concerns, has obtained an influence in this iron ore mining company.

Nordag.—Founded in 1941 for the production and manufacture of aluminum and other light metals. Capital supplied by the Bank der Deutschen Luftfahrt and Hansa-Leichtmetall A. G., Berlin, although there is a suspicion that the company really belongs to the German Reich.

Norvegienne de l'Azote et de Forces Hydro-Electriques (Norsk-Hydro).—Controlling interest acquired during the occupation by I. G. Farbenindustrie and its affiliates, which already held a minority share in the company.

POLAND

Kommerzialbank, Cracow.—Controlled since 1940 by the Dresdner Bank, which acquired this interest from its affiliate, the Länderbank Wien A. G.

Creditanstalt A. G., Cracow.—Formed in 1944 out of the Cracow and Lowow branches of the Creditanstalt-Bankverein, Vienna, and controlled by that bank and its parent institution, the Deutsche Bank.

Ostbank A. G., Posen.—Majority acquired by the Dresdner Bank in 1940.

Bank der Danzig-Westpreussischen Landschaft, Danzig.—Established in 1940. Majority interest held by the Reich.

Landschaftliche Bank für das Wartheland, Poznan.—Established in 1940. Controlling interest taken over by the Reich.

Haupttreuhandstelle-Ost G. m. b. H.—Formed by the Nazis to facilitate the transfer to German owners of industrial properties in Polish territories annexed to Germany.

Werke der Generalgouvernements.—Newly established organization managed by the occupying authorities to control the most important industrial facilities of German-occupied Poland.

Ost-Energie A. G.—Established by the Germans to exploit the electric power station at Roznow.

Wspolnota Intersow S. A.—Acquired after the German occupation of Poland by Fried. Krupp A. G. and the Röchling'sche Eisen- und Stahlwerke G. m. b. H.

RUMANIA

Banca Comerciala Romana, Bucharest.—Control acquired by the Deutsche Bank in 1940-41 from former French and Belgina owners.

Societatea Bancara Romana, Bucharest.—Established in 1929, when the Dresdner Bank transformed its Bucharest branch into a separate company. Majority of the capital owned by the Dresdner Bank with the Commerz Bank and J. H. Stein, the Cologne private banking house, holding minority participations.

Banca de Credit Roman, Bucharest.—Prior to the war the German banking house of Mendelssohn & Co. held a minority interest in this bank. Following the liquidation of Mendelssohn in 1938, this interest passed to the Deutsche Bank and in 1941 to the Reichskreditgesellschaft.

Banca Chrissoveloni, Bucharest.—Minority interest acquired by the Berliner Handels-Gesellschaft in 1940.

Bukarester Handelsbank, Bucharest.—Minority interest acquired by the Bank der Deutschen Arbeit in 1940, when the name of the bank was changed from the Banca Anglo-Romana to the present title.

Resitaer Eisenwerke und Domanen A. G.—Participation acquired by the Göring combine.

Prima Societate Romana de Explosivi.—I. G. Farbenindustrie holds an interest through the Dynamit Nobel A. G. and its affiliates.

YUGOSLAVIA

Bankverein A. G., Belgrade.—Reorganization of the Servian branches of the Opšte Jugoslavensko Bankarsko Drustvo a. D. Controlling interest held by the Deutsche Bank and its affiliates with small participations in the hands of the Commerz Bank and the Reichskreditgesellschaft.

Bankverein für Kroatien A. G., Zagreb.—Reorganization of the Croatian branches of the Opšte Jugoslavensko Bankarsko Drustvo a. D. Controlling interest held by the Deutsche Bank and its affiliates with small participations in the hands of the Commerz Bank and the Reichskreditgesellschaft.

Kroatische Landesbank, Zagreb.—Controlling interest held by the Dresdner Bank since 1941.

Landesbank für Bosnien und Herzegovina, Sarajevo.—Majority interest acquired in 1942 by the Creditanstalt-Bankverein, Vienna, a subsidiary of the Deutsche Bank.

Mitteleuropäische Bergwerks A. G.—Controlled by the Bleiberger-Bergwerks-Union, Klagenfurt, Austria, which is in turn owned by the Preussische Bergwerks- und Hütten A. G., Berlin.

Energieversorgung Sudsteirmark.—This new company, formed by the Reich, took over, among others, the following electrical enterprises in Yugoslav territory incorporated into the Reich: Elektrizitäts A. G. Fall, the Trifailer Kohlenwerksgesellschaft, and the Krainische Landes-Elektrizitätswerke.

Bosnische Elektrizitäts A. G.—Control obtained by the Dynamit Nobel A. G., which is affiliated with the I. G. Farbenindustrie.

Stickstoffwerke A. G. Ruse.—Brought into the sphere of influence of the I. G. Farbenindustrie.

Compagnie Française des Mines de Bor.—Copper mine, in which controlling interest was bought from French owners by a German group represented by the Preussische Staatsbank.

Yugochrom A. G.—Formed jointly in 1940 by the Göring combine and Fried. Krupp A. G., Essen.

EXHIBIT No. 7

PRELIMINARY STUDY OF THREE GERMAN BANKS

BANK DER DEUTSCHEN ARBEIT A. G.

A. LOCATION, BRANCH OFFICES, ETC.

Corporate address: Berlin C 2, Germany.

Branches in Germany.—At the end of 1940 the Bank der Deutschen Arbeit had 26 branches and 68 agencies in Germany. Later figures are not available but it is virtually certain that its branch system remains much smaller than that of the other three big branch banks. Because of this fact, and by virtue of the privileged political position of the institution, it has apparently been little affected by the rationalization movement in German banking which resulted in the closing of many branch banks.

Branches outside Germany.—At the end of 1940 the Bank der Deutschen Arbeit had 17 branches in annexed areas, as follows:

Number of branches		Number of branches	
Austria.....	2	Poland (annexed territory).....	7
Sudentenland.....	1	Ostland.....	2
Protectorate.....	1	Alsace-Lorraine.....	2
Danzig.....	1	Luxemburg.....	1

Except for the fact that 5 additional branches in Polish territory were added in 1942, later information is not available.

Outside of annexed territory the bank's foreign participations, all developed during the war period, consist mainly of subsidiaries in Belgium and Holland and a minority interest in a small Rumanian bank.

B. DESCRIPTION OF BANK AND ITS BUSINESS

1. Origin and ownership

The Bank der Deutschen Arbeit was founded in 1924 under the name "Bank der Arbeiter, Angestellten und Beamten, A. G." as an institution of the Freie Gewerkschaften (Free Labor Unions), Germany's most powerful labor organization. In the spring of 1933, when the Nazis came to power, the German labor unions were dissolved and replaced by an official organization of the Nazi party, the Deutsche Arbeitsfront (German Labor Front). The bank's name was changed at that time to Bank der Deutschen Arbeit A. G. and, since 1933, it has been completely owned by the German Labor Front. In contrast to the situation prevailing in the other large Berlin banks, the directors of the Bank der Deutscher Arbeit enjoy political rather than industrial prominence.

2. Growth from 1933 to 1943

Under the auspicious sponsorship of the German Labor Front, the Bank der Deutschen Arbeit has enjoyed a phenomenal growth under the Nazi regime. At the end of 1932 its total assets were only RM. 126,000,000. By 1939, however, its total assets exceeded those of the Berliner Handels-Gesellschaft and of the Reichs-Kredit-Gesellschaft and, in 1942, it moved ahead of the Commerzbank, thereby attaining its present position as the third ranking Berlin bank. Its total resources at the end of 1942 were RM. 3,700,000,000 and its capital was RM. 50,000,000.

The bank participated until 1938 in the Nationalbank A. G., Essen, which, under the name "Deutsche Volksbank A. G.," was the credit institution of the Christian labor unions. In 1938 it acquired a minority interest in Georg Fromberg & Co., A. G., a former interest of the Deutsche Bank.

An example of the favorable treatment accorded the bank is found in a press report dated November 13, 1944. Therein it is stated that leading directors in both the Dresdner Bank and the Deutsche Bank were arrested because of the fact that these banks refused to support the Bank der Deutschen Arbeit, banking enterprise of Robert Ley, Minister of Labor, which had gotten into difficulties.

3. Nature of activities

Since 1940 the Bank der Deutschen Arbeit has been classified in official German banking statistics as a Berliner Grosbank. While there is ample justification for such a classification from the standpoint of total resources, the bank has never enjoyed an international reputation.

The character of the bank's business differs considerably from that of the other Grossbanken. Its deposits are drawn largely from public or semipublic sources, and it has not developed commercial credits, security transactions, or industrial connections to the conventional extent. Its balance sheets for the war years show an even greater concentration of investment in Reich securities than those of the other Grossbanken (69 percent of total resources invested in Treasury bills as against 52 percent for the Grossbanken as a whole).

Being patronized by public and party organizations, the Bank der Deutschen Arbeit has many semipublic functions. The German Labor Front holds with the bank the large liquid funds which it receives from membership fees and other semi-compulsory contributions. The bank is also the depository for the advance payments which the public has been induced to make for the "Volkswagen," a cheap car intended for the lower income groups, production of which has never materialized. The bank is used to finance the economic enterprises of the German Labor Front, most of which were appropriated from the earlier German labor unions.

The German Labor Front controls (in some instances through the Bank der Deutschen Arbeit) several insurance companies, building and settlement corporations, printing and publishing houses, and other enterprises, as well as the People's Car Works and People's Tractor Works, which were developed under the Nazi regime and presumably are devoted to armaments manufacture.

4. Foreign affiliations

Unlike the Deutsche Bank and the Dresdner Bank, the Bank der Deutschen Arbeit has accomplished little expansion outside of Germany. A brief statement of its activities in annexed and formerly occupied territory is as follows:

Austria and Czechoslovakia.—Branches were opened in Austria (Vienna and Graz), in the Sudetenland (Reichenberg), and in the Protectorate (Prague). In 1944 the bank stated its intention of converting its Prague branch into a subsidiary.

Danzig.—In 1939 the bank acquired the private banking firm, R. Damme Danzig, which became the nucleus of the branch which it opened in Danzig later in the year. In 1940 the bank took over the Danziger Privat-Actien-Bank and, in 1942, absorbed it in the branch organization.

Poland.—In the territories annexed from Poland the bank maintained six branches. In the Government General, a branch was maintained in Cracow and a representative's office in Warsaw.

Baltic States.—Branches were maintained at Riga and Kaunas. In 1944 the bank stated its intention to convert these branches into subsidiaries.

Alsace-Lorraine.—A branch was established in Alsace (Strasbourg) and in Lorraine (Metz).

Luxemburg.—The bank took over the Luxemburg branch of Credit Lyonnais, S. A., transforming it into its own branch.

France.—The bank's penetration of France has been reported to be limited to the establishment of a representative's office in Paris.

Belgium.—The bank established Banque de l'Ouest, Brussels (also known as the Westbank) as a subsidiary in 1941, with a branch at Antwerp. Total assets increased from 59,500,000 Belgian francs in 1942 to 415,700,000 Belgian francs in 1943. In the latter year the capital was increased from 10,000,000 to 25,000,000 Belgian francs.

Netherlands.—Bank voor Nederlandsche Arbeid, with headquarters in Amsterdam and branches in Rotterdam and Utrecht was established by the bank as a subsidiary in 1941. The bank subscribed 1,000,000 guilders capital and another 1,000,000 guilders was contributed in 1942 by the Dutch Labor Front, allegedly in order to emphasize the harmony between Dutch and German interests. Total assets in 1943 were 36,700,000 guilders.

Rumania.—In 1940 the bank acquired out of former minority holdings a minority interest in the Banca Anglo-Romana and changed its name to Bukarester Handelsbank. This relatively small bank was capitalized at 100,000,000 lei and had assets of 800,000,000 lei in 1941.

C. RELATION TO POLITICAL ORGANIZATIONS, BANKING INSTITUTIONS, AND INDUSTRIAL ENTERPRISES IN GERMANY

1. Political organizations

(a) *Rechtsamt der Deutschen Arbeitsfront:*

Address: Berlin.

Description: Legal division of the German Workers' Front.

Interest: Gustav Bähren, a director of the bank, is chief.

(b) *Ferein Heime für Handel und Industrie:*

Address: Weisbaden.

Description: Vacation homes for employees in commerce and industry.

Interest: Gustav Bähren, a director of the bank, is president.

(c) *"Bauhilfe" der Deutschen Arbeitsfront für den Sozialem Wohnungsbau Gemeinnützige G. m. b. H.:*

Address: Berlin.

Description: Public housing.

Interest: August Christoffel, a member of the bank's management committee, is a director.

(d) *"Gehag" Gemeinnützige Heimstatte A. G. der Deutschen Arbeitsfront*

Address: Berlin.

Description: Public dwellings.

Interest: August Christoffel, a member of the bank's management committee, is a director.

(e) *"Heima" Gemeinnützige Wohnungs und Siedlungsgesellschaft der Deutschen Arbeitsfront, A. G.*

Address: Berlin.

Description: Public housing.

Interest: August Christoffel, a member of the bank's management committee, is a director.

(f) *Miscellaneous organizations allied with the German Labor Front*

Address: Various addresses in Germany.

Description: Numerous organizations engaged in insurance, building, housing, printing, publishing, etc., operated as a part of or in conjunction with the German Labor Front. A complete listing of such organizations is contained under the biographies of directors and management personnel.

Interest: Bruno Raueiser, a director of the bank, is a director or officer in 22 organizations falling in this category. Hans Strauch, a director of the bank, is a director or officer in 17 organizations falling in this category.

2. Banks and financial institutions

No instances were noted in which more than one member of the board of directors or management committee of the Bank der Deutschen Arbeit serves as an officer or director of another German bank. No other information which tends to indicate an important interest in other German banks was found.

3. Insurance companies

Members of the board of directors and/or the management committee of the Bank der Deutschen Arbeit are directors or officers of numerous insurance companies which appear to be operated either by or in conjunction with the German Labor Front or allied labor organizations. A list of such insurance companies, with the name of the bank's representative parenthetically inserted, is as follows:

- (a) Deutsche Sachversicherung A. G., Hamburg (Bähren, Lencer, Strauch).
- (b) Deutsche Ring Krankenversicherung A. G., Hamburg (Bähren, Lencer).
- (c) Deutsche Ring Lebensversicherung A. G. Hamburg (Bähren, Bierlein).
- (d) Deutsche Ring Transport- und Fahrzeug-Versicherungs A. G., Hamburg (Bähren, Lencer).
- (e) Volksfürsorge Lebensversicherung A. G. der Deutschen Arbeitsfront, Hamburg (Bähren).
- (f) Hamburg-Bremer Rückversicherungs, A. G., Hamburg (Halder).
- (g) Beamtenversicherungsverein der Deutschen Bank und Bankiergewerbes, A. G., Berlin (Lencer).
- (h) Deutscher Ring Versicherungsgesellschaft der DAF, Hamburg (Strauch).
- (i) "Gisela" Deutschen Lebens- und Aussteuer-Versicherungs, A. G., Munich (Strauch).
- (j) Volksfürsorge Lebensversicherungs A. G. der DAF, Hamburg (Strauch).
- (k) Reichsversicherungsausschuss (Strauch, Lencer).
- (l) Fachamt Banken und Versicherungen der Deutschen Arbeitsfront (Lencer).

4. Industrial and commercial enterprises

With the exception of the following, the Bank der Deutschen Arbeit does not have more than one representative on the board of directors of any German industrial or commercial enterprise, and there is no other indication of ownership or control of such enterprises by the bank.

- (a) *Volkswagenwerk G. m. b. H.*:
Address: Berlin.
Description: Manufacturers of "people's" motorcar.
Interest: Interlocking directorates. Four representatives of the bank are directors.
- (b) *Hanseatische Verlagsanstalt A. G.*:
Address: Hamburg.
Description: Publications and books.
Interest: Interlocking directorates. Three representatives of the bank are directors.
- (c) *Albert Langen/ Georg Müller Verlag G. m. b. H.*:
Address: Munich.
Description: Publications and printing.
Interest: Interlocking directorates. Two representatives of the bank are directors.

D. RELATION TO BANKING INSTITUTIONS AND OTHER ENTERPRISES OUTSIDE OF GERMANY

1. Banking institutions

- (a) *Banque de l'Ouest*:
Address: Brussels, Belgium.
Capital: 25,000,000 Belgian francs.
Interest: Established as a subsidiary of Bank der Deutschen Arbeit in 1941. Heinz Reitbauer, of the management committee of Bank der Deutschen Arbeit, is vice chairman.
- (b) *Bank voor Nederlandsche Arbeid*:
Address: Amsterdam, Holland.
Capital: 2,000,000 guilders (paid in).

Interest: 50 percent participation in paid-in capital, the remaining 50 percent being held by the Dutch Labor Front. Heinz Reitbauer, of the management committee of Bank der Deutschen Arbeit, is deputy chairman.

(c) *Bukarester Handelsbank:*

Address: Bucharest, Rumania.

Capital: 100,000,000 lei.

Interest: The Bank der Deutschen Arbeit holds a minority interest which was acquired in 1940.

(d) *Ostdeutsche Privatbank A. G.:*

Address: Danzig.

Capital: Not stated.

Interest: August Christoffel and Rudolf Lencer, of the Bank der Deutschen Arbeit, are directors.

2. Insurance

(a) *Deutsche Ring Oesterreichische Lebensversicherungs A. G.:*

Address: Vienna, Austria.

Description: Insurance.

Interest: Bank is represented on the board of directors by Gustav Bähren.

(b) *Deutscher Ring Oesterreichische Versicherungsgesellschaften der DAF:*

Address: Vienna, Austria.

Description: Association of Austrian Insurance Companies of the DAF.

Interest: Hans Strauch, a director of the bank, is chairman of the board of directors.

(c) *Deutscher Ring Oesterreichische Krankenversicherungs-Anstalt auf Gegenseitigkeit vormals "Krankenkasse-Collegialität":*

Address: Vienna, Austria.

Business: Life insurance.

Interest: Ludwig Bierlein, a director of the bank, is a director.

E. MANAGEMENT PERSONNEL, NAMES OF DIRECTORS, ETC. 1944

Management Committee:

Rudolf Lencer,¹ chairman.
August Christoffel.
Adolf Geyrhalter.

Heinz Reitbauer.
Hanns Slanina.

Board of directors:

Hans Strauch.
Ludwig Bierlein.
Gustav Bähren.

Alexander Halder.
Adolf Müller.
Bruno Raueiser.

Dr. Gustav Bähren

Dr. Bähren, a director of the Bank der Deutschen Arbeit, is an attorney and notary who is especially active in the field of insurance and workers' welfare. His personal political service to the party is contributed in his capacity as head of the legal division of the German Workers Front.

His commercial and financial affiliations were reported as follows in 1942:

Political.—Rechtsamt der Deutschen Arbeitsfront, Berlin (Legal Division of the German Workers Front)—Chief.

Ferein Heime für Handel und Industrie, Wiesbaden (Vocation Homes for Employees in Commerce and Industry)—President.

Banking.—Bank der Deutschen Arbeit A. G., Berlin—Director.

Insurance.—Deutsche Sechversicherung A. G., Hamburg—Director.

Deutsche Ring Krankenversicherung, v. a. G., Hamburg—Director.

Deutsche Ring Lebensversicherung A. G., Hamburg—Director.

Deutsche Ring Oesterreichische Lebensversicherungs A. G., Vienna—Director.

Deutsche Ring Transport- und Fahrzeug-Versicherungs A. G., Hamburg (transport and marine insurance)—Director.

Volksfürsorge Lebensversicherung A. G. der Deutschen Arbeitsfront, Hamburg—Director.

Miscellaneous.—Deutsche Crosseinkaufs G. m. b. H., Hamburg (wholesale purchasing)—Director.

¹ Succeeded Carl Rosenhauer, who died in 1943.

Hanseatische Verlagsanstalt A. G., Hamburg-Wandsbek (publishers)—Director.

Volkswagenwerk G. m. b. H., Berlin (motorcars)—Director.

Ludwig Bierlein

Ludwig Bierlein may be described as a prominent political figure and industrialist. He has numerous connections with holding and industrial companies of the German Labor Front, and as head of the Trustee Company for Economic Undertakings of the German Labor Front.

The companies with which Bierlein is associated are engaged in such diversified activities as building construction, production and sale of building materials, insurance, real estate, and a trust company for economic enterprises.

In the financial field he serves on the board of directors of the Bank der Deutschen Arbeit, large Berlin bank which has been completely owned by the German Labor Front since 1933.

Outstanding among his industrial connections is "Neue Heimat" Gemeinnützige Wohnungs- und Siedlungsgesellschaft der Deutschen Arbeitsfront (New Homestead Public Housing and Settlement Company of the German Labor Front), which has branches in as many as 35 German cities.

Ludwig Bierlein's residence, as reported in 1942, was 80 Machnower Busch, Berlin-Zehlendorf. His political, financial, and industrial connections as of 1942 were reported as follows:

Political.—Trustee Company for Economic Undertakings of the German Labor Front—Head.

Banking and financial.—Bank der Deutsche Arbeit—Director.

Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF, G. m. b. H., Berlin (Trust Company for the Economic Enterprises of the German Labor Front) (holding company; capital, 1942, R.M. 500,000)—Manager.

Insurance.—Deutscher Ring Oesterreichische Krankenversicherungs-Anstalt auf Gegenseitigkeit vormals "Krankenhilfe-Collegialität", Vienna (direct and indirect life insurance; capital, 1942, R.M. 9,400,000; after the Anschluss the controlling interest was acquired by the German Labor Front)—Director.

Deutscher Ring Krankenversicherungsverein A. G., Hamburg (health insurance; concern member of the Deutsche Ring Versicherungsgesellschaft, which belongs to the German Labor Front)—Director.

Deutscher Ring Lebensversicherungs A. G., der DAF, Amburg (Life insurance; concern member of the Deutscher Ring Versicherungsgesellschaft; capital, 1937, R.M. 3,000,000)—Director.

Housing, real estate, construction.—Deutsches Nationaltheater A. G., Berlin (administration and utilization of theater real property and other real estate; capital, 1937, R.M. 100,000; the Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF, G. m. b. H., Berlin, is its principal shareholder)—Director.

Hanseatische Verlageanstalt A. G., Hamburg (editing books and periodicals, and production of printed matters; capital, 1937, R.M. 4,000,000)—Director.

Deutsche Bau A. G., Berlin (construction work and production and sale of building material; capital, 1937, R.M. 5,000,000; wholly owned by the Bank der Deutschen Arbeit, which in turn is owned by the German Labor Front)—Deputy chairman of the board of directors.

Bauhilfe der Deutschen Arbeitsfront für der sozialen Wohnungsbau G. m. b. H., Berlin (building subsidy of the German Labor Front for Public Housing)—Director.

Bau- und Betreuungsgesellschaft der DAF m. b. H., Berlin (building and controlling company of the German Front Ltd.)—Director.

"Gehag" Gemeinnützige Wohnungs- und Siedlungsgesellschaft der DAF, Berlin, or "Gehag" Gemeinnützige Heimstätten- Spar- und Bau-Aktiengesellschaft, Berlin (construction and control of small dwellings; capital, 1937, R.M. 2,000,000; 96 percent controlled by the German Labor Front)—Director.

"Heimat" Gemeinnützige Wohnungs- und Siedlungsgesellschaft Ziegelwerke Volkermarkt, G. m. b. H., Klagenfurt (public housing company)—Director.

"Neuland" Gemeinnützige Wohnungs- und Siedlungsgesellschaft der Deutschen Arbeitsfront in der Stadt des K d F Wagens, G. m. b. H., Stadt des K d F Wagens (Public Housing and Settlement Company of the German Labor Front)—Director.

Sonderbau, G. m. b. H., der DAF., Berlin (Special Constructions, Ltd., of the German Labor Front)—Director.

"Neue Heimat" Gemeinnützige Wohnungs- und Siedlungsgesellschaft der Deutschen Arbeitsfront (New Homestead Public Housing and Settlement Company of the German Labor Front in the regional section of:

- Gau Swabia G. m. b. H., Augsburg—Director.
- Gau Danzig-West Prussia G. m. b. H., Danzig—Director.
- Gau Düsseldorf G. m. b. H., Düsseldorf—Director.
- Gau Essen A. G., Essen—Director.
- Gau Franken G. m. b. H., Nürnberg—Director.
- Gau Halle-Merseburg, G. m. b. H., Halle—Director.
- Gau Bayerische Ostmark, Bayreuth—Director.
- Gau Hamburg, G. m. b. H., Hamburg—Director.
- Gau Hessen-Nassau A. G., Frankfurt/Main—Director.
- Gau Kärnten G. m. b. H., Klagenfurt—Director.
- Gau Moselland, G. m. b. H., Koblenz—Director.
- Gau Köln-Aschen G. m. b. H., Cologne—Director.
- Gau Kurhessen, G. m. b. H., Kassel—Director.
- Gau Magdeburg-Anhalt, G. m. b. H., Magdeburg—Director.
- Gau Mark Brandenburg A. G., Berlin—Director.
- Gau Mecklenburg, G. m. b. H., Schwerin—Director.
- Gau München-Oberbayern, A. G., Munich—Director.
- Gau Oberdonau, G. m. b. H., Linz/Ostmark—Director.
- Gau Oberschlesien, G. m. b. H., Kattowitz—Director.
- Gau Ost-Hannover, G. m. b. H., Wesermünde-Mitte—Director.
- Gau Ostpreussen, A. G., Königsberg/Pr.—Director.
- Gau Sachsen, G. m. b. H., Dresden—Director.
- Gau Salzburg, G. m. b. H., Salzburg—Director.
- Gau Schlesien, G. m. b. H., Breslau—Director.
- Gau Schleswig-Holstein, G. m. b. H., Kiel—Director.
- Gau Steiermark, G. m. b. H., Graz—Director.
- Gau Süd-Hannover-Braunschweig, G. m. b. H., Hannover—Director.
- Gau Sudetenland, G. m. b. H., Reichenberg—Director.
- Gau Tirol-Vorarlberg, G. m. b. H., Innsbruck—Director.
- Wartheland, G. m. b. H., Posen (Poland)—Director.
- Gau Weser-Ems, G. m. b. H., Oldenburg—Director.
- Gau Westfalen-Nord., Münster—Director.
- Gau Westmark, G. m. b. H., Saarbrücken—Director.
- Gau Württemberg-Hohenzollern, G. m. b. H., Stuttgart—Director.

August Christoffel

August Christoffel is a member of the management committee of the board of directors of the Bank der Deutschen Arbeit. He is reported to be a staunch Nazi Party member and is active in the fields of banking and public housing. He was born in Neu-Ulm/Donau in 1894. His present position in the bank is presumably a reward for his strong party support, since it has been reported that only a short time ago he was merely one of the bank's many employees.

His political and commercial affiliations were as follows in 1942:

Political.—"Bauhilfe" der Deutschen Arbeitsfront für den sozialen Wohnungsbau Gemeinnützige G. m. b. H., Berlin (public housing)—Director.

"Gehag" Gemeinnützige Heimstätte A. G. der Deutschen Arbeitsfronts, Berlin (public dwellings)—Director.

"Heima" Gemeinnützige Wohnungs und Siedlungsgesellschaft der Deutschen Arbeitsfront A. G., Berlin (public housing)—Director.

Banking.—Bank der Deutschen Arbeit A. G., Berlin—Management committee of the board of directors (also 1943).

Ostdeutsche Privatbank A. G., Danzig—Deputy chairman of the board of directors.

Diskont und Kredit A. G., Berlin—Director.

Commercial.—Neue ABC Waren-Kredit A. G., Berlin (merchandise financing)—Director.

Miscellaneous.—Deutsches National Theater A. G., Berlin—Director.

Adolf Geyrhaller

Adolf Geyrhaller is a member of the management committee of the Bank der Deutschen Arbeit A. G., Berlin. This bank, which is the third largest in Germany, differs from other big Berlin banks in that only political personalities are represented on its board of directors. In addition this bank is the depository for advance payments which the public made for the Volkswagen, a cheap car, the production of which never materialized. Geyrhaller also is a director of Volkswagenwerk, Berlin-Fallersleben.

Adolf Geyrhalter was born on November 12, 1899, in Steltin, and resides at Grass-Gliencke bei Kladow, Akazienalle 35.

His banking and industrial connections are as follows:

Banking.—Bank der Deutschen Arbeit A. G., Berlin—Member of management committee.

Industrial.—Volkswagenwerk, Berlin, Fallersleben (cars)—Director.

Alexander Halder

Alexander Halder is a general manager of Vermögensverwaltung der DAF Forschungs- und Verwertungs G. m. b. H., apparently a capital management and trust enterprise connected with the German Labor Front.

Halder is also prominent in the general affairs of the Nazi Party and he was, in 1938, proposed by Hitler to be a member of the German Reichstag. Additionally, he is a Reich Auditor and what is referred to as a Reichsamleiter of the party.

Halder also holds directorships with a number of institutions directly or indirectly connected with the Government. Among these should be mentioned the one with Bank der Deutschen Arbeit AG., an institution owned completely by the Nazi-sponsored German Labor Front. This bank was originally founded as a comparatively small enterprise by the free German Labor Union. Under the Nazis, however, it experienced tremendous expansion so that by 1942 it had become the third largest bank in Germany and one of the Berliner Grossbanken. In spite of its ostensibly private character it is to all intents and purposes a Government bank, a fact which is indicated by its having three-fourths of its total assets invested in Reich securities.

Halder's directorships outside those affiliated with the Government are not particularly important. He was born on May 16, 1906, and is reported to reside at Zehlendorf Wilskestrasse 58a, Amtsleiter, Berlin.

His known financial and industrial connections are as follows:

Financial.—Vermögensverwaltung der DAF Forschungs- und Verwertungs G. m. b. H., Berlin (capital and trust management company affiliated with and possibly owned by the German Labor Front)—Manager.

Bank der Deutschen Arbeit, A. G., Berlin (fully owned by the German Labor Front)—Director.

Hamburg-Bremer Rückversicherungs A. G., Hamburg (reinsurance company; capital RM. 3,000,000)—Director.

Industrial.—Deutscher Veranstaltungsdienst G. m. b. H., Berlin—Director.

A. Langen-G. Müller Verlag, München (publishing)—Director.

Volkswagenwerk G. m. b. H., Berlin (automobiles)—The company charged with the production of the so-called people's car.—Director.

Miscellaneous.—Präsidium der Ferienheime für Handel und Industrie, Wiesbaden (Presiding Council of the Vacation Home for Commerce and Industry)—Member.

Rudolf Lencer

Rudolf Lencer, a general manager of Bank der Deutschen Arbeit, is one of the Nazis who has benefited from that party's coming into power.

Before 1933 he was a leader and an extremist in the National Socialist Trade Union of Bank Employees which had been developed in competition with the already established Social Democratic Unions. In this position Lencer is reported to have been unusually sharp and aggressive and to have made frequent attacks upon the banking administrations.

At the time, his paid position was only that of a subordinate employee of the Deutsche Bank. This condition, however, changed abruptly in 1933 when Hitler became Chancellor of the Reich. Following Hitler's rise to power, Lencer became head of the Nazi bank employees and manager in the German Labor Front which had "expropriated" all the "free" trade unions. In this position he was strategically placed to deal with the banks and bankers which he had formerly criticized.

Subsequently, his party zeal was further rewarded when he was transferred to the post of manager of the Bank der Deutschen Arbeit which formerly had been an instrumentality of the "free" German labor unions, and a comparatively small bank. Under the Nazis, it experienced tremendous expansion so that by 1936 it had become the third largest bank in Germany and one of the so-called Berliner Grossbanken. In spite of its ostensibly private character it is to all intents and purposes a Government bank, a fact which is indicated by its origin and by its having three-fourths of its total assets invested in Reich securities. Bank der Deutschen Arbeit is also reported to be one of the institutions which provides

good and well-paid jobs for long time "party hacks." In respect to this latter statement it should be noted that there are reports that a law was passed in Germany in 1944 forbidding party functionaries to have paid or unpaid jobs in private industry. Whether this decree affects this institution is not known.

Lencer is also a member of the advisory board of the Deutsche Reichsbank, the German central bank, the Kreditausschuss Reichsbank, or the credit division of the Reichsbank.

Insurance affiliations.—Lencer is prominent in the Reich's official organization of the insurance field, holding the position of chief of the division of banking and insurance in the German Labor Front. He is also a director of several small insurance companies, control of which is held by the Labor Front through the Bank der Deutschen Arbeit.

Background.—Lencer was born on August 10, 1901, in Germany. After a relatively limited education, he became an apprentice in a branch of what is now the Commerz Bank.

After serving his apprenticeship he held various jobs with banks and business firms but soon became actively interested in the Nazi Socialist movement and eventually became a speaker in Berlin. In the party he rose quickly and by March 12, 1933, was elected a State and district Representative from Berlin as well as the State Councillor of the Trechow district. By April 11, 1933 he was appointed chairman of the German Bank Employees' Union and was charged with bringing all bank employees under the jurisdiction of the Party unions.

Shortly afterwards he was made the Reich Leader for Banks and Insurance.

Up to this time Rudolf Lencer's affiliations with the party had been in strictly organizational posts, but between 1933 and 1936 he received a more substantial appointment, namely, general manager of the aforementioned Bank der Deutschen Arbeit. By 1938 Hitler personally proposed him as a member of the Reichstag and in 1942 he was made an official of conquered Latvia.

Rudolf Lencer is reported to reside at 5 Lindenalle, Berlin-Westend. His known connections were as follows in 1942:

Financial.—Banking: Bank der Deutschen Arbeit A. G., Berlin—Member of the management committee.

Osdeutsche Privatbank A. G., Danzig—Member of board of directors.

Deutsche Reichsbank, Berlin—Member of the advisory board.

Kreditausschuss Reichsbank, Berlin—(member of the credit division of the Reichsbank)—Member of the advisory board.

Insurance: Deutsche Sachversicherung A. G., Hamburg (casualty insurance and reinsurance in the life field; capitalized at RM. 1,000,000; owned jointly by Bank der Deutschen Arbeit and the Treuhandgesellschaft für Wirtsch Unternehmungen, m. b. H.—Director.

Beamtenversicherungsverein der Deutschen Bank und Bankiergewerbes A. G., Berlin (bank employees' insurance)—Director.

Deutscher Ring Transport- und der Fahrzeug-Versicherungs A. G., Hamburg (life insurance company; capitalized at RM. 2,500,000; entirely owned by the German Labor Front; member of the Ring Konzern)—Director.

Deutscher Ring Lebensversicherungs A. G., Hamburg (Another "Ring" member, which has a small interest in Deutscher Ring Transport- und Fahrzeug-Versicherungs A. G. (see above) capitalized at RM. 3,000,000—Director.

Industrial.—Vereinigte Textilwerke A. G., Hanover (textiles)—Member of board of directors.

Wilhelmshütte Eisen- u. Emaillewerke A. G., Sprottau (small processed iron and enamel products factory, owned jointly by the Deutsche Bank and the city of Sprottau)—Director.

Semipolitical.—Fachamt Banken und Versicherung der Deutschen Arbeitsfront—(chief, division of banking and insurance, in the German Labor Front).

Akademie für Deutsches Recht, Berlin: Ausschuss für Versicherungsrecht Ausschuss für Genossenschaftsrecht (Academy of German Law, Berlin, Division of Insurance Law and Division of Citizens Rights)—Member.

Reichsversicherungsausschuss, Berlin (Reich Insurance Division, Berlin)—Member.

Adolf Müller

Adolf Müller, a director in the Bank der Deutschen Arbeit, is also an individual who has been prominent in the affairs of the National Socialist Party since 1921, when he first associated with Adolf Hitler.

His whole development shows a very nationalistic line, and at the outbreak of the First World War he volunteered in the German Army. Later he joined various nationalistic movements and eventually joined the Nazi Party.

His business career started after he had gone to the School of Mechanical Drawing in Munich, the birthplace of nazism. His early technical training he received with the Allgemeine Electrizitäts Gesellschaft. By 1915 he was discharged from the German Army due to difficulty in hearing. Nevertheless, he was able to utilize his technical skill by perfecting the efficiency of German submarines, an effort for which he was awarded an honorary degree from the University of Hannover.

After the armistice was declared he was sent as German Minister to Switzerland. He soon returned to Munich, however, and started his future career as a publisher and editor by founding the printing house, M. Müller & Sohn, which became the printer of the well-known Nazi newspaper, the Munchner Beobachter, the forerunner of the now notorious Volkischer Beobachter.

His association with the Nazis paid good dividends, and after having founded a storm troop division he was made the head of the central publishing house of the party. As such he specialized in printing technical publications and publicity for the German economy and he became also a member of the governing board of the Deutsche Reichspost.

Having rendered such service to the Nazi Party it is not difficult to understand his position with the Bank der Deutschen Arbeit, an institution owned completely by the Nazi-sponsored German Labor Front. This bank was originally founded as a comparatively small enterprise by the free German labor unions. Under the Nazis, however, it experienced tremendous expansion so that by 1942 it had become the third largest bank in Germany and one of the Berliner Grossbanken. In spite of its ostensibly private character it is to all intents and purposes a Government bank, a fact which is indicated by its having three-fourths of its total assets invested in Reich securities. Bank der Deutschen Arbeit is also reported to be one of the institutions which provides good and well-paid jobs for long-time and trusted "party hacks." In respect to this statement it should be noted that there are reports that a law was passed in Germany in 1944 forbidding party functionaries to have paid or unpaid jobs in private industry. Whether this law has affected Adolf Müller's directorship is not known.

Of Müller's other directorships should be mentioned Ala Anzeigen A. G., a real-estate enterprise started as an affiliate of a large public publishing house. It is significant that another board member is Max Amann, the head of the Hitler-owned Eher Publishing House, which in turn is the publisher of Mein Kampf. Amann is also one of the original and most trusted followers of Adolf Hitler.

Schnollpressenfabrik König & Bauer A. G., is a medium-sized Austrian printing enterprise which in 1938 was capitalized at 1,500,000 Austrian schillings, or, at that time, approximately \$300,000. As Müller is a director in this institution today, but held no position before the Anschluss in 1938, it may be possible that this is another instance where he has been awarded a directorship for trusted party service. Adolf Müller is also the Chief Forester for Upper Bavaria, a post which links him to Hermann Göring, who holds the post as Supreme Forester for the Reich.

Adolf Müller was born on May 4, 1884, in Munich, and according to reliable information, a German national of the same name maintained, on September 5, 1943, assets in the United States amounting to \$8,200 invested in seven \$1,000 International Telephone & Telegraph Corp. shares. The coowners of these securities are five other individuals, all bearing the name of Müller, three of them being Swiss citizens and two German.

Adolf Müller is reported to reside at Schellingstrasse 41, Munich, and his known financial and business affiliations are as follows:

Banking.—Bank der Deutschen Arbeit, Berlin—Member of board of directors.

Industrial.—Buchgewerbehaus M. Müller & Sohn A. G., Munchen (printing house).

Schnellpressenfabrik König & Bauer A. G., Wurzburg und Moldling bei Wein—Member of board of directors.

Political.—Gaujägermeister von Oberbayern—Chief Forester in Province of Upper Bavaria.

Miscellaneous.—Ala Anzeigen A. G., Berlin (real estate)—Member of board of directors.

Deutsche Reichspost, Berlin (newspaper)—Member of the advisory board.

Werberat der Deutschen Wirtschaft, Berlin (economic chamber)—Member.

Bruno Raueiser

Bruno Raueiser is an official leader of the Labor Front and has numerous connections with companies within that organization both in Germany and Austria. These companies cover such fields of endeavor as banking, insurance, publishing, building construction, etc. Among these are such important corporations as the Bank der Deutschen Arbeit A. G., of Berlin, which is the third in size of the six Berliner Grossbanken. In addition he has several other industrial connections outside the German Labor Front which are in similar fields of endeavor.

Bruno Raueiser was born on January 3, 1909, in Cologne, and his last known address was 174/177 Hohenzollerndamm, Berlin-Wilmersdorf. His connections, as of 1942, were reported as follows:

Labor front organizations.—Bank der Deutschen Arbeit A. G., Berlin—Director. Zentralstelle für die Finanzwirtschaft der Deutschen Arbeitsfront, Berlin (Central Office for Budget of the German Labor Front)—Area chief.

Deutscher Ring Lebensversicherungs A. G. der Deutschen Arbeitsfront, Hamburg (German Ring Life Insurance of the German Labor Front; capital, 1938, R.M. 3,000,000; insurance in force 1939, R.M. 1,127,000,000)—Director.

Deutscher Ring Transport- und Fahrzeug-Versicherungs A. G., Hamburg (German Ring Transportation and Motor Vehicle Insurance; capital, 1938, R.M. 1,000,000; premium receipts, 1939, R.M. 1,057,000)—Director.

Deutscher Ring Oesterr. Lebensversicherungs A. G. der Deutschen Arbeitsfront, Vienna (German Ring Austrian Life Insurance; capital 1938, R.M. 9,400,000, of which the majority is owned by the German Labor Front)—Director.

Ostmärkische Volksfürsorge Lebensversicherungs A. G. der Deutschen Arbeitsfront, Vienna (Austrian Popular Welfare Life Insurance; capital, 1942, R.M. 1,200,000)—Director.

Volksfürsorge Lebensversicherungs A. G. der Deutschen Arbeitsfront, Hamburg (life insurance; insurance in force, 1942, R.M. 3,500,000,000)—Director.

Sudetendeutsche Volksfürsorge Lebensversicherungs A. G. der Deutschen Arbeitsfront, Vienna (Sudeten German Popular Welfare Life Insurance)—Director.

Volkswagenwerk G. m. b. H., Berlin (peoples car)—Director.

Bauhilfe der Deutsche Arbeitsfront Für den sozialen Wohnungsbau Gemeinnützige G. m. b. H., Berlin (building aid for public housing)—Chairman of the board of directors.

Sonderbau G. m. b. H., der Deutschen Arbeitsfront, Berlin (special constructions)—Deputy chairman of the advisory board.

Gemeinschaftswerk der Deutschen Arbeitsfront, G. m. b. H., Hamburg (co-operative works)—Director.

Stettiner Vulkan-Werft A. G., Stettin (shipbuilding yard)—Director.

Verlag der Deutschen Arbeitsfront, G. m. b. H., Berlin (publishing house)—Deputy chairman of the advisory board.

"Neue Heimat" Gemeinn. Wohnungs- u. Siedlungsgesellschaft der DAF, in der Ostmark G. m. b. H., Vienna (public housing and settlements)—Director.

Wiener Weltmoden-Verlag A. G., Berlin (publication of a fashion magazine; capital, 1942, R.M. 133,333, which is wholly owned by the Verlag der DAF G. m. b. H.)—Director.

Deutsche Bau A. G., Berlin (building construction and building material; capital, 1938, R.M. 5,000,000; principal shareholders, Bank der Deutschen Arbeit, 50 percent; and Treuhand Gesellschaft für die Wirtschaftlichen Unternehmungen der Deutschen Arbeitsfront, 50 percent)—Director.

Other affiliations.—Deutsche Sachversicherungs A. G., Hamburg (fire and general insurance; capital, 1938, R.M. 7,000,000; principal shareholders, Bank der Deutschen Arbeit and Treuhandgesellschaft für Wirtschaftliche Unternehmungen m. b. H.)—Director.

"Gisela" Deutsche Lebens- und Aussteuerer-Versicherungs A. G., München (life insurance; capital, 1938, R.M. 1,000,000; belongs to the Konzern of the Münchener Rückversicherungsgesellschaft)—Director.

Deutsche Wirtschaftsprüfungs- und Treuhand-gesellschaft, m. b. H., Berlin (German accounting and trust company)—Deputy chairman of the advisory board.

Hanseatische Verlagsanstalt A. G., Hamburg (publishing house; capital, 1938, R.M. 4,000,000)—Director.

Albert Langen Georg Müller Verlag G. m. b. H., München (publishing house)—Director.

Dianabad A. G., Vienna (Bath and Swedish treatment establishment; capital, 1938, RM. 1,800,000; Treuhandgesellschaft für wirtschaftliche Unternehmungen m. b. H. is principal shareholder)—Deputy chairman of the advisory board.

Heinz Reitbauer

Heinz Reitbauer, 45 years old, is a member of the management committee of the Bank der Deutschen Arbeit A. G., Berlin. He is reported to be a staunch member of the Nazi Party. This is evidenced by his banking connections, both in Germany and Holland. In the latter country he is deputy chairman of the Bank voor Nederlandschen Arbeid N. V., which is the Dutch counterpart of the German Nazi Labor Bank.

Heinz Reitbauer's address is given as 34a Haderslebener Strasse, Berlin-Dalhem. His known connections are as follows:

Banking.—Bank der Deutschen Arbeit A. G.—Member of management committee.

Bank voor Nederlandschen Arbeid N. V.—Deputy chairman.

Westbank N. V. (Banque de l'Ouest S. A.), Brussels—Vice chairman.

Industry.—Düsseldorfer Eisenhüttengesellschaft Ratingen b. Düsseldorf (iron works)—Director.

Hans Strauch

Hans Strauch is head of the office for economic enterprises of the German Labor Front. He is one of Robert Ley's assistants, an expert in the building of laborer's dwellings, and a leader in many foreign and domestic enterprises of the Labor Front. Most of Strauch's connections, which are very numerous, are of a political nature. Even those connections which might be considered to be in the fields of banking, insurance, and industry are more or less political in their nature inasmuch as they are directly or indirectly tied up with the German Labor Front and its enterprises. Such are, for instance, the Bank der Deutschen Arbeit, the Deutsche Bau- und Bodenbank A. G., Berlin, which is almost wholly owned by the Reich, a number of insurance organizations owned and controlled by the Labor Front, the Deutsche Bau A. G., Berlin, a building company owned jointly by the Bank der Deutschen Arbeit and Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF G. m. b. H., Berlin.

Hans Strauch was born in Bavaria in 1891; his last-known address was given as 174/177 Hohenzollerndamm, Berlin, and his known connections are as follows:

Political.—Amtsleiter für die wirtschaftlichen Unternehmungen der DAF, Berlin—Head of Office for Economic Enterprises of the German Labor Front.

Allgemeine Hausbau- und Grundstücksgesellschaft der DAF, in der Stadt des KdF-Wagens G. m. b. H., Stadt des KdF-Wagens bei Fallersleben (General Building and Real Estate Company of the German Labor Front in the City of KdF-Wagens—City of Strength-through-Joy Vehicles)—Chairman.

Arbeitswissenschaftlicher Verlag G. m. b. H., Berlin (Labor publishing firm)—Chairman.

"Gehag" Gemeinnützige Heimstätten A. G., der DAF, Berlin (Community Homestead Corporation of DAF)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs- und Siedlungsgesellschaft der DAF in Gau Steiermark G. m. b. H., Graz ("New Home" Settlement Company of DAF in Steiermark District)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft im Gau Kärnten G. m. b. H., Linz ("New Home" Settlement in District of Kärnten)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft im Gau München-Oberbayern A. G., München ("New Home" Community Dwelling and Settlement Company in Munich)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft im Reichsgau Wartheland G. m. b. H., Posen ("New Home" Settlement and Dwelling Company in Wartheland)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft im Gau Salzburg G. m. b. H., Salzburg ("New Home" Settlement and Dwelling Company in Salzburg)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft der DAF im Gau Schwaben G. m. b. H., Augsburg ("New Home" Settlement and Dwelling Company in Swabia)—Chairman.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft der DAF in den Gauen Wien und Niederdonau G. m. b. H., Wien ("New Home" Settlement and Dwelling Company in Vienna and on lower Danube)—Chairman.

"Neuland" Gemeinnützige Wohnungs und Siedlungsgesellschaft der DAF in der Stadt des KdF-Wagens G. m. b. H., Stadt des KdF-Wagens bei Fallersleben ("Neuland" Community Dwelling and Settlement Fund in City of Strength Through Joy)—Chairman.

Verlag der Deutschen Arbeitsfront G. m. b. H., Berlin (Press of the German Labor Front)—Chairman.

Gemeinschaftswerk der DAF G. m. b. H., Hamburg (Community Work of the DAF)—Deputy chairman of the board.

"Neue Heimat" Gemeinnützige Wohnungs und Siedlungsgesellschaft der DAF in Gau Tirol-Vorarlberg G. m. b. H., Innsbruck (Community Dwelling and Settlement in Tirol District)—Deputy chairman of the board.

Reichsverband des Deutschen Gemeinnützigen Wohnungswesens, Berlin (Union of Community Dwelling Developments)—Chairman of management board.

Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF G. m. b. H., Berlin (Auditing Company for Economic Undertakings of the DAF)—Manager.

Banking.—Bank der Deutschen Arbeit A. G., Berlin (Bank of the Labor Front)—Deputy chairman of the board.

Deutsche Bau und Bodenbank A. G., Berlin (building and real estate bank, almost wholly owned by the Reich)—Director.

Insurance.—Deutsche Sachversicherung A. G., Hamburg (general insurance; 50 percent owned by Bank der Deutschen Arbeit, 50 percent owned by Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF G. m. b. H., Berlin)—Chairman.

Deutscher Ring Versicherungsgesellschaft der DAF, Hamburg (Association of Insurance Companies of the DAF)—Chairman.

Deutscher Ring Oesterreichische Versicherungsgesellschaften der DAF, Wien (Association of Austrian Insurance Companies of the DAF)—Chairman.

"Gisela" Deutschen Lebens und Aussteuer-Versicherungs A. G., München (German Life and Endowment Insurance Corporation)—Chairman.

Ostmarkische Volksfürsorge Lebensversicherungs A. G. der DAF, Wien (Austrian Life Insurance of DAF)—Chairman.

Sudetendeutsche Volksfürsorge Lebensversicherungs A. G., Aussig (Sudetenland Life Insurance)—Chairman.

Volksfürsorge Lebensversicherungs A. G. der DAF, Hamburg (Life Insurance of DAF; 100 percent owned by Labor Front)—Chairman.

Reichsversicherungsausschuss (Reich Insurance Union)—Member.

Industrial.—Bau- und Betreungsgesellschaft der DAF, Berlin (building construction company of DAF)—Chairman.

Baustoffwerke Teupitz G. m. b. H., Berlin (building material factories)—Chairman.

Deutsche Bau A. G., Berlin (building corporation; 50 percent owned by Bank der Deutschen Arbeit; 50 percent owned by Treuhandgesellschaft für die wirtschaftlichen Unternehmungen der DAF G. m. n. H., Berlin)—Chairman.

Dianabad A. G., Wien (baths)—Chairman.

Hanseatische Verlagsanstalt A. G., Hamburg (publications, books)—Chairman.

Albert Langen/Georg Müller Verlag G. m. b. H., München (printing, publications)—Chairman.

August Pries, G. m. b. H., Leipzig—Chairman.

Sonderbau G. m. b. H. der DAF, Berlin (Special Building Company, Ltd., of the DAF)—Chairman.

Wiener, Weltmoden-Verlag A. G., Wien (publications)—Chairman.

Stettiner Vulkan-Werft A. G., Stotten (shipyards company)—Deputy chairman of the board.

Volkswagenwerk G. m. b. H., Berlin (manufacture of people's car)—Deputy chairman of the board.

Vorarlberger Gemeinnützige Wohnungs-bau und Siedlungsgesellschaft G. m. b. H., Dornbun/Ostmark (community dwellings and settlements)—Deputy chairman of the board.

DEUTSCHE BANK

A. LOCATION, BRANCH OFFICE, ETC.

Corporate address: 35-42 Mauerstrasse, Berlin W 3 (building reported demolished by recent bombings).

Branches in Germany: At the end of 1940 the Deutsche Bank had 489 branches and agencies, including 43 main regional branches, 230 local branches, and 216 agencies, of which 183 were neighborhood offices in cities where a more important office of the bank was located. It was reported in the early part of 1944 that rationalization schemes, planned to effect war economies, had resulted in the closing of nearly a third of these branches. More recently, however, the movement has been toward decentralization as a defense against air raids.

Branches outside Germany: As of 1942 the Deutsche Bank had the following branches in foreign, annexed, and occupied territory: Turkey, Istanbul; Austria, represented by its subsidiary, the Creditanstalt Bankverein, with 32 agencies in Vienna and branches throughout Austria; Sudetenland, 20 branches; Danzig, 3 branches; Poland, 7 branches; Alsace-Lorraine, 4 branches.

B. DESCRIPTION OF BANK AND ITS BUSINESS

1. *Character and importance*

The Deutsche Bank is the largest of the six great Berlin banks, the Berliner Grossbanken. In common with the other banks of this class it normally combines in its operations commercial and investment banking, meeting practically all the short- and long-term credit and capital demands of its customers.

The strength and prestige of the Deutsche Bank is indicated by the fact that it is the only one of the present list of Berliner Grossbanken which was able to weather the banking crisis of 1931 without governmental assistance. It was, consequently, able to keep itself relatively free of public ownership.

2. *Stock-market activities*

Before the war the Deutsche Bank, like other great commercial German banks, operated actively in the stock market, trading for its own account and for that of its customers. Because of the bank's large clientele it was often possible to match buying and selling orders of customers without passing the transaction through the stock exchange. Recent legislation, however, has restricted this and other speculative activities.

3. *Industrial connections*

As the largest of the great commercial banks, the Deutsche Bank has close relations with a number of the largest and most important industrial organizations. These close ties with industry were fostered not alone by the fact that the bank normally finances these enterprises and frequently holds participations in them, but also by the custom by which clients frequently deposit their security holdings with the bank and authorize it to exercise the voting rights.

Ties with industry are further strengthened through interlocking directorates, but the extent to which the bank's directorate now interlocks with directorates of other enterprises is far less than formerly. Reform legislation initiated after the banking crisis of 1931, and finally crystallized in the corporation law of January 1937, reduced the number of directorships which any one person might hold and limited the size of boards of directors.

The Deutsche Bank has in the past maintained close relationships with institutions in the field of mortgage banking. At one time it was closely associated with a number of private banking firms, but in the middle thirties withdrew from the majority of these participations. It appears to be closely connected with several of the large German insurance groups, notably the Gerling and Allianz Konzerns.

4. Foreign affiliations

Although it has always played an important part in financing Germany's foreign trade, and before the war, had numerous connections and correspondents in international financial centers, up to 1937 the Deutsche Bank held but a very limited number of participations in foreign banking institutions. Since 1939, however, it has competed with the Dresdner Bank in taking the lead in Germany penetration into the banking structures of controlled or annexed countries. In this movement the Deutsche Bank has to a great extent worked through the great Austrian commercial bank, Creditanstalt Bankverein, now a subsidiary of the Deutsche Bank. The general policy pursued by the Deutsche Bank in acquiring these foreign participations was to cede minority interests to certain dominated institutions, notably the Creditanstalt Bankverein, and to a lesser extent the Böhmisché Union Bank of Prague, while retaining for itself "small majorities," in other words, an interest of between 50 and 60 percent.

According to such information as is presently available the penetration movement discussed above was confined to tanking institutions, and the Deutsche Bank does not appear to have acquired a direct control in industrial enterprises native to German-controlled areas. Stock ownership and control of many of the larger concerns in occupied territory was permitted to pass into the hands of large German industrial combines, notably the Göring group, while some participations were acquired by VIAG, the Reich holding company. It is probable, however, that with the acquisition of control over a number of key banking institutions, particularly in central Europe, the Deutsche Bank gained, through these banks, an indirect interest in a large number of industries in those areas. This does not hold true as regards the Creditanstalt Bankverein of Vienna, since before the Deutsche Bank acquired control of this institution it had been obliged to relinquish its major transportation, public utility and heavy-industry interests to Reich-controlled corporations.

5. Recent activities

According to press reports of November 1944 a run on large Berlin banks was precipitated by the arrest of Oswald Roesler and Karl Goetz, managing directors respectively of the Deutsche and Dresdner Banks. The cause of the arrests was reportedly the refusal of the two bank officials to come to the support of the Bank der Deutschen Arbeit, Bank of the Ministry of Labor, which was in difficulties.

There is reason to believe that the branch of the Deutsche Bank, Istanbul, Turkey, took active part in assisting the concealment of German funds outside of Germany in anticipation of the German defeat. The Istanbul branch was the principal depository of German diplomatic agents, cover firms, and individuals closely associated with German operations of all kinds in Turkey. Immediately before and following the severance of commercial and diplomatic relations between Turkey and Germany, numerous and sizable withdrawals of funds were made from the Istanbul branch of the Deutsche Bank. There is no evidence of the final disposition of these funds after withdrawal. Some of them undoubtedly represented genuine commercial operations, but many of them, judging by the character of the person or firm involved, were made for transfer or concealment purposes.

C. RELATION TO ENTERPRISES OR OTHER BANKING INSTITUTIONS IN GERMANY

1. Banks and financial companies

(a) Deutsche Reichsbank

Address: Berlin.

Business: Central bank of Germany.

Interest: Nine officials of the Deutsche Bank serve on advisory committees or supervisory boards of the Deutsche Reichsbank.

(b) Industrie—Werte G. m. b. H.

Address: Berlin.

Capital and reserves: RM. 2,400,000.

Business: Established to engage in stock-market operations. Developed into a holding company for industrial preferred shares endowed with special voting rights.

Interest: Controlled by the Deutsche Bank together with the Berliner Handels Gesellschaft and the Dresdner Bank.

(c) *Deutsche Überseeische Bank*

Address: Berlin.

Capital: RM. 36,000,000.

Business: Largest and most influential German bank for South America. As of 1938 it has 21 branches distributed throughout Spain, Argentina, Chile, Peru, Uruguay, and Brazil. Those in Brazil and Peru were liquidated in 1942.

Interest: The Deutsche Bank holds a 50-percent interest in the Deutsche Überseeische Bank.

(d) *Deutsche Bank für Ostasien.*

Address: Berlin.

Capital: RM. 10,000,000.

Business: To finance trade with the Far East. Established a branch in Tokyo June 1943.

Interest: The Deutsche Bank, together with the Dresdner Bank and the Reichskredit Gesellschaft, are the most important stockholders while the Commerz Bank and the Bank der Deutschen Arbeit hold smaller participations.

(e) *Industrie-Finanzierungs A. G. Ost. (IFAGO)*

Address: Behrenstrasse 14-16, Berlin W-8.

Capital and reserves: RM. 625,000 (1938).

Business: Established to aid in financing German exports to Russia and has assumed considerable importance as an acceptance institution. - Its acceptances, usually guaranteed by banking syndicates, the so-called IFAGO Konsortien, led by the Deutsche and the Dresdner Banks, outstanding to the amount of RM. 176,000,000 at the end of 1939.

Interest: This is a joint enterprise of the Deutsche Bank, the other Berliner Grossbanken, and other credit institutions.

(f) *Diskont-Compagnie*

Address: Jägerstrasse 54/55, Berlin W-8.

Capital: RM. 50,000,000 (one-quarter paid in).

Business: To discount bankers' acceptances and increase marketability of such paper of adding a third signature.

Interest: A bare majority of the capital held by the Deutsche Gold Diskontbank (Reichsbank subsidiary) and the remainder by the Deutsche Bank, the other big Berlin banks, and the Deutsche Verkehrs-Kredit-Bank, the Deutsche Industrie Bank, and others.

(g) *Gemeinschaftsgruppe Deutscher Hypotheken Bank*

Business: This is an organization of the following six mortgage institutions in Northern and Central Germany: Deutsche Centralbodenkredit A. G., Berlin; Deutsche Hypothekenbank in Weimar; Sächsische Bodencreditanstalt, Dresden; Frankfurter Hypothekenbank, Frankfurt a/M; Westdeutsche Bodenreditanstalt, Cologne; Mecklenburgische Hypotheken- and Wechselbank, Schwerin.

Interest: The Deutsche Bank was instrumental in the establishment in 1930, of the Gemeinschaftsgruppe Deutscher Hypotheken Bank and has close relations with it.

(h) *Deutsche Centralbodenkredit A. G.*

Address: Berlin.

Capital: RM. 43,000,000.

Business: This is the leading institution of the Gemeinschaftsgruppe Deutscher Hypotheken Banken. In 1942 it had total mortgage loans outstanding to the value of RM. 1,275,500,000.

Interest: The Deutsche Bank maintains close relationship with this mortgage institution. A representative of the Deutsche Bank is chairman of the board of directors of the mortgage bank.

(i) *Sächsische Bodenkreditanstalt.*

Address: Dresden.

Capital: RM. 11,000,000.

Business: Mortgage institution.

Interest: The Deutsche Bank appears to have a close connection with the Sächsische Bodenkreditanstalt. The latter institution is a member of the mortgage banking group, Gemeinschaftsgruppe Deutscher Hypotheken Bank (see above) with which the Deutsche Bank is closely associated. Ernst Schoen van Wildenegg, honorary chairman of the Deutsche Bank, is deputy chairman of the board of Sächsische Bodenkreditanstalt, and the two institutions have a common director in Franz Urbig.

(j) *Deutsche Hypothekenbank*

Address: Weimar.

Capital: RM. 14,000,000.

Business: An important mortgage bank, prominent in the field of agricultural credit. Mortgage loans outstanding at the end of 1942 totaled RM. 539,000,000. It is the second largest of the six mortgage banks which are members of the Gemeinschaftsgruppe Deutscher Hypotheken Bank (see above).

Interest: The Deutsche Bank is closely connected with the Deutsche Hypothekenbank through interlocking directorates; is frequently associated with it in financial operations; and is also connected with it through the Gemeinschaftsgruppe Deutscher Hypotheken Bank.

(k) *Rheinisch-Westfälische Boden-Credit-Bank*

Address: Cologne.

Capital: RM. 10,800,000.

Business: Specializes in second mortgages.

Interest: The Deutsche Bank is represented on the board of this mortgage institution by two directors, Herman J. Abs and Hugo Henkel.

(l) *Allgemeine Deutsche Creditanstalt (ADCA)*

Address: Leipzig.

Capital and reserves: RM. 26,200,000.

Business: This institution ranks third in importance and size among Germany's regional banks. It is mainly supported by the large Saxon textile industry. It has numerous branches in the state and provinces of Saxony and Thuringia and, after the annexation of the Sudetenland, opened 16 branches there, bringing the total number of branches up to 115. In the course of the Aryanization program, ADCA took over a series of private banking firms in Central Germany.

Interest: ADCA is traditionally close to the Deutsche Bank and is connected with it through interlocking directorates.

(m) *Niederlausitzer Bank A. G.*

Address: 7 Kaiser-Friedrich-Strasse Cottbus.

Capital: RM. 2,200,000 (1938).

Business: Engaged in banking transactions of all kinds.

Interest: The Deutsche Bank holds an interest in this institution.

(n) *Deutsche Beamten-Zentralbank G. m. b. H.*

Address: Schützenstrasse 63, Berlin SW-68.

Capital: RM. 500,000 (1938).

Business: Extends credit at low interest rates to officials and organizations of officials. Accepts deposits and savings.

Interest: The Deutsche Bank was instrumental in the reorganization of this bank in 1930 and guarantees its deposits.

(o) *Deutsche Industriebank A. G.*

Address: Berlin.

Capital: RM. 200,000,000.

Business: This has been since 1938 the chief long-term credit institution of the German manufacturing industries. Since 1939 has had the special task of financing the expansion of armament industries and the conversion of industry to war production. Although classified as a private corporation, its stock being held by industries liable for assessment originating with the Dawes plan, it is for all practical purposes a public institution, with a Reichs Commissioner attached to the staff, and its funds mainly derived from public sources. One of the purposes for which the Industriebank was used was to supply capital for the reorganization of private banking firms under the Aryanization program.

Interest: The Deutsche Bank is connected with the Deutsche Industriebank through two common officials, Hermann Schmitz, chairman of the board of the I. G. Farbenindustrie, who is a director of the Deutsche Bank and deputy chairman of the Industriebank; and through Rudolph Stahl, a director of the Deutsche Bank and a member of the board of managers of the Deutsche Industriebank. The Deutsche Bank is also associated, with the Industriebank and the National-Bank A. G. of Essen, in which the Industriebank has an interest, in the private banking firm Burkhart and Co., formed by the Aryanization of Simon Hirschland, of Essen.

(p) National-Bank A. G.

Address: Essen.

Capital: RM. 5,000,000.

Business: Commercial and investment banking. The Deutsche Industriebank (see above) has a participation of RM. 500,000, and has used the National-Bank A. G. in Aryanization financing.

Interest: The Deutsche Bank has been associated with the National-Bank A. G. in financing the private banking firm, Burkhardt und Co., formed from the Aryanized company, Simon Hirschland, of Essen.

(q) Mendelssohn und Co.

Address: Berlin.

Business: This was one of the outstanding private banking firms of Germany and its disappearance in 1938 from the list of private banks had far-reaching effects. It was considered Aryan and ranked first in capital strength and prestige among German private banks and was important in investment, banking, and international finance.

Interest: In 1938 it was put into liquidation by the Deutsche Bank following heavy losses incurred by its Amsterdam affiliate. The Deutsche Bank took over its clientele.

(r) Jacquier und Securius

Address: Berlin.

Business: Old private banking firm.

Interest: The Deutsche Bank, in 1938, gave support to this house in the form of a long-term deposit.

(s) Burkhardt und Co.

Address: Essen.

Business: Private banking firm. In 1940 it took over the business of the Jewish banking firm, Simon Hirschland, Essen-Hamburg, which was Aryanized.

Interest: The Deutsche Bank, together with Merck Finck und Co., the Essener Nationalbank, the Deutsche Industriebank, and several industrial firms, participated in the organization of Burkhardt und Co.

(t) Philipp Elimeyer

Address: Dresden.

Business: Private banking firm.

Interest: In 1940, the Deutsche Bank absorbed this firm in which it already held a controlling interest.

(u) J. Wichelhaus & Sohn A. G.

Address: Wuppertal, Elberfeld.

Capital: RM. 1,500,000 (1938).

Business: Private banking firm.

Interest: The Deutsche Bank holds a participation in this company.

2. Insurance companies

(a) Berlinische Feuer-Versicherungs-Anstalt

Address: Berlin.

Business: Berlin Fire Insurance Company.

Interest: Interlocking directorates in the persons of Franz Urbig, Karl Ernst Sippell, and Max H. Schmid, indicate that the Deutsche Bank is closely associated with this company. Franz Urbig is chairman of the insurance company's board.

(b) Gerling-Konzern Lebensversicherungs A. G.

Address: Cologne.

Business: Life insurance. Member of the important Gerling Konzern.

Interest: Four interlocking directors indicate that the Deutsche Bank has a close connection with this company.

(c) Allianz Lebensversicherungs A. G.

Address: Berlin.

Business: Life insurance company of the large Allianz group. In 1939 had insurance in force to a total of RM. 5,023,000,000.

Interest: The Deutsche Bank is connected with this company through two interlocking directors.

(d) *Allianz Versicherungs A. G.*

Address: Berlin.

Capital: RM. 60,000,000.

Business: Insurance. A leading company of the important Allianz group.

Interest: The Deutsche Bank is connected with this company through interlocking directors in the persons of Hermann Schmitz, Wilhelm Zangen, and Karl Kimmich.

(e) *Alle Leipziger Lebensversicherungsgesellschaft A. G.*

Address: Leipzig.

Business: A leading life insurance company.

Interest: Ernst Schoen von Wildenegg, a director of the Deutsche Bank is chairman of this company. The bank and the insurance company have another common director in Oswald Rösler.

(f) *Leipziger Feuerversicherungs-Anstalt*

Address: Leipzig.

Business: Fire insurance.

Interest: The Deutsche Bank is connected with this company through two interlocking directors, Oswald Rösler and Ernst Schoen von Wildenegg. The latter is chairman of the insurance company's board.

(g) *Nord-Deutsche Lebensversicherung A. G.*

Address: Hamburg.

Capital: RM. 10,000,000.

Business: All types of insurance.

Interest: The Deutsche Bank is connected with this company through two interlocking directors, Erich Bechtolf and Hermann Münchmeyer. The latter heads the insurance company's board.

(h) *Nord-Deutsche Versicherungs-Gesellschaft*

Address: Hamburg.

Business: Life insurance.

Interest: The Deutsche Bank is connected with this company through two interlocking directors, Erich Bechtolf and Hermann Münchmeyer. The latter is chairman of the insurance company's board.

(i) *Union und Rhein Versicherungs A. G.*

Address: Berlin.

Business: Union and Rhine Insurance Corp.

Interest: The Deutsche Bank is connected with this company through two interlocking directors in the persons of Franz Urbig and Karl Ernst Sippell.

3. *Industrial and commercial enterprises*(a) *Electric power, utilities, equipment, installations, etc.*(i) *Allgemeine Elektrizitäts-Gesellschaft (AEG):*

Address: Berlin.

Capital: RM. 264,000,000 (1942).

Business: Large electrical equipment and power combine with participations in public utility companies and foreign power developments.

Interests: The Deutsche Bank is represented on the board of AEG by Wilhelm Zangen, Gunther Quandt, and Karl Kimmich. The latter is deputy chairman of the advisory board of AEG.

(ii) *Siemens & Halske A. G.:*

Address: Berlin.

Capital: RM. 400,000,000.

Business: Large electrical equipment combine, ranking in size and importance with General Electric.

Interest: The Deutsche Bank is connected with Siemens & Halske through interlocking directors in the persons of Hermann von Siemens and Hermann Münchmeyer.

(iii) *Siemens-Schuckert-Werke A. G.:*

Address: Berlin.

Capital: RM. 240,000,000.

Business: Electro-chemical installations. Subsidiary of Siemens-Halske.

Interest: The Deutsche Bank is connected with Siemens-Schuckert-Werke through interlocking directors in the persons of Hermann von Siemens and Albert Pietzsch.

- (iv) *Accumulatoren-Fabrik A. G.*
Address: Berlin.
Capital: RM. 21,250,000.
Business: Storage batteries.
Interest: Hermann J. Abs, member of the management committee of the Deutsche Bank, is chairman of the board of this company; Gunther Quandt, a Deutsche Bank director, is chairman of the company's management committee. The latter is reported to own 75 percent of the company's capital.
- (v) *Rheinisch-Westfälisches Elektrizitäts-Werk A.G.:*
Address: Essen.
Capital: RM. 246,000,000 (1939).
Business: Powerful public utility holding company possessing about 20 electric power works, 10 gas works, besides its Ruhrgas A. G. connections, waterworks, and large participations in electric power and coal companies. A large proportion of its stock is controlled by states and communities and VIAG, large Reich holding company, has a small interest.
Interest: The Deutsche Bank is connected with this public utility company through interlocking directorships in the persons of Herman J. Abs, and Arthur Koepchen.
- (vi) *Elektrizitäts-Lieferungs-Gesellschaft:*
Address: Berlin.
Business: Public utilities holding company.
Interest: The Deutsche Bank is connected with this company through two interlocking directorships.
- (b) *Iron, steel, metals*
- (i) *Vereinigte Stahlwerke:*
Address: Düsseldorf.
Capital: RM. 460,000,000.
Business: Steel cartel.
Interest: The Deutsche Bank is connected with Vereinigte Stahlwerke through two interlocking directors, as well as through representation on the boards of several of the steel combine's subsidiaries.
- (ii) *Rheinische Stahlwerke:*
Address: Essen.
Capital: RM. 150,000,000.
Business: Steel works. Part of the Vereinigte Stahlwerke group.
Interest: The Deutsche Bank is connected with this company through two interlocking directors. One of these, Hermann Schmitz, is chairman of the Vereinigte Stahlwerke board.
- (iii) *Klöckner Werke A. G.:*
Address: Duisberg.
Capital: RM. 105,000,000.
Business: Iron and steel. Owns five large steel mills; together with Wintershall A. G., the largest potash organization, it owns a nitrogen and benzine plant; has an interest in the important Humboldt-Deutz automobile and machinery concern.
Interest: Florain Klöckner, chairman of the board of Klöckner werke, is a director of the Deutsche Bank. Karl Kimmich, member of the management committee of the Deutsche Bank, heads the advisory board of Klockner werke.
- (iv) *Mannesmannrohren Werke:*
Address: Düsseldorf.
Capital: R. M. 180,000,000 (1943).
Business: Leading tube, pipe, and sheet metal concern with important coal interests, blast furnaces, rolling mills, etc. Has 21 domestic and 17 foreign trading companies. Has numerous diversified interests, many of which were gained through the Aryanization of Jewish firms.
Interest: Since the death of five Mannesmann brothers controlling stock interest has apparently come to the Deutsche Bank, steel trust, and Siemens interest. Oswald Röser, of the Deutsche Bank, is chairman of the Mannesmannrohren board, and the bank is further represented by Rudolph Stahl and Wilhelm Zangen. The latter heads Mannesmannrohren's management committee.

- (v) Mannesmannrohren Werke Komotau A. G.:
 Address: Komotau.
 Capital: R.M. 60,000,000.
 Business: Tube and pipe works. Subsidiary of Mannesmannrohren Werke.
 Interest: Wilhelm Zangen and Oswald Rösler of the Deutsche Bank are respectively chairman and deputy chairman of Mannesmannrohren Werke Komotau A. G.
- (vi) Mannesman Stahlblechbau A. G.:
 Address: Berlin.
 Capital: R.M. 5,000,000.
 Business: Steel plate construction. Owned by Mannesmannrohren Werke.
 Interest: The Deutsche Bank is closely connected with this company. Wilhelm Zangen, a director of the Deutsche Bank, and Oswald Rösler, of the bank's management committee, are respectively chairman and deputy chairman of Mannesman Stahlblechbau.
- (vii) Felten & Guilleame Carlswerk A. G.:
 Address: Cologne.
 Capital: R.M. 64,000,000.
 Business: Manufacture of wire and cable products, light metal work equipment, and so forth. Has substantial interest in other cable companies, telephone and electrical equipments, foreign utilities and so forth. Its principal stockholder is the Arbed Konzern of Luxembourg.
 Interest: The Deutsche Bank, which has an interest in Arbed is connected with this company through two interlocking directorships.
- (viii) Metallgesellschaft A. G.:
 Address: Frankfurt am Main.
 Capital: R.M. 42,000,000 (1939).
 Business: Organized for trade in nonferrous metals and development of mining fields. Has developed considerable chemical interests in related fields and even in artificial rubber. Has participations in the banking firms Delbrück Schickler & Co., and Delbrück von der Heydt & Co. Among the principal stockholders of Metallgesellschaft is I. G. Farben, directly and through the Gold und Silber Scheidenanstalt.
 Interest: The Deutsche Bank is connected with Metallgesellschaft through two interlocking directorates in the persons of Hermann Schmitz and Hermann J. Abs.
- (ix) Vereinigte Aluminum Werke A. G.:
 Address: Berlin.
 Capital: R.M. 40,000,000.
 Business: Largest aluminum company in Germany, more than 90 percent controlled by VIAG, the Reich holding company.
 Interest: The Deutsche Bank is connected with this company through interlocking directors in the persons of Granz Urbig, Karl Schirner, and Arthur Koepchen.
- (x) Mansfeld A. G. für Bergbau u. Hüttenbetrieb:
 Address: Berlin.
 Business: Copper, brass, etc.
 Interest: The Deutsche Bank is connected with Mansfeld A. G. through two interlocking directorships in the persons of Ernst Schoen von Wildenegg and Rudolf Stahl. The former is chairman of Mansfeld, the latter, general manager.
- (c) *Machinery, equipment, installations, etc.*
- (i) Schiess A. G.:
 Address: Dusseldorf.
 Business: Machine factory.
 Interest: Schiess A. G. is reportedly controlled by the Deutsche Bank which is represented on the company's board by two directors.
- (ii) Heinrich Lanz A. G.:
 Address: Mannheim.
 Business: Machines.
 Interest: The Deutsche Bank is connected with Heinrich Lanz A. G. through interlocking directorships in the persons of Karl Ernst Sippel and Max H. Schmidt, who respectively hold the positions of chairman and deputy chairman of Heinrich Lanz.

- (iii) Vereinigte Kugellagerfabriken A. G.:
 Address: Schweinfurt.
 Business: Ball bearings.
 Interest: Hans Rummel, of the management committee of the Deutsche Bank, is chairman of the board of this company, and the two organizations are connected through a second interlocking director, Gunther Quandt.
- (iv) Demag A. G.:
 Address: Duisburg.
 Capital: R.M. 26,500,000 (1939).
 Business: Important machine company producing especially heavy machinery, mill and mining equipment, and equipment for chemical plants, bridges, and railways. It has numerous important subsidiaries.
 Interest: The Deutsche Bank is closely connected with this company through three interlocking directorships.
- (v) Minimax A. G.:
 Address: Berlin.
 Business: Fire fighting apparatus.
 Interest: The Deutsche Bank is connected with this company through interlocking directors in the persons of Max H. Schmidt and Joachim Kessler. The former is chairman of Minimax.
- (vi) Maschinenfabrik Buckau R. Wolf A. G.:
 Address: Magdeburg.
 Business: Factory installations.
 Interest: The Deutsche Bank is connected with this company through two interlocking directorships in the persons of Oswald Rösler and Gustav Brecht. The former is chairman of the Maschinenfabrik board.
- (vii) Vomag Maschinenfabrik A. G.:
 Address: Plauen.
 Business: Machinery.
 Interest: This enterprise is jointly owned by Allgemeine Deutsche Credit-Anstalt, Sachsische Bank, Dresdner Bank, and the Deutsche Bank. Ernst Schoen von Wildenegg, a director of the Deutsche Bank, is chairman of the board of the machinery company. The Deutsche Bank and the machinery company have another common director in Joachim Kessler.
- (viii) Vögtländische Metallwerke G. m. b. H.:
 Address: Plauen.
 Business: Metals. Affiliated with Vomag Maschinenfabrik A. G.
 Interest: The Deutsche Bank is connected with this enterprise through two interlocking directors. One of these, Ernst Schoen von Wildenegg, is a member of the advisory committee of the metal company.
- (d) *Chemicals, munitions, nitrogen*
- (i) I. G. Farbenindustrie:
 Address: Frankfurt am Main.
 Capital: R.M. 730,000,000.
 Business: Dye and chemical combine.
 Interest: The Deutsche Bank is connected with the parent company of I. G. Farben through two interlocking directorships in the persons of Herman Schmitz, chairman of the Farben company, and Hermann J. Abs.
- (ii) Deutsche Gold-und Silberscheidenanstalt vorm. Roessler:
 Address: Frankfurt am Main.
 Capital: R.M. 35,600,000.
 Business: Leading concern in the field of precious metals. Has built up, chiefly for its own use, certain chemical branches, particularly in cyanides and sodium. Has close connections with Henkel & Co. and with I. G. Farben. Shares with the latter an interest in Metallgesellschaft A. G.
 Interest: The Deutsche Bank appears to have close relations with this enterprise as the two are connected through three interlocking directorships.
- (iii) Henkel & Cie. A. G.:
 Address: Dusseldorf.
 Capital: R.M. 200,000,000.
 Business: A chemical and soap flakes manufacturing company which has expanded rapidly during the war. Is said to have a close connection with I. G. Farben and the Deutsche Gold- u. Silberscheidenanstalt.
 Interest: Hugo Henkel, who directs Henkel & Cie. A.G., is a director of the Deutsche Bank. Karl Kimmich, member of the management committee of the Deutsche Bank, is on the Henkel advisory board.

- (iv) Wintershall A. G.:
 Address: Kassel.
 Capital: RM. 150,000,000.
 Business: The largest German potash concern and the largest factor in the German Potash Syndicate. After I. G. Farben the largest chemical concern.
 Interest: The Deutsche Bank is connected with Wintershall through three interlocking directors. One of these Gunther Quandt, is deputy chairman of Wintershall.
- (v) Salzdettfurth A. G.:
 Address: Berlin.
 Capital: RM. 44,175,000.
 Business: Large potash concern, second in importance only to Wintershall.
 Interest: The company is mainly owned by Solvay, Delbruck, Shickler & Co., banking partner of Metallgesellschaft A. G. and a group of large commercial banks, including the Deutsche Bank. I. G. Farben has an indirect interest in Salzdettfurth through Metallgesellschaft A. G.
- (vi) Gewerkschaft Victor Stickstoffwerke:
 Address: Castrop-Rauxel.
 Business: Synthetic nitrogen.
 Interest: The Deutsche Bank is represented on the board of this company by Florian Klöckner, who was chairman of the company's mining management committee, and by Günther Quandt, who is a member of the mining committee.
- (vii) Deutsche Waffen- und Munitions-fabriken A. G.:
 Address: Berlin.
 Business: Ammunition works.
 Interest: The Deutsche Bank appears to be represented on the board of this company by Hermann J. Abs and Günther Quandt. The latter is chairman of the management committee of the munition company.
- (viii) Westfälisch-Anhaltische Sprengstoff A. G. Chemische Fabriken:
 Address: Berlin.
 Business: Explosives and munitions.
 Interest: The Deutsche Bank is connected with this enterprise through two interlocking directors in the persons of Wilhelm Zangen and Rudolf Stahl.
- (ix) J. D. Riedel-E. de Haën A. G.:
 Address: Berlin.
 Business: Chemicals and drugs.
 Interest: The Deutsche Bank is connected with this company through two interlocking directors.
- (e) *Motor manufacturing*
 - (i) Daimler-Benz A. G.:
 Address: Stuttgart.
 Capital: RM. 90,200,000 (1942).
 Business: Second largest German automobile and airplane motor manufacturing enterprise. Has several large plants in Germany and numerous foreign subsidiaries and agencies.
 Interest: The Deutsche Bank appears to control Daimler-Benz and has three representatives on the company's board.
 - (ii) Bayerische Motoren-Werke A. G.:
 Address: Munich.
 Business: Motor manufacturing enterprise. May have an indirect connection with VIAG, the Reich holding company.
 Interest: Hans Rummel, member of the management committee of the Deutsche Bank, is deputy chairman of the advisory board of the above-mentioned company. The bank is also represented on the board of the company by one of its directors, Max H. Schmid.
- (f) *Oil, coal, mining*
 - (i) Deutsche Erdöl A. G.:
 Address: Berlin.
 Capital: RM. 100,000,000 (1939).
 Business: Petroleum company with drilling plants in Alsace and Hanover. Has extensive interests in Rumanian oil fields and in Austrian and Rumanian refineries. Has important lignite holdings and interests in chemical industries associated with brown coal or petroleum.
 Interest: The Deutsche Bank appears to be the controlling interest in this company and is represented in its organization by three officials in high positions.

(ii) Kontinental Oel A. G.:

Address: Berlin.

Capital: RM. 80,000,000 (authorized, RM. 120,000,000).

Business: Founded in 1941 to develop oil fields in eastern Europe from Poland to the Caucasus, which Germany expected to obtain and hold. The company was called a model of a future enterprise. At the end of its first year of operation had almost doubled its total assets. Was to function as a holding company for subsidiaries in Rumania, Poland and Russia siphoning off profits to German banks and oil interests.

Interest: Controlling stockholders are four large banks and German oil interests, Wintershall A. G., a large potash concern, and the state-owned Preussische Bergwerks u. Hutten A. G. The Deutsche Bank, which is apparently one of the banks in the group of founders, is represented on the board of the oil company by Karl Schirner and Hermann J. Abs.

(iii) Rheinische A. G. für Braunkohlenbergbau u. Brikett-fabrikation:

Address: Cologne.

Capital: RM. 72,900,000.

Business: Lignite mining and briquette manufacture. Has substantial holdings in other lignite concerns, notably Roddergrube, its parent company, which in turn is a subsidiary of Rheinsche-Westfälisches Elektrizitätswerk A. G.

Interest: The Deutsche Bank is closely connected with this company through three interlocking directorships.

(iv) Eisen-und Hüttenwerke A. G.:

Address: Cologne.

Business: Iron and coal mining and steel production. Belongs to the Otto Wolff group, which has been prominent in the German trade penetration of South America and the Far East.

Interest: Karl Kimmich, member of the management committee of the Deutsche Bank, is deputy chairman of the advisory board of this company and Ernst Schoen von Wildenegg, a director of the bank, is also on the board of the steel company.

(v) Harpener Bergbau A. G.:

Address: Dortmund.

Capital: RM. 60,000,000 (1939).

Business: Described as the largest independent coal undertaking in Germany but closely connected with the Vereinigte Stahlwerke and the Flick interest.

Interest: The Deutsche Bank is connected with this company through interlocking directorates in the persons of Gustav Brecht, Werner Carp, and Karl Kimmich.

(vi) Erft-Bergbau A. G.:

Address: Brüggen/Erft.

Business: Mining contractors.

Interest: The Deutsche Bank is connected with this company through two interlocking directorships in the persons of Hermann J. Abs and Gustav Brecht.

(vii) Essener Steinkohlenbergwerke A. G.:

Address: Essen.

Capital: RM. 75,000,000 (1942).

Business: Collieries. Subsidiary of Harpener Bergbau described as the largest independent coal undertaking in Germany.

Interest: The Deutsche Bank is represented on the board of this company by two officials, Werner Carp and Karl Kimmich. The latter is chairman of the coal company's advisory board.

(viii) Otavi Minen- und Eisenbahn-Gesellschaft:

Address: Berlin.

Business: Mining and railway company.

Interest: The Deutsche Bank is closely connected with this company through interlocking directorships in the persons of Franz Urbig, Karl Ernst Sippell, and Karl Schirner, all three of whom hold leading official positions in the organization of the mining and railway company.

(g) *Communications*

(i) Deutsche-Atlantische Telegraphengesellschaft:

Address: Berlin.

Business: Wire and telegraph service.

Interest: The Deutsche Bank is closely connected with this company through interlocking directorates. Karl Ernst Sippell, a member of the bank's management committee, is chairman of the company's board of directors, and the bank and the telegraph company have a common director in Hermann Münchmeyer.

(ii) Hochtief A. G. für Hoch- u. Tiefbauten:

Address: Essen.

Business: Telegraph construction.

Interest: The Deutsche Bank is connected with this company through interlocking directorates in the persons of Karl Ernst Sippell and Arthur Koepchen.

(h) *Textiles*

(i) Christian Dierig A. G.:

Address: Langenbielau.

Business: Holding company for the extensive Dierig textile interest.

Interest: Oswald Roessler, member of the management committee of the Deutsche Bank, is a director of the Dierig company; Wolfgang Dierig, a director of the Deutsche Bank, is chairman of the board of directors of Christian Dierig A. G., and apparently has a financial interest in that company.

(ii) Zellstoffabrik Waldhof:

Address: Mannheim.

Business: Artificial fibers, cellulose.

Interest: The Deutsche Bank appears to maintain close relations with Zellstoffabrik Waldhof as it has three representatives on the company's board, two of the three holding high official positions.

(iii) Kammgarnspinnerei Stöhr & Co., A. G.:

Address: Leipzig.

Business: Yarns, textile mills. A subsidiary of Spinnerei Cassmansdorfs.

Interest: The Deutsche Bank is connected with this company through interlocking directorates in the persons of Oswald Rösler, Günther Quandt, and Ernst Schoen von Wildenegg. The latter is deputy chairman of the textile company.

(i) *Miscellaneous*

(i) Deutsche Linoleum-Werke A. G.:

Address: Bietigheim.

Business: Flooring and linoleum.

Interest: Karl Ernst Sippell, a member of the management of the Deutsche Bank, is chairman of the board of this linoleum company. Joachim Kessler, one of the managers of the bank, is a director of the company.

(ii) Deutsche Tafelglass A. G. (Detag):

Address: Furth.

Business: Plate glass.

Interest: The Deutsche Bank appears to be represented on the board of this company by Hugo Henkel and Hans Rummel. The latter is chairman of the board of the glass company.

(iii) Porzellanfabrik Kahla:

Address: Kahla/Thuringen.

Business: Porcelain factory.

Interest: The Deutsche Bank is connected with this company through interlocking directorships in the persons of Franz Urbig, and Hans Rummel. The latter is chairman of the porcelain company's board.

(iv) Dyckerhoff Portland-Zementwerke A. G.:

Address: Amoneburg.

Capital: RM. 20,000,000.

Business: Cement.

Interest: The Deutsche Bank appears to be connected with this company through two interlocking directorships.

(v) Schwabenbrau A. G.:

Address: Dusseldorf.

Business: Brewery.

Interest: The Deutsche Bank is connected with this company through two interlocking directors.

(vi) Rudolph Karstadt A. G.:

Address: Berlin.

Business: Trading company with 8 subsidiaries.

Interest: The Deutsche Bank is connected with this company through interlocking directorates in the persons of Hermann Münchmeyer and Clemens Plassman.

D. RELATION TO ENTERPRISES OR OTHER BANKING INSTITUTIONS OUTSIDE OF GERMANY

1. Banks

(a) Creditanstalt-Bankverein:

Address: Vienna, Austria.

Capital: R.M. 70,700,000.

Business: This was formerly Austria's most important commercial bank. Following the banking crisis of 1931 its control was taken over by the Austrian Government and the Austrian National Bank. Following the incorporation of Austria into the German Reich in 1938 the German Government became the owner of 76 percent of the shares of the Creditanstalt Bankverein and turned them over to the Reich holding company, Vereinigte Industrie A. G. (VIAG).

Interest: VIAG turned over first 25 percent and later 26 percent of this interest in the Creditanstalt-Bankverein to the Deutsche Bank. The Deutsche Bank agreed in return not to establish a branch of its own in Austria but to use the Creditanstalt-Bankverein and its branches as a regional network in order to provide some degree of decentralization for German banking. The Austrian bank thus became Germany's largest regional bank. With the acquisition of control in this institution, the Deutsche Bank acquired indirect control of three smaller Austrian banks as well as a bank in Belgrade, Yugoslavia. The Creditanstalt-Bankverein has been employed by the Deutsche Bank as its partner or agent in penetrating into the banking structure of central European countries.

(b) Bank für Kaernten:

Address: Klagenfurt, Austria.

Capital: R.M. 3,000,000.

Business: Commercial bank.

Interest: The Deutsche Bank controls the Bank für Kaernten through the Creditanstalt-Bankverein, which holds the majority interest. The Bayerische Hypotheken- und Wechsel-Bank of Munich, leading Bavarian mortgage institution, has held a minority interest in the Bank für Kaernten since 1922. Since the Anschluss three branches of the Bank für Kaernten have been taken over by the Creditanstalt-Bankverein and added to the latter's network.

(c) Bank für Oberdenour und Salzburg:

Address: Linz, Austria.

Capital: R.M. 6,000,000.

Business: Commercial bank.

Interest: The Deutsche Bank controls the Bank für Oberdenour und Salzburg through the Creditanstalt-Bankverein which holds a 75 percent interest in it. A minority interest in the Bank für Oberdenour und Salzburg (25 percent) has been held by the Bayerische Vereinsbank, important regional bank of Munich, since 1921.

(d) Bank für Tirol und Verarlberg A. G.:

Address: Innsbruck, Austria.

Capital: R.M. 1,000,000.

Business: Commercial bank.

Interest: The Deutsche Bank controls the Bank für Tirol und Verarlberg A. G. through the Creditanstalt-Bankverein which has a 75 percent interest in it. A minority interest (25 percent) has been held by the Bayerische Vereins-Bank, important regional bank of Munich, since 1921.

(e) Böhmsche Union-Bank:

Address: Prague, Protectorate of Bohemia-Moravia (formerly part of Czechoslovakia).

Capital: R.M. 15,000,000.

Business: This is the largest commercial bank in Prague. In 1943 it had nine branches.

Interest: The Deutsche Bank controls the Böhmsche Union-Bank through a direct participation of 59 percent and the participation of 33 percent held by the Creditanstalt-Bankverein. The Deutsche Bank assumed the control of this institution in 1939.

(f) Banca Comerciala Romana:

Address: Bucharest, Rumania.

Capital: R.M. 7,500,000.

Business: Commercial banking.

Interest: In 1941 the Deutsche Bank took over from a Franco-Belgian group consisting of the Banque de l'Union Parisienne, Societe Generale de Belgique, and the Banque d'Anvers, the majority of the shares of the Banca Comerciala Romana. As of 1943 the Deutsche Bank held a 59 percent interest in the Creditanstalt-Bankverein and a 30 percent interest in the Banca Comerciala Romana.

(g) Banca Comerciala si Industriala:

Address: Bucharest, Rumania.

Capital: R.M. 600,000.

Business: Commercial banking.

Interest: The Deutsche Bank controls the Banca Comerciala si Industriala through the Banca Comerciala Romana.

(h) Deutsch Bulgarische Kreditbank:

Address: Sofia, Bulgaria.

Capital: R.M. 1,500,000.

Business: Commercial banking, chiefly to finance trade between Germany and Bulgaria. Since its establishment in 1905 this bank has been the center of German interests in Bulgaria.

Interest: The Deutsch Bulgarische Kreditbank has been a subsidiary of the Deutsche Bank since 1929. As of 1943 it was reported that the Deutsche Bank held a 63 percent interest and the Creditanstalt Bankverein of Vienna, now a subsidiary of Deutsche Bank a 30 percent interest in the Deutsch Bulgarische Kreditbank.

(i) Apatiner Bank und Sparkasse A. G.:

Address: Apati, Hungary (formerly Yugoslavia).

Capital: R.M. 4,000,000.

Business: Commercial and savings bank.

Interest: The Deutsche Bank has an indirect interest in this bank through the Creditanstalt Bankverein.

(j) Landesbank von Bosnien und Herzegovina:

Address: Sarajevo, Croatia.

Capital: R.M. 1,000,000.

Business: Commercial banking.

Interest: The Deutsche Bank has an interest in this institution through a majority participation held by the Creditanstalt Bankverein.

(k) Bankverein für Kroatien A. G.:

Address: Zagreb, Croatia.

Capital: R.M. 6,300,000.

Business: Finance international trade.

Interest: The Deutsche Bank controls the Bankverein für Kroatien A. G. through a 15 percent direct interest, and an indirect interest through two subsidiaries, the Creditanstalt Bankverein of Vienna and the Böhmische Union-Bank of Prague which hold respectively interests of 55 percent and 10 percent in the Bankverein für Kroatien A. G. Small participations in this Croatian bank are held by two other Berlin banks, the Commerzbank and the Reichs-Kredit-Gesellschaft. This was formerly a branch of the Allgemeine Yugoslavischer Bankverein A. G.

(l) Bankverein A. G.:

Address: Belgrade, Serbia.

Capital: R.M. 5,000,000.

Business: Finance international trade.

Interest: The Deutsche Bank controls the Bankverein A. G. of Belgrade, through a 13 percent direct interest and through indirect interests of 51 percent held by the Creditanstalt Bankverein of Vienna and 7 percent by the Böhmische Union-Bank of Prague. The two last-mentioned institutions are subsidiaries of the Deutsche Bank. Small participations in the Bankverein A. G. of Belgrade are also held by the three large Berlin banks, the Dresdner Bank, the Commerzbank, and the Reichs-Kredit-Gesellschaft. This was formerly a branch of the Allgemeine Yugoslavischer Bankverein A. G.

(m) Union-Bank Pressburg A. G.:

Address: Bratislava, Slovakia.

Capital: R.M. 4,300,000.

Business: Commercial bank.

Interest: This bank was established in 1940 as the result of a merger of several banks. The Deutsche Bank controls it through its subsidiaries, Creditanstalt Bankverein and the Böhmische Union-Bank, the former of which holds a 55 percent participation and the latter a 45 percent participation in the Union-Bank Pressburg A. G.

(n) Banque Nationale de Grece:

Address: Athens, Greece.

Capital: R.M. 50,000,000.

Business: One of the three largest commercial banks in Athens.

Interest: German penetration of Greek banking took the form chiefly of "collaboration agreements" by the German and Greek banks without the influx of German capital. The Bank Nationale de Grece formed an agreement of this kind with the Deutsche Bank. The Creditanstalt-Bankverein of Austria, controlled by the Deutsche Bank, was included in this arrangement.

(o) Generalbank Luxemburg A. G. (Banque Generale du Luxemburg A.):

Address: Luxemburg.

Capital: R.M. 2,000,000 (only partially paid up).

Business: Commercial and investment banking.

Interest: Prior to 1940 the majority interest in this bank was held by the Societe Generale de Belgique. The Deutsche Bank took over a 30 percent interest with an option on another 30 percent still held, as of 1943, by the Societe Generale de Belgique.

(p) Handels Maatschappij H. Albert de Bary & Company:

Address: Amsterdam, Holland.

Capital: R.M. 20,000,000.

Business: Commercial banking firm.

Interest: Prior to World War II, the Deutsche Bank held a participation in this Dutch banking firm which during the period of occupation of the Netherlands has been increased to almost complete control (95 percent).

(q) Bank voor West-Europeeschen-Handel (Bank for West European Trade):

Address: Amsterdam, Holland.

Business: This Dutch bank was founded in 1940 by the German "big banks" under the leadership of the Deutsche Bank and the Dresdner Bank. It is reported that its purpose was the financing of international trade.

Interest: Jointly controlled by the Deutsche Bank with other Berliner Grossbanken.

(r) Deutsche Asiatische Bank:

Address: Shanghai, China (head office).

Capital: R.M. 3,400,000 (1938).

Business: Finance trade with the Far East. In 1938 it had two branches in Germany (Berlin and Hamburg) and six in China.

Interest: This bank was established as a joint enterprise of the Deutsche Bank and the other Berliner Grossbanken.

2. Industries

(a) Compania Hispano-Americana de Electricidad:

Address: Madrid.

Capital: 120,000,000 pesetas as of 1936.

Business: Holding company for foreign utilities.

Interest: Capitalized at 120,000,000 pesetas. This company was, before the last war, a German enterprise with public utility holdings in South America. Following the war it was reorganized as a Spanish corporation with Belgian, Swiss, French, British, and Spanish capital joining the old German interest. The chief interest in the Belgian group is Sofina, large Belgian holding company, by which CHADE is 15 percent owned. As of 1942, the German interests were represented on the board of the company by Hermann Abs and Karl Kimmich of the Deutsche Bank, and Hermann Buecher of the Allgemeine Elektrizitäts Gesellschaft. The Spanish interests were the Banco de Bilbao, the Banco Urquijo, and the Catalan group, consisting of the Banco Espanos de Credito, the Garigimeno brothers, and the Sociedad Financiera de Industrias y Transportes. CHADE is of little significance in the Spanish electrical field. It operates primarily in South America, where its principal property is CADE, which is under Sofina management.

(b) Prager Eisen-Industrie-Gesellschaft:

Address: Prague.

Business: Iron industry.

Interest: Interlocking directorates indicate that the Deutsche Bank has an interest in this enterprise. Wilhelm Zangen, a director of the Deutsche Bank, is deputy chairman of the iron company's advisory board; Oswald Rösler, of the Deutsche Bank's management committee, is a member of the executive committee of Prager Eisen-Industrie-Gesellschaft.

(c) S. A. des Acieries Reunies de Burbach-Eich-Dudelange (ARBED):

Address: Luxemburg.

Capital: 1,250,000,000 Luxemburg francs.

Business: Large operating and holding company with extensive interests in steel, coal, and heavy industry, and with numerous international connections which include several important German enterprises. ARBED is the principal stockholder in Felten & Guillaume Carlswerk A. G., with which the Deutsche Bank appears to be connected, Kurt von Schröder, chairman of Felten & Guillaume and a partner of the J. H. Stein banking firm in Cologne, heads one of the ARBED companies. ARBED is the only one of the Lorraine-Luxemburg steel interests which after the German occupation was accepted into the German economy without a change of owners.

Interest: After the German occupation of western Europe the Belgian bank, Ste. Generale de Belgique sold half of its interest of 10 percent in ARBED to the Deutsche Bank. The interest in ARBED held by the Ste. Generale de Belgique was reported as 125,000,000 Belgian francs, which would indicate that the financial interest of the Deutsche Bank in ARBED is approximately 62,500,000 Belgian francs.

(d) Steyr Werke:

Business: Largest Austrian automobile enterprise, now engaged in the manufacture of armaments.

Interest: The Deutsche Bank may have an indirect interest in this company, as since the beginning of World War II the Deutsche Bank's Austrian subsidiary, the Creditanstalt-Bankverein, together with the Länderbank of Vienna, underwrote an issue of RM. 50,000,000 of industrial bonds of the Steyr Werke.

(e) Kontinentale Rohstoff-und Papier-Industrie (Kontag):

Address: Austria.

Business: Cellulose and paper manufacturing enterprise, successor to the Aryanized Bunzl & Biach which had been the largest cellulose concern in Austria.

Interest: The Deutsche Bank has an indirect interest in this company through its subsidiary, the Creditanstalt-Bankverein, which, during the Aryanization of Bunzl & Biach acquired a majority interest in Kontag.

E. MANAGEMENT PERSONNEL

Names of directors, etc. (1944)

Management committee:

Hermann J. Abs.
Erich Bechtolf.
Robert Frowein.
Karl Ritter von Halt.
Heinrich Hunke.
Johannes Kiehl.
Clemens Plassmann.
Oswald Roesler.
Hans Rummel.
Karl Ernst Sippell.

Board of directors:

Franz Urbig, honorary chairman.
Karl Kimmich, chairman.
Hans Oesterlinck, vice chairman.
Albert Pietzsch, vice chairman.
Gustav Brecht.
Werner Carp.
Wolfgang Dierig.
Hugo Eckener.
Otto Fitzner.
Richard Freudenberg.

Franz Hasslacher.
Herman Ludwig von Hatzfeldt.
Hugo Henkel.
Florian Klöckner.
Arthur Koepchen.
Emil Kreibich.
Hermann R. Muenchmeyer.
Gunter Quandt.
Philipp F. Reemtsma.
Wolfgang Reuter.
Ernst Enno Russell.
Ernst Schoen v. Wildenegg.
Hermann v. Siemens.
Rudolf Stahl.
Emil Georg v. Stauss.
Erich Tgahrt.
Richard F. Ullner.
Johann P. Vielmetter.
Theodor Wiedemann.
Wilhelm Zangen.

Herman J. Abs

Herman J. Abs is a banker and industrialist whose rise within the Nazi economy has been phenomenal. There is no record of his participation in commercial undertakings prior to 1938, when it was first reported that he was a member of the management committee of the Deutsche Bank and a member of the Creditanstalt-Bankverein. His success within the next 4 years is the more remarkable in the light of his having begun his career as secretary to Cardinal Schulte, the Archbishop of Cologne.

Nevertheless, between 1938 and 1942, his connections extended through 40 of the most important banks and industries in Germany. It may be that he is merely a figurehead for the Government or the protector of the interests of the Deutsche Bank. In the field of banking alone his influence has expanded from affiliation with only the Deutsche Bank and the Creditanstalt-Bankverein (controlled by the Deutsche Bank) to that of director of an imposing list of Deutsche Bank-controlled financial institutions in the Balkans.

Abs is on the board of numerous enterprises in the field of utilities, heavy industries, munitions, machine tools, etc. He is a director of I. G. Farben, Metallgesellschaft, Deutsche Solvay-Werke and others. He is on the boards of 26 important industrial companies and 14 banking institutions.

Herman Abs is about 48 years of age. He is one of the prominent lay Catholic leaders in Germany, and rumors persist that he is a potential leader of the Catholic opposition in the country. However, no reference to his political activities is available and it may be concluded that his preoccupation arising from affiliation with 40 banks and commercial enterprises has prevented any appreciable contribution to the work of the opposition.

His banking and commercial connections were the following in 1942:

Banking.—Deutsche Bank (Berlin) (total assets in 1941, R.M. 7,500,000)—Member of the management committee; also in charge of the bank's foreign department.

Creditanstalt-Bankverein, Vienna (51 percent owned by Deutsche Bank and 25 percent owned by VIAG)—Deputy chairman of board of directors.

Allgemeiner Jugoslawischer Bank-Verein A. G., Belgrade (majority control held by Creditanstalt-Bankverein, above, which founded this bank: sole representative of German interests in Serbia)—Director.

Landesbank für Bosnien und Herzegovina, Sarajevo (majority control held by Creditanstalt-Bankverein, above, which founded this bank)—Member of management committee.

Bohmische Union Bank, Prague (59 percent owned by Deutsche Bank and 35 percent owned by Creditanstalt-Bankverein, above)—Member of management committee.

Kreditbank, Sofia (50 percent owned by the Deutsche Bank)—Chairman of board of directors.

Banca Commerciala Romana, Budapest (59 percent owned by Deutsche Bank and 30 percent owned by Bohmische Union Bank, above)—Deputy chairman of advisory board.

Deutsch-Asiatische Bank, Shanghai-Berlin (organized by the six Berlinen Grossbanken for the purpose of expanding trade in China)—Deputy chairman of board of directors.

Generalbank Luxemburg, A. G., Luxemburg (large participations by Deutsche Bank)—Deputy chairman of board of directors.

Luxemburger Unionbank Anon. Ges., Luxemburg—Director.

Handel-Maatschappij H. Albert de Bary & Co., N. V., Amsterdam (interests of Deutsche Bank in this institution extend to 1937; Deutsche Bank acquired full control after the outbreak of war in 1939)—Chairman of board of directors.

Rheinisch-Westfälische Boden-Credit-Bank, Cologne (specializes in second mortgages)—Director.

Deutsche Ueberseeische, Berlin—Chairman of board of directors.

Deutsche Reichsbank, Berlin—Member of advisory board.

Industrial.—Iron and steel works: Metallgesellschaft A. G., Frankfurt/Main (subsidiary of I. G. Farben; it is the dominant industrial concern of the Metal Trust in the field of nonferrous metals and related industrial spheres; major shareholders are the British Metal Corp. and the Schweizerische Gesellschaft für Metalwerke)—Director.

Neunkircher Eisenwerk A. G., Vorm. Gebr. Stumm, Neunkirchen/Sarr (large trading and manufacturing company producing iron products. It is capitalized at R.M. 40,000,000, and its major shareholders are the Stumm brothers and Otto Wolff)—Director.

Pittler Werkzeugmaschinenfabrik A. G., Leipzig-Wahren (machine tools, capitalized at R.M. 5,000,000; majority owned by the Commerz Bank and the Dresdner Bank)—Chairman of board of directors.

Walther-Staubtechnik G. m. b. H., Köln-Dell-bruck (manufacturing concern for boilers and heavy shell equipment)—Director.

Mining: Bergwerks-gesellschaft Dahlbusch, Gelsenkischen (subsidiary of Deutsche Solvay-Werke, A. G., below, capitalized at R.M. 15,000,000; it specializes in coal and belongs to the Rheinisch-Westfälische Kohlensyndikat; in 1936 it was owned jointly by Deutsche Solvay-Werke A. G., below, and the Libby-Owens concern)—Chairman of board of directors.

Schlesische Bergwerks und Hütten A. G., Beuthen (majority control by Metallgesellschaft A. G., above, and Schweizerische Gesellschaft für Metalwerte; it is capitalized at R.M. 16,200,000)—Chairman of board of directors.

Erft-Bergbau A. G., Brüggen/Erft (mining contractors)—Director.

Utilities: Compania Hispano-Americana de Electricidad, Madrid (holding company for foreign utilities, particularly in Argentina, France and Belgium; its directorate is predominantly Spanish and British)—Director.

Rheinisch-Westfälisches Elektrizitäts-Werk A. G., Essen (subsidiary of Vereinigte Industrie-Unternehmungen A. G.)—Director.

Munitions: Accumulatoren-Fabrik A. G., Berlin (storage batteries; 75 percent owned by E. Gunther Quandt; it is capitalized at R.M. 21,250,000 and participates in other electrical enterprises; maintains many important affiliates in Hungary, Sweden, Finland, Yugoslavia, and Holland)—Chairman of board of directors.

Deutsche Waffen- und Munitionsfabriken A. G., Berlin (ammunition works, probably affiliated with Accumulatoren-Fabrik, above, whose majority stockholder, Quandt, is also chairman of the board of directors of Deutsche Waffen- und Munitionsfabriken)—Director.

Chemicals and dyes: I. G. Farbenindustrie A. G., Frankfurt am Main (this huge German Dye Trust was capitalized in 1939 at R.M. 730,000,000 and had total assets of R.M. 1,900,000,000)—Director.

Deutsche Solvay-Werke A. G., Bernburg (capitalized at R.M. 55,000,000; it is controlled by the Belgian Solvay family)—Director.

Kontinentale Oel-A. G., Berlin—Director.

Cement works: Portland-Cementwerke Heidelberg A. G., Heidelberg (capitalized at R.M. 27,100,000)—Deputy chairman of board of directors.

Dyckerhoff Portland-Zementwerke A. G., Amoneburg (capitalized at R.M. 20,000,000; its majority shareholder is the Dyckerhoff family)—Director.

Rayons and cellulose: Algemeene-Kunstzijde Unie N. V. Arnheim, Holland—Deputy chairman of board of directors.

Vereinigte Glanzstoff-Fabriken A. G., Elberfeld (rayon, in 1936 100 percent owned by Algemeene Kuntzide Unie N. V., above; it is capitalized at R.M. 76,500,000; among its subsidiaries are the North American Rayon Corp., of Tennessee, the American Bemberg Corp., of Tennessee, and the British Bemberg Corp., Ltd., of London)—Chairman of the board of directors.

Aschaffenburg Zellstoffwerke A. G., Berlin (cellulose, capitalized at R.M. 23,200,000; it maintains affiliates in Holland and Finland)—Director.

Photographic equipment and precision instruments: Zeiss Ikon A. G., Dresden (majority stockholder is the huge Carl Zeiss concern)—Deputy chairman of board of directors.

Transportation: Compania de Ferrocarriles Suramericanos Gran Ferrocarril de Venezuela, Madrid—Director.

Real estate and construction: Philipp Holzmann A. G., Frankfurt am Main (capitalized at R.M. 12,900,000; its own extensive storage and factory structures and maintains construction works in South America, Greece, and Turkey)—Chairman of board of directors.

Leather: Norddeutsche Lederwerke A. G., Berlin—Chairman of board of directors.

Glass works: Deutsche Libbey-Owens Gesellschaft für Maschinelle (33½ percent owned by Bergwerks-gesellschaft Dahlbusch, above; glass manufacturing with patents held by Libby-Owens; capitalized at R.M. 11,500,000)—Director.

Miscellaneous (business not ascertained): Mechanik G. m. b. H., Rochlitz, Leipzig-Wahren—Chairman of board of directors.

H. F. & Ph. F. Reemtsma, Hamburg-Bahrenfeld—Member of advisory board.

Erich Bechtolf

Erich Bechtolf, appointed to the management committee of the Deutsche Bank in 1942, is also a member of the committee on admissions, Hamburg Stock Exchange, as well as a member of the management committee of the Securities Exchange, Hamburg.

In addition to his activities in the financial field, Bechtolf is on the board of directors of a number of industries producing rubber and asbestos, cement, leather, and other products. He is reported to be a foreign trade-expert, and is considered politically disinterested.

Bechtolf was born in Hamburg on August 4, 1891; his address is listed as 8 Adolphsplatz. While little information is available concerning his personal and political background, his business and financial connections are as follows:

Industrial.—Stader Lederfabrik, A. G., Stade (leather)—Chairman of the board.
Tretorn Gummi- und Asbestwerke, A. G., Hamburg (rubber and asbestos)—Chairman of the Board. (Helsingborgs Gummifabriks A/B, Helsingborg, Sweden, is the majority stockholder.)

Portland-Cementfabrik, Hemmoor (cement)—Deputy chairman of the advisory board.

Guano-Werke, A. G., formerly Ohlendorffsche und Merck'sche werke, Hamburg (fertilizers)—Director.

Norddeutsche Affinerie, Hamburg (miscellaneous metals)—Director.

Navigation.—Hamburg-Südamerikanische Dampfschiffahrts-Gesellschaft, Hamburg—Deputy chairman of the advisory board.

Hamburg-Amerikanische Packetfahrt, A. G. Hamburg—Director.

Insurance.—Nord-Deutsche Versicherungs-Gesellschaft, Hamburg—Director.

Nord-Deutsche Lebensversicherungs, A. G., Hamburg—Director.

Financial.—Liquidations-Casse in Hamburg, A. G., Hamburg (finance company)—Director.

Gustav Brecht

Gustav Brecht, a member of the board of directors of the Deutsche Bank and an official of the war-production program (Wehrwirtschaftsführer), is an engineer who is primarily associated with the lignite-mining industry of Germany. He is chairman of the bank committee of Rheinische A. G. für Braunkohlenbergbau und Brikettfabrikation, Cologne, and is deputy chairman of the advisory board of Braunkohle-Benzin A. G., Berlin, lignite mining and benzine company, which is affiliated with the I. G. Farben and VIAG (Vereinigte Industrie-Unternehmungen Aktiengesellschaft) combines.

Following his studies in the secondary schools of Lübeck, he studied mechanical and electro-engineering at technical colleges in Brunswick and Berlin. Brecht was born on January 9, 1880, in Lübeck. He is the son of Ernst Walther Brecht, managing director of Lübeck-Buchener Eisenbahngesellschaft, a railroad company. He married Nora Deppe of Brussels on April 12, 1912, and has three children.

Brecht's latest known address was Lindenallee 39, Köln-Marienburg/and Essen. His professional career has been as follows:

1904—construction overseer, Railroad Board, Berlin and Essen.

1906—Regierungs-Baumeister, Railroad Board.

1907—given leave of absence to take over a division of the Allgemeine Elektrizitäts Gesellschaft (AEG).

1911—having returned to Government service, directed operations for opening up of the electrical main line from Bitterfeld to Dessau.

1912—Prussian Ministry of Works.

1914—Served in the World War as captain of reserves; was wounded and taken prisoner.

1918—Councilor and head of the section on coal and energy economy of the Reich Ministry of Economy.

1920—Retired from Government service and became a member of the management committee of Reichskohlen Verband A. G., Berlin.

1925—Chairman of the management committee of Rheinische A. G. für Braunkohlen-Berbau und Brikettfabrikation, Köln, and chairman or substitute chairman of the boards of directors of Rheinisches Braunkohlen Syndikat, Köln, Rheinische Elektrizitäts Werke, and A. G. Köln.

1924-25—Served in Paris as a member of the Special Committee on Procedures on Reparations.

His political, business, and financial connections in 1942 were as follows:

Political.—Wehrwirtschaftsführer—Leader of War Economy.

Banking.—Deutsche Bank, Berlin—Member of the board of directors.

Insurance.—Allianz Lebensversicherungs A. G., Berlin (life insurance)—Member of the board of directors.

Industrial.—Coal and lignite: Rheinische A. G. für Braunkohlenbergbau u. Brikettfabrikation, Köln (lignite mining and briquet manufacture)—Chairman of the bank committee.

Rheinische Braunkohlen-Syndikat G. m. b. H., Cologne—Chairman of the board of directors.

Rheinische Elektrizitätswerk ein Braunkohlenrevier A. G., Cologne (electric works for lignite mines)—Chairman of the board of directors.

Rheinische Braunkohlentiefbaugesellschaft m. b. H., Cologne, (construction for lignite mines)—Chairman of the board of directors.

Union Rheinische Braunkohlen-Kraftstoff A. G., Cologne—Chairman of the board of directors.

Braunkohle-Benzin A. G., Berlin (lignite-benzine, I. G. Farben-VIAG affiliate)—Deputy chairman of the advisory board.

Braunkohlen-Industrie A. G., "Zukunft," Eschweiler—Director.

Braunkohlen-und Briketwerke Roddergrube A. G. (lignite and compressed fuels)—Director.

Mining construction.—Erft-Bergbau A. G., Bruggen Erft—Deputy chairman of the advisory board.

Harpener Bergbau A. G., Dortmund—Director.

Miscellaneous.—Felten und Guilleaume Carlswerk A. G., Köln-Mülheim (construction of plant for wire manufacture)—Director.

Maschinenfabrik Buckau R. Wolf A. G., Magdeburg (machines)—Director.

Professional.—Bezirksgruppe Rheinischer Braunkohlenbergbau der Wirtschaftsgruppe Bergbau (district group for lignite mining construction)—Chief.

Wirtschaftsgruppe Bergbau, Berlin (economic group for mining construction)—Deputy chief.

Industrie- und Handelskammer, Cologne (Köln Chamber for Industry and Commerce)—Member of the advisory board.

Wirtschaftskammer Cologne (economic chamber)—Member of the advisory board.

Prasidium Reichsvereinigung Kohle, Berlin (German Coal Association)—Member.

Werner Carp

Werner Carp is a director of the Deutsche Bank. In 1938 he was vice chairman of the executive council of the directorate for the steel cartel, Vereinigte Stahlwerke, A. G. Although it is not reported that he is now affiliated with Vereinigte Stahlwerke, he is a member of the board of a number of important mining and smelting enterprises.

In 1942 his commercial and industrial connections were the following:

Banking.—Deutsche Bank Rheinisch-Westfälischer Beirat der Deutschen Bank, Berlin—Member of the advisory board.

Insurance.—"Albingia" Versicherungs A. G., Hamburg—Director.

Industrial.—Mining: Essener Steinkohlenbergwerke A. G., Essen (collieries)—Director.

Gutehoffnungshütte A. G. für Bergbau und Hüttenbetrieb, Nuremberg (mining and smelting works)—Director.

Franz Haniel A. G., Duisburg-Ruhrort (coal works affiliated with Gutehoffnungshütte A. G., above)—Chairman of the board of directors.

Harpener Bergbau A. G., Dortmund—Director.

Cable works: Deutsche Kabelwerke A. G., Berlin—Director.

Kabelwerk-Rheydt A. G., Rheydt—Director

Armaments: Rheinische-Westfälische Sprengstoff A. G., Cologne (explosives)—Director.

Schiess A. G., Dusseldorf (rifles)—Director.

Shipping: Oldenburg - Portugiesische Dampfschiffs - Rhederi, Hamburg—Director.

Machinery: Daimler-Benz A. G., Stuttgart-Untertürkheim (motors)—Director.

Demag A. G., Duisburg (mining products and machinery)—Director.

Wolfgang Dierig

Wolfgang Dierig, a director of the Deutsche Bank, the largest bank in Germany, is an important figure in the German textile industry.

He is chairman of the board of Christian Dierig A. G., one of the most important German textile enterprises, which has several subsidiaries. Since Dierig is listed as a factory owner, and this firm bears his name, it seems safe to conclude that he has an important interest in it.

In addition to the connection of Christian Dierig, A. G. with the Deutsche Bank through Wolfgang Dierig, it should be noted that on the board of the textile company are found representatives of two other large German banks, Berliner Handelsgesellschaft and the Deutschen Bank und Disconto Gesellschaft.

Of Wolfgang Dierig's other board memberships it may be mentioned that A. G. fuer Bleicherei Faerberei, Appretur, and Druckerei; Ernest Mallinckrodt A. G.; Gebrüder Moras A. G.; Spinnerei und Weberei Kottren; Augsburg

Buntweberei vorm., L. A. Riedinger und Ausruestungsanstalt Wiesenthal A. G. are subsidiaries of Christian Dierig A. G.

Wolfgang Dierig is domiciled at Langenbielan Schlesien. His financial and business connections are as follows:

Banking.—Deutsche Bank, Berlin—Director.

Industrial.—A. G. fuer Bleicherei Faerberei, Appretur, und Druckerei, Augsburg (dyeing, processing, and printing of textiles)—Chairman of board of directors.

Christian Dierig A. G., Langenbielan Schlesien (textiles, cotton, processing, and financing)—Chairman of board of directors.

Ernst Mallinckrodt A. G., Leipzig (cotton textiles)—Chairman of board of directors.

F. H. Hommersen A. G., Osnabrück (cotton textiles)—Deputy chairman of the advisory board.

Gebruder Moras A. G., Zittau (textiles)—Deputy chairman of the advisory board.

Spinnerei und Weberei Kottorn, Kottorn bei Kempten (textiles)—Deputy chairman of the advisory board.

Augsburger Buntweberei vorm., L. A. Riedinger, Augsburg (textiles)—Director.

Ausruestungsanstalt Wiesenthal A. G. i. L., Brombach (textile processing)—Director.

Hugo Eckener

Hugo Eckener, a director of the Deutsche Bank, is one of the main promoters in the field of dirigible airships. Eckener has made his name virtually synonymous with the progress of airship construction and flying. Today, nearing the age of 80, he can look back on a series of achievements that have taken him through the skies of four continents and brought him acclaim and honors from a dozen nations.

Born in Flensburg on August 10, 1868, he is the son of a prosperous tobacconist. From high school he went to the universities of Munich and Berlin, majoring in the arts, music, economics, and philosophy. When Eckener was graduated he became a journalist and wrote a series of criticisms on the efforts of the airship pioneer, Count Ferdinand von Zeppelin. Impressed by the intelligence of these criticisms, the then aging Count called upon Eckener and converted him into an airship enthusiast. Eventually they became close friends, Eckener assuming the position of press agent, fund raiser and, finally, the builder and operator of the airships he and the Count conceived.

After the First World War, when Count von Zeppelin died, Eckener was willed control over the Zeppelin airship construction enterprises and commenced building a number of very large dirigibles which became the talk of the world in the period from 1930 to the *Hindenburg* disaster in 1937.

Eckener never participated actively in politics, so that when the Nazis came into power in 1933 he refused them his assistance. Later, in 1936, a more serious clash occurred when he refused to allow his big ships to carry propaganda material for the Nazi movement. It is alleged that Joseph Goebbels forced the German press to refrain from mentioning Eckener or any of his activities.

The New York Times of December 9, 1938, however, reports that "Eckener was Hitler's guest at the luncheon ceremonies at the launching of the first German airplane carrier." The article also stated that "This was the first formal recognition of Dr. Eckener since his tilt with Goebbels."

Hugo Eckener has been honored by leading scientific institutions both in Germany and abroad. The National Geographic Magazine awarded him its medal in 1930; in 1936 he won the British gold medal for aeronautics; and he has won the coveted Harmon International Trophy five times. As recently as 1937 he was awarded the Guggenheim gold medal. Eckener has a son, Knut Eckener, who is also engaged in airship construction.

Eckener is the deputy chairman of the board of Aero Union A. G., Berlin, a company devoted to the promotion and furthering of airship communication both in Germany and abroad. The main shareholders in this enterprise are the Allgemeine Electricitäts Gesellschaft A. G., Berlin, the Hamburg Amerika Line, the Luftschiffbau G. m. b. H., as well as the large metal trading corporation, the Metallgesellschaft.

Hugo Eckener's financial and business connections are:

Financial.—Deutsche Bank—Director.

Industry and transportation.—Luftschiffahrt-Zeppelin G. m. b. H. (airship construction)—Chairman, board of directors.

Aero Union A. G., Berlin (air transport)—Deputy chairman, board of directors.

Richard Freudenberg

Richard Freudenberg, a director of the Deutsche Bank and owner of the private banking house of Carl Freudenberg, is an official of the German Department of Economic Welfare.

Freudenberg's industrial interests lie in the field of shoe manufacturing. The majority stock of Conrad Tack & Co., a shoe factory with capital of R.M. 5,300,000, is owned by his private banking firm, Carl Freudenberg. Richard Freudenberg is on the board of another small shoe factory, Gustav Hoffman A. G. (capital R.M. 2,300,000). The banking firm of Carl Freudenberg holds certain patents in the United States, presumably connected with shoe manufacture, but no value has been declared on this property.

Richard Freudenberg is a director of Gerling-Kongerin Lebensversicherung A. G. This is a life insurance company which is a member of a group of insurance companies known as the Gerling Concern, which seems to derive a great many of their customers from the German steel and iron industry.

Freudenberg lives at Lützelsachsener Strasse, Berlin. His political, financial, and business connections are as follows:

Political.—German Department of Economic Warfare—Official.

Banking.—Carl Freudenberg, Weinheim/Bergstrasse (private banking house).

Deutsche Bank, Berlin—Director.

Industry.—Conrad Tack & Cie., Berlin (shoe industry)—Owner.

Gustav Hoffman A. G., Kleve (shoe industry)—Director.

Insurance.—Gerling-Kongerin Lebensversicherung A. G., Koeln.

Karl Ritter von Halt

Ritter von Halt is a member of the management committee of the Deutsche Bank. He has little influence in the management, his principal function being to represent the bank as employer against the Labor Front. He owes that position to his membership in the Nazi Party. Ritter von Halt is mainly interested in sports. He has for many years held the position of manager of the German Olympic Committee.

Background.—Ritter von Halt was born June 2, 1891, in Munich. He attended the University of Munich and holds the degree of doctor of political science. During World War I he was a lieutenant of infantry, was wounded and taken prisoner by the English. He holds several Austrian and German decorations. Beginning with 1918 he became active both in banking and sports. He has held several high positions on German boards dealing with sports. In March 1944 he was reportedly sent to Bucharest in his capacity as member of the International Olympic Committee. Some years ago he was a submanager in the Jewish banking firm of S. Aufhäuser in Munich. He left that position at the request of the Nazi Party to accept an appointment at the Deutsche Bank.

His financial and industrial activities as of 1942 were as follows:

Banking.—Deutsche Reichsbank, Berlin—Member of advisory board.

Deutsche Bank, Berlin—Director.

Deutsche Verkehrs-Kredit-Bank A. G., Berlin (Bank of the Ministry of Transportation)—Director.

Creditanstalt-Bankverein, Vienna—Chairman of the board of directors.

Industrial.—Alpen-Elektrowerke A. G., Vienna (subsidiary of Vereinigte Industrie-Unternehmungen A. G. (VIAG))—Director.

Wiener Allianz Versicherungs A. G., Vienna (insurance company)—Chairman of the board of directors.

Brüder Hasslacher & Co., Hermagor, Austria—Partner.

"Slavonia" Oesterreichische Holzindustrie A. G., Vienna (wood)—Chairman of the board of directors.

"Semperit" Gummiwerke A. G., Vienna (rubber products)—Chairman of the board of directors.

Säge-Hobel- und Elektrowerk (sawmill, planing, and electricity), Wetzmann/Carinthia, Austria—Owner.

Mitropä Mitteleuropäische Schlafwagen- und Speisewagen A. G., Berlin (pullman sleeping and dining car company)—Director.

Deutsche Reichsbahn, Berlin (German Reich Railway System)—Member of the advisory board.

Franz Hasslacher

Franz Hasslacher has leading managerial connections with four large German and Austrian banks. He is also a director of a subsidiary of the Vereinigte Industrie-Unternehmungen A. G. (VIAG) and of a variety of other important enterprises in Germany and Austria.

Hasslacher, who has the title of Commercial Councillor, was born November 20, 1884, in Lind-Drautal, a small place very near the Yugoslav border in the Province of Carinthia in Austria. He is decorated with the Cross of Commendatore of the Italian crown.

It is safe to assume that Hasslacher is a trusted Nazi. As an Austrian he has attained powerful positions in Germany since the Anschluss and increased his activities in Austria in comparison to those he was engaged in in 1937.

His Austrian financial and industrial connections as of 1937, i. e., pre-Anschluss were as follows:

Banking.—Oesterreichische Creditanstalt-Wiener Bankverein, Vienna—Vice president.

Industrial.—Fa. Brüder Hasslacher & Co., Hermagor, Austria—Partner.

Oesterreichische Brundesbahnen (Austrian State Railway System)—Director. Austrian branch of the Riunione Adriatica di Sicurtà (Italian insurance company)—Director.

Miscellaneous.—Bund der oesterreichischen Industrieller (Association of Austrian Industrialists)—Member of executive committee.

Fachverband der Holzindustrie (Professional Association of the Wood Industry)—Chairman.

Societe Continentale de Gestion (a holding company), Monaco—Director.

Herman von Hatzfeldt

Von Hatzfeldt, a member of the Silesian nobility, is a director in the Deutsche Bank. His family owns large estates in Silesia where he is connected with two small companies.

Background.—Von Hatzfeldt was born in 1874. He has occupied a number of diplomatic posts in Europe and South America. He was at one time Charge d'Affaires at the German Embassy in Washington. In 1918 he was German delegate at The Hague negotiating the exchange of war prisoners. This work took him to London and Cairo. In 1921 he was appointed Governor of Upper Silesia. It is not known whether or not he still holds that post.

Von Hatzfeldt's known connections are as follows:

Banking.—Deutsche Bank, Berlin—Director.

Industry.—Trachenberger Molkerei G. m. b. H., Trachenberg (grains)—Chairman.

Trachenberg-Militscher Kreisbahn A. G., Berlin (railways, subsidiary of Aktiengesellschaft für Verkehrswesen).

Dr. Hugo Henkel

Dr. Hugo Henkel's activities in the banking and industrial fields link him closely to the Nazi Party and Government. Besides his directorship with the Deutsche Bank, Berlin, and his position as district adviser to the Reichsbank at Düsseldorf, he is a director of the I. G. Farben subsidiary, Duisburger Kupferhütte, Duisburg (copper mines). Politically, he is affiliated with the Advertising Council for German Economy, the industrial committee of the Chamber of Commerce at Berlin, and the Chemical Division of the German Labor Front, Berlin. In the latter organization he acts as a special chemical adviser.

Hugo Henkel was born on January 21, 1881 in Düsseldorf, Germany, the son of Fritz Henkel, who was a prominent manufacturer and Councillor of Commerce. Obtaining his early education at the Oberrealschule (higher modern school) and the Realgymnasium (semiclassical secondary school), Hugo Henkel continued his studies at the Technical College of Stuttgart and the University of Berlin, where he received the degree of doctor of philosophy in 1905.

Entering his father's firm of Henkel & Cie. in March 1905, he rapidly rose to the position of partner, and in 1908 became the sole manager of the Henkel-Werke, a manufacturing concern which produces numerous well known chemical products.

In 1908, too, Hugo Henkel married Gerda Janssen, the daughter of Prof. Karl Janssen, a noted sculptor and teacher at the Art Academy of Düsseldorf. He has five children: Jost, born July 27, 1909, Ruth born December 16, 1910; Elizabeth, born May 1, 1914; Konrad, born October 25, 1915, and Paul, born December 11, 1916.

His political, banking, and industrial connections are as follows:

Political.—Ratsheer der Stadt Düsseldorf—(town councillor).

Industrie- und Handelskammer, Düsseldorf (Industrial and Commercial Chamber of Commerce)—Adviser.

Industrieabteilung der Wirtschaftskammer, Düsseldorf (industrial division of Düsseldorf Chamber of Commerce)—Adviser.

Deutsche Arbeitsfront, Fachamt Chemie, Berlin (Labor Front, Chemical Division)—Chemical Adviser.

Fachgruppe Verarbeitung von Walen der Wirtschaftsgruppe Chemische Industrie (chemical association), Berlin—Chairman.

Wirtschaftsgruppe Chemische Industrie, Wirtschaftskammerbezirk, Düsseldorf (economic group of chemical industry)—General director.

Banking.—Deutsche Bank, Berlin—Director.

Rheinisch-Westfälische Boden-Credit-Bank, Köln (mortgage bank)—Director.
Reichsbankstelle, Düsseldorf (division of the Reichsbank, Düsseldorf)—District adviser.

Industry.—Chemical: E. Matthes & Weber A. G., Duisburg—Chairman of the board of directors.

Henkel & Cie, A. G., Düsseldorf—Director.

Henkel & Cie G. m. b. H., Düsseldorf-Holthausen—Adviser.

Brewery: A. G. Schwabenbräu, Düsseldorf—Director.

Brauerei Tivoli G. m. b. H., Krefeld—Director.

Heavy machinery, construction and metals: Büttner Werke A. G., Uerdingen (Machinery)—Director.

Deutsche Gold- und Silber Scheideanstalt, vorm. (fine metals)—Director.

Duisburger Kupferhütte, Duisburg (copper mine)—Director.

M. Gladbach (building construction)—Director.

Fr. Hesser Maschinen-Fabrik A. G., Stuttgart-Bad-Cannstatt (machines)—Director.

Coal, paper, woollens and candy: Deutsche Hydrierwerke A. G., Chemnitz (coal)—Director.

Deutsche Tafelglas A. G. (Detag), Fürth (glass)—Director.

Feldmühle Papier- und Zellstoffwerke A. G., Stettin-Odermünde (paper and cellulose)—Director.

Gebrüder Stollwerk A. G., Köln (chocolate and confectionery)—Director.

Advertising: Ala Anzeigen A. G., Berlin—Director.

Miscellaneous: Roessler, Frankfurt am Main—Director.

Werberat der Deutschen Wirtschaft—Member.

Dr. Karl Kimmich

Dr. Karl Kimmich, one of the most prominent and influential individuals in the Nazi-controlled economy, is a director of the Deutsche Bank and a member of the advisory board of the Deutsche Reichsbank. Reputed to be one of Germany's banking experts, he became identified with the Deutsche Bank following its merger with the Diskonto Gesellschaft, of which he had been manager. He occupies a strategic position of leadership and responsibility in numerous branches of commerce and industry, and his industrial connections represent a cross section of enterprises geared to all phases of the Nazi war machine, including the means of production. These affiliations, naturally, are heavily concentrated in the huge German combines.

Kimmich is a director of the Vereinigte Stahlwerke and is associated in the heavy industries with enterprises controlled by I. G. Farben, VIAG, Friedrich Flick, and Hugo Stinnes. In the field of utilities his connections include the powerful Gesellschaft für Elektrische Unternehmungen and the AEG combine. Kimmich's affiliation with the Krupp empire, however, was apparently terminated in 1942 when it was reported that he had resigned from the management of the mining company, Constantin der Grosse, a Krupp interest.

Dr. Kimmich was born in Ulm, Germany, on September 14, 1880. He typifies the integration of finance and industry in behalf of the German State through his own leadership in those activities.

Karl Kimmich's financial and industrial connections are as follows:

Banking.—Deutsche Bank, Berlin (total assets, 1942: RM. 7,504,000,000)—Director.

Deutsche Reichsbank, Berlin—Member of advisory board.

Financial.—Allianz Versicherungs A. G., Berlin (insurance; capitalized at RM 60,000,000, it is one of the largest insurance companies in Germany; another director is Friedrich Flick)—Director.

Industrial.—Iron and steel: Rheinische Stahlwerke, Essen (steel; capitalized at RM 150,000,000; it is 44.9 percent owned by I. G. Farben; also belongs to the Rheinisch-Westfälisches Kohlensyndikat, the coal cartel)—Director.

Vereinigte Stahlwerke A. G., Düsseldorf (steel and coal combine; in 1939 capitalized at RM. 460,000,000 and total assets reported as RM. 1,864,014,000. Other directors are Schmitz, of I. G. Farben; Flick, of the Flick combine; Pferd-menges, of Oppenheim and Cie.; Stein, of J. H. Stein; and Fentner von Vlissingen, of Holland)—Director.

Mitteldeutsche Stahlwerke A. G., Riesa/Sachs (steel; 100 percent owned by Friedrich Flick A. G.)—Director.

Eisenwerk-Ges. Maximilianshütte, Sulzbach-Rosenberg Hütte (iron and steel, 80 percent owned by Mitteldeutsche Stahlwerke A. G., above)—Director.

Harpener Bergbau A. G., Dortmund (steel; majority of stock owned by Eisenwerk-Ges. Maximilianshütte, above, and 10 percent owned by von Vlissingen, Flick's close friend and a notorious Dutch Nazi)—Director.

Eisen-und Hüttenwerke A. G., Cologne (steel; belongs to the Otto Wolf group which has been prominent in the German trade penetration of South America and the Far East)—Deputy chairman of advisory board.

Klockner-Werke A. G., Castrop-Raukeo (ores and trading; largest enterprise of the Klockner group)—Chairman of the advisory board.

Hoesch A. G., Dortmund (mines and foundry; capitalized at RM. 100,800,000; belongs to the Rheinisch-Westfälisches Kohlensyndikat)—Chairman of board of directors.

Coaling mining: Bergbau A. G. Ewald-König Ludwig, Essen (coal mining; 30 percent owned by the Thyssen group)—Deputy chairman of advisory board.

Mühlheimer Bergwerks-Verein, Essen (mining; 62.5 percent owned by the Stinnes group; also a member of the Rheinisch-Westfälisches Kohlensyndikat)—Director.

Essener Steinkohlenbergwerke A. G., Essen (coal; capitalized at RM 63,000,000, it is another Flick enterprise; 38 percent owned by Harpener Bergbau, above)—Chairman of advisory board.

Lignite: Braunkohlen-Industrie A. G., "Zukunft, Eschweiler Demag A. G." (capitalized at RM 16,000,000; majority of stock is held by Rheinisch-Westfälisches Elektrizitätswerk A. G.)—Director.

Rheinische A. G., für Braunkohlenbergbau und Brikettfabrikation, Cologne (capitalized at RM. 73,000,000; majority of stock is held by Rheinisch-Westfälisches Elektrizitätswerke A. G.)—Member of board of directors.

Utilities: Ges. für Elektrische Unternehmungen A. G., Berlin (important holding company for utility and industrial developments. Has many subsidiaries in Germany and abroad, particularly in Hungary, Belgium, France, Spain, and Mexico)—Chairman of board of directors.

Ullgemeine Elektrizitäts Gesellschaft (electrical products; 25 percent owned by Ges. für Elektrizitätswerke Westfalen, above, and 25 percent owned by International General Electric of New York)—Deputy chairman of advisory board.

Compania Hispano-Americana de Electricidad S. A., Brussels, Belgium (affiliated with Ges. für Elektrische Unternehmungen, above; originally founded with all the assets of the Deutsche-Überseeischen Elektrizitäts Gesellschaft)—Deputy chairman of advisory board.

Vereinigte Elektrizitätswerke Westfalen A. G., Dortmund (a large utility company, capitalized at RM. 40,000,000; it is owned by 136 cities in Westfalia)—Director.

Machinery: Rheinmetall-Borsig A. G., Düsseldorf (machinery and metal works; capitalized at RM. 50,000,000; its total assets are RM. 148,000,000; it is 58.96 percent owned by VIAG and about 10 percent owned by Friedrich Krupp A. G.)—Director.

Chemicals and oils: Deutsche Erdöl A. G., Berlin (synthetic oils and mineral oil products; capitalized at RM. 100,000,000, it belongs to two of the most powerful cartels in Germany, the Synthetic Nitrogen Cartel and the Rheinisch Westfälisches Kohlensyndikat)—Chairman of board of directors.

Henkel & Cie., A. G. Düsseldorf (chemicals; 100 percent owned by the Henkel family; specializes in the manufacture of soap and chemical laundry powder; has numerous foreign subsidiaries and metal works)—Member of advisory board.

Dr. Florian Klöckner

Florian Klöckner, director of the Deutsche Bank of Berlin, is prominent in the coal and metal industry of Germany.

Klöckner is closely connected with the so-called Klöckner combine which is controlled by the large holding company, Klöckner Eisen A. G., of Duisburg. Klöckner is chairman of the board of Klöckner-Werke A. G., a large metal processing and trading firm capitalized at RM. 105,000,000, which, in addition to belonging to the Klöckner combine, is a member of both the Rheinisch Westfälisches Kohlen Syndikat (coal cartel) and of the Synthetic Nitrogen Cartel.

Florian Klöckner is chairman of the board of Klöckner-Humboldt-Deutz A. G., a large motor and machinery concern of which Klöckner-Werke A. G. and Klöckner Eisen A. G. hold the majority of the stock. He is also a director of Klöckner

Flugmotorenbau G. m. b. H. This company, which manufactures aeroplane motors, was not listed in earlier directories and is probably one of the Klöckner combine's war developments.

Florian Klöckner is on the management committee of Gewerkschaft Victor, Stickstoffwerk Castrop, a large synthetic nitrogen company, a majority of the stock of which is owned by Klöckner-Werke A. G.

Florian Klöckner, who is an honorary doctor of political science, was born in Coblenz on October 4, 1868. He had a high school education and was trained in a banking firm. In 1891 he entered the iron industry and became a partner of Klöckner & Co. During World War I he served as a captain of the reserves, but after being wounded was assigned to the Ministry of War, Division of Raw Materials.

From 1920 to 1933, he was a Member of the German Reichstag.

During the present war, Klöckner, along with Stinnes and Friedrich Flick, has had an important influence in the coal trade in Belgium.

Klöckner had the following financial and business connections in 1942:

Banking.—Deutsche Bank, Berlin—Director.

Industry.—Klöckner Flugmotorenbau G. m. b. H., Hamburg (airplane motors)—Director.

Klöckner-Werke A. G., Duisburg (metals, processing, trade)—Chairman, board of directors.

Klöckner Humboldt-Deutz A. G. Köln-Deutz (metals, processing, trade)—Chairman, board of directors.

Eckhardt & Co. A. G., Hamburg (trade in metals and byproducts)—Director.

Gewerkschaft Victor Stickstoffwerke Castrop-Rauxel (synthetic nitrogen)—Chairman, mining management committee.

Arthur Koepchen

Arthur Koepchen, an engineer by profession, is a director of the Deutsche Bank and connected with the management of many corporations, principally in the public utilities and mining fields. A number of these corporations are subsidiaries or affiliations of two of the largest German combines, namely AEG (Allgemeine Elektrizitäts Gesellschaft) and VIAG (Vereinigte Industrie Unternehmungen).

Koepchen was born on August 30, 1878. His address is 13 Maybachstrasse, Essen. In 1942 he had the following business and financial connections:

Banking.—Deutsche Bank—Director.

Industrial.—Utilities: Kraftwerke Altwürttemberg, A. G., Behingen (water power)—Chairman.

Leck Elektrizitätswerke A. G., Augsburg (water power)—Chairman.

Rheinisch-Elektrizitäts A. G., Mannheim (electrical apparatus)—Chairman.

Rheinkraftwerke Albrück-Dogern, A. G., Waldschut/Baden (water power installations)—Chairman.

Niederrheinische Licht u. Kraftwerke A. G., Rheydt (light and power)—Deputy chairman.

Schluchseewerk A. G., Freiburg (water power)—Deputy chairman.

Vorarlberger Illwerke, A. G., Bregenz (subsidiary of Elektrizitäts Versorgung Württemberg A. G.)—Deputy chairman.

A. G. für Energiewirtschaft, Berlin (electricity, gas, water; 100 percent owned by Allgemeine Gas und Elektrizitäts A. G., Bremen)—Director.

Elektrizitäts-Lieferungs Gesellschaft, Berlin (electric power)—Director.

Elektrowerke A. G., Berlin (electrical energy; subsidiary of VIAG)—Director.

Isarwerke A. G., München (water power, electricity; subsidiary of Rheinisch-Westfälische Elekt. A. G.)—Director.

Märkisches Elektrizitätswerke A. G., Berlin (electric and gas installations)—Director.

Preussische Elektrizitäts A. G., Berlin (electric power; subsidiary of Elekt. A. G. Mitteldeutschland, Kassel)—Director.

Main-Kraftwerke, A. G., Frankfurt (electric light and power)—Chairman.

Elektrizitäts A. G., vorm W. Lahmeyer & Co., Frankfurt (electrical equipment)—Member of managing committee.

Rheinisch-Westfälisches Elektrizitätswerk, A. G., Essen (light and power; subsidiary of VIAG)—Member of managing committee.

Oberstein-Idarer Elektrizitäts A. G., Idar (electric light and power; subsidiary of Rheinische Westfälisches Elekt. A. G.)—Chairman of advisory board.

Coal and other fuels: Braunkohlen-Industrie, A. G., Zukunft Weisweiler, Eschweiler (Lignite; subsidiary of Eschweiler Bergwerke Verein)—Chairman.

Eschweiler Bergwerke Verein Kohlscheid (coal and fuels)—Director.

Rheinische A. G. für Braunkohlenbergbau u. Brikettenfabrik, Köln (fuels; subsidiary of Rheinisch-Westfälisches Elekt. A. G.)—Director.

Braunkohlen und Briketwerke Roddergrube A. G., Brühl bei Köln (lignite, fuels)—Director.

Metals: Vereinigte Aluminum Werke A. G., Berlin (subsidiary of VIAG)—Director.

Construction materials: Hochtief A. G. für Hoch- und Tiefbauten, Essen (construction and construction materials; subsidiary of AEG)—Member of managing committee.

Miscellaneous: Nordwestdeutsche Kraftwerke A. G., Hamburg—Director.

Emil Kreibich

Emil Kreibich, director of the Deutsche Bank, is a member of the management committee of the Böhmisches Union Bank of Prague, in which the Deutsche Bank has acquired a 59 percent interest since 1940. Kreibich also holds a prominent position in the textile industry of Czechoslovakia.

Kreibich was born in Walkowitz, a small town in an area which later became part of Czechoslovakia. It would appear that most of Kreibich's connection with Czechoslovak textile companies, as well as his connection with the Deutsche Bank, may have been gained as a result of his willingness to cooperate with German interests, after the absorption of Czechoslovakia. Although he was a member of the management committee of the Bohmische Union Bank before the Germans marched into Czechoslovakia, his connections with the Deutsche Bank and with a number of the Czechoslovak textile companies have been made since that event took place.

Kreibich's present address is 638 Bahnhofstrasse, Schluckernau, Sudetenland. His business and financial connections were as follows in 1942:

Political.—Wehrwirtschaftsführer (Official, Department Economic Warfare and War Production Board).

Banking.—Deutsche Bank, Berlin—Director.

Böhmische Union Bank, Prague—Member of the executive committee.

Industrial.—Textiles: A. G. für Textilindustrie, Königinhof (textiles)—Member of the executive committee.

M.B. Neumann's Söhne-Union Weberei und Druckerei A. G. Königinhof (textiles)—Member of the executive committee.

Maco-Spinnerei u. Zwirnersi Rudolf Weber's, Erben Schluckeman (textiles)—Coowner and technical Director.

Fried. Mattausch & Sohn K. G. für Textilindustrie Bersen (textiles; limited liability company)—Director.

Hohensemser Weberei und Druckerei A. G., Hohenems (textiles)—Chairman of board of directors.

Neudeker Wallkammerei und Kammgarnspinnerei A. G., Neudek, Engerland (wool textiles)—Director.

Kunstseidenspinnerei A. G., Senica (rayon)—Member of executive committee.

Wegena Corset-Fabrik Dr. Thannhäuser A.G., Berlin (corsets; limited liability company)—Director.

Erste Böhmische Kunstseidefabrik A. G., Theresienthal bei Arnau (rayon)—Chairman of the executive committee.

Reichsstelle für Baumwolle, Bremen (National Bureau of Cotton Industry)—Member of the advisory board.

Bezirkgruppe Sudetenland der Fachgruppe Baumwollspinnerei der Wirtschaftgruppe Textilindustrie, Reichenberg (cotton association; limited liability company)—Director.

Insurance: Bohm.-Mährische Versicherungs A. G. für Gewerbe Handel und Industrie, Prague (insurance)—Member of the executive Committee.

Direktionsrat für den Sudetengau du Riunione Adriatica die Sicunta (Adriatische Versicherungs-Gesellschaft, Reichenburg) (insurance group)—Member.

Miscellaneous: Industrie- und Handelskammer, Reichenberg (chamber of commerce)—Director.

Aussenhandelsstelle für das Sudetenland, Reichenberg (export office for the Sudetenland)—Administrator.

Bezirksausgleichsstelle für öffentliche Aufträge, Industrieabteilung und Industrie- und Handelskammerabteilung der Wirtschaftskammer Sudetenland, Reichenberg (official trade and industrial guild)—Administrator.

Basaltschottenwerk Botzen G. m. b. H., Kaiserswalde bei Schluckenau (stone)—Chairman of the management committee.

Hermann Münchmeyer

Hermann R. Münchmeyer, a director of the Deutsche Bank, is also the owner of Münchmeyer & Co., assumedly a private banking house.

Münchmeyer is prominent in German insurance affairs and is a director of Siemens & Halske A. G., which challenges the position of General Electric Co. as the largest manufacturer of electrical equipment in the world. This huge enterprise, capitalized at RM 107,000,000, produced in 1939, 60 to 80 percent of all telephone and telegraph equipment, 50 percent of all U boat motors, and 40 percent of all fine measuring instruments in Germany. Today Siemens is totally converted to production of war goods, whether in the primary or secondary state. The company also has subsidiaries and affiliates all over the world and in the electrical field it has been extremely influential in South America.

Münchmeyer is also a director of Deutsch-Atlantische Telegraphengesellschaft, a cable company which maintains cables from Germany to South America, Africa, Asia, and Australia, and through Western Union connects with the United States. Its capital is only about RM. 5,000,000 but its board includes people prominent in German shipping and communications.

Hermann Münchmeyer was born on July 30, 1875, in Hamburg and is reported to reside at Alsterdamm No. 33, Hamburg, and his known financial and industrial connections are as follows:

Banking.—Deutsche Bank, Berlin—Director.

Münchmeyer & Co. (private bank)—Owner.

Insurance.—Norddeutsche Lebensversicherungs A. G., Hamburg (all types of insurance; capital, RM. 10,000,000)—Chairman of board of directors.

Norddeutsche Versicherungs Ges., Hamburg (life insurance; subsidiary of Norddeutsche Lebensversicherungs A. G.)—Chairman of board of directors.

Aachener- und Münchener Feuer- Versicherungs Ges., Aachen (capital, RM. 20,000,000; many affiliates in Germany, and world-wide system of agencies)—Member of board of directors.

Hamburg-Bremer Rückversicherungs A. G., Hamburg (reinsurance)—Member of board of directors.

Niedersachsen Versicherungs A. G., Hamburg (appears to have been taken over by the Gerling insurance group in 1937)—Member of board of directors.

Miscellaneous.—Deutsch-Atlantische Telegraphengesellschaft, Hamburg (telegraph)—Director.

Rudolph Karstadt A. G., Berlin (trading company with 8 subsidiaries)—Director.

Kepa A. G., Berlin—Director.

Lederwerke Wiemann A. G., Hamburg (leather; capital, RM. 5,000,000)—Director.

Buxtehuder Lederfabrik A. G., Hamburg (leather; subsidiary of Lederwerke Wiemann A. G.)—Director.

Industrial.—Siemens & Halske A. G., Berlin (electrical)—Member of board of directors.

Hans Oesterlinck

Hans Oesterlinck, a director of the Deutsche Bank, is a member of the Advisory Council of the Deutsche Reichbank, the German central bank, and the bank of issue.

Oesterlinck is also a director of the Deutsche Centralbodenkredit A. G., semi-governmental mortgage bank which has a close connection with the Deutsche Bank. Among Oesterlinck's associates on the board of the Deutsche Centralbodenkredit, A. G., are such individuals as Pferdmeniges of Oppenheim & Cie., generally identified with the German steel industry: Count Hans Bodo von Alvensleben, president of the exclusive Herrenklub, and said to have been instrumental in helping Hitler integrate himself with the Rhineland industrialists; and the Duke of Saxe-Coburg, who is the most prominent member of the German nobility to have embraced nazism.

Hans Oesterlinck was born May 14, 1882, in Breslau. He is the son of an architect. After having studied law, he passed an examination to qualify as an assistant judge.

In World War I Oesterlinck received the Iron Cross of the first and second class, considered a marked distinction in Germany.

After the war he obtained employment from January 1, 1919, to December 21, 1931, in the Prussian Bureau of Commerce. Later he obtained an appointment as substitute state commissioner of the Berlin Stock Exchange. Since January 1, 1942, he has been on the managing committee of the Deutsche Centralbodenkredit A. G. He is chairman of the associated group of German mortgage banks.

Hans Oesterlinck's address is Berlin-Wannsee, Tristanstr. 15. His business and financial connections were as follows, in 1942:

Banking.—Deutsche Reichsbank (central bank)—Member of the advisory board.

Deutsche Bank, Berlin—Director.

Fachgruppe Private Hypothekenbanken in der Wirtschaftsgruppe Privates Bankgewerbe, Berlin (national association of private mortgage banks)—Executive.

Deutsche Centralbodenkredit A. G., Berlin—Member of the management committee.

Gemeinschaft agruppe Deutscher Hypothekenbanken, Berlin (national association of mortgage banks)—Chairman.

Albert Pietzsch

Albert Pietzsch is a member of the supervisory board of the Deutsche Bank and a member of the supervisory board of the Deutsche Reichsbank, Berlin. He is also a member of the advisory board of the German railways, holds important political positions including that of president of the Reich Economic Chamber in Berlin. In addition, he has a number of important industrial holdings, including control of the Elektro-Chemische Werke in Munich.

Albert Pietzsch has been an adviser of Hitler since 1925, and is alleged to be one of the men who financed Hitler in the early days of the Nazi Party. Pietzsch has also been reported as instrumental in helping Hitler achieve financial domination of occupied countries.

Background.—Albert Pietzsch was born June 28, 1874. From 1894 to 1898 he studied mechanical engineering at the Technical Institute of Dresden. In 1900 he began his career as an engineer and invented various new processes, in particular one concerned with the production of potash liquor. In 1910 he founded the firm of Adolph Pietzsch Co., which eventually became the powerful Elektro-Chemische Werke in Munich.

Holdings in the United States.—Albert Pietzsch, on August 6, 1940, obtained United States patent No. 2,210,429, on apparatus for filtering gases. As reported by patent attorneys, Buckley & Bean, 1608 Liberty Bank Building, Buffalo, N. Y., this patent has been assigned to a United States citizen, Charles A. Buerk, Buffalo, N. Y.

Albert Pietzsch is the owner of 510 shares of the Buffalo Chemico-Electric Co., Inc., chemical manufacturers of Buffalo, N. Y., a national of Switzerland and Germany. The stock is estimated at \$51,000.

He also holds a voting trust certificate of approximately 32½ shares of Sucro-Blanc, S. A., a Cuban corporation, the value of which is nominally reported at \$12 per share. The voting trust is held by the Buffalo Electro-Chemical as agents for Pietzsch.

Another 350 shares of the Buffalo corporation, estimated at \$35,000, is held by Pietzsch as executor of the estate of his deceased daughter, Ingeborg Schickert, for the benefit of her minor heirs, Dorothea and Franziska, for whom a voting trust of some 22½ shares of Sucro-Blanc is also held.

Albert Pietzsch's known connections are as follows:

Political.—Leader of the district adjustment committee for the Industrial and Commerce Division of the Bavarian Economic Chamber.

President of the Industrial and Commerce Chamber of Munich.

President of the Reich Economic Chamber of Berlin.

Banking.—Deutsche Reichsbank—Member of the supervisory board.

Deutsche Bank—Member of the supervisory board.

Industry.—Elektro-Chemische Werke in Munich—General manager. He also holds controlling interest.

Filmkunst G. m. b. H., Munchen (movies)—Deputy chairman.

Bayerischer Lloyd Schifffahrts A. G., Regensburg (navigation)—Deputy chairman.

Aktienbrauerei zum Lowenbräu, München (brewery)—Director.

Siemens-Schuckert-Werke A. G., Berlin (electrochemical installations; subsidiary of Siemens & Halske)—Director.

German Railways, Berlin—Member of advisory board.

Clemens Plassman

Clemens Plassman is a member of the managing committee of the Deutsche Bank, a post to which he was only recently appointed. He originally came from the Commerzbank A. G., in which he is still a member of the provincial

committee for eastern Germany. He is reported as having no political connections.

Clemens Plassman is 50 years old. His address is given as 39 Mauerstrasse, Berlin. His known connections are as follows.

Banking.—Deutsche Bank, Berlin—Member of the managing committee.

Commerzbank A. G.—Member of the provincial committee for eastern Germany
Rheinische Hypothekenbank, Mannheim (mortgage bank)—Director.

Industry.—Argenta Schokoladenwerk A. G., Wernigerode (chocolate)—Chairman.

Kasseler Druckerei und Farberei, A. G., Kassel-Bettenhausen (printing and dyeing)—Deputy chairman.

Dyckerhoff Portland-Zementwerke A. G., Mainz-Amöneburg (cement)—Director.

Pongs & Zahn Textilwerke A. G., Viersen (textiles)—Deputy chairman.

Gruschwitz Textilewerke A. G., Neusalz am Oder (textiles)—Director.

Rudolph Karstadt A. G., Berlin (department store)—Director.

Rheinische Kunstseide A. G., Krefeld (artificial silk)—Director.

Vereinigte Deutsche Metallwerke, Frankfurt am Main (metals; subsidiary of Viag)—Director.

Wintershall A. G., Berlin-Kassel—Director.

Günther Quandt

Günther Quandt appears to be one of the more important individuals in the German economy. He is a director in Allgemeine Elektrizitäts-Gesellschaft, a director in the Deutsche Bank, and is connected in one capacity or another with a large number of insurance and industrial concerns. His interests cover a wide field of activities such as automobiles, textiles, chemicals, ammunition, mining, potash, etc. An idea of his wealth may be gathered from his holdings in Accumulatoren-Fabrik A. G., which is but one of some 30 organizations with which he is affiliated. In 1936, that company had a capital and surplus of approximately RM. 30,000,000. Quandt is reported to own 75 percent of the capital stock. At the official rate of exchange this would represent an investment of some \$9,000,000. He is also a part owner of textile concerns which appear to be family affairs such as Gebrüder Draeger Tuchfabrik and Draeger-Werke G. m. b. H. Quandt is a leader in the War Economy (Wehrwirtschaftsführer).

Background.—Günther Quandt was born July 28, 1881, the son of a textile manufacturer in Pritzwalk. He never received a university education, notwithstanding the fact that he now holds an honorary degree of doctor of engineering. He started his business career at the age of 19 when he was entrusted with the management of one of the family's textile factories. He made rapid progress and expanded into other fields of activity. In the spring of 1933, Quandt came in conflict with Josef Goebbels, who by that time had become the husband of Quandt's divorced wife. Goebbels attached the holdings of Quandt in his various firms, asserting that the alimony which Quandt owed to his own child was endangered. A settlement was apparently made, as a result of which Goebbels acquired a portion of Quandt's holdings. At about the same time, Quandt was being criminally prosecuted for alleged mishandling of the Accumulatoren concern. It was reported that Quandt had to deposit bail to the amount of RM. 4,000,000.

No information is available as to the outcome of this affair but the fact that apparently Quandt continued to prosper and now occupies a prominent position in Germany seems to indicate that Quandt managed to patch up his difficulties and remain in favor with the powers that be.

Quandt's known connections are as follows:

Banking.—Deutsche Bank, Berlin—Director.

Westfalenbank A. G., Bochum/Westfalen—Director.

Insurance.—Gerling-Konzern, Rheinische Versicherungsgruppe A. G., Köln (reinsurance; subsidiary of Gerling-Konzern)—Chairman.

Friedrich Wilhelm Lebensversicherungs A. G., Berlin (life insurance; subsidiary of Gerling-Konzern)—Chairman.

Gerling-Konzern, Rückversicherungs A. G., Köln (reinsurance; 100 percent subsidiary of Gerling-Konzern Rheinische Versicherungsgruppe A. G.)—Deputy chairman.

Gerling-Konzern, Lebensversicherungs A. G., Köln (life insurance; 100 percent subsidiary of Gerling-Konzern, Rückversicherungs A. G.)—Deputy chairman.

Industrial.—Allgemeine Elektrizitäts-Gesellschaft, Berlin (electric trust)—Director.

Accumulatoren-Fabrik A. G., Berlin (storage batteries; Quandt owns 75 percent of the stock)—Chairman of management committee.

Deutsche Waffen- und Munitionsfabriken A. G., Berlin (arms and ammunition; probably belongs to the Quandt interests)—Chairman of management committee.

Durener Metallwerke A. G., Berlin (miscellaneous metals; subsidiary of Deutsche Waffen- und Munitionsfabriken A. G.)—Member of management committee.

Berlin-Erfurter Maschinenfabrik Henry Pels & Co., A. G., Berlin (machinery; 100 percent subsidiary of Deutsche Waffen- und Munitionsfabriken A. G.)—Chairman.

Concordia Elektrizitäts A. G., Dortmund (electrical installations; subsidiary of Accumulatoren Fabrik A. G.)—Chairman.

Dominitwerke G. m. b. H., Berlin (electrical apparatus; subsidiary of Accumulatoren-Fabrik A. G.)—Chairman.

Pertrix-Werke G. m. b. H., Berlin (flashlights and batteries; subsidiary of Accumulatoren Fabrik A. G.).

Wintershall A. G., Kassel (potash)—Deputy chairman.

Bergbau A. G. Lothringen, Bochum-Gerthe (mining; subsidiary of Wintershall A. G.)—Deputy chairman.

Gewerkschaft Victor-Stickstoffwerke, Castrop-Rauxel (nitrogen products; owned by Wintershall A. G.)—Member of mining committee.

Gewerkschaft Wintershall, Heringen (mining)—Chairman of mining committee.

Gebrüder Draeger Tuchfabrik, Pritzwalk (textile factory)—Co-owner.

Draeger-Werke G. m. b. H., Potsdam-Babelsberg (textiles)—Manager.

Byk-Guldenwerke Chemische Fabrik A. G., Berlin (chemicals)—Chairman.

Deutsche Wollenwaren-Manufaktur A. G., Grünberg/Schlesien (woolen products; subsidiary of four German Grossbanken under leadership of Dresdner Bank)—Chairman.

Deutsche Tuchsyndikat G. m. b. H., Berlin (German cloth syndicate)—Chairman.

Hermann Herzog & Co. A. G., Neugersdorf/Sachsen (textile finishing; subsidiary of Concordia Spinnerei & Weberei)—Chairman.

Busch-Jaeger, Lüdenscheider Metallwerke A. G., Lüdenscheid/Westfalen (electrical installation apparatus)—Deputy chairman.

A. G. für Verkehrswesen, Berlin (railroads and other transportation)—Director.

Daimler-Benz A. G., Stuttgart (automobiles)—Director.

Deutsches Kalisyndikat G. m. b. H., Berlin (potash syndicate)—Director.

Kammgarnspinnerei Stöhr & Co. A. G., Leipzig (wool yarns, worsteds)—Director.

Vereinigte Kugellagerfabriken A. G., Schweinfurt (ball bearings; subsidiary of SKF of Sweden)—Director.

Oswald Rösler

Oswald Rösler, managing director of the Deutsche Bank and member of the management committee of the bank since 1933, is a prominent German financial and industrial leader. His financial interests extend to Prague, where he is chairman of the executive committee of the Böhmische Union Bank, which is controlled by the Deutsche Bank. He is also deputy chairman of the Deutsche Ueberseeische Bank, Berlin, whose Brazilian branch has been completely liquidated by the Brazilian Government. In the industrial sphere, Rösler's influence extends to the railroad, textile, and machinery fields, and he is chairman of the board of directors of Mannesmannröhren-Werke, Düsseldorf, whose branches in Argentina, Brazil, Chile, and Uruguay have been listed in the Proclaimed List of Certain Blocked Nationals.

According to press reports Rösler, together with Karl Goetz, managing director of the Dresdner Bank, were arrested in November 1944 for refusing to support the Bank der Deutschen Arbeit, banking enterprise of Robert Ley, Nazi Minister of Labor, which reportedly was in difficulties.

Rösler was born on May 26, 1887, in Schweidnitz. His last known address was 8 Mozartstrasse, Berlin-Lankwitz. His business and financial affiliations in 1942 were as follows:

Banking.—Deutsche Bank, Berlin—Member of the management committee.

Deutsche Ueberseeische Bank, Berlin—Deputy chairman of the advisory board.

Böhmische Union-Bank, Prague (controlled by Deutsche Bank)—Chairman of the executive committee.

Borse zu Berlin, Abt. Wertpapierbörse—Member of management committee.
 Gunther Wagner Verwaltungs—Gesellschaft m. b. H., Hannover—Member of the advisory board.

Liquidationsverein für Zeitgeschäfte an der Berliner Wertpapierbörse E. V. Berlin—Member of advisory board.

Insurance.—Alte Leipziger Lebensversicherungsgesellschaft A. G., Leipzig—Member of the board of directors.

Leipziger Feuer-Versicherungs-Anstalt, Leipzig—Member of the board of directors.

Industrial.—Machinery: Mannesmannrohren-Werke, Dusseldorf (metal products)—Chairman of the board of directors.

Schubert & Salzer, Maschinenfabrik A. G., Chemnitz (textiles)—Chairman of the board of directors.

Mannesmannrohren-Werke Komotau A. G., Komotau (metal products)—Deputy chairman of the advisory board.

Maschinenfabrik Buckau R. Wolf A. G., Magdeburg (factory installations)—Chairman of board of directors.

Textiles: Christian Dierig A. G., Langenbielau (holding company)—Member of the board of directors.

Kammgarnspinnerei Stöhr & Co. A. G., Leipzig—Director.

Railroads: Allgemeine Lokalbahn- und Kraftwerke A. G., Berlin—Deputy chairman of the advisory board.

Braunschweiger A. G. für Industriebeteiligungen, Braunschweig (holding company)—Director.

Sugar: Rabbethge & Giesecke A. G., Kleinwanzleben—Director.

Zuckerfabrik Glaugitz, Glaugitz/Anhalt—Director.

Miscellaneous.—Continental Gummi-Werke A. G., Hannover (rubber articles)—Deputy chairman of the advisory board.

Mannesmann-Stahlblechbau A. G., Berlin (steel)—Deputy chairman of the advisory board.

Elektrizitäts-Lieferungs-Gesellschaft, Berlin (public utilities holding company)—Director.

Osnabrucker Kupfer- und Drahtwerk A. G., Osnabruck (wire and cable)—Director.

Westdeutsche Kaufhof A. G., Köln (wholesalers and department stores)—Director.

Wintershall A. G., Kassel (holding company for potash industry)—Director.

Koehlmann-Werke A. G., Frankfurt am Oder—Deputy chairman of the advisory board.

Prager Eisen-Industrie-Gesellschaft, Prague (iron and steel)—Member of the executive committee.

Hans Rummel

Hans Rummel has been a member of the management committee of the Deutsche Bank Berlin since 1931. He is also chairman of the Board of the Bank des Berliner Kassen-Vereins, Berlin.

Rummel's interests extend to many industrial fields, including machinery and porcelain manufacturing. He is chairman of the board of directors of Elektrische Licht- und Kraftanlagen A. G., Berlin, part of the Siemens & Halske A. G. combine.

Rummel was born on March 9, 1882, in Krautostheim/Mittelfranken. He is known as a bank technician who has specialized in the mechanization of the course of payments. He is said to be well versed in the internal organization of the Deutsche Bank, and is classed as a typical administrative official, without ambition, without marked political interests.

Rummel's last known address is 12 Arnimalle, Berlin-Dahlem. His financial and industrial affiliations in 1942 were as follows:

Banking and financial.—Deutsche Bank, Berlin—Member of the management committee.

Bank des Berliner Kassen-Vereins, Berlin—Chairman of the board of directors.

Deutsche Hypothekenbank A. G., Berlin—Member of the board of directors.

Insurance.—Allianz Lebensversicherungs A. G., Berlin—Director.

Industrial.—Porcelain: Porzellanfabrik Kahla, Kahla/Thuringen—Chairman of the board of directors.

Porzellanfabrik Lorenz Hutschenreuther A. G. Selb., Bayern—Chairman of the board of directors.

Machinery: Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg—Director.

R. Stock & Co., Spiralbohrer, Werkzeug- und Maschinenfabrik A. G., Berlin. Marienfelde—Deputy chairman of the advisory board.

Vereinigte Kugellagerfabriken A. G., Schweinfurt—Chairman of the board of directors.

Bayerische Motoren-Werke A. G., Munchen—Deputy chairman of the advisory board.

Miscellaneous.—Deutsche Tafelglas A. G. (Detag), Furth (plate glass)—Chairman of the board of directors.

Elektrische Licht- und Kraftanlagen A. G., Berlin (part of Siemens & Halske A. G.; electric light and power)—Chairman of the board of directors.

Gebr. Junghans Uhrenfabriken A. G., Schramberg, Schwarzwald (watches)—Chairman of the board of directors.

Deutsche Telephonwerke und Kabelindustrie A. G., Berlin (telephones and cables)—Deputy chairman of the advisory board.

Gesellschaft für Electricitäts-Anlagen m. b. H., Berlin (investment in electrical concerns)—Deputy chairman of the advisory board.

Freiherrlich von Tucher'sche Brauerei A. G., Nurnberg (brewery)—Director.

Heliwatt Werke Elektrizitäts A. G., Berlin (electrical apparatus)—Director.

Württembergische Metallwarenfabrik, Geislingen-Staige (metalware)—Director.

Krauss-Maffei A. G., Munchen-Allach—Chairman of the board of directors.

Ernst Enno Russell

Ernst Enno Russell is the deputy chairman of the board of directors of the Deutsche Bank, Berlin, and the Deutsche Hypothekenbank, Weimar.

He was born on May 25, 1869, in Papenburg/Ems and is a doctor of jurisprudence. In 1940, he was a member of the management committee of the Rheinisch-Westfälisches Kohlen-Syndikat, but no longer held this position in 1942, probably due to his advanced age. He resides at 35 Mauerstrasse, Berlin W 8.

His financial connections as of 1942 were as follows:

Deutsche Bank, Berlin—Deputy chairman of board of directors.

Deutsche Hypothekbank (German Mortgage Bank), Weimar—Deputy chairman of board of directors.

Karl Schirner

Karl Schirner, a director of the Deutsche Bank, is a Leader in the German military-economic system (Wehrwirtschaftsführer) and holds prominent positions in two affiliates of the powerful German industrial combine, Vereinigte Industrie-Unternehmungen Aktiengesellschaft (VIAG). He is deputy chairman of the advisory board of Berliner Kraft und Licht A. G., (Bewag), Berlin, a light and power company, and is a member of the board of directors of Vereinigte Aluminium-Werke A. G., Berlin, both concerns being VIAG affiliates. His interests also include several firms in the German oil, coal, and paraffin industries.

Schirner was born on December 1, 1885, in Berlin. His last known address is 9 Karolingerplatz, Berlin-Charlottenburg. His financial and business connections in 1942 were as follows:

Banking.—Deutsche Bank, Berlin—Director.

Industrial.—Oil: Deutsche Erdöl A. G., Berlin (oil wells)—Chairman, bank committee.

Eeysche Erdöl A. G., Berlin—Chairman, board of directors.

Deutsche Viscobil 01—G. m. b. H., Berlin (motor oil)—Chairman, board of directors.

Kontinental Oel A. G., Berlin—Director.

Wax and paraffin: Compes & Cie., A. G., Dusseldorf—Chairman, board of directors.

Carl Rühmsam, Wachswarenfabrik A. G., Fulda—Chairman, board of directors.

Coal: "Briko" Brikett- und Kohlenhandel A. G., Leipzig—Chairman, board of directors.

Stöck & Fischer G. m. b. H., Mannheim—Chairman, board of directors.

Mitteldeutsches Braunkohlen-Syndikat 1936 G. m. b. H., Leipzig (lignite)—Director.

Miscellaneous.—Deutscher Eisenhandel A. G., Berlin (iron dealers)—Chairman, board of directors.

"Vaucefa" Vereinigte Chemische Fabriken A. G., Brandenburg/Havel (chemicals)—Chairman, board of directors.

Berliner Kraft und Licht A. G. (Bewag), Berlin (light and power; a VIAG affiliate)—Deputy chairman of the advisory board.

Berliner Maschinenbau A. G., vormals L. Schwartskopp, Berlin (machine fabrication)—Director.

Gebhardt & Koenig-Deutsche Schachtbau A. G., Nordhausen (borings, pits)—Director.

Vereinigte Aluminium-Werke A.G., Berlin (VIAG affiliate)—Director.
 Zellstofffabrik Waldhof, Mannheim (cellulose)—Director.
 Otavi Minen- und Eisenbahn-Gesellschaft, Berlin (mining and transportation)—Member of the executive committee.

Hermann Schmitz

Hermann Schmitz is one of the most important persons in Germany. He is chairman of I. G. Farbenindustrie and a director in Vereinigte Stahlwerke, the giant steel cartel. He is also a director in a string of I. G. Farbenindustrie subsidiaries as well as in other industrial concerns. He occupies a number of important positions in several leading banks including the bank of issue. He has been for several years a director of the Bank for International Settlements in Basel. He is a member of several political organizations and was made a Member of the Reichstag by the Nazis for his zeal in the service of the Nazi regime.

Background.—Hermann Schmitz, at the time of the Weimar Republic, was economic adviser to Chancellor Brüning, whom he accompanied to London in the summer of 1931. He became, however, an early supporter of Hitler, with whom he collaborated in making I. G. Farbenindustrie a vast spying organization under a commercial cloak. He also conceived a plan of having members of the families of I. G. Farbenindustrie officials emigrate to other countries and become citizens there in order to protect company interests in wartime. He was for a time, the head of the American I. G., the United States subsidiary of German I. G., which later became General Aniline Corp., headed for a time by his brother, Dietrich, a naturalized American citizen.

Hermann Schmitz has been characterized as "deserving a high place on the list of war criminals."

Towards the end of 1943 he was reported as having been in touch with Lisbon friends on behalf of Dr. Schacht. The Lisbon friends, in turn, were to get in touch with New York bankers in the interest of peace. Hermann Schmitz is 63 years old.

Holdings in the United States.—Hermann Schmitz was reported to own as of June, 1941, \$86,000 worth of the stock of General Aniline.

Hermann Schmitz's known connections are as follows:

Political.—Member of the Nazi Reichstag.

Doctor of laws, honoris causa.

Academy for German Law—Member.

Committee for Corporate Law, Berlin—Member.

Banking.—Bank for International Settlements, Basel—Director.

Deutsche Bank—Director.

Reich-Kredit-Gesellschaft—Director.

Deutsche Reichsbank—Member, advisory committee, and member, currency committee.

Deutsche Industriebank—Chairman.

Deutsche Landerbank—Chairman.

Insurance.—Allianz Versicherungs, A. G., Berlin—Director.

Industry.—I. G. Farbenindustrie—Chairman.

Vereinigte Stahlwerke (steel cartel)—Director.

Norske-Hydro, Oslo (synthetic nitrogen; subsidiary of I. G. Farben)—Director.

Ammoniakwerk-Merseburg, G. m. b. H. (ammonia; subsidiary of I. G. Farben)—Manager.

Leuna Werke-Merseburg (ammonia; subsidiary of I. G. Farben)—Manager.

A. G. für Stickstoffdünger, Knapsack/Köln (fertilizers; subsidiary of I. G. Farben)—Chairman.

Deutsche Celluloid Fabrik A. G. Eilenburg (subsidiary of I. G. Farben)—Chairman.

Dynamit A. G. vorm. Noble (subsidiary of I. G. Farben)—Chairman.

Rheinische Stahlwerke (steel works; subsidiary of I. G. Farben)—Chairman.

A. Riebeck'sche Montanwerke (mines; subsidiary of I. G. Farben)—Chairman.

Wolff & Co. Walzrode (chemicals; subsidiary of I. G. Farben)—Chairman.

Kalle & Co. A. G. Wiesbaden (cellulose; subsidiary of I. G. Farben)—Director.

Metallgesellschaft, A. G. (subsidiary of Gold and Silber Scheideanstalt; I. G. Farben has minority interest)—Director.

Bochum-Gelsenkircher Bahngesellschaft (streetcars)—Manager.

Rheinische Gummi und Celluloid Fabrik, Mannheim (rubber and celluloid)—Director.

Stickstoff Syndicat, G. m. b. H. (nitrogen syndicate)—Director.

Max H. Schmid

Max H. Schmid, a director of the Deutsche Bank, is predominantly associated with the paper and cellulose manufacturing, and the machinery and motors industries of Germany.

He was born on June 30, 1891, in Hof/Saale, and on October 27, 1932, he married Miss Lee Boemer in New York City. He was associated with the Deutsche Bank at the time of his marriage.

Schmid's latest known address is listed as 10 Bayernallee, Berlin-Charlottenburg. His financial and business connections in 1942 were as follows:

Banking.—Deutsche Bank, Berlin—Director.

Insurance.—Berlinische Feuer Versicherungs-Anstalt, Berlin—Director.

Industrial.—Paper and cellulose manufacturing: Natron-Papier-Industrie A. G., Wien—Chairman of board of directors.

Papierfabrik Krappitz A. G., Berlin—Chairman of board of directors.

Natronzellsteff- und Papierfabriken A. G., Berlin—Deputy chairman of advisory board.

Neusiedler A. G. für Papierfabrikation, Wien—Member of board of directors.

Zellstoff- und Papierfabrik Frentschach A. G., Berlin (cellulose and paper manufacturing)—Chairman of board of directors.

Zellstofffabrik Waldhof, Berlin (cellulose manufacturing)—Chairman of bank committee; technical director.

C/Y Waldhof A/B, Helsingfors (possibly Finnish subsidiary of Gellstofffabrik Waldhof, Berlin)—Deputy chairman of advisory board.

Machinery and motors: Heinrich Lanz A. G., Mannheim (machines)—Deputy chairman of advisory board.

Bayerische Motorenwerke A. G., Munich (possibly connected with Bayerische Wasserkraftwerke A. G., Munich (VIAG))—Director.

Daimler-Benz A. G., Stuttgart-Unterturkheim (automobiles, airplane motors)—Director.

Deutsche Niles Werke A. G., Berlin (machine and machine parts)—Director.

Schnellpressenfabrik A. G., Heidelberg (printing machinery)—Director.

Miscellaneous.—Minimax A. G., Berlin (fire-fighting apparatus)—Chairman of board of directors.

N. V. Handel-en Transport Mij. Waldhof, Rotterdam (import and export, transportation)—Chairman of board of directors.

J. D. Riedel-E. de Haën A. G., Berlin (chemicals and drugs)—Deputy chairman of advisory board.

N. V. Stuwadoors Mij. "Neptunus," Rotterdam (stevedores)—Deputy chairman of advisory board.

Deutsche Gold- und Silberscheideanstalt vorm. Boessler, Frankfurt am Main (fine metals; gold- and silver-smiths)—Member of board of directors.

Ernst Schoen von Wildenegg

Von Wildenegg is a member of the advisory board of the Deutsche Reichsbank, a director in the Deutsche Bank, a director in the Bayerische Hypotheken- und Wechsel-Bank, the most important Bavarian institution, and in several other banking institutions. He is chairman in three insurance companies and appears on the management of a large number of industrial companies, principally in the metallurgical and textile fields.

Von Wildenegg was born August 22, 1877. He holds the degree of doctor of jurisprudence. His last known address was given as 2 Wilhelm-Seyffert-Strasse, Leipzig, and his known connections are as follows:

Political.—Zulassungsstelle für Wertpapiere an der Mitteldeutschen Borse zu Leipzig (Committee on Admission of Securities on Leipzig Stock Exchange)—Deputy member of management committee.

Banking.—Deutsche Reichsbank, Berlin—Member of advisory board.

Deutsche Reichsbank, Leipzig—Member of district advisory committee.

Deutsche Bank, Berlin—Director.

Allgemeine Deutsche Credit-Anstalt, Leipzig—Member of management committee.

Bayerische Hypotheken- und Wechsel-Bank, München (mortgage bank)—Director.

Sächsische Bodenkreditanstalt, Dresden (mortgage institution)—Deputy chairman.

Deutsche Hypothekenbank, Weimar (mortgage bank)—Director.

Insurance.—Alte Leipziger Lebensversicherungsgesellschaft A. G. Leipzig (life insurance)—Chairman.

Leipziger Feuerversicherungs-Anstalt, Leipzig (fire insurance; subsidiary of Alte Leipziger Lebensversicherungsgesellschaft A. G.)—Chairman.

Leipziger Allgemeine, Transport- und Rückversicherungs- A. G., Leipzig (insurance and reinsurance; subsidiary of Leipziger Feuerversicherungs-Anstalt, Leipzig)—Chairman.

Industrial.—Vomag Maschinenfabrik A. G., Plauen (machinery; jointly owned by Allgemeine Deutsche Credit-Anstalt-Sächsische Bank, Deutsche Bank, Dresdner Bank)—Chairman.

Vogtländische Metallwerke G. m. b. H., Plauen (metals; affiliated with Vomag Maschinenfabrik A. G.)—Member of advisory committee.

Kammgarnspinnerei Stöhr & Co. A. G., Leipzig (yarns, textile mills; subsidiary of Spinnerei Cossmansdorf)—Deputy chairman.

Vaterländische Kammgarnspinnerei und Weberei A. G., Budapest (yarns and textiles; affiliated with Kammgarnspinnerei Stöhr & Co. A. G.)—Director.

Leipziger Wollkämmerei, Leipzig (wool; subsidiary of Kammgarnspinnerei Stöhr & Co. A. G., and Thüringer Wollgarnspinnerei A. G.)—Deputy chairman.

Elberfelder Textilwerke A. G., Wuppertal-Elberfeld (textile mills; subsidiary of Kammgarnspinnerei Stöhr & Co. A. G.)—Director.

C. F. Solbrig Söhne A. G., Chemnitz (cotton yarn mills; subsidiary of Kammgarnspinnerei Stöhr & Co. A. G.).

Mansfeld A. G. für Bergbau u. Hüttenbetrieb, Berlin (copper, brass, etc.)—Chairman.

Kurhessischer Kupferschieferbergbau G. m. b. H., Eisleben (copper mining; subsidiary of Mansfeld A. G., für Bergbau u. Hüttenbetrieb)—Director.

Mansfeldscher Kupferschieferbergbau A. G., Eisleben (copper mining; subsidiary of Mansfeld A. G. für Bergbau u. Hüttenbetrieb, Berlin)—Director.

Riebeck-Brauerei A. G., Leipzig (brewery)—Chairman.

Aktien-Brauerei Neustadt-Magdeburg, Magdeburg (holding company of breweries; subsidiary of Riebeck-Brauerei A. G.)—Director.

Hugo Schneider A. G., Leipzig (copper, aluminum wares; subsidiary of Dresdner Bank)—Chairman.

Thüringer Wollgarnspinnerei A. G., Leipzig (woolen yarn mills)—Chairman.

Leipziger Baumwollspinnerei, Leipzig (cotton mills, textiles)—Deputy chairman.

Eisen- und Hüttenwerke A. G., Köln (iron and coal mining)—Director.

Salzdetfurth A. G., Berlin (potash; jointly owned by a consortium of large German banks)—Director.

Studiengesellschaft Deutscher Kupferschieferbergbau G. m. b. H., Eisleben (copper laboratories)—Director.

Herman von Siemens

Hermann von Siemens, a director of the Deutsche Bank, is closely identified with the giant Siemens electrical concern. He is a rarity among important German industrialists insofar as, outside the above, he is not connected with any institutions other than those owned and managed by the Siemens concern, and even in those he has only three official positions, namely, the board chairmanships in the companies discussed below:

Siemens & Halske A. G., a RM. 107,000,000 company which challenges the position of the General Electric Co. as the largest manufacturer of electrical equipment in the world. Within Germany, responsibility for meeting the major shares of the electrical requirements of the German war machine has been delegated by the German Government to this concern. In spite of the fact that it is predominantly an electrical concern, it also rates as Germany's third largest producer of airplane motors. In comparison with the large Allgemeine Elektrizitäts Gesellschaft, partly American-owned combine, it may be stated that Siemens produces 35 percent, whereas Allgemeine Elektrizitäts Gesellschaft produces only 25 percent of the total output of electrical goods.

Siemens Planiawerke, another Siemens Halske subsidiary of which Hermann von Siemens is the head, is a large enterprise engaged primarily in the production of carbon and graphite electrodes and allied products. It originated from an amalgamation of Gebrüder Siemens & Co. with the Rutgerswerke A. G. in 1928. Today these two companies own all the shares in the Planiawerke.

Another major entity in the Siemens combine is the Siemens-Schuckert-Werke, capitalized at RM. 120,000,000, with far-reaching international agreements. Westinghouse Electrical & Manufacturing Co., of New York, and Brown Boveri & Cie., of Switzerland, are but a few of the companies participating in these agreements. Like "Halske," it maintains its own agencies, factories, and offices in every country of the world.

Both Siemens-Schuckert and Siemens & Halske have interlocking directorships with Vereinigte Stahlwerke, often referred to as the German Steel Trust.

Hermann von Siemens was born September 8, 1885. He resides in 5 am Kleinen Wannsee, Berlin-Wannsee.

His financial and industrial connections are:

Banking.—Deutsche Bank, Berlin—Director.

Industrial.—Siemens & Halske A. G., Berlin (light electrical equipment)—Chairman of the board of directors.

Siemens-Schuckert-Werke A. G., Berlin (heavy electrical equipment)—Chairman of the board of directors.

Siemens-Planawerke A. G. für Kohlefabrikate, Berlin (coal-tar derivatives)—Chairman of the board of directors.

Dr. Karl Ernst Sippell

Dr. Karl Ernst Sippell (doctor of jurisprudence), member of the management committee of the Deutsche Bank, Berlin, and chairman of the board of directors of Deutsche Centralbodenkredit A. G., Berlin, a mortgage banking concern, was formerly a director of the Deutsche Bank und Diskonto-Gesellschaft.

Sippell's other interests appear to be distributed widely between insurance concerns, mining and machinery firms, and utilities. In the latter category, he is a director of Hochtief A. G. für Hoch und Tiefbauten, Essen, a firm engaged in telegraph construction which is affiliated with the large electrical combine, Allgemeine Elektrizitäts Gesellschaft (AEG). He is also associated, as a member of the board of directors, with Deutsche Edelstahlwerke A. G., Krefeld, an affiliate of Vereinigte Stahlwerke Aktiengesellschaft (VS), the German steel combine.

Dr. Sippell was born on February 4, 1889, in Bad Sooden-Allendorf/Werra. He is described as "of good family, politically conservative, a man of no special stamp, no leading personality." His last known address is 22 Wildpfad, Berlin-Dahlem.

His financial and business connections in 1942 were as follows:

Banking.—Deutsche Bank, Berlin—Member of management committee.

Deutsche Centralbodenkredit A. G., Berlin (mortgage banking)—Chairman of the board of directors.

Insurance.—Berlinische Feuer-Versicherungs-Anstalt, Berlin (fire insurance)—Director.

Magdeburger Feuerversicherungs-Gesellschaft, Magdeburg (fire insurance)—Director.

Union und Rhein Versicherungs, A. G., Berlin—Director.

Industrial.—Mining: Bergwerksgesellschaft Gluckauf-Sarstedt m. b. H., Berlin—Chairman of the board of directors.

Otavi Minen- und Eisenbahngesellschaft, Berlin (mining and railroads)—Chairman of the executive committee.

Gewerkschaft Deutschland, Berlin—Chairman of a mining management committee.

Gewerkschaft Westfalen/Ahlen—Member of a mining management committee.

Felten & Guilleaume Carlsberg A. G., Köln (general trade, particularly in mining products)—Member of the board of directors.

Machinery: Heinrich Lanz A. G., Mannheim—Chairman of the board of directors.

Sächsische Textilmaschinenfabrik vorm. Rich. Hartmann A. G., Chemnitz (textile machinery)—Deputy chairman of the advisory board.

Utilities: Rheinische Elektrizitäts A. G., Mannheim (utility)—Director.

Deutsche-Atlantische Telegraphengesellschaft, Berlin (wire and telegraph service)—Chairman of the board of directors.

Hochtief A. G. für Hoch- u. Tiefbauten, Essen (telegraphy construction, an AEG affiliate)—Board of directors.

Miscellaneous.—Deutsche Linoleum-Werke A. G., Bietigheim (flooring and linoleum)—Chairman of the board of directors.

Kali-Chemie A. G., Berlin (fertilizers)—Chairman of the board of directors.

Salzbergwerk Neu-Stassfurt, Berlin (salt)—Chairman of the board of directors.

Salzbergwerk Neu-Stassfurt II, Löderburg (salt)—Chairman of the board of directors.

Zellstofffabrik Waldhof, Berlin (artificial cellulose, fibers)—Chairman of the board of directors.

Deutsche Continental-Gas-Gesellschaft, Dessau (gasoline)—Deputy chairman of the advisory board.

Siddentsche Zucker A. G., Mannheim (sugar)—Deputy chairman of the advisory board.

Deutsche Edelstahlwerke A. G., Krefeld (steel)—Member of board of director (member of VS combine).

Deutsche Erdöl A. G., Berlin (petroleum)—Member of board of directors.

Rudolf Stahl

Rudolf Stahl, a member of the advisory board of the Deutsche Reichsbank and a director of the Deutsche Bank, Berlin, is a Leader in the German military-economic system ("Wehrwirtschaftsführer"). He is deputy manager of the Reichsgruppe Industrie, Berlin, the official industrial association; he is also a member of the advisory board of the Reichswirtschaftskammer, Berlin, German Chamber of Commerce.

Stahl's predominant position in the German economic system has apparently been gained in part through his success in the mining field in his connection with the Salzdettfurth concern in particular.

Stahl was born on April 20, 1884, in Barmen. After engaging in law practice for several years he entered business in 1919 at the age of 35, and after 10 years in business, took over the leadership of Mansfeld A. G. für Bergbau und Hüttenbetrieb in Eisleben, a mining concern. He became associated in the early stages of his business career with the Salzdettfurth group and later took over the large mining and smelting works controlled by a banking group which includes the Deutsche Bank. In 1942 he was chairman of the board of directors of this concern and was also chairman of the bank committee of Salzdettfurth-Konzern Berlin, a potash company he organized by uniting three large potash firms.

After buying control of Mansfeld A. G., Stahl effected an exchange with the Goering Werke of anthracite mines in the Ruhr for coal mines in central Germany, where the Mansfeld anthracite mine holdings are located. From this exchange, for which Stahl is highly praised, the Kali-Jupfer-Kohle-Konzern developed.

Rudolf Stahl's last known address is 18 Tauberstrasse, Berlin-Grünswald. His financial and business connections in 1942 were as follows:

Banking and financial.—Deutsche Bank, Berlin—Director.

Deutsche Reichsbank, Berlin—Member of advisory board.

Deutsche Industriebank—Member of board of managers.

Allgemeine Deutsche Creditanstalt, Leipzig—Director.

Insurance.—Gerling-Konzern Lebensversicherungs A. G., Köln (life insurance)—Director.

Industrial.—Mining and foundry: Salzdettfurth A. G., Berlin—Chairman of board of directors.

Mansfeld A. G. für Bergbau und Hüttenbetrieb, Berlin—General manager.

Preussische Bergwerke und Hütten A. G., Berlin—Director.

Stalberger Zink A. G. für Bergbau und Hüttenbetrieb, Aachen—Director.

Miscellaneous.—Salzdettfurth-Konzern, Berlin (phosphates and fertilizers)—Chairman of the bank committee.

Demag A. G., Duisburg (machinery)—Director.

Deutsche Gold- und Silber-Scheidenstalt, vorm Noessler, Frankfurt am Main (precious metals, chemicals)—Director.

Mannesmannrohren-Werke, Düsseldorf (steel tubes)—Director.

Westfälisch-Anhaltische Sprengstoff A. G., Berlin (ammunition)—Director.

Erich Tgahrt

Erich Tgahrt, who holds membership on the board of directors of Deutsche Bank, Berlin, is also on the board of directors of the Gerling-Konzern Lebensversicherungs, A. G., Dortmund (life insurance). He is chairman of the management committee of Hoesch Köln Neuessen A. G. für Bergbau und Hüttenbetrieb, Dortmund (acquisition and operation of mines, foundries, and rolling mills). In addition he is a director in several subsidiaries of that company as well as other organizations in which the Vereinigte Stahlwerke combine has an interest. He is reported to be chairman of the supervisory board of Maschinenbau und Bahnbedarf A. G., Berlin, of which General Joachim von Stulpnagel has become a member.

Erich Tgahrt, who is 62 years, old is reported to reside at 30 Holmannstrasse, Dortmund. His banking, insurance, and industrial connections are as follows:

Banking.—Deutsche Bank, Berlin—Director.

Insurance.—Gerling-Konzern Lebensversicherungs A. G., Dortmund—Director.

Industrial.—Iron and steel: Hoesch Köln Neuessen A. G., für Bergbau und Hüttenbetrieb, Dortmund (acquisition, erection, and operation of mines, foundries, and rolling mills)—Chairman of management committee and manager.

F. Küppersbusch & Sohne A. G., Gelsenkirchen (manufacture and sale of stoves, ovens, central heating plants, and similar metal castings; affiliated with Hoesch Köln Neussen A. G. and Küppersbusch family)—Chairman of board of directors.

Schmiedag A. G., Hagen, Westfalen (manufacture and sale of forged products of iron, steel, etc.; subsidiary of Hoesch Köln Neussen A. G.)—Chairman of board of directors.

Trierer Walzwerk A. G., Trier (rolling mills; subsidiary of Hoesch Köln Neussen A. G.)—Chairman of board of directors.

Other metal companies: Maschinenbau und Bahnbedarf A. G., Berlin (machinery and railroad equipment)—Chairman of supervisory board.

Eisen- und Metall A. G., Essen (iron and metals)—Director.

Stahlwerke-Verband A. G., Düsseldorf (steel mills)—Director.

Miscellaneous companies (Vereinigte Stahlwerke A. G. or Hoesch Köln Neussen A. G. have an interest).—Rheinisch-Westfälisches Kohlen-Syndikat A. G., Essen (coal; Vereinigte Stahlwerke A. G.)—Director.

Rheinisch-Westfälische Kalwerke, Dornap (lime; Vereinigte Stahlwerke A. G.)—Chairman of board of directors.

Westdeutsche Kalk- und Portlandzementwerke A. G., Köln (lime and portland cement; Vereinigte Stahlwerke A. G.)—Director.

Westfälische Transport A. G., Dortmund (transport; affiliated with Vereinigte Stahlwerke A. G. and Hoesch Köln Neussen A. G.)—Director.

Seereederei "Frigga" A. G., Hamburg (steamship company; affiliated with Vereinigte Stahlwerke A. G. and Hoesch Köln Neussen A. G.)—Director.

Franz Urbig

In spite of the fact that Franz Urbig is 80 years old, he was very active in banking and industrial enterprises as late as 1942, which is the latest information we possess concerning him. At that time, he was chairman of the board of directors of the Deutsche Bank, Berlin, and director of the Sächsische Bodencredit Anstalt, Dresden. He was also director of the Vereinigte Industrie-Unternehmungen A. G. (VIAG), as well as various insurance, mining and aluminum companies. He was, in addition director of the Bergmann-Elektricitäts-Werke A. G., Berlin, principle stockholders of which are Siemens-Schuckertwerke A. G. (SS) and the Allgemeine Elektrizitäts Gesellschaft (AEG).

Franz Urbig was born on January 23, 1864, at Luckenwald. He has a long and important banking career behind him. He entered the Diskonto Gesellschaft in 1884. From 1894 to 1900, he was active in China, Japan, and India as a member of the management committee of the Deutsche Asiatische Bank, and was, from 1910 to 1935, chairman of its board of directors. In 1900, he again entered the Diskonto Gesellschaft as an alternate director and from 1902 to 1935, he was a personally responsible partner. In 1924, he was a member of the general council of Reichsbank, and in 1930 he became chairman of the board of directors of the Deutsche Bank und Diskonto Gesellschaft.

As early as 1923, Urbig's mentality appears to have been very Nazi-tainted. At that time he was already harping upon the ideas that the Nazis have been expounding ever since. He stated in Berlin at that time that Germany was battling imperialism in the west and communism in the east, and until she could free herself from French militarism, an unworkable peace treaty, and socialistic extremists at home, she could not recover. In January 1924 Urbig assured Hjalmar Schacht of loyal cooperation with respect to the reparations problem. In September 1925 he asserted in Berlin that German colonial expansion was of absolute necessity if Germany were to be free of complete dependence upon America.

He resides at 23 Ludwig-Frost-Strasse, Berlin. His financial and industrial affiliations as of 1942 were as follows:

Financial.—Deutsche Bank, Berlin—Chairman of the board of directors.

Sächsische Bodencredit-Anstalt (Saxon Land Mortgage Credit Institution), Dresden—Director.

Industrial.—Vereinigte Industrie-Unternehmungen A. G. (VIAG), Berlin—Director.

Vereinigte Aluminum Werke A. G. (United Aluminum Works, Inc.), Berlin—Director.

Berlinische Feuer-Versicherungs-Anstalt (Berlin Fire Insurance Co.), Berlin—Chairman of board of director.

Union und Rhein Versicherungen A. G. (Union and Rhine Insurance Corp.), Berlin—Director.

Magdeburger Rückversicherungs A. G. (reinsurance corporation), Magdeburg—Director.

Magdeburger Allgemeine Lebens und Rentenversicherungs A. G. (Magdeburg General Life Insurance and Annuity Insurance Corp.)—Deputy chairman of board of directors.

Bergmann-Elektricitäts-Werke A. G., Berlin—Director.

Otavi Minen und Eisenbahn-Gesellschaft (mining and railway company)—Chairman of board of directors.

Porzellanfabrik Kahla (porcelain factory), Kahla/Sachsen—Director.

Theodor Wiedemann

Theodor Wiedemann, a commercial privy counselor, is a director of the German Reichsbank, Berlin. His industrial interests are apparently confined to the manufacture and sale of textiles. He is chairman of the board of directors of Werdener Feintuckwerke A. G., Essen, a firm which manufactures cloth, and is deputy chairman of the board of directors of Haweco Heymann, Wetler & Co., A. G., Berlin, primarily concerned with trade in clothing materials.

Wiedemann was born on December 5, 1858, in Augsburg. His latest known address is Provinoststrasse, Augsburg.

Banking.—Deutsche Bank, Berlin—Director.

Industrial.—Augsburger Kammgarn-Spinnerei, Augsburg (worsted spinning mill)—Chairman of board of directors.

Werdener Feintuckwerke A. G., Essen (cloth manufacture)—Chairman of board of directors.

Augsburger Localbahn, Augsburg (railroad)—Deputy chairman, board of directors.

Haweco Heymann, Wetler & Co., A. G., Berlin (trade in clothing, piece goods, etc.)—Deputy chairman, board of directors.

Wilhelm Zangen

Wilhelm Zangen is prominent in the political, banking and industrial fields. He is a member of the group of leading German bankers who now control the German monopoly in European banking. This control is exercised by him through memberships in the board of directors of both the Deutsche Reichsbank and the Deutsche Bank. Zangen is chairman of the executive committee of Mannesmannröhren Werke, a tube and pipe factory with several subsidiaries. This group, known as the Mannesmann combine, is apparently closely connected with Vereinigte Stahlwerke through representation on its board. Zangen is also a director in Deutsche Revisions und Treuhand A. G., an auditing company affiliated with the Government-owned VIAG. He is a director of Salzdettefurth A. G., which is a subsidiary of a group of the largest German banks. Another company in which he is a director is Schiess A. G., which is controlled by the Deutsche Bank. Another important connection is director in Demag A. G., Duisburg, in which the board membership indicates close relationship with Vereinigte Stahlwerke and the Flick combine.

On the political side Zangen occupies a number of important posts, some of which are the vice presidency of the Düsseldorf Chamber of Commerce, membership in the management committee of the Düsseldorf Stock Exchange and membership in the Association of Germany Foundry Men in Düsseldorf.

Background.—Zangen was born September 30, 1891. At an early age he worked as an apprentice in the August Thyssen Huette at Duisburg and other metallurgical concerns. He became intimately connected with the Nazi leadership and it is to this connection that he owes his present position of power.

Wilhelm Zangen's known connections are as follows:

Political.—Düsseldorf Chamber of Commerce and Industry—Vice President.

Rheinisch-Westphalian Stock Exchange, Düsseldorf—Member of management committee.

Academy for German Law, Berlin—Member.

Southeast Europe Company, Vienna—Member of executive board.

Association of German Iron Foundry Men, Düsseldorf—Member.

Banking.—Deutsche Reichsbank, Berlin—Member of advisory committee.

Deutsche Bank, Berlin—Director.

Insurance.—Allianz Versicherungs A. G., Berlin—Director.

Industry.—Allgemeine Elektrizitäts-Gesellschaft, Berlin (General Electric Co.)—Director.

Mannesmannröhren-Werke, Düsseldorf (tube and pipe works)—Chairman of management committee.

Mannesmannröhren-Werke Komotau A. G., Komotau (tube and pipe works in Czechoslovakia; subsidiary of Mannesmannröhren-Werke, Düsseldorf)—Chairman of board of directors.

Mannesman Stahlblechbau A. G., Berlin (steel plate construction; subsidiary of Mannesmannröhren-Werke, Düsseldorf)—Chairman of board of directors.

Maschinenfabrik Meer A. G. M., Gladbach (machinery factory; subsidiary of Mannesmannröhren-Werke, Düsseldorf)—Chairman of board of directors.

"Kronprinz" A. G. für Metallindustrie, Solingen-Ohligs (metal industry; subsidiary of Mannesmannröhren-Werke, Düsseldorf)—Chairman of board of directors.

Prager Eisen-Industrie-Gesellschaft, Prag (Prague Iron Industry Co.)—Deputy chairman of advisory board.

Demag A. G., Duisburg (machine factory)—Director.

Deutsche Revisions und Treuhand A. G., Berlin (auditing and trust company; subsidiary of VIAG)—Director.

Salzdetfurth A. G., Berlin (subsidiary of several large German banks)—Director.

Schiess, A. G. Düsseldorf (machine factory; controlled by Deutsche Bank)—Director.

Schwabenbrau A. G., Düsseldorf (brewery)—Director.

Westfälisch-Anhaltische Sprengstoff A. G. Chemische Fabriken, Berlin (Westphalia-Anhalt Explosive Corp., chemical plants)—Director.

DRESDNER BANK

A. LOCATION, BRANCH OFFICES, ETC.

Address: 35-39 Behrenstrasse, Berlin; 3 König-Johann-Strasse, Dresden.

Branches in Germany: At the end of 1941 the Dresdner Bank had 192 branches and 176 agencies, 82 of the latter being located in Berlin. During 1942, however, 12 branches and 25 agencies (9 in Berlin) were closed, and it was anticipated that there would be a further reduction in the number in operation.

Branches outside Germany: The Dresdner Bank has maintained, in recent years, the following branches in foreign, annexed and occupied territory: Belgium, Eupen (opened in 1940); Istanbul and Izmir, Turkey, operated by Deutsche Orientbank; Alexandria and Cairo, Egypt, (closed at the beginning of the war but later reopened and operated under supervision of the Egyptian Government); Austria, represented by its subsidiary, the Länderbank Wien, which has 12 branches in Austria and 36 agencies in Vienna; Sudetenland, 16 branches formed from the branches of three Czech banks; Poland, 7 branches (6 opened after the conquest of Poland); Danzig, branches in Danzig and Zoppot (established before 1938), branch in Memel opened in 1939; Alsace, 2 branches; Lorraine, 5 branches, formed from the branches of two French banks (Ste. Gen. Alsacienne de Banque and Banque Nationale pour le Commerce et l'Industrie).

B. DESCRIPTION OF BANK AND ITS BUSINESS

1. Character and importance

The Dresdner Bank ranks second only to the Deutsche Bank among the Berliner Grossbanken. Its present size has been built up over a period of years through the absorption of a number of other German banking institutions. Like the Deutsche Bank it belongs to the class of universal banks, carrying on both a general commercial and investment banking business.

2. Public ownership and reprivatization

The Dresdner Bank, lacking the hidden resources of the Deutsche Bank, was unable to weather the banking crisis of 1931 so successfully as did the latter. In this crisis, consequently, the Dresdner Bank was obliged to accept assistance from the Reich, and at the end of 1933 was 70 percent owned by the Reich Government and 20 percent by the Deutsche Golddiskontbank, subsidiary of the Deutsche Reichsbank, the central bank of Germany. In 1937, however, the Dresdner Bank was "reprivatized", together with several other banks which had been in the same situation, since by this time banking legislation had been passed which gave the Reich a strong degree of control over the German banks and made it no longer necessary for the Government to obtain this control through stock ownership.

3. Close to Nazi Party

Possibly because of this period of public ownership, the Dresdner Bank, even since its reprivatization, is believed to have had closer connections with the Nazi Party than did the Deutsche Bank. The London Banker of February 1944, as proof of this theory, points to the names of Carl Lürer and Emil Meyer on the management committee of the bank, and to the more recent appointment of the politically prominent William Avieny, Walther Schieber, and Karl Heinz Heuser to its board.

4. Ties with German banks and industries

The Dresdner Bank has close affiliations with numerous banks and financial companies in Germany, maintaining close ties with German industries particularly in the fields of steel, heavy industry, and transportation, and is represented on the boards of many of the most important industrial enterprises. On its directorate are Karl Pfeiffer, of I. G. Farbenindustrie, the great chemical combine; Alfred Krupp von Bohlen und Halbach, owner of Krupp; and Friedrich Flick, the head of the vast Flick steel and coal interests. Through Hellmuth Röhner, one of its vice chairmen, the Dresdner Bank is associated with the great Hermann Göring combine and the great Junkers airplane works.

Industrial affiliations of the bank as indicated by two or more interlocking directors are shown under section C of this report. In this section, however, no mention has been made of a large number of additional enterprises with which the bank has connections through a single common director.

5. Foreign banking affiliations

Up to 1937, the Dresdner Bank had a limited number of foreign banking participations. Since the beginning of World War II, however, the foreign banking interests of the Dresdner Bank have been greatly expanded through the cut-throat competition with the Deutsche Bank into which it entered in penetrating the banking structures of conquered or annexed countries. In many areas the two great banks are active rivals, but, generally speaking, the Deutsche Bank's interests are more important in Austria, Serbia-Croatia, and the Netherlands, while the Dresdner Bank leads in Greece, Poland, and the Ostland.

Prior to the Anschluss, the Dresdner Bank was the sole shareholder in the medium-sized Mercurbank of Vienna. After the invasion the Dresdner Bank persuaded the other two important foreign banks with branches in Vienna, the Zivnostenska Banka of Prague (Gerwerbe Bank) and the Banque des Pays de l'Europe Central (Zentral-Europäische Länderbank) of Paris, to permit the absorption of these branches. These were combined with the Mercurbank to form the Länderbank Wien. This bank, entirely owned by the Dresdner Bank, is sufficiently large and important to challenge the position of the Creditanstalt Bankverein in Vienna.

The other important foreign acquisition by the Dresdner Bank was the Böhmische Escompte Bank of Prague, formerly controlled by the Zivnostenska Bank and Brufina (Ste. de Bruxelles pour la Finance et l'Industrie, large Belgian holding company).

6. Methods of banking penetration

Just as the Deutsche Bank worked through the Creditanstalt Bankverein of Vienna, and the Böhmische Union-Bank of Prague in the penetration movement, the Dresdner Bank spearheaded its activities in acquiring foreign banking participations, through its two newly gained subsidiaries, the Länderbank Wien and the Böhmische Escompte Bank. Methods employed by the two great German banks, however, varied greatly. The Deutsche Bank made a practice of ceding minority participations to its two principle foreign subsidiaries. The Dresdner Bank, on the other hand, kept most of the participations in its own portfolio, and even took under direct control participations held by its subsidiaries. It did, however, leave certain minority interests to the Länderbank Wien, which also represents the interest of the Dresdner Bank on various boards of directors.

7. Foreign industrial affiliations

Through interests acquired in foreign banking institutions, it is believed that the Dresdner Bank obtained direct or indirect interests in numerous foreign industrial enterprises. Definite information as to these possible industrial acquisitions is not available, and it is believed that many of them may have been gained in

moderate-sized local enterprises. It is known that the Länderbank Wien, the Dresdner Bank's Austrian subsidiary, served for the most part moderate-sized firms.

C. RELATION TO ENTERPRISES OR OTHER BANKING INSTITUTIONS IN GERMANY

1. Banks and financial companies

(a) *Deutsche Reichsbank:*

Address: Berlin.

Business: Central bank of Germany.

Interest: Four members of the directorate of the Dresdner Bank are members of the advisory board of the Deutsche Reichsbank. In addition, the two institutions have a common director in Carl Luer.

(b) *Diskont-Kompagnie:*

Address: 54/55 Jägerstrasse, Berlin W-8.

Capital: RM. 50,000,000 (one-quarter paid in).

Business: To discount bankers' acceptances and increase marketability of such paper by adding a third signature.

Interest: A bare majority of the capital held by the Deutsche Golddiskontbank (Reichsbank subsidiary) and the remainder by the Dresdner Bank, the other big Berlin banks, and the Deutsche Verkehrskreditbank, the Deutsche Industriebank, and others.

(c) *Deutsche Bank für Ostasien:*

Address: Berlin.

Capital: RM. 10,000,000.

Business: To finance trade with the Far East. Established a branch in Tokyo June 1943.

Interest: The Deutsche Bank together with the Dresdner Bank and the Reichskredit Gesellschaft are the most important stockholders, while the Commerz Bank and the Bank der Deutschen Arbeit hold small participations.

(d) *Sächsische Bodenkreditanstalt:*

Address: Dresden.

Capital: RM. 11,000,000.

Business: Mortgage bank. Mortgage loans outstanding at the end of 1942 reported as RM. 480,000,000.

Interest: The Dresdner Bank is the majority shareholder in this mortgage bank.

(e) *Nieder-Rheinische Bank, A. G.*

Address: Wesel.

Capital: RM. 1,200,000.

Business: Local banking.

Interest: The Dresdner Bank, together with Hardy & Co. (see below) owned a small participation in this bank. In 1944 the Nationalbank A. G. of Essen bought a majority of the stock of the Nieder-Rheinische Bank. The Nationalbank is believed to be controlled by the Deutsche Industrie bank, semipublic institution which has been financing the expansion in German war industries. It is not known whether or not the Dresdner Bank has retained its interest.

(f) *Hamburgische Baukasse A. G.*

Address: Hamburg.

Capital and reserves: RM. 1,100,000.

Business: Administers mortgages financed by long-term borrowings mainly from abroad (Netherlands and England). At the end of 1940 had total assets of RM. 41,400,000, of which RM. 39,900,000 were mortgages.

Interest: The capital of the institution is shared among the Dresdner Bank (40 percent) the Commerzbank (20 percent) and various private bankers.

(g) *Hardy und Co. G. m. b. H.*

Address: Berlin.

Capital: RM. 12,000,000.

Business: Formerly a private banking firm, and its business has kept this character. It has 20 subsidiaries.

Interest: As a result of two reorganizations, the Dresdner Bank until recently owned 90 percent of Hardy und Co.'s capital. During the Aryanization process the business of the private banking firms, Gebrüder Arnhold, of Dresden, and

Berlin and of S. Bleichroeder und Co., of Berlin, was taken over by the Dresdner Bank and Hardy und Co. The Dresdner Bank acquired especially the Dresden business of Gebrueder Arnhold, sharing the remainder with Hardy und Co. Early in 1943 the capital of Hardy und Co. was increased from R.M. 10,000,000 to its present figure of R.M. 12,000,000, and the Dresdner Bank's interest in the banking firm reduced to 25 percent. The greater part of the Dresdner Bank's interest was sold at that time to a group which included a number of German industrial firms and, according to report, some foreign banks.

(h) *Oldenburgische Landesbank (Spar- und Leihbank)*

Address: Oldenburgh.

Capital: R.M. 4,400,000; reserves R.M. 8,000,000.

Business: Regional bank in northwestern Germany. Has 28 branches, and holds a majority interest in the Dürer Bank in Dürer (between Aachen and Cologne).

Interest: The Dresdner Bank controls the Oldenburgische Landesbank, but the State of Oldenburgh also holds a participation in it.

(i) *Dürer Bank*

Address: Dürer (between Aachen and Cologne).

Capital and reserves: R.M. 6,400,000.

Business: General banking.

Interest: The Dresdner Bank has an indirect control over the Dürer Bank through the Oldenburgische Landesbank.

(j) *Sponholz, Ehestätt und Schröder*

Address: Berlin.

Business: Private banking firm.

Interest: The Dresdner Bank holds a participation in this banking firm.

(k) *Poensgen, Marz und Co.*

Address: Dusseldorf.

Business: Private banking firm.

Interest: The Dresdner Bank owns a participation in this firm. This interest may have been gained during Aryanization proceedings, as until 1941 Poensgen, Marx und Co. was known as B. Simons und Co.

(l) *Diskont und Kredit A. G.*

Address: Berlin.

Capital and reserves: R.M. 11,700,000 (1938).

Business: Discount and loan company.

Interest: This finance company was established by the Dresdner Bank in 1934.

(m) *Gebrueder Arnhold*

Address: Dresden and Berlin.

Business: Private banking firm.

Interest: During the Aryanization process the business of this firm was taken over by the Dresdner Bank and its (then) subsidiary, Hardy und Co. The Dresdner Bank acquired especially the Dresden business, sharing the rest with Hardy und Co.

(n) *S. Bleichroeder und Co.*

Address: Berlin.

Business: Private banking firm, closely associated with Gebrueder Arnhold.

Interest: During the aryanization process the business of this firm was taken over by the Dresdner Bank and Hardy und Co.

(o) *Bank für Brauindustrie*

Address: Berlin.

Capital and reserves: R.M. 16,500,000 (1942).

Business: Investment and holding company in the field of the brewing industry. It had belonged to the interests of the Aryanized firm Gebrueder Arnhold.

Interest: The Dresdner Bank holds controlling interest in this investment company.

(p) *Deutsch-Sudamerikanische Bank A. G.*

Address: Berlin and Hamburg.

Capital: R.M. 20,000,000.

Business: Organized for business in South America. In 1938 it had 9 branches in Spain, Argentina, Brazil, Paraguay, Chile, and Mexico, but the branches in Brazil and Mexico were liquidated in 1942.

Interest: This is a wholly owned subsidiary of the Dresdner Bank.

(q) Industrie-Werte G. m. b. H.

Address: Berlin.

Capital and reserves: RM. 2,400,000.

Business: Established to engage in stock-market operations. Developed into a holding company for industrial preferred shares endowed with special voting rights.

Interest: Controlled by the Deutsche Bank together with the Berliner Handels Gesellschaft and the Dresdner Bank.

(r) Industrie-Finanzierungs A. G., Ost (IFAGO)

Address: Behrenstrass 14-16, Berlin W-8.

Capital and reserves: RM. 625,000 (1938).

Business: Established to aid in financing German exports to Russia and has assumed considerable importance as an acceptance institution. Its acceptances, usually guaranteed by banking syndicates, the so-called IFAGO Konsortien led by the Deutsche and the Dresdner Bank, outstanding to the amount of RM. 176,000,000 at the end of 1939.

Interest: This is a joint enterprise of the Dresdner Bank, the other Berliner Grossbanken, and other credit institutions.

(s) Deutsche Ansiedlungsgesellschaft

Address: Berlin.

Capital: RM. 1,000,000.

Business: Mortgage company for financing farm property and small rural industries.

Interest: This mortgage bank is reportedly 50 percent owned by the Dresdner Bank.

2. Insurance companies

(a) Aachener Rückversicherungsgesellschaft

Address: Aachen.

Business: Large reinsurance company, member of the Aachener and Münchner group, a loosely connected group of large independent insurance companies, which coordinate their activities closely. Interlocks with other groups, notably the Nordstern insurance companies.

Interest: Interlocking directorates indicate that the Dresdner Bank is closely associated with this insurance company. Carl Arthur Pastor, a director of the Dresdner Bank, heads the insurance company's board. The two enterprises also have a common director in Georg Talbot.

(b) Aachener und Münchner Feuer-Versicherungs-Gesellschaft

Address: Aachen.

Business: Fire insurance company of the Aachener und Münchner group.

Interest: The Dresdner Bank is connected with this company through interlocking directorates in the persons of Georg Talbot and Carl Arthur Pastor. The latter heads the insurance company's board.

(c) Aachener und Münchner Lebensversicherungs A. G.

Address: Aachen.

Business: Life insurance company of the Aachener und Münchner group.

Interest: The fact that Carl Arthur Pastor, a director of the Dresdner Bank, heads the board of this insurance company would appear to indicate that this is another tie between the Dresdner Bank and the Aachener und Münchner insurance group.

(d) Hamburg und Bremer Feuer Versicherungs Gesellschaft

Address: Heuberg 4, Hamburg 36.

Business: Fire insurance company of the Aachener und Münchner group.

Interest: Interlocking directorates in the persons of Karl Lindemann and Carl Arthur Pastor indicate that the Dresdner Bank is closely associated with this insurance company.

(e) Münchner Rückversicherungsgesellschaft (Münchner Rück)

Address: Munich.

Capital: RM. 20,007,500 (1938).

Business: Reinsurance company of the Allianz and Stuttgarter Konzern which, during the German occupation, was most active in penetrating the insurance

business of occupied countries and consequently became the largest reinsurance company in the world.

Interest: The Dresdner Bank is connected with the Münchner Rück through interlocking directors. Carl Goetz, chairman of the bank, is a director of the insurance company; Wilhelm Kisskalt, vice chairman of the bank, is deputy chairman of the insurance company.

(f) *Hermes Kreditversicherungs A. G.*

Address: Berlin.

Capital: R.M. 5,005,000 (1938).

Business: Commercial credit; insurance; fidelity insurance. The Münchner Rückversicherungs is the principal stockholder.

Interest: The Dresdner Bank is connected with this insurance company through interlocking directors in the persons of Hugo Zinszer and Wilhelm Kisskalt. The latter heads the insurance company's board.

(g) *Allianz Versicherungs A. G.*

Address: Berlin.

Business: Insurance, member of the large and important group known as the Allianz und Stuttgarter Konzern. The above-mentioned company is one of the predominant companies in the group.

Interest: Interlocking directors in the persons of Friedrich Flick, Ernst Henke, Carl Goetz, and Wilhelm Kisskalt indicate that the Dresdner Bank may have a connection with this insurance company.

(h) *Allianz Lebensversicherungs A. G.*

Address: Berlin.

Business: Most important life insurance company in Germany. The Allianz Versicherungs (see above) holds a 30 percent interest in it.

Interest: The Dresdner Bank is connected with this life insurance company through interlocking directors in the persons of Emil Heinrich Meyer and Wilhelm Kisskalt.

(i) *Thuringia Versicherungs A. G.*

Address: 2/4 Schillerstrasse, Erfurt.

Capital: R.M. 6,000,000.

Business: Various types of risk and accident insurance.

Interest: The Dresdner Bank is connected with this insurance company through interlocking directors in the persons of Georg Talbot and Carl Arthus Pastor. The latter is deputy chairman of the insurance company's advisory board.

(j) *Colonia Kolnische Feuer und Kolnische Unfall Verischerungs A. G.*

Address: Cologne.

Capital: R.M. 8,000,000 (1938).

Business: Fire and casualty insurance. One of the leading companies of the Rheinische Interessengemeinschaft pool, a group of important insurance companies, largely independent from a financial and operating point of view, but with some measure of interlocking ownership.

Interest: The Dresdner Bank is connected with this insurance company through interlocking directors in the persons of Carl Arthur Pastor and Carl Wentzel.

3. Industrial and commercial enterprises

(a) *Electric power, utilities, equipment, installations, etc.*

(i) *Gesellschaft für Elektrische Unternehmungen A. G. (Gesfürel):*

Address: 35/37 Dorotheenstrasse, Berlin.

Capital: R.M. 80,010,000 (1939).

Business: Oldest and most important German electric holding company. Shares with International General Electric Co. the control of Allgemeine Elektrizitäts Ges. (AEG), each of the two holding a 25 percent stock interest in AEG. Gesfürel has important investments in the field of copper, cableworks, machinery, screws, porcelain, and airplane parts manufacturing.

Interest: Gesfürel is largely controlled by the Deutsche Bank and the Dresdner Bank. Carl Goetz, chairman of the Dresdner Bank is deputy chairman of Gesfürel's advisory board; August Goetz is a member of the management committee of the company's Ludwig subsidiary.

(ii) Allgemeine Elektrizitäts Gesellschaft (AEG):

Address: Berlin.

Capital: RM. 264,000,000 (1942).

Business: Large electrical equipment and power combine with participations in public utility companies and foreign power developments. At the outbreak of World War II the company's principal stockholders were International General Electric Co., New York (about 25 percent) and Gesellschaft für Elektrische Unternehmungen A. G. (Gesfürel) (about 25 percent).

Interest: The Dresdner Bank is connected with AEG through its interest in Gesfürel and through interlocking directors in the persons of Friedrich Flick and August Goetz. The latter is deputy chairman of AEG's advisory board.

(iii) Berliner Kraft- und Licht (Bewag) A. G.:

Address: Berlin.

Capital: RM. 240,000,000 (1938).

Business: Electric utility company of Berlin. Nearly its entire stock is owned by Berliner Elektrizitäts-Union G. m. b. H., in which Elektrowerke A. G., 100 percent owned by VIAG, the Reich holding company, holds a 26 percent interest.

Interest: The Dresdner Bank is connected with Bewag through interlocking directors in the persons of Hans Schippel and Hellmuth Röhnert.

(iv) Rheinisch-Westfälisches Elektrizitätswerk A. G. (RWE):

Address: 28 Hachestrasse, Essen.

Capital: RM. 1,169,206,480.

Business: RWE is the most powerful public utility holding company, possessing about 20 electric power works as well as gas and water works and extensive holdings in electric power, coal, and brown coal companies. Its stock is owned largely by states and communities, but VIAG, the Reich holding company, has a small participation.

Interest: The Dresdner Bank is connected with RWE through interlocking directorates. Ernst Henke, a director of the bank, is a member of RWE's management committee; Carl Goetz, chairman of the bank, is a director of RWE. The Dresdner bank is also represented on the boards of a number of RWE subsidiaries (see below).

(v) Elektrizitäts A. G., vormals W. Lahmeyer & Co.:

Address: Frankfurt.

Capital: RM. 22,000,000.

Business: Electrical construction. Rheinisch-Westfälisches Elektrizitätswerk A. G. is the major stockholder (see above).

Interest: The Dresdner Bank is connected with Elektrizitäts A. G. through interlocking directors. Carl Lüer, member of the advisory board of the bank, is a director of the company; Wilhelm Avieny and Ernst Henke, directors of the bank, are, respectively, deputy chairman of the board of directors and deputy chairman of the advisory board of the company.

(vi) Accumulatoren-Fabrik A. G.:

Address: Berlin.

Capital: RM. 21,250,000.

Business: Manufacture of storage batteries, etc.; holds participations in other electrical enterprises and has branches in Hungary, Sweden, Finland, Yugoslavia, and Holland. It is reported to be largely owned by Günther Quandt.

Interest: The Dresdner Bank is connected with Accumulatoren-Fabrik through interlocking directorates in the persons of Karl Rasche and Hellmuth Röhnert.

(vii) C. Lorenz A. G.:

Address: Berlin-Tempelhof.

Capital: RM. 9,500,000 (1938).

Business: Production of telephone and telegraph apparatus and installations. Has an interest in 7 companies, among which is the Dutch company N.V. Stabilovolt, The Hague, now in liquidation.

Interest: The Dresdner Bank is connected with this company through interlocking directors. Alfred Dufour von Feronce, of the Dresdner Bank, heads the company's board. The two enterprises also have a common director in Emil Heinrich Meyer.

(viii) Garbe Lahmeyer & Co.:

Address: 191 Fülcher Strasse, Aachen.

Capital: RM. 1,000,000.

Business: Engaged in the manufacture of machines, apparatus and installations of all kinds in the field of electrical engineering, motors, transformers, etc. Has small subsidiary company in the same field of activity, the Baugesellschaft für Elektrische Anlagen A. G. of Aachen. It also has a participation in Industrie-Finanzierungs A. G. Ost, (IFAGO) of Berlin, which had a capital of RM. 1,500,000 in 1938. The Dresdner Bank has an interest in IFAGO.

Interest: The Dresdner Bank is connected with this enterprise through interlocking directors in the persons of Carl Arthur Pastor and Georg Talbot.

(b) *Iron, steel, metals, machines, tools*

(i) Vereinigte Stahlwerke A. G.:

Address: Düsseldorf.

Capital: RM. 460,000,000.

Business: Steel combination.

Interest: The Dresdner Bank is connected with Vereinigte Stahlwerke through interlocking directors in the persons of Friedrich Flick, Georg Talbot, and Carl Goetz.

(ii) Friedrich Krupp A. G.:

Address: Essen.

Capital: RM. 160,000,000.

Business: Outstanding firm in the field of armaments and heavy industry, with numerous German and foreign subsidiaries and coal important interests.

Interest: Alfred Krupp von Bohlen und Halbach, owner of Krupps, is a director of the Dresdner Bank; Carl Goetz, chairman of the bank is on the Krupp directorate.

(iii) Rheinische Stahlwerke (Rheinstahl):

Address: Arenberghaus, Essen.

Capital: RM. 150,000,000 (1939); RM. 180,000,000 (1942).

Business: Formerly possessed important steel mills but these were given up to Vereinigte Stahlwerke, the steel trust, of which Rheinstahl is still one of the principal beneficiaries. Rheinstahl still has important lignite holdings, and through its interest in Riebeck'sche Montanwerke A. G. of Halle holds a major position in the German lignite industry. It supplies a substantial portion of I. G. Farben's coal requirements, and is an important link between Farben and the steel trust. I. G. Farben, with 47.7 percent stock interest, or over 50 percent with the exercise of an option, and the Waldthausen family, of Essen, are the principal stockholders.

Interest: The Dresdner Bank is connected with Rheinstahl through interlocking directors in the persons of Carl Goetz, chairman of the bank, and Karl Pfeiffer, a director of the bank, who is on the board of I. G. Farben, as well as on that of Rheinstahl.

(iv) Mitteldeutsche Stahlwerke G. m. b. H.:

Address: Riesa, Elbe.

Capital: RM. 28,000,000.

Business: Owns three famous old steel mills which have been of especial importance in the industry of Saxony; the Lauchhammer works; the Riesa works, and the Greditz works. The activities of these plants include blast furnaces, rolling mills, production of machinery parts, locomotive and ship boilers, sheet metal, etc. Lauchhammer also owns a large electric power plant. Mitteldeutsch has, in addition two important machinery manufacturing subsidiaries. It is 100 percent owned by the Flick interests. It was formerly organized as a corporation, but in 1943 was reorganized as a limited company (G. m. b. H.).

Interest: The Dresdner Bank appears to be closely associated with Mitteldeutsche Stahlwerke through interlocking directors. Friedrich Flick, who heads the steel company's board, is a director of the bank; the two organizations also have a common director in Heinrich Koppenberg.

(v) Allgemeine Transportanlagen G. b. m. H. (ATG):

Address: Leipzig.

Capital: RM. 4,000,000.

Interest: The Dresdner Bank is connected with this company (ATG) through interlocking directors in the persons of Friedrich Flick and Heinrich Koppenberg. Mitteldeutsche Stahlwerke, which itself is 100 percent owned by the Flick interests, is the majority stockholder in ATG.

- (vi) Waggon-und-Maschinenfabrik A. G., vorm. Busch:
 Address: Bautzen.
 Capital: RM. 22,950,000.
 Business: Manufacture of car bodies and machines. This is a subsidiary of Mitteldeutsche Stahlwerke.
 Interest: The Dresdner Bank is connected with Waggon- und Maschinenfabrik through interlocking directors in the persons of Carl Otto Schmelzer, Heinrich Koppenberg, and Friedrich Flick. The latter is deputy chairman of the machine company's board.
- (vii) Harpener Bergbau A. G.:
 Address: 14 Goldstrasse, Dortmund.
 Capital: RM. 60,000,000 (1939).
 Business: Described as the largest coal producer, its production exceeded only by that of the coal interests of Vereinigte Stahlwerke and those of the Reich (Saargrubben A. G. and Hibernia). It is very closely connected with the steel industry. Its majority stockholder is Eisenwerk Gesellschaft Maximilianshütte, which is controlled by Mitteldeutsche Stahl. It is also connected with Vereinigte Stahlwerke through eight interlocking directorships.
 Interest: The Dresdner Bank is connected with Harpener Bergbau through interlocking directors in the persons of Carl Goetz, chairman of the bank's board, and Friedrich Flick. The latter is chairman of the board of Harpener Bergbau. This appears to be another link between the bank and Flick's Mitteldeutsche Stahl interests.
- (viii) Metallgesellschaft A. G.:
 Address: Frankfurt am Main.
 Capital: RM. 42,000,000.
 Business: Organized for trade in nonferrous metals and developments of mining fields. Has developed considerable chemical interests in related fields and even in artificial rubber. Has participations in the banking firms, Delbrück Schickler & Co. and Delbrück von der Heydt & Co. Among the principal stockholders of Metallgesellschaft are: I. G. Farben, directly, and through the Gold- und Silber-Scheidenanstalt; British Metal Corp., London; and Schweizerische Gesellschaft für Metallwerke, Basle.
 Interest: The Dresdner Bank is connected with Metallgesellschaft through interlocking directorates. Wilhelm Avieny, a director of the bank, heads the metal company's management committee; Carl Luer, member of the bank's management committee, is chairman of the Metallgesellschaft board of directors; Karl Rasche, also on the bank's management committee, is a director of Metallgesellschaft.
- (ix) Hugo Schneider A. G.:
 Address: Leipzig.
 Capital: RM. 4,200,000 (1938).
 Business: Operates enterprises engaged in metal-processing industry and connected lines. Has three wholly owned subsidiaries: (a) Otto Müller A. G., Leipzig; (b) Hugo Schneider A. G. Vereinigte Glühlampenwerke G. m. b. H., Leipzig; and (c) Thermos A. G., Leipzig.
 Interest: The Dresdner Bank holds the controlling interest, about 51 percent, in the Hugo Schneider enterprise.
- (x) Hirsch Kupfer- und Messingwerke A. G.:
 Address: Berlin.
 Capital: RM. 12,500,000 (1938).
 Business: Steel and products of copper and other metals. This company is 79.2 percent owned by Ges. für Elektrische Unternehmungen, A. G.
 Interest: The Dresdner Bank is connected with this company through interlocking directorates. August Goetz, of the Dresdner Bank, heads the metal company's board. The two organizations have a common director in Alfred Holling.
- (xi) Busch-Jaeger Lüdenscheider Metallwerke A. G.:
 Address: Lüdenscheid.
 Capital: RM. 1,500,000.
 Business: Manufacture of metal products.
 Interest: The Dresdner Bank is connected with this metal enterprise through two interlocking directors in the persons of Fritz Kranefuss, Heinrich Schmidt, and Hellmuth Röhnert. The latter serves on the metal company's management and technical committees.

- (xii) Alexanderwerk A. von der Nahmer A. G.:
Address: Remscheid, Westphalia.
Capital: R.M. 4,500,000.
Business: Mining, iron and foundry works.
Interest: The Dresdner Bank is connected with this company through interlocking directors. Gustav Overbeck of the bank's management committee is chairman of the Alexanderwerk; Hellmuth Röhnert, vice chairman of the bank, is deputy chairman of the iron company's advisory board.
- (xiii) Eisenwerk-Gesellschaft Maximilianshütte:
Address: Sulzbach-Rosenberg Hütte.
Capital: R.M. 26,250,000.
Business: Iron works, 80 percent owned by Mitteldeutsche Stalwerke A. G., which, in turn is entirely owned by the Flick interests.
Interest: The Dresdner Bank is connected with this enterprise through interlocking directors, Emil Heinrich Meyer, Heinrich Koppenberg, and Friedrich Flick. The last-named is chairman of the board of Maximilianshütte.
- (xiv) Pittler Werkzeugmaschinenfabrik A. G.:
Address: Leipzig-Wahren.
Capital: R.M. 5,000,000.
Business: Machine tool works. Before the war had a manufacturing agreement with the National Acme Co. of Cleveland, Ohio, and had that company's president on its board, along with notables of the Dresdner und Deutsche Bank, and the Junker General Joachim von Steulpnagel.
Interest: The majority of the stock of the Pittler company is owned by the Commerz Bank and the Dresdner Bank.
- (xv) Waggonfabrik Jos. Rathgeber, A. G.:
Address: Munich.
Capital: R.M. 2,138,000.
Business: Manufacture and sale of vehicles, machines, and apparatus of various kinds.
Interest: In 1938 the Dresdner Bank was the principal stockholder in this company.
- (xvi) G. Karger, Fabrik für Werkzeugmaschinen A. G.:
Address: Berlin.
Capital: R.M. 1,800,000 (1938).
Business: Manufacture of machinery for production of precision instruments.
Interest: The Dresdner Bank is connected with this company through interlocking directorates in the persons of Bruno Claussen and Hugo Zinszer. The former is chairman of the company's board of directors, the latter, deputy chairman of the company's advisory board.
- (xvii) Magdeburger Werkzeugmaschinen Fabrik G. m. b. H.:
Business: Manufacture of machine tools.
Interest: The Dresdner Bank is connected with this company through interlocking directorates. Hellmuth Röhnert, a vice chairman of the bank, is a chairman of the company's advisory board; Heinrich Koppenberg, a director of the bank, is a member of the company's advisory board.
- (c) *Chemicals, munitions*
 - (i) Wintershall A. G.:
Address: Kassel.
Capital: R.M. 150,000,000.
Business: The largest German potash concern and the largest factor in the German potash syndicate, after I. G. Farben, the largest German chemical concern. The owners of Wintershall are the Rosterg family, Günther Quandt, and others, who hold their interest through the holding company, Gewerkschaft Wintershall, the principal stockholder in Wintershall A. G.
Interest: The Dresdner Bank is connected with Wintershall through interlocking directors in the persons of Karl Rasche and Heinrich Schmidt. The latter is head of the Wintershall board of directors.
 - (ii) Bergbau A. G. Lothringen:
Address: Bochum.
Capital: R.M. 20,000,000.
Business: Mining company in which a 28 percent interest is held by Wintershall, the largest German potash enterprise.
Interest: The Dresdner Bank is connected with Bergbau A. G. Lothringen through interlocking directors in the persons of Gustav Overbeck and Heinrich Schmidt. The latter heads the mining company's board.

(iii) Dynamit A. G., vormalig Alfred Nobel & Co.:

Address: Troisdorf.

Capital: RM. 47,125,000 (1939).

Business: Leading European dynamite and explosives manufacturing concern. It has 10 important plants producing detonators, gunpowder, glycerine, chemical compounds, ammunition, etc., and has considerable participations in other firms in the same field of activity. I. G. Farben is the principal shareholder (44.5 percent with profit-sharing agreement) but the major German steel companies also appear to have an interest in Dynamit A. G.

Interest: The Dresdner Bank is connected with this enterprise through interlocking directors in the persons of Friedrich Flick and Karl Pfeiffer.

(iv) Deutsche Gold- und Silber-Scheideanstalt, vorm. Roessler (Degussa):

Address: 9 Weissfrauenstrasse, Frankfurt am Main.

Capital: RM. 35,600,000 (1939).

Business: Has been for years the leading concern in the field of precious metals, and has built up, at first for its own use, then in connection with Henkel und Co. and I. G. Farben, who are its principal stockholders, a considerable production and business in certain chemical fields, particularly in cyanides and sodium. Has extensive holdings in other technical enterprises, and in companies manufacturing technical lamps and equipment. Degussa and I. G. Farben have about an equal interest in Metallgesellschaft A. G., another large metal concern, and through Metallgesellschaft an interest in the large potash and copper company, Salzdettfurth.

Interest: The Dresdner Bank is connected with Degussa through interlocking directors in the persons of Wilhelm Avieny and Carl Goetz. The latter, who is chairman of the bank, is deputy chairman of the Degussa advisory board.

(v) Chemische Fabrik von Heyden A. G.:

Address: Radebeul, near Dresden, Saxony.

Capital: RM. 13,700,000 (1938).

Business: Engaged in the construction and operation of chemical plants in Germany and abroad.

Interest: The Dresdner Bank is connected with this chemical company through interlocking directors in the persons of Gustav Herman, Erwin Dircks, and Otto Zinszer. The latter is deputy chairman of the chemical company's advisory board. Both Dircks and Zinszer are stockholders in Chemische Fabrik von Heyden.

(d) *Coal, mining, fuel oils*

(i) Braunkohlen und Briketwerke Roddergrube A. G.:

Address: 7-13 Comesstrasse, Brühl bei Köln.

Capital: RM. 36,000,000 (1939).

Business: Roddergrube together with Rheinbraun. (Rheinische A. G. für Braunkohlenbergbau und Brikettfabrikation) are the two main lignite subsidiaries of Rheinisch-Westfälisches Elektrizitätswerk-A. G. (RWE) the largest public utility holding company in Germany. R. W. E. owns 53 percent of the stock of Roddergrube; Roddergrube owns approximately 51 percent of the stock of Rheinbraun, which, in turn, owns nearly 46 percent of the stock of Roddergrube.

Interest: The Dresdner Bank is connected with Roddergrube through interlocking directors in the persons of Ernest Henke and Carl Wentzel.

(ii) Rheinische A. G.-für Braunkohlenbergbau und Brikettfabrikation (Rheinbraun):

Address: Cologne.

Capital: RM. 72,900,000.

Business: Lignite mining and briquet manufacture. Has substantial holdings in other lignite concerns, notably Roddergrube, its parent company, which, in turn, is a subsidiary of Rheinische Westfälisches Elektrizitätswerk A. G.

Interest: The Dresdner Bank is connected with this lignite mining company through interlocking directors, in the persons of Friedrich Flick and Ernst Henke.

(iii) Braunkohle-Benzin A. G.:

Address: Berlin.

Capital: RM. 100,000,000.

Business: This corporation was founded by the principal German lignite producers in conformance to Reich decrees of 1934 which required lignite

interests to form a corporation for the production of lignite-derivative fuel oils and lubricants.

Interest: The Dresdner Bank appears to have a close connection with this enterprise, as three officials of the bank hold high official positions in Braunkohle-Benzin: Fritz Kranefuss is a member of the management committee, Karl Rasche is a director, and Heinrich Schmidt heads the company's board of directors.

(iv) Essener Steinkohlenbergwerke A. G.:

Address: 92/94 Huyssenallee, Essen.

Capital: RM. 75,000,000 (1942).

Business: Coal mining, production of coke, ammonia, benzol, and briquets. Holds fifth place in the German coal syndicate from point of view of production. Owns eight active coal mines, numerous byproduct plants, and has extensive participations in other enterprises in the same field. The principal shareholder is the Flick group, which through Harpener Bergbau A. G. controls nearly 38 percent of the capital of Essener Steinkohlenbergwerke.

Interest: The Dresdner Bank is connected with this company through interlocking directorates: Friedrich Flick, a director of the Dresdner Bank, is head of the coal company's board; Karl Rasche, member of the bank's advisory board, is a director of the coal company.

(e) *Airplanes and motors*

(i) Junkers Flugzeug- und Motorinwerke A. G.:

Address: Dessau.

Capital: RM. 130,000,000.

Business: Largest airplane manufacturing concern, with connections with the Government, commercial air lines, and other manufacturers, which place it in the central position in the German industry.

Interest: The Dresdner Bank is connected with this company through interlocking directors in the persons of Emil Heinrich Meyer and Hellmuth Röhnert. The latter is the chairman of Junkers board of directors.

(ii) Arado Flugzeugwerke G. m. b. H.:

Address: Potsdam-Babelsberg.

Capital: RM. 30,000,000.

Business: Airplane factory.

Interest: The Dresdner Bank is connected with this airplane company through two interlocking directors, Emil Heinrich Meyer and Fritz Kranefuss. The latter is a member of the advisory board of Arado Flugzeugwerke.

(f) *Miscellaneous*

(i) Süddeutsch Zucker A. G.:

Address: Mannheim.

Capital: RM. 30,000,000.

Business: Sugar company.

Interest: The Dresdner Bank is connected with this sugar company through interlocking directors in the persons of Gustav Dircks and Hugo Zinsser.

(ii) Zuckerraffinerie Hildesheim G. m. b. H.:

Address: Hildesheim.

Capital: RM. 2,000,000.

Business: Sugar refinery. Has 11 subsidiaries.

Interest: The Dresdner Bank is connected with this company through interlocking directorates in the persons of Georg Talbot and Carl Wentzel. The latter is chairman of the sugar refinery's board.

(iii) Gemeinnützige Baugesellschaft für Aachen und Burscheid A. G.:

Address: Aix-la-Chapelle.

Capital: RM. 90,000.

Business: Public building construction.

Interest: The Dresdner Bank is connected with this construction company through interlocking directorates. Carl Arthur Pastor, a director of the bank, heads the company's board of directors. The two organizations also have a common director in Georg Talbot.

(iv) Westdeutsche Kaufhof A. G.:

Address: Cologne.

Capital: RM. 27,000,000.

Business: Wholesalers and owners of department stores.

Interest: The chief stockholders in this enterprise, according to latest available information, were the Deutsche Bank, the Dresdner Bank, and the Commerzbank. The Dresdner Bank is connected with the company

through interlocking directors in the persons of Bruno Claussen and Gustav Overbeck. The latter is deputy chairman of the company's board.

(v) Dortmund Ritterbrauerei A. G.:

Address: Dortmund.

Business: Brewery.

Interest: The Bank für Brauindustrie, an investment and holding company in the field of the brewing industry, in which the Dresdner Bank holds a participation, owns 25 percent of the stock of this brewing company. The Dresdner Bank is also connected with Dortmund Ritterbrauerei A. G. through interlocking directors in the persons of Gustav Overbeck and Wilhelm Meinberg.

(vi) Radeberger Exportbierbrauerei A. G.:

Address: Radeberg.

Capital: RM. 6,000,005.

Business: Engaged in the acquisition, lease, and operation of breweries in Germany and abroad and in connected transactions. Has one subsidiary, the Stadtbrauerei Hainschen.

Interest: The principal shareholder in this company is the Bank für Brauindustrie of Berlin, an investment and holding company in which the Dresdner Bank holds the controlling interest.

D. RELATION TO ENTERPRISES OR OTHER BANKING INSTITUTIONS OUTSIDE OF GERMANY

1. Banks and financial companies

(a) *Länderbank Wien, A. G.*

Address: Vienna, Austria.

Capital: RM. 20,000,000.

Business: Second largest commercial bank in Austria, but greatly exceeded in size and importance by the Creditanstalt-Bankverein, Vienna subsidiary of the Deutsche Bank. It has 12 branches in Austria and 36 agencies in Vienna. It finances, for the most part, firms and enterprises of medium size.

Interest: This is a wholly owned subsidiary of the Dresdner Bank; it was formed following the Anschluss by combining the Mercurbank of Vienna, in which the Dresdner Bank was the sole shareholder, with the Vienna branches of the Zivnostenska Banka of Prague and the Banque des Pays de l'Europe Centrale. According to report the Bank of England, which before the war was said to be the largest stockholder in the Banque des Pays de l'Europe Centrale, is seeking to have that institution regain complete or partial control over Austrian and Czech interests which it formerly held.

(b) *Eisenstadler Bank*

Address: Niederdonau, Eisenstadt, Austria.

Capital: RM. 200,000.

Business: Commercial banking.

Interest: This is a wholly owned subsidiary of the Länderbank Wien, and through this last-mentioned bank is controlled by the Dresdner Bank.

(c) *Bohmische Escompte-Bank-"Bebca" (Ceska Eskomptni Banka)*

Address: Prague, Protectorate Bohemia-Moravia (Czechoslovakia).

Capital: RM. 15,000,000.

Business: Commercial and investment banking.

Interest: This is a subsidiary of the Dresdner Bank. It was formerly controlled by the Zivnostenska Banka of Prague and the Belgian holding company Brufina (Ste. de Bruxelles pour la Finance et l'Industrie), with the former the controlling influence. It was strengthened by the absorption of the Bank für Handel und Industrie ehemals Länderbank in Prague, formerly owned by the Banque des Pays de l'Europe Centrale, and several lesser institutions. It also obtained part of the assets of the Prager Kreditbank (formerly Anglo-Prager Kreditbank) which was liquidated.

(d) *Prager Kreditbank (formerly Anglo-Prager Kreditbank)*

Address: Prague, Protectorate Bohemia-Moravia (Czechoslovakia).

Business: This was the fourth largest commercial bank in Prague.

Interest: During the nationalization of banking which followed the German conquest of Czechoslovakia this bank was liquidated and its assets divided among the Deutsche Bank, the Böhmisches Union Bank and the Dresdner Bank's subsidiary, the Böhmisches Escompte-Bank.

(e) *Deutsche Handels- und Kreditbank A. G.*

Address: Bratislava, Slovakia (formerly Czechoslovakia).

Capital: RM. 2,600,000.

Business: General banking. Acting in financing barter transactions chiefly with Germany, but also with other countries such as Turkey. Ten branches in Slovakia.

Interest: In 1939 the Länderbank Wien took over this bank from the Böhmsche Escompte-Bank. It was a small, rather weak bank, but was built up by absorbing from the Escompte-Bank its industrial interests in Slovakia, and taking over various local banks (Bankhaus Frankl, Sillein; Cerehater Bank, Unter-Metzen-seifen; and the Zipser Bank, A. G., Käsemarkt). The Dresdner Bank apparently took over most of the new shares issued during this operation while the Länderbank became the minority holder and a small interest was given to the Böhmsche Escompte-Bank.

(f) *Kroatische Landesbank A. G.*

Address: Zagreb (Agram), Croatia (Yugoslavia).

Capital: RM. 5,000,000.

Business: General banking. Has four branches in Croatia.

Interest: This bank was formerly controlled by the Zivnostenska Banka in Prague which owned the majority of its capital. In 1941 the Dresdner Bank acquired most of the shares held by the Zivno, and at the same time strengthened its interest by doubling the capital of the bank. The Zivno still has an interest of 25 percent.

(g) *Süd-Bank, A. G.*

Address: Belgrade, Serbia (formerly included in Yugoslavia).

Capital: 12,000,000 dinars.

Business: General banking.

Interest: Early in 1944 the Dresdner Bank, together with the Länderbank Wien, established the Süd-Bank A. G. to take over the Belgrade branches of the Kroatische Landesbank. The Dresdner Bank has a two-thirds interest, and a one-third interest was given to the Länderbank Wien.

(h) *Bankverein A. G.*

Address: Belgrade, Serbia (formerly included in Yugoslavia).

Capital: RM. 5,000,000.

Business: Finance international trade.

Interest: The Deutsche Bank controls the Bankverein A. G. of Belgrade through a 13 percent direct interest and through indirect interests of 51 percent held by the Creditanstalt Bankverein of Vienna and 7 percent by the Böhmsche Union-Bank of Prague. The two last-mentioned institutions are subsidiaries of the Deutsche Bank. Small participations in the Bankverein A. G. of Belgrade are also held by the three large Berlin banks, the Dresdner Bank, the Commerzbank, and the Reichs-Kredit-Gesellschaft. This was formerly a branch of the Allgemeine Yugoslavischer Bankverein A. G.

(i) *Banque d'Athènes*

Address: Athens, Greece.

Capital and reserve: 176,000,000 drachmas.

Business: Second largest commercial bank of Greece.

Interest: In 1941 the Dresdner Bank concluded an agreement with the Banque d'Athènes with a view to closer cooperation. Dr. Hans Pilder, of the Dresdner Bank, became a member of the Greek bank's board, although so far as is known the Dresdner Bank did not participate in the capital of that institution. The Banque d'Athènes is still controlled by Greek-Egyptian interests, in particular the Greek banking family, Eliasco. The French bank, the Banque de l'Union Parisienne, holds a minority participation.

(j) *Griechisch-Deutsche Finanzierungs-Gesellschaft A. G. (Ste. Financiere Greco-Allemande S. A.)*

Address: Athens, Greece.

Capital: 35,000,000 drachmas.

Business: Established for the purpose of fostering trade between Greece and Germany. In 1942 was entrusted with the function of cashier or transfer agent of the Deutsche-Griechische Warenausgleichsgesellschaft. This last-mentioned institution fixed the premiums to be paid by Greek importers on imports from Germany, and utilized the funds received for the cheapening of Greek imports

to Germany, a procedure which became necessary because of the rapidly rising price level in Greece, and the unchanged clearing rate of the drachma. The Griechisch-Deutsche Finanzierungs had branches in 120 Greek cities, 3 branches in Egypt, 2 in Cyprus, and an office in London. It owned the Bank of Athens Trust Co., in New York, as well as half the capital of the French-Hellenic Mortgage Bank, in Athens.

(k) *French-Hellenic Mortgage Bank (Banque Hypothecaire Franco-Hellenique)*

Address: Athens, Greece.

Business: General banking.

Interest: The Dresdner Bank would appear to have an indirect interest in this institution through the Griechisch-Deutsche Finanzierungs Ges. (see above).

(l) *Ungarische Allgemeine Kreditbank (Magyar Allános Hitelbank)*

Address: Budapest, Hungary.

Capital: RM. 32,400,000.

Business: Important commercial bank with extensive interests in textile, machinery, electrical and leather industries. As of 1942 it had a large system of branches and controlled 12 Hungarian banks.

Interest: The Dresdner Bank owns a considerable interest in the Ungarische Allgemeine Kreditbank but the exact size of the participation is not known. The bank, established in 1867 by the Rothschild banking group, had come under French influence in 1920 when the Schneider group acquired a considerable block of its shares. In 1941, the Dresdner Bank took over from the Banque des Pays du Nord, Paris, and the Union Europeenne Industrielle et Financiere (both of the Schneider group) their interest in the institution, amounting at that time to 16 percent of the bank's capital. Since the Dresdner Bank had some participation before the acquisition of the French interests and since the Böhmsche Escompte-Bank (controlled by the Dresdner Bank) owned a minority interest in the institution, it is possible that the present participation of the Dresdner Bank group may amount to a majority of the capital. The bank is said to be the main representative of the Dresdner Bank's interests in Hungary.

(m) *Wechselstuben A. G. "Mercur"*

Address: Budapest, Hungary.

Capital: RM. 400,000.

Business: General banking.

Interest: The Dresdner Bank has an indirect interest in this bank through the Länderbank, Austrian subsidiary of the Dresdner Bank which controls Wechselstuben A. G.

(n) *Rumänische Bankanstalt (Societatea Bancara Romana)*

Address: Bucharest, Rumania.

Capital: RM. 5,000,000.

Business: Has been especially active in the financing of German-Rumanian trade. It was formed in 1929 when the Dresdner Bank, in cooperation with associated banks and bankers, transformed its Bucharest branch into a separate corporation under this name. In 1942 the Rumänische Bankanstalt took over the Bucharest branch of the Prager Kreditbank. Has several branches in Rumania.

Interest: The Dresdner Bank has a majority interest of 70 percent, while minority interests are held by the Commerz Bank, of Berlin, and by J. H. Stein, of Cologne.

(o) *Rumänische Kreditbank (Banca de Credit Romana)*

Address: Bucharest, Rumania.

Capital: RM. 10,000,000.

Business: General banking.

Interest: It is believed that the Dresdner Bank holds a small participation in the Rumänische Kreditbank, and that a larger interest is held by the Reichs-Kredit-Gesellschaft.

(p) *Bulgarische Handelsbank (Banka Bulgarski Kredit)*

Address: Ruse, Bulgaria (legal address); Sofia, Bulgaria (head operating office).

Capital: RM. 1,800,000.

Business: Third largest commercial bank in Bulgaria. Besides two Sofia branches it maintains branches in 16 provincial towns. It exercises considerable influence over the national economy, controlling, among others, two provincial

banks, the Banque Commerciale de la Bulgarie du Sud and the Banque Commerciale Vidine, as well as a series of enterprises in the coal mining, textile, electrical and cement industries.

Although the bank is said to be Government-controlled, the financially powerful Bulgarian family, the Gubidelnikous, among the most important financial and industrial groups in southeastern Europe, are believed to be the principal stockholders. It is estimated that about one-third of the bank's capital is on deposit with the French investment bank, Banque de Paris et des Pays Bas (Paribas), which is said to have owned, since the early twenties, a minority interest in the Bulgarian institution. The Bulgarische Handelsbank suffered considerable losses, however, in the banking crisis of the early thirties, and Paribas withdrew as an active stockholder without relinquishing its participation.

Interest: In December 1941 the Dresdner Bank and its subsidiary, the Länderbank Wien concluded a "friendship agreement" with the Bulgarische Handelsbank with a view to closer cooperation. The Dresdner Bank is believed to have bought up some minor Bulgarian holdings in the Bulgarische Handelsbank, and to have made an arrangement with Paribas, allowing the Dresdner Bank to exercise the Paribas rights without acquiring the Paribas participation in the Bulgarian bank.

(g) *Deutsche Orientbank*

Address: Istanbul and Izmir, Turkey.

Business and interest: The Deutsche Orientbank was organized in 1906 by a group of German banks but control was eventually gained, through mergers, by the Dresdner Bank. In 1931 the Dresdner Bank took over in its own name the two Egyptian branches of the Orientbank, and later absorbed the Orientbank, which retains the name, Deutsche Orientbank, and under that title operates the two Turkish branches of the Dresdner Bank.

(r) *Kommerzialbank A. G.*

Address: Cracow, Government General (Poland).

Capital: RM. 2,500,000.

Business: General banking. Has branches in Cracow and Lwow, Poland.

Interest: This bank was owned by the Länderbank Wien (a successor to the Mercurbank) until 1940 when the Dresdner Bank took over the participation.

(s) *Ostbank A. G.*

Address: Posen, Wartheland (Poland).

Capital: RM. 3,000,000.

Business: Regional bank with a series of branches.

Interest: Prior to 1940 the Dresdner Bank had an interest of 30 percent in this bank. This interest was considerably increased in 1940 and the Ostbank became a subsidiary of the Dresdner Bank. It took over the Dresdner Bank's branch at Poznan in 1940.

(t) *Handels-und-Kreditbank A. G.*

Address: Riga, Ostland (Latvia).

Capital: RM. 1,000,000.

Business: Commercial banking.

Interest: This bank is a subsidiary of the Dresdner Bank. It was developed in 1941 through the merger of three pre-1939 participations of the Dresdner Bank: A. G. Libauer Bank, Riga (Liepajas Banka); Litauische Kommerzbank, Kovno, Lithuania (Lietuvos Komercijos Bankas); and the Dorpater Bank, Reval, Esthonia (A. S. Tartu Bank, Tallinn).

(u) *Handelstrust West N. V.*

Address: Amsterdam, Holland.

Capital: 1,000,000 gulden.

Business: General banking. Opened branch in The Hague in 1942. May have taken over the assets of the banking firm, Hamburger & Co., in which the Dresdner Bank formerly had an interest and which was liquidated because of its Jewish management.

Interest: This bank was established by the Dresdner Bank in 1939 and has been operated as a subsidiary.

(v) *Bank voor Noord Nederland*

Address: Groningen, Holland.

Capital: 100,000 gulden.

Business: Local institution, reportedly established for political purposes because of its strategic location close to the German border. It was hoped to bring the Dutch province of Groningen within the sphere of Nazi financial influence.

Interest: Established by the German bank, Oldenburgische Landesbank, a subsidiary of the Dresdner Bank.

(w) *Bank voor West-Europeeschen-Handel (Bank for West European Trade)*

Address: Amsterdam, Holland.

Business: This Dutch bank was founded in 1940 by the German "big banks" under the leadership of the Deutsche Bank and the Dresdner Bank. It is reported that its purpose was the financing of international trade.

Interest: Jointly controlled by the Dresdner Bank with other Berliner Grossbanken.

(x) *Continental Bank S. A./N.V.*

Address: Brussels.

Capital: 25,000,000 Belgian francs.

Business: Its main purpose was the financing of the international potash-syndicate. In 1942 it opened a branch in Antwerp. It is closely affiliated with the Dutch Bank of the same name.

Interest: This Belgian bank was founded by the Dresdner Bank and its subsidiary. Since the liberation of Belgium its assets have been sequestered by the Belgian Government.

(y) *Internationale Bank Luxemburg A. G.*

Address: Luxemburg.

Capital: RM. 3,000,000.

Business: Commercial and investment banking.

Interest: The Dresdner Bank formerly held a minority participation which it increased in 1940 at the expense of the Banque de Bruxelles and the Banque de l'Union Parisienne, earlier majority holders. The Dresdner Bank now owns a 50 percent interest, while the German banking firms, Pferdmeiges und Co., of Cologne, and Delbrück, Schickler und Co., of Berlin, hold 13 and 5 percent respectively; 22 percent is held by Luxemburg citizens, while the Banque de Bruxelles and the Banque de l'Union Parisienne now own only 5 percent each.

(z) *Luxemburger Bank A. G.*

Address: Luxemburg.

Business: Holding company devised to administer capital participations in the banks which control the Internationale Bank.

Interest: The Dresdner Bank appears to have an indirect interest in this holding company through the Internationale Bank.

(a-2) *Banco Germanico de la America del Sur*

Address: Madrid, Spain.

Capital: 3,000,000 pesetas.

Business: This is a subsidiary of the Deutsch-Südamerikanische Bank, Berlin and Hamburg, German bank for South American trade.

Interest: The Dresdner Bank controls the Banco Germanico de la America del Sur through the Deutsch-Südamerikanische Bank, which the Dresdner Bank owns.

(b-2) *Bank of Athens Trust Co.*

Address: 205 West Thirty-third Street, New York, United States of America.

Capital: \$500,000.

Business: General banking administration of trusts, estates, etc.

Interest: The Dresdner Bank would appear to have an indirect interest in the Bank of Athens Trust Co. through the Griechisch-Deutsche Finanzierungs-Ges., which owns the Bank of Athens. The Dresdner Bank owns half the capital of the Griechisch-Deutsche Finanzierungs-Ges.

(c-2) *Deutsche Asiatische Bank*

Address: Shanghai, China (head office).

Capital: RM. 3,400,000 (1938).

Business: Finance trade with the Far East. In 1938 it had two branches in Germany (Berlin and Hamburg) and six in China.

Interest: This bank was established as a joint enterprise of the Dresdner Bank and the other Berliner Grossbanken.

*2. Industries**(a) Steyr-Daimler-Puch AG. (Steyr Werke)*

Address: Vienna, Austria.

Business: Largest Austrian automobile concern which during the war was engaged in the manufacture of armaments. It is controlled by the Hermann Göring combine.

Interest: The Dresdner Bank may have an indirect interest in this company through its subsidiary, the Länderbank Wien, which, since the beginning of World War II assisted the Creditanstalt Bankverein of Vienna in underwriting an issue of RM. 50,000,000 bonds of the Steyr enterprise.

(b) Kontinentale Rohstoff- und Papier-Industrie (Kontag)

Address: Austria.

Business: Cellulose and paper manufacturing enterprise, successor to the Aryanized Bunzl & Biach, which had been the largest cellulose concern in Austria.

Interest: During the Aryanization proceedings the Creditanstalt-Bankverein, Austrian subsidiary of the Deutsche Bank, acquired a majority interest in Kontag. At the same time the Länderbank Wien, subsidiary of the Dresdner Bank, acquired a smaller interest in the firm.

(c) Gebr. Boehler & Co. A. G.

Address: Vienna, Austria.

Business: Important Austrian steel company.

Interest: The Länderbank Wien, Austrian subsidiary of the Dresdner Bank, assisted in underwriting a bond issue of this firm in 1941.

E. MANAGEMENT PERSONNEL

Names of directors, etc. (1944)

Management committee:

Alfred Busch.
Alfred Hölling.
Carl Lüer.
Emil H. Meyer.
Gustav Overbeck.
Hans Alder.
Karl Rasche.
Hans Schippel.
Hugo Zinsser.

Board of directors:

Carl Goetz, chairman.
Wilhelm Meinberg, vice chairman.
Wilhelm Kisskalt, vice chairman.
Hellmuth Röhnert, vice chairman.
John von Berenberg-Gossler (died July 14, 1943).
Fritz Dreysel (died March 11, 1943).
Wilhelm Avieny.
Bruno Claussen.
Erwin Dircks.
Albert, Baron Dufour von Feronce.
Friedrich Flick.

Board of directors—Continued

August Goetz.
Werner Habig.
Ernst Henke.
Karl Heinz Heuser.
Otto Kämper (retired May 6, 1943).
Heinrich Koppenberg.
Fritz Kranefuss.
Alfred Krupp von Bohlen und Halbach.
Karl Lindemann.
Ewald Löser (retired May 6, 1943).
Carl Arthur Pastor.
Karl Pfeiffer.
Hans Carl Scheibler.
Walther Schieber.
C. Ottl Schmelzer.
Heinrich Schmidt.
Georg Talbot.
Hans Ullrich.
Hans Walz.
Carl Wentzel.
Joseph Wiehen.

Wilhelm Avieny

Wilhelm Avieny, prominently associated with the I. G. Farben affiliate, Metallgesellschaft A. G., Frankfurt am Main, in the capacity of chairman of the board of directors, a Nazi industrial profiteer in good standing with the party, is a member of the supervisory board of the Dresdner Bank (since May 1943), general director of the Nassau Landesbank in Wiesbaden, and a member of the supervisory board of the Deutsche Bank. He is active in the fields of banking and industry.

Avieny was born in the town of Wiesbaden on November 21, 1897. He is said to be a very aggressive type of individual, and a frequent spokesman for Nazi policies. His good standing with the party is evidenced by two important positions he holds, that of Wehrwirtschaftsführer (leader of the war economy program, and Reichswirtschaftsrichter (judge of the National Economic Court).

He is also Gau economic adviser of Hessen Nassau (Gauwirtschaftsführer). In 1938 Avieny was proposed by Hitler as a member of the Reichstag.

Wilhelm Avieny's chief industrial connection is with Metallgesellschaft A. G., of which he is a director. This company is an outstanding German industrial concern, or Metal Trust, and holds a dominant position in the nonferrous metals and related industrial spheres. Its position is analogous to that occupied by I. G. Farben in the domain of chemicals and general synthetic raw materials.

When the presidency in the Metallgesellschaft became vacant a few years ago, Avieny, a politically expedient party man, was put into the key position. Manifestly lacking in both executive ability and industrial training, serving merely in a minor clerical capacity in the pre-Hitler period, Avieny was looked upon by the industrial groups who put him into his position as a party stooge. It was agreed that he would be assisted in his duties by a trained industrialist named Kissel, son-in-law of the late Professor Bosch, and former head of I. G. Farben.

Wilhelm Avieny's address is 45 Anlarge, Bockenheimer. His political, banking, and industrial connections are as follows:

Political.—Wehrwirtschaftsführer—Leader in war economy system.

Reichswirtschaftsrichter—Judge of the National Economic Court.

Gauwirtschaftsführer—Gau economic adviser of Hessen Nassau.

Industrie und Handelskammer für das Rhein-Mainische Wirtschaftsgebiet, Frankfurt am Main (chamber of commerce)—Assistant director.

Akademie für Deutsches Recht, Ausschuss für G. m. b. H. Recht, Berlin (Academy of German Law and Corporate Law)—Member.

Reichsarbeitskammer, Berlin (Department of Labor)—Member.

Wirtschaftskammer Hessen, Frankfurt am Main (chamber of commerce)—Member of the advisory board.

Banking.—Deutsche Reichsbank, Berlin—Member of the advisory board.

Reichsgruppe Banken, Berlin (central body for banking supervision)—Member of the advisory board.

Dresdner Bank—Director (1944).

Reichsgruppe Banken, Bezirk, Hessen (arbitrator of the German banking group)—Regional chief.

Nassau Landesbank, Wiesbaden—General director.

Industry.—Metal: Metallgesellschaft A. G., Frankfurt am Main (large mining and metal-working combine)—Chairman of board of directors; member of advisory committee.

Norddeutsche Affinerie, Hamburg (subsidiary of Metallgesellschaft)—Chairman of board of directors.

Sachtleben A. G. für Bergbau und Chemische Industrie, Cologne (subsidiary of Metallgesellschaft)—Chairman of board of directors.

Vereinigte Deutsche Metallwerke A. G., Frankfurt am Main (subsidiary of Metallgesellschaft)—Chairman of board of directors.

Unterweser Reederei A. G., Bremen (subsidiary of Metallgesellschaft)—Deputy chairman of board of advisers.

Deutsche Gold- und Silver-Scheidenstalt vormals Roessler, Frankfurt am Main—Director.

Neue Baugesellschaft Wayes & Freytag A. G., Frankfurt am Main (construction company)—Deputy chairman of board of directors.

Vereinigte Aluminium Werke A. G., Berlin (subsidiary of Vereinigte Industrie-Unternehmungen A. G., Berlin (VIAG))—Deputy chairman of board of directors.

Public utilities.—Elektrizitäts A. G., vormals W. Lahmeyer & Co., Frankfurt am Main (electric public utility)—Deputy chairman of board of directors.

Telefonbau und Normalzeit G. m. b. H., Frankfurt am Main (telephone company, probably public utility)—Deputy chairman of board of directors.

Air lines: Südwestdeutsche Flugbetriebs A. G., Rhein Main, Frankfurt am Main—Deputy chairman of board of directors.

Miscellaneous: Ernest Leitz G. m. b. H., Wetzlar—Deputy chairman of board of directors.

Andreas-Noris Zahn A. G., Bremen—Director.

Alfred Busch

Alfred Busch, a member of the management committee of the Dresdner Bank, was formerly connected with the Deutsche Bank.

Busch is spoken of as an efficient man with political ambitions. It has also been said that he is not a Nazi, but there is no confirmation for this. The statement is possibly based upon the fact that he was originally sponsored by S. Ritscher, an outstanding Jewish banker.

Dr. Bruno Claussen

Dr. Claussen, formerly State Secretary in the Prussian Council, is now a privy counselor of the Government and is prominent in banking and industrial circles. He is a director of the Dresdner Bank, and is chairman of the boards of several companies engaged in such diverse activities as the manufacture of cement, machines, and combustibles.

Early background.—He was born in Itzehoe/Holstein in 1884 and attended local schools in Meldorf and Ratzeburg. He pursued his studies in law and political economy at the Universities of Grenoble, Tübingen, Berlin, and Kiel. His military service included action as first lieutenant of marksmen during the First World War.

His professional career has been as follows:

1911-14—Government lawyer in the subprefect's office at Kemper-on-the-Rhine.

1916—Attached to the War Food Supply Office.

1919-20—Representative of War Food Supply in Budapest and in the occupied Rhine territories.

1920—Ministerial adviser for the occupied Rhine territories.

1926—Entered the Reich Ministry of Economy.

1933—Secretary in the Prussian Ministry for Economy and Labor.

1934—Member of the Prussian Council. Retired temporarily. Nothing further is reported concerning him until 1942.

His financial and commercial affiliations were the following in 1942:

Banking.—Dresdner Bank, Berlin—Director.

Commerzbank, Berlin—Director.

Allgemeine Deutsche Credit-Anstalt, Leipzig—Director.

Commercial.—Trading companies: A. G. für Verkehrswesen, Berlin—Director.

Westdeutsche Kaufhof A. G., Cologne—Director.

Industrial.—Cement works: Dyckerhoff-Portland-Zementwerke A. G., Mainz-Amoenburg—Chairman of board of directors.

Machine tools: G. Karger, Fabrik für Werkzeugmaschinen A. G., Berlin—Chairman of board of directors.

Combustibles: Deutsche Zundwaren-Monopol-Gesellschaft, Berlin—Chairman of board of directors.

Gustav Herman Erwin Dircks

Gustav Herman Erwin Dircks, a member of the board of directors of the Dresdner Bank, the second largest bank in Germany, is connected with the corn products refining and cement industries. He is chairman of the management committee of the Deutsche Maizena Werke A. G., and also a director of W. A. Scholten Starke und Syrup Fabriken A. G., Finkenheerde Obstwerke R. Sonnenburg, A. G. fuer Maisverarbeitung and Norddeutsche Eiswerke A. G., subsidiaries of Deutsche Maizena Werke A. G.

Deutsche Maizena Werke A. G. is a large corn products company with factories and warehouses both in Germany and in a number of other European countries. Corn Products Refining Co. of New York is the majority stockholder in the company. One of the directors of Deutsche Maizena Werke is Count Bode von Alvensleben, a man with exceptionally close connections with German heavy industry. Von Alvensleben was in 1932 the president of the exclusive Herrenklub which counted as its members the high Junker nobility and the large German industrialists. Together with von Papen he is alleged to have brought Hitler and heavy industry together. Walter E. Dircks, who in 1941 gave the New York office of the Corn Products Refining Co. as his address, is probably a relative of Erwin Dircks, as the two appeared to maintain a close contact.

Erwin Dircks' interest in the portland cement industry is indicated by the fact that he is a director of Norddeutsche Portland-Cement-Fabrik Misburg A. G., and of its subsidiaries Portland Cementwerke Schwanebeck A. G., Misburger Portland-Cementfabrik Kronsberg A. G., and Portland-cementfabrik Alemannia A. G.

In 1941 Dircks has assets of \$6,186 in the United States representing mainly stock in Corn Products Refining Co.

Erwin Dircks was born on April 10, 1881, in Hamburg and resides at Heilwigstrasse 61, Hamburg. His financial and business connections are as follows:

Banking.—Dresdner Bank, Berlin—member, board of directors.

Gesellschaft fuer Industriebeteili m. b. H., Hamburg (industrial holding company)—Manager.

Industry.—Cement: Norddeutsche Portland-Cement-Fabrik Misburg A. G., Misburg; (cement)—Deputy chairman of the advisory board.

Portland Cementwerk Schwanebeck A. G., Schwanebeck, Kreis Oesherleben/Bode (cement)—Deputy chairman of the advisory board.

Portland-cementfabrik Alemannia A. G., Höver (cement)—Chairman, board of directors.

Misburger Portland-Cement Fabrik Kronsberg A. G., Misburg bei Hannover (cement)—Member, board of directors.

Chemicals: P. Beiersdorf & Co. A. G., Hamburg (chemical products)—Member, board of directors.

Chemische Fabrik von Heyden A. G., Radebeul (chemicals)—Member, board of directors.

Food products: Deutsche Maizena Werke A. G., Hamburg (corn products)—Chairman, bank committee.

Finkenheerder Obstwerke Richard Sonnenburg A. G. (sirup)—Chairman, board of directors.

W. A. Scholten, Starke und Syrup-Fabriken A. G., Brandenburg a. H. (starch and sirup)—Chairman, board of directors.

Aktien-Malsfabrik Landsberg bei Halle (malt)—Deputy chairman of the advisory board.

Münchner Export-Malzfabrik München A. G., Munech (malt export)—Deputy chairman of the advisory board.

A. G. fuer Maisverarbeitung, Bratislava/Slawakei (corn processing)—Member, board of directors.

Suddeutsche Zucker A. G., Mannheim (sugar)—Member, board of directors.

Mondemin, Berlin (pudding powders)—Directors.

Karl. Fr. Tollner, Nahrungsmittel-Fabrik, Bremen (sirups)—Director.

Saatzuchtwirtschaft C. Braune, Berneburg, Germany (beet-sugar seed)—Director.

C. H. Knorr A. G., Heilbornn/Neckoi (food and grocery products)—Deputy chairman of the advisory board.

Corn Products Co. S. A., Antwerp, Belgium (sales organization)—Director.

Akt. Corn Products Co., Copenhagen, Denmark (sale organization)—Director.

N. V. Corn Products Co., Amsterdam, Holland (sales organization)—Director.

Transportation: Transport und Lagerhaus, Barby, Germany (transport and warehouse Co.)—Director.

Miscellaneous.—Norddeutsche Eiswerke A. G., Berlin (ice works and refrigerated warehouses)—Deputy chairman of the advisory board.

Seidel & Naumann A. G., Dresden (special machinery, typewriters, bicycles)—Member, board of directors.

E. Gundlach A. G., Bielefeld (stationery, printing and wrapping paper)—Member, board of directors.

Ottensener Eisenwerke A. G., Hamburg, Ottensen (iron works)—Member, board of directors.

Maisena Haus G. m. b. H., Hamburg (warehousing)—Officer.

Baron Albert Dufour von Feronce

Baron Albert Dufour von Feronce is a director of the Dresdner Bank in Berlin and of the Deutsch-Südamerikanische Bank, A. G., which is a wholly owned overseas subsidiary of the Dresdner Bank. In addition he has several connections in industry in such fields as glass manufacture, brewing, textiles, etc.

Baron Feronce was born on May 14, 1868, in London, England, and his last known address is 7 Rauchstrasse, Berlin W-35. His affiliations as of 1942, were reported as follows:

Banking.—Dresdner Bank, Berlin—Director.

Deutsch-Südamerikanische Bank A. G., Berlin (capital R.M. 20,000,000, wholly owned by the Dresdner Bank; this bank was incorporated in Germany but does business in South America)—Director.

Industrial.—C. Lorenz A. G., Berlin-Tempelhof (production of telephone apparatus, telegraph installations, etc.; has interests in seven companies, among which is the Dutch company, N. V. Stabilovolt (in liquidation), The Hague; capital in 1938 R.M. 9,500,000; one of the members of the management committee of the Dresdner Bank is on the board of directors of this company)—Deputy chairman of the advisory board.

Engelhardt-Brauerei A. G., Berlin (production of beer; has nine subsidiaries, and the Dresdner Bank is its principal shareholder, with 50 percent interest)—Director.

Otto Stumpf A. G., Leipzig (wholesale trade in the manufacture of pharmaceutical biological and cosmetic preparations, medicinal and medical products; has branches in 10 cities; capital (1938), R.M. 700,000)—Director.

Neue Glasindustrie G. m. b. H., Wisswasser/O. L. (glass)—Member of the advisory board.

Woltex Woll- und Textilhandels A. G., Berlin (wool and textile trading)—Deputy chairman of the advisory board.

Treuhand-Vereinigung A. G., Berlin (trust and auditing business; has several branches; capital in 1938, R.M. 175,000; the chairman of the board of this company is a substitute member of the management committee of the Dresdner Bank)—Deputy chairman of the advisory board.

Friedrich Flick

Friedrich Flick, the creator and head of one of Germany's largest industrial concerns, established this gigantic combine through his money, speculation, and political influence. By dint of persistence in attempts to consolidate the iron industry he eventually brought under his control in 1926 the Vereinigte Stahlwerke, now Germany's largest industrial concern; and about the same time founded the Mitteldeutsche Stahlwerke, another large steel organization.

Individually, Flick now controls a very large proportion of the Reich's steel production as well as the country's biggest lignite fields; with Goering he rules the entire Ruhr coal region; and ever since the Nazi Party reportedly took over the vast Thyssen holdings, Flick became the latter's successor as the dominant power in the joint steel and coal combines.

Flick is a member of the advisory board of the Deutsche Reichsbank and a director of the Dresdner Bank. He is a director of the war economy program and holds a leading position in industries directly controlling production for the war machine. He is also a member of the Russland-Ausschuss der Deutschen Wirtschaft, presumably part of a premature plan to convert to Germany's use the tremendous natural resources of Russia's mines. In October 1943, on his sixtieth birthday, Flick was hailed in the Nazi press as a great industrial leader.

Collaboration with the Government.—(A) *Industrial transactions.*—1. Vereinigte Stahlwerke: In 1931, during the industrial crisis, the German Government was forced to purchase from Flick the most important firm of the Vereinigte Stahlwerke in order to prevent its falling into foreign hands. Apparently Flick had offered this firm to a French representative of heavy industry, presumably Schneider-Creusot, and had greatly enraged German political circles. The Government paid Flick 167 percent of the actual value of the firm in order to prevent the sale to a foreigner.

2. Goering exchange: In 1938 Flick was permitted by Goering to acquire the lignite mines in Germany which were being Aryanized and wrested from their former Jewish ownership, the prominent Czechoslovakian Petschek family. It is reported that this transaction cost Flick \$6,325,000, and was paid from the German Government's dollar funds in the United States. From this purchase Flick obtained controlling interest in Werschen-Weissenfelsen Braunkohlen A. G. and the Anhaltische Kohlen Werke A. G., together with their coal selling agency. (For some unaccountable reason these companies are not listed officially in 1942 with Flick's other connections. It may be that this information has been withheld from the public because the deal required payment by use of Government dollar assets in the United States.) In return for the right to purchase these mines Flick transferred to Goering one-third ownership of the important Harpener Bergbau coal mines, which are reported to be a coal foundation of the vast Goering Werke and of which he is chairman of the board.

3. Occupied countries: Following the Nazi invasion and occupation of the countries of Europe, Flick shared in the spoils of conquest, particularly in Lorraine, Austria, Belgium, and the Baltic countries. In addition, his other war gains have been Bergwerke und Hutten A. G., Austria, and Sud Chemie A. G., Munich, (in which he installed his nephew as chairman of the board of directors), neither of which is listed among his 1942 affiliations.

(B) *Political service.*—Politically, Flick has remained in the background. His name is hardly known, yet he is probably the greatest wire puller in Nazi Germany. Current rumors are that he is probably lying low hoping to pass as a moderate after the capitulation of Germany.

Before 1931, Flick financed the Deutsche Volkspartei and the Deutsche Nationale Partei. Utilizing his director, Steinbrinck (who was on excellent terms with Keppler and Himmler), and Ernst Tengelman (who was close to Goering), Flick won his way into the party. In addition, his money and industrial power paved the way for a complete understanding with the National Socialists.

It has been reported that with Krupp and Thyssen, Flick financed the German administrations' secret service by running it as a private enterprise (after the Versailles Treaty forbade its continuance) and by hiring its director, Colonel Nicolai, as a private employee.

His financial and industrial connections were the following in 1942:

Financial.—Banking: Dresdner Bank, Berlin—Director.

Deutsche Reichsbank, Berlin—Member of the advisory board.

Insurance: Allianz Versicherungs A. G., Berlin (capitalized at RM. 16,000,000, it is one of the largest insurance companies in Europe; allegedly controlled by Merck Finck & Co. (Hitler's private banker) through Münchener Rückversicherungs Gesellschaft)—Director.

Personal holding companies: Friedrich Flick K. G., Dusseldorf (personal property of Flick and holding company for all his major interests)—Owner.

Metafina: Holding company established after World War I in the Netherlands to protect his personal fortune. During the inflationary period in Germany in the twenties, he transferred considerable amounts to Holland and Switzerland. One of his intimate friends was Franz Koenigs, of Rhodius Koenigs Handelsmaatschappij in Amsterdam, with whom he succeeded in gaining control of a great number of old Rheinisch Westfälisches Werke.

Industrial.—Steel works: Vereinigte Stahlwerke A. G., Dusseldorf (German Steel Trust)—Director.

Mitteldeutsche Stahlwerke A. G., Riesa/Elbe (majority ownership held by Friedrich Flick K. G.; may be termed the No. 2 holding entity of the Flick enterprises; it is capitalized at RM. 28,000,000)—Chairman of board of directors.

Sächsische Guss-stahl Werke Döhlen A. G., Freital—Chairman of board of directors.

Hochofenwerk Lubeck A. G., Lubeck Herrenwyk (blast furnaces; regarded as one of Flick's war organizations. Its other directors include Thyssen, Tengelmänn, Kappenberg, and von Schroder)—Chairman of board of directors.

Rombacher Huttenwerke G. m. b. H., Rombach/Westmark (foundries; acquired after the Nazi occupation of Lorraine)—Chairman of board of directors.

Mining—Iron and coal:

Eisenwerke-Ges. Maximilianshütte, Sulzback-Rosenberg-Hütte (iron works; 80 percent owned by Mitteldeutsche Stahlwerke, above)—Chairman of board of directors.

Harpener Bergbau A. G., Dortmund (subsidiary of Eisenwerke Ges. Maximilianshütte, above; one-third owned by Hermann Goering; its directorate includes some of Germany's most prominent industrialists: Kurt von Schroder; Kimmich; von Vlissingen, the notorious Dutch Nazi; and Ernst Tengelmänn who is alleged to have brought Goering and Flick together when the Nazis came into power)—Chairman of the board of directors.

Gewerkschaft des Steinkohlen- und Eisenstein-Bergwerks "Sieben-planeten", Dortmund (coal and iron mines)—Member of mining management committee.

Anhaltische Kohlenwerke, Berlin—Chairman of board of directors.

Essener Steinkohlenbergwerke A. G., Essen (reputedly bought by Flick from the Stahlverein)—Chairman of board of directors.

Rheinische A. G. für Braunkohlen-Bergbau u. Brikettfabrikation, Köln (coal and lignite; capitalized at RM. 72,900,000; other directors are Thyssen, Schroder, and Völger; affiliated with Rheinisch-Westfälisches Elektrizitäts-werke through one of its subsidiaries)—Director.

Heavy machinery: Linke-Hofmann-Werke A. G., Breslau (subsidiary of Mitteldeutsche Stahlwerke, above)—Deputy chairman of advisory board.

Siegener Maschinenbau A. G., Siegen (owned by the Weiss family; its total assets in 1937 were RM. 7,500,000; does not appear to be affiliated with Vereinigte Stahlwerke)—Deputy chairman of the advisory board.

Waggon- und Maschinenfabrik A. G., vorm. Busch, Bautzen (railroad cars and machinery; two other directors, Otto Steinbrinck and Friedrich Moller, are also on the board of Mitteldeutsche Stahlwerke, above)—Deputy chairman of advisory board.

Munitions: Dynamit A. G., vormals Alfred Nobel & Co., Hamburg (majority stock held by I. G. Farben; another director is Tengelmänn)—Director.

Electricity: Allgemeine Elektrische Gesellschaft (electrical combine with subsidiaries all over the world; in 1937 it was reputed capitalized at RM. 120,000,000, with total assets of RM. 431,000,000; at that time each of the following owned 25 percent of the stock of AEG: International General Electric of New York; Gesellschaft für Elektrische Unternehmungen; and Ludwig Lowe A. G.; its board

included Loser of the Krupp empire, Gunther Quandt, Otto Wolff, and Baldwin and Minor of International General Electrical)—Director.

Chemicals and pharmaceuticals: Schering A. G., Berlin (also owns 21.43 percent interest in Concordia Bergbau, majority control of which is vested in Vereinigte Stahlwerke, above)—Director.

Transportation: Allgemeine Transportanlagen G m b H., Leipzig—Director.

Political.—Wehrwirtschaftsführer—Leader of the war economy.

Carl Goetz

Carl Goetz, member of the advisory board of the Deutsche Reichsbank, and chairman of the board of the Dresdner Bank, is prominent in the implementation of the financial and industrial structure of the Nazi economy. In addition to his insurance and banking connections he is affiliated with almost every important financial combine operating on behalf of the German war machine.

Outstanding among those associations are: Vereinigte Stahlwerke, Allgemeine Elektrizitäts Gesellschaft (AEG), Friedrich Krupp, and Gesellschaft für Elektrische Unternehmungen. He is also affiliated with the directors of the above enterprises in numerous mutual undertakings which are basic to the war effort.

Goetz was born in 1885. He is reported to be an expert in international finance and at one time was in charge of the foreign business of the Commerzbank. His financial and industrial associations were the following in 1942:

Financial.—Banking: Deutsche Reichsbank—Member of the advisory board.

Dresdner Bank—Chairman of board of directors.

Deutsche-Südamerikanische Bank (wholly owned subsidiary of the Dresdner Bank, above; its assets in 1942 were reported as RM. 79,000,000; it maintains branches in South America and was regarded before the war as one of the most important German financial spearheads in South America)—Chairman of board of directors.

Sächsische Bodenkredit Anstalt (mortgage bank; majority control vested in the Dresdner Bank, above)—Chairman of board of directors.

International Bank in Luxembourg (50 percent owned by Dresdner Bank, above)—Vice president.

Insurance: Münchner Rückversicherungs-Gesellschaft, Munich—Director.

Allianz Versicherungs A. G., Berlin (50 percent owned by Münchner Rückversicherungs-Gesellschaft, Munich, above capitalized at RM. 60,000,000; the director is the industrialist, Friedrich Flick.)—Director.

Industrial.—Steel: Vereinigte Stahlwerke (steel trust; in 1939, capitalized at RM. 460,000,000, with total assets of RM. 1,864,014,000; its directorate includes some of the most important financiers and industrialists of the country)—Director (member of the executive council in 1938).

Rheinische Stahlwerke A. G., Essen (capitalized at RM. 150,000,000; it is a member of the Rheinisch-Westfälisches Kohlensyndikat and numbers among its directors Hermann Schmitz, of I. G. Farben, and Otto Wolff, of the Wolff enterprises.)—Director.

Armaments: Fried Krupp, Essen—Director.

Meuser Werke A. G., Oberndorf (fully owned by Deutsche Waffen und Munitionsfabriken A. G., allegedly affiliated with the Goering Werke.)—Director.

Electrical: Gesellschaft für Elektrische Unternehmungen A. G., Berlin (a large holding company, capitalized at RM. 80,000,000 and controls numerous important subsidiaries)—Deputy chairman of advisory board.

Allgemeine Elektrizitäts Gesellschaft, AEG (electric trust, 25 percent owned by Gesellschaft für Elektrische Unternehmungen, above, and 25 percent owned by International General Electric of New York)—Deputy chairman of advisory board.

Schlesische Elektrizitäts und Gas A. G., Gleiwitz (hydroelectric, and gas bombs; subsidiary of Gesellschaft für Elektrische Unternehmungen, above.)—Chairman of board of directors.

Rheinisch-Westfälisches Elektrizitäts werke A. G., Essen (capitalized at RM. 246,000,000; its directorate also includes Vögler and Thyssen, of Vereinigte Stahlwerke)—Director.

Mining: Harpener Bergbau A. G., Dortmund (one of the largest mining works in Germany; outstanding industrialists such as Flick, Kimmich, and Kurt von Schroder, comprises its directorate)—Director.

Machinery and construction: Alderwerke, vorm. Heinrich Kleyer A. G., Frankfurt (also has branch in South America)—Chairman of board of directors.

Grün und Bilfinger A. G., Mannheim (engineering and construction; also operates through its established offices in Belgium, Portugal, and Argentina)—Director.

Chemicals: Salzdefurth, A. G., Berlin (chemicals, potash, and salt enterprises controlled by Deutsche Bank, Dresdner Bank, and Deutsche Solvay Werke. Member of the Potash cartel)—Deputy chairman.

Deutsche Gold- und Silber-Scheideanstalt, vorm. Roessler, Frankfurt (fine metals and chemicals; sixth largest chemical producer in Germany; it maintains 53 plants in 5 countries. It is capitalized at RM. 76,500,000, half of which is invested in its subsidiaries)—Deputy chairman of the advisory board.

Cellulose: Zellstoffabrik Walhof, Berlin—Deputy chairman.

Political.—Gemeinschaftsrat der Gemeinschaftsgruppe Deutscher Hypothekenbanker, Berlin (mortgage bank association)—Member of executive committee.

August Goetz

August Goetz, a director of Dresdner Bank, is also deputy chairman of the advisory board of the large German electrical combine, Allgemeine Elektrizitäts Gesellschaft and connected with many other important electric companies tied together by common interests.

He is a member of the advisory board of Reichsautobahnen of Berlin, a governmental agency concerned with the administration of national motor roads.

Goetz's last known address is 10 Albrechtstrasse, Berlin-Lichterfelde. His commercial and financial affiliations were reported as follows:

Political.—Reichsautobahnen, Berlin (corporaion for the administration of national motor roads)—Member of the advisory board.

Banking.—Dresdner Bank—Director.

Industrial.—Allgemeine Elektrizitäts Gesellschaft, Berlin—Deputy chairman of the advisory board.

Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G., Berlin (company for electric enterprises)—Member of the management committee.

Hirsch Kupfer- und Messingwerke A. G., Berlin (copper and steel metal works, 79.2 percent owned by Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Chairman of the board of directors.

NSF Nurnberger Schraubenfabrik und Elektrowerke G. m. b. H., Nurnberg (production of screws of all kinds and radio parts; 100 percent owned by Gesellschaft für Elektrische Unternehmungen A. G.)—Chairman of the board of directors.

Typograph G. m. b. H., Berlin (94 percent owned by Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Chairman of the board of directors.

Vereinigte Isolatorenwerke A. G. (Viacowerke), Berlin (plastic material for insulation; 43.4 percent of common stock and 50 percent of preferred stock owned by Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Chairman of the board of directors.

Richard Weber G. m. b. H., Berlin (not listed)—Chairman of the board of directors.

A. G. für Elektrische und Verkehrs-Unternehmungen, Budapest, Hungary (electric company; 35 percent owned by Allgemeine Elektrizitäts Gesellschaft)—Deputy chairman of the advisory board.

Volta-Werke Elektrizitäts A. G., Berlin (electric company; 95 percent owned by Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Chairman of the board of directors.

Agg-Flugzeugwerke G. m. b. H., Oscherhalben/Bode (airplane works; 89 percent owned by Hirsch Kupfer- und Messingwerke A. G.)—Director.

Amperwerke Elektrizitäts A. G., Munich (electric power works; 53.88 percent owned by Gesellschaft für Elektrische Unternehmungen A. G.)—Director.

Innwerk A. G., Munich (power works of Inn River, aluminum production etc.; owned 90.91 percent by Vereinigte Industrie-Unternehmungen A. G. and 9.09 percent by the Bavarian State)—Director.

Koblenzer Elektrizitätswerk und Verkehrs A. G., Koblenz (electric streetcar company; owned 99.5 percent by Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Director.

Maschinenbau (machine and railways factory; not listed)—Director.

Neckawerke A. G., Esslingen (Electric power; belongs 50 percent to Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G.)—Director.

Norddeutsche Kabelwerke A. G., Berlin (cables factory; principal shareholders, Gesellschaft für Elektrische Unternehmungen Ludwig Loewe A. G., 55.23 percent, and Dresdner Bank, 27 percent)—Director.

Otavi Minen- und Eisenbahn-Gesellschaft, Berlin (South African mining and railway company and copper mines; RM. 2,000,000 shares owned by Hirsch Kupfer- und Messingwerke A. G., Berlin)—Member of executive committee.

Werner Habig

Werner Habig is a member of the board of directors of the **Dresdner Bank** and a member of the advisory board of the **Deutsche Bank**. He is also a member of the advisory board of the **Sudwestfälische Industrie und Handelskammer, Hagen**. In addition he and his family own **Heinrich Habig A. G., Herdecke/Ruhr**. He is also chairman of the board of directors of **Rameohl & Schmidt A. G., Oelde/Westf.**, a company manufacturing dairy machinery.

Background.—Werner Habig was born July 16, 1888, in **Herdecke/Ruhr** and graduated from **Gymnasium**. His education has been in the field of commerce and banking. His political, banking, and industrial connections are as follows:

Political.—**Sudwestfälische Industrie und Handelskammer, Hagen** (South Westfalian Chamber for Industry and Commerce)—Member of the advisory board.

Banking.—**Deutsche Bank, Berlin**—Member of the advisory board.

Dresdner Bank—Member of the board of directors.

Industrial.—**Heinrich Habig A. G., Herdecke, Ruhr** (textiles)—Stock of company family-owned.

Rameohl & Schmidt A. G., Oelde/Westf. (dairy machinery)—Chairman of board of directors.

Ernst Henke

Ernst Henke, director of the **Dresdner Bank**, Germany's second largest banking institution, is a member of the management committee of the **Rheinisch-Westfälisches Elektrizitätswerk, A. G., Essen**. This organization is a subsidiary of the **Vereinigte Industrie-Unternehmungen A. G.**, a German cartel which has considerable influence upon the German economy. Further evidence of Ernst Henke's prominence in Nazi industrial affairs is evidenced by his widespread connections in companies associated with public utility enterprises such as electricity, gas, waterpower, and railroads. He is also associated with the **Allianz Versicherungs A. G.** (insurance) in the capacity of director of the company.

Henke was born on September 1, 1881. His present address, according to the latest report received, is **Virchowstrasse 124, Essen, Germany**.

Ernst Henke's political, banking, and industrial connections are as follows:

Political.—**Landes-Ausschuss für Rheinland (Düsseldorf-Essen) der Dresdner Bank, Berlin** (Export Department for the Rhineland)—Member.

Zulassungsstelle der Rheinisch-Westfälischen Börse zu Düsseldorf (Committee on Admission to Düsseldorf Stock Exchange)—Member.

Banking.—**Dresdner Bank, Berlin**—Director.

Insurance.—**Allianz Versicherungs A. G., Berlin**—Director.

Industry.—Public utilities: **Rheinisch-Westfälisches Elektrizitätswerk A. G., Essen**—Member of the management committee.

Gas A. G. Ritter & Cie., Siegen i. W.—Chairman of the board of directors.

A. G. für Energiewirtschaft, Berlin—Deputy chairman of the advisory board.

Elektrizitäts A. G., vorm. W. Lahmeyer & Co., Frankfurt am Main—Deputy chairman of the advisory board.

Rheinische Elektrizitäts A. G., Mannheim—Deputy chairman of the advisory board.

Rheinkraftwerk Albbuck-Dogern A. G., Waldshut/Rh.—Deputy chairman of the advisory board.

Bayerische Wasserkraftwerke, A. G., Munich—Director.

Elektrowerke A. G. (Reichselektrowerke), Berlin—Director.

Isarwerke, A. G., Munich—Director.

Kraftwerk Altwürttemberg A. G., Ludwigsburg—Director.

Lech, Elektrizitätswerke, Augsburg—Director.

Main-Kraftwerke A. G., Frankfurt am Main-Höchst—Director.

Rheinisch-Westfälische Wasserwerke G. m. b. H., Mulheim/Ruhr—Director.

Schluchsewerk A. G., Freiburg/Br.—Director.

Vorarlberger Illwerke A. G., Bregenz—Director.

Railroad: Bochum-Gelsekirchener Bahngesellschaft G. m. b. H., Gelsekirchen—Director.

Süddeutsche Eisenbahn-Gesellschaft, Damstadt—Director.

Engineering: Hochtief A. G. für Hoch- und Tiefbauten vorm. Gebr.—Director.

Lignite.—Braunkohlen- und Briketwerke Roddergrube A. G., Brühl—Director.

Braunkohlen-Industrie A. G. Zukunft, Weisweiler—Director.

Rheinische A. G. für Braunkohlenbergbau und Brikettfabrikation, Cologne—Director.

Miscellaneous.—**Helfmann, Essen**—Director.

Alfred Hölling

Alfred Hölling, deputy member of the management committee of the Dresdner Bank, Berlin, since 1941, is a prominent figure in German industry and finance. Chairman of the board of directors of the Berlinische Boden-Gesellschaft, Berlin; he is also a director of the Getreide-Kreditbank A. G., Berlin, a grain financing bank, and chairman of the board of directors of the Diskont- und Kredit A. G., Berlin. His industrial interests vary widely, ranging from the construction field to the glass and machine tools industries.

Hölling worked his way up in the Dresdner Bank, and was appointed to the management committee in 1941. He is described as a great opportunist, without any particular political ambition, and especially clever. His latest known address is Berlin W-8, Behrenstrasse 37/39.

His financial and industrial affiliations in 1942 were as follows:

Banking and financial.—Dresdner Bank, Berlin—Deputy member of the management committee.

Diskont-und Kredit A. G., Berlin—Chairman of the board of directors.

Getreide-Kreditbank A. G., Berlin—Director.

Berlinische Boden-Gesellschaft, Berlin—Chairman of the board of directors.

Industrial.—Grundwert A. G., Hamburg (real estate)—Chairman of the board of directors.

Habermann & Guckes A. G., Berlin (construction)—Chairman of the board of directors.

Scheidemandel-Notard-Werke A. G., Berlin—Deputy chairman of the advisory board.

Auergesellschaft A. G., Berlin (construction for gas and chemical plants)—Director.

Bugsier-Reederei u. Bergungs A. G., Hamburg—Director.

Enrich & Graetz A. G., Berlin (management of industrial concerns)—Director.

Eisen-u. Rutenwerke A. G., Köln (iron and foundry)—Director.

Hirsche Kupfer-und Messingwerke A. G., Finow/Mark (copper and brass)—Member of the board of directors.

Pittler Werkzeugmaschinenfabrik A. G., Leipzig (machine tools)—Member of the board of directors.

Vereinigte Lausitzer Glasswerke A. G., Berlin (glass) Director.

Wilhelm Kisskalt

Wilhelm Kisskalt, deputy chairman of the Dresdner Bank, has important connections in the German insurance field.

Kisskalt was born on August 21, 1873, and was educated at the Universities of Würzburg and Berlin. He is a privy councillor at law, a member of the Academy for German Law, and has the honorary degree of doctor of political economy. His address is listed as 12 Georgenstrasse, Munich. In 1942, he had the following business and financial connections:

Banking.—Dresdner Bank—Deputy chairman.

Insurance.—Hermes Kreditversicherungs, A. G., Berlin—Chairman.

Karlsruher Lebensversicherungs A. G.—Deputy chairman.

Münchner Rückversicherungs Gesellschaft—Deputy chairman.

Allianz Lebensversicherungs A. G., Berlin—Director.

Allianz Versicherungs, A. G., Berlin—Director.

Industrial: Würzburger Hofbrau A. G., Würzburg (brewery)—Director.

Heinrich Koppenberg

Heinrich Koppenberg, managing director of the Dresdner Bank, exercises considerable influence in the implementation of the German war production program as Wehrwirtschaftsführer (leader of the war economy program). A complete list of his directorships has the aspect of a vertical combine in the motor and metal industries, extending from the raw materials to the finished products. He is associated as director with several of the Flick enterprises, is connected with the Vereinigte Stahlwerke combine, and is thought to be affiliated with the Goering Werke.

His spectacular progress in the light metal industry originated with the Nazis' coming to power. It has been reported that shortly after the occupation of Norway, Koppenberg headed an industrial delegation from the Goering group to Norway and subsequently became managing director for all Norwegian aluminum companies. The extensive plans for the expansion of this industry fell through however and the entire venture became notorious as the Nordag Schandel. Nevertheless, Koppenberg continues to hold a leading position in several aluminum companies one of which is prominent in the development of the Norwegian aluminum industry.

Koppenberg is also a director of Pittler Werkzeugmaschinenfabrik A. G., one of the large machine tool works which, before the war, had a manufacturing agreement with the National Acme Co. of Cleveland, Ohio, and included the latter's president on its directorate. It may be noted that the present directorate includes the prominent Herman J. Abs and the Junker General Joachim von Stulpnagel.

An unconfirmed report in the spring of 1942 alleged that Koppenberg had been placed in the concentration camp at Dachau because of his reputed comments to Hitler that the output of the Junker Flugzeug- und Motorwerke A. G., Dessau (of which he was chairman) could not be increased. However, indications are that Koppenberg was supporting the German war machine in 1943, latest available date.

Koppenberg was born in 1880. His last reported address was Berlin Grunewald, Taunusstrasse 7.

His political and commercial affiliations were the following in 1942:

Political.—Wehrwirtschaftsführer (war production program)—Official.

Reichsgruppe Industrie, Magdeburg—Member of advisory board.

Banking.—Dresdner Bank—Managing director.

Financial.—Gesellschaft Zur Verwaltung von industriellen Werten m. b. H., Berlin (administration of industrial assets)—Manager.

Industrial.—Airplane and automotive industries: Deutsche Versuchsanstalt für Luftfahrt e. V., Berlin (aircraft research)—Chairman of management committee.

Flugzeug- und Motorenwerke A. G., Dessau (airplanes, machine tools, etc.; capitalized at RM. 130,000,000, it is one of the largest German aluminum consumers)—Chairman of the management committee (not a director in 1936).

Hannoversche Maschinenbau A. G., vorm. Egestoff (Hanomag) Hannover-Linden (automobiles and machines; 100 percent owned by Bochumer Verein für Gusstahlfabrikation A. G., a member of the Vereinigte Stahlwerke group; it is capitalized at RM. 20,000,000 and its directorate includes Thyssen, von Flotow, and Vogler, of Vereinigte Stahlwerke)—Director.

Waggon- und Maschinenfabrik, vorm. Busch, Bautzen (automobiles, machinery)—Director.

Fahrzeug- und Motorenwerke G. m. b. H., vorm. Maschinenbau Linke-Hofmann, Breslau (automotive products; a Flick enterprise)—Member of advisory board.

Iron and Steel (Flick enterprises; Mitteldeutsche Stahlwerke A. G. Riesa Elbe)—Director.

Eisenwerk-Gesellschaft Maximilianshütte, Rosenberg (subsidiary of Mitteldeutsche Stahlwerke, above)—Director.

Light Metals: Durener Metallwerke A. G., Berlin-Barsigwalde (metals; 53 percent owned by Deutsche Waffen- und Munitionsfabriken A. G. and rumored to be affiliated with the Goering Works)—Director.

Mineralöl-Baugesellschaft m. b. H., Berlin (construction; believed to be prominent in the development of the Norwegian aluminum industry)—Chairman of board of directors.

Machine tools.—Pittler Werkzeugmaschinenfabrik A. G., Leipzig—Director (not on board in 1937).

Magdeburger Werkzeugmaschinenfabrik G. m. b. H. Magdeburg—Member of advisory board.

Transportation.—ATG Allgemeine Transportanlagen G. m. b. H., Leipzig—Director.

Fritz Kranefuss

Fritz Kranefuss is a member of the board of directors of the Dresdner Bank, Berlin, and a member of the management committee of the Braunkohle-Benzin A. G., and I. G. Farben subsidiary.

He is prominent in the Nazi economic organization, holding several semi-political posts as director of the organization concerned with public housing, and a member of the advisory board of the governmentally organized committee of the fuel industry.

His financial, industrial, and political connections in 1942 were as follows:

Political.—Gemeinnützige Siedlungsbau G. m. b. H., Berlin (public housing)—Director.

Wirtschaftsgruppe Kraftstoff-industrie, Berlin (economic group of the fuel industry)—Member, advisory board.

Akademie für Deutsches Recht, Berlin. Ausschuss für Rechtsfragen des Wirtschaftsaufbaues (Academy of German Law, Berlin; committee for legal questions concerning the economic development)—Member.

Banking.—Dresdner Bank, Berlin (Landesausschuss beider Zentrale der Dresdner Bank)—Director and member of the committee in Berlin office which is concerned with the bank's country-wide system of branches.

Industrial.—Braunkohle-Benzin A. G., Berlin (lignite-gasoline corporation, subsidiary of I. G. Farben and Vereinigte Industrie-Unternehmungen A. G.)—Member, management committee.

Arado Flugzeugwerke G. m. b. H. Potsdam-Babelsberg (airplane factory)—Member, advisory board.

Busch-Jaeger Lüdenschneider Metallwerke A. G. Lüdenschied (metal works)—Director.

Alfred Krupp von Bohlen und Halbach

Alfred Krupp, the 37-year-old owner of Germany's biggest industrial and war production enterprise, is also a director of the Dresdner Bank. Educated as an engineer, in 1942 he was a member of the management committee of Friedrich Krupp A. G., and one year later became the chairman of its board of directors.

It was reported early this year that the Krupp works had been reorganized in January 1944 for the purpose of its reconversion from a corporation to a privately owned firm headed by Alfred Krupp. The secret behind this return to private ownership is construed as an effort to prevent its confiscation by the Allies. It has been rumored in neutral countries of Europe that individual fortunes will presumably be spared because such confiscation would be contrary both to Anglo-Saxon principles and to general international legal conceptions. This move has therefore been regarded as an attempt to perpetuate Germany's armaments dynasty and her military potential.

Alfred, who was born in 1907, represents the fifth generation to be associated with the armaments organization, succeeding his father, Dr. Guatav Krupp von Bohlen und Halbach, who is credited with having been largely responsible for bringing Hitler to power.

Alfred Krupp's business connections are the following:

Banking.—Dresdner Bank—Director.

Industrial.—Friedrich Krupp A. G., Essen—Owner (1944).

Karl Lindemann

Karl Lindemann, a director of the Dresdner Bank, Germany's second largest banking institution, is also a member of the advisory board of the Deutsche Reichsbank. In addition to holding these important posts Lindemann is the owner of C. Melchers & Co., assumedly a private banking house.

Among his other financial directorships should be mentioned Norddeutsche Kreditbank A. G., a banking and brokerage house, successor to the J. F. Schröder Bank K. G. Although its capital is only RM. 12,000,000, it had assets of RM. 52,000,000 in 1936. Its importance is further indicated by its interest in a number of companies, including a small participation in Hamburg-Amerika Linie and in the German Government's propaganda news agency, Transocean. Hamburg-Amerika Linie, before the war, was extremely active in South America, the main field of Transocean's endeavor.

Lindemann is particularly prominent in the field of transportation, especially shipping and is recognized as one of the outstanding shipping experts in Europe. In June 1933 he was elected chairman of the governing board of the North German Lloyd. A little more than a month later he retired from the board, giving for his reason that the new shipping plans of the Hamburg and Bremen senate, at that time already under Nazi control, had not been made known to him. Be that as it may, the latest information indicates that he has reoccupied that position and still holds it.

Lindemann is also on the board of the Hamburg-America Line, which has cartel agreements with Norddeutsche Lloyd, with Deutsche Lufthansa A. G., large air transport corporation, and with Eckener's enterprise, Deutsche Zeppelin Reederi G. m. b. H.

According to a reliable source Karl Lindemann had on deposit in the United States, life insurance policies totaling \$100,000 with a surrender value of \$36,720 as of June 14, 1941. The beneficiaries of these policies are his estate.

General background.—Karl Lindemann, prominent in German shipping circles, is a State councillor of the Brunen district. He was born on April 17, 1881, in Goldberg/Mecklenburgh.

After having undergone secondary schooling he received 4 years of business training in Hamburg. By 1900 he had volunteered to participate in the Boxer rebellion in China where he subsequently remained to manage the agency of Melchers & Co. This company eventually elected Lindemann to a partnership in 1920.

After having accepted this partnership in Germany he interested himself in the shipping affairs of Bremen and by 1933 was elected a member of the foreign business council of that city.

Lindemann is active in various promotional and educational associations. Among these may be mentioned the Kaiser Wilhelm Institute for the Advancement of Science in Berlin; the Institute for World Economy and Sea Transport at the University of Kiel and the Bremen Chamber of Commerce.

His reaction to the Nazis when they came into power seemed to have been lukewarm, but when they manifested strength and staying power, he apparently ingratiated himself with the party.

By 1938 Lindemann was elected president of the German division of the International Chamber of Commerce. He is reported to reside at No. 76 Bachmann-Strasse in Bremen and his known financial and business associations are as follows:

- Banking and financial.*—Deutsche Reichsbank—Member of the advisory board.
- Dresdner Bank, Berlin—Director.
- Melchers & Company, Bremen (Private bankers)—Owner.
- Norddeutsche Kredit bank A. G., Bremen (connected with Norddeutsche Lloyd through interlocking directorate)—Director.
- Insurance.*—Assicurazioni Compagnie Mercur, Bremen (specializes in freight insurance; capital, Rm. 1,000,000; two insurance companies closely associated with Merck, Finck & Company, Allianz und Münchener Rückversicherungs Ges. each hold 38.83 percent interest)—Director.
- Hamburg-Bremen-Feuer-Versicherungs Gesellschaft, Hamburg (fire and reinsurance)—Director.
- Hamburg-Bremer Rückversicherungs, A. G. (fire and reinsurance)—Director.
- Shipping.*—Norddeutscher Lloyd, Bremen—Chairman of advisory Board.
- Hamburg-Amerika Linie, Hamburg—Director.
- Industrial.*—Vereinigte Industrie-Unternehmungen, A. G. "VIAG" (Rm. 180,000,000 Reich holding company)—Director.
- Norddeutsche Woll- und Kammgarn-industrie A. G., Delmenhorst (textiles)—Deputy chairman of advisory board.
- Wollgarnfabrik Tittel & Krüger u. Sternwoll-Spinnerei A. G., Leipzig (textiles)—Deputy chairman of advisory board.
- Mülheimer Bergwerksverein, Essen/Ruhr (utility holding company; Capital, Rm. 20,000,000, majority owned by Gewerkschaft Mathias Stinnes, Essen, of the Stinnes group)—Director.
- Atlas-Werke, A. G., Bremen (ship building; interlocking directorates with Mülheimer Bergwerksverein)—Chairman, board of directors.
- Deutsche-Amerikanische Petroleum A. G., Hamburg (oil products; majority owned by Standard Oil of New Jersey)—Director.
- Miscellaneous.*—Deutsche Revisions- und Treuhand A. G., Berlin (auditing; 70 percent owned by VIAG; 30 percent by the State of Prussia)—Director.
- Political.*—Akademie für Deutsches Recht, Berlin, Ausschuss für Seerecht (law association)—Member.
- Aussenhandelsausschuss Reichsbank (foreign trade council)—Member.
- Industrie und Handelskammer, Bremen (chamber of commerce)—Member.
- Deutsche Gruppe der Internationalen Handelskammer, Berlin (International Chamber of Commerce)—Chairman.
- Gesellschaft zur Förderung des Institute für Weltwirtschaft, Kiel (Institution for the Advancement of World Economy)—Chairman.
- Landesausschuss für Nordwestdeutschland, Bremen—Member.

Carl Lürer

Carl Lürer is a director of the Deutsche-Reichsbank, a member of the management committee of the Dresdner Bank, a director of the Adam Opel Corp., the largest automobile producers in Europe. In addition he occupies a number of important positions in industrial concerns as well as a series of important political posts. He is a leader of the Gau Economic Chamber of the Rhein-Main District; district leader in the Hitler Youth; president of the Rhein-Main diet of the Chamber of Industry and Commerce; member of the Academy for German law, etc. He has been a member of the Reichstag since 1933.

Background.—Carl Lürer was born August 14, 1897. He apparently did not receive more than a secondary education. In the First World War he served with a regiment of the guard and was wounded.

In the pre-Hitler period Lürer occupied only obscure positions but, following the establishment of the Nazi regime, his influence in private industry began to rise rapidly and he was elected to the directorate and management of important

corporations which began to secure his services due to the strong political influence he was able to exert in their interest, based upon his affiliation with the Nazi hierarchy. In 1934 he was given an honorary degree of professor at Frankfurt.

It is interesting to note that before the advent of the Hitler regime, Lürer was an outstanding exponent of the then favorite Nazi socialistic theories, and especially vehement in his denunciation of the practices of private capitalism such as the holding by one individual of directorships in several companies, concentration of industrial and financial power in a few closely held groups, etc. By his own acts, however, Lürer has become one of the greatest offenders against his own much publicized preachments and there are few people in Germany today who have accomplished more than he in the development and preservation of powerful industrial combinations.

Carl Lürer's known connections are as follows:

Political.—Industrie und Handelskammer für das Rhein-Mainische Wirtschaftsgebiet, Frankfurt am Main (Industry and Commerce Chamber for the Rhine-Main District)—President.

German-Italian Chamber of Commerce, Frankfurt—Honorary president.

Aussenhandelsstelle für das Rhein-Mainische Gebiet (Export Post for the Rhine-Main District)—Chairman, management committee.

Economic Chamber of Hesse, Frankfurt—Leader.

German group of the International Chamber of Commerce, Berlin—Member of the supreme council.

German Economic Chamber, Berlin—Member, council committee.

Academy of German Law—Member.

Banking.—Deutsche Reichsbank—Director.

Dresdner Bank—Member of management committee (1944).

Industry.—Adam Opel, A.G. (largest automobile producers in Europe, now manufacturing armaments; 100 percent owned subsidiary of General Motors)—Director.

Boden und Werkstoffforschungs, G. m. b. H., Frankfurt (research organization; subsidiary of Opel)—Director.

Brauerei-Schofferhof, Binding, A. G., Frankfurt (brewery)—Chairman of the board.

Deutsche Gold- und Silberscheideanstalt, vorm. Roessler, Frankfurt (fine metals)—Chairman.

Metallgesellschaft, A. G., Frankfurt (subsidiary of Deutsche Gold- und Silberscheideanstalt, partly owned by I. G. Farben)—Chairman.

Buderus'sche Eisenwerke, Wetzlar (metal construction)—Director.

Continental Caoutchouc Compagnie, G. m. b. H., Hannover (rubber)—Director.

Dyckerhoff Portland-Zementwerk, A. G. Mainz (cement)—Director.

Elektrizitäts A. G., vorm. W. Lahmeyer, Frankfurt (electrical construction)—Director.

Nassauische Heimstätte, G. m. b. H., Frankfurt (real estate)—Director.

Wilhelm Meinberg

Wilhelm Meinberg, who advanced from the rank and file of the Nazi Party to prominent political posts, appears to be a leading figure in German industry and economy. He is a leader in the War Economy Council, a director in the central National Socialist Party office, member of the National Labor Chamber, arbitrator in the National Food Agricultural Estate, and a special director in the 4-year plan for the transportation of coal. His banking and insurance affiliations include directorships in the Dresdner Bank A. G., Berlin, and Allianz und Stuttgarten Verein Versicherungs A. G., Berlin. In addition Meinberg serves on the board of directors of eight subsidies of the Hermann Göring combine. The two remaining industrial affiliations of Meinberg are a brewery and a street and viaduct construction company, the former being in Dortmund and the latter in Vienna. He has been characterized as "a typical industrialist who rose to economic power through political pull."

Background.—Wilhelm Meinberg was born March 1, 1898, in Wasserkurl, Kreis Unna, a descendant of an old landed family. He was educated in the secondary schools of Unna in Westphalia and served agricultural apprenticeships in Brandenburg and Mecklenburg. He served in the German Army in World War I, was captured by the English, and decorated with the Iron Cross.

Professional career.—In November 1919, after his release, Meinberg entered the Schutz und Trutzbund Völkischer (radical nationalist antisemitic militia group), where he became a leader in the Ruhrkampf. He founded the first Steel Helmet group in the industrial field. Since 1923 Meinberg has been a

farmer in addition to carrying on an active business career. His advancement in the field of industry appears to have kept pace with this political career for although his background was agricultural, his chief sphere of interest now is in public utilities, machinery, etc.

Political career.—In 1929 Meinberg joined the National Socialist Party. He was twice convicted by the German Government for his activities. Subsequently he became regional group leader (Landesgruppenführer) of the party, and in 1930 reorganized the agrarian policy in Germany. During the next few years he climbed the political ladder of success and by 1935 had become as SS Brigadeführer.

He was last reported to be residing at Kommandantenstrasse 14, Berlin-Lichterfelde-West. His known political, banking, insurance, and industrial connections are as follows:

Political.—Wehrwirtschaftsführer—Leader in the War Economy Council.
Hauptamtsleiter der NSDAP—Director in the central National Socialist Party office.

Reichsarbeitskammer, Berlin (National Labor Chamber)—Member.

Reichspost (national post office system)—Member of the advisory council.

Reichsnährstand (National Food Agricultural Estate)—Arbitrator.

Sonderbeauftragter für den Transport der Kohle (Vierjahresplan)—Special deputy for the transportation of coal under the 4-year plan.

Banking.—Dresdner Bank, Berlin—Director.

Insurance.—Allianz und Stuttgarten Verein Versicherungs A. G., Berlin (accident and liability insurance)—Director.

Industrial.—Subsidiaries and affiliates of the Hermann Göring combine: Wohnungs A. G. der Reichswerke "Hermann Göring," Berlin (cooperative dwellings for workers)—Chairman of management committee.

Wasser- und Energieversorgungsgesellschaft m. b. H., Göring Werke, Watenstedt/über Braunschweig (water and electric power)—Director.

Steinkohle-gewerkschaft der Reichswerke, "Hermann Göring," Hessen—Deputy chairman of board of directors.

Grossdeutsche Umsiedlungs G. m. b. H., Berlin (100 percent-owned)—Deputy chairman of board of directors.

Bayerischer Lloyd, Schifffahrts A. G., München (majority-owned)—Director.

Erste Donau-Dampfschiffahrts-Gesellschaft, Wien (steamship company, also railroad company, 97 percent-owned)—Director.

Deutsche Bergwerks- und Hüttenbau G. m. b. H., Berlin (coal and iron mining, 100 percent-owned)—Director.

Bergbau A. G. Ewald-König Ludwig, Hertern/westf. (coal mining, majority-owned)—Director.

Miscellaneous.—Stuag Strassen- und Tiefbau-Unternehmung A. G., Wien (street and viaduct construction company)—Chairman of board of directors.

Dortmunder Ritterbrauerei A. G., Dortmund (brewery, Bank für Brau-Industrie, Berlin, over 25 percent)—Director.

Emil Heinrich Meyer

Emil Heinrich Meyer, a member of the management committee of the Dresdner Bank and a director of a number of important industrial concerns, is stated to owe his career to his brother-in-law, Keppler, Secretary of State and economic adviser to Hitler. Although Meyer is reported to be an insignificant person of no decided attitude, he is identified with companies in diverse fields including banking, insurance, aircraft, communications equipment, and others.

Meyer was one of the leading officials in the organization of German cooperatives. Later he became the director of the cooperatives department of the Dresdner Bank and subsequently a member of the bank's management committee. He is reported also to be a director of Oldenburgische Landesbank and Deutsche Ansiedlungsgesellschaft, small banks connected with the Dresdner Bank. In addition, Meyer is deputy chairman of the advisory committee of the Frankfurter Hypothekenbank, the third largest private mortgage institution in Germany, and a director of the Bank des Berliner Kassen-Verein, a Government-owned bank created for the purpose of facilitating its participation in industrial enterprises. Another Government-controlled bank with which he is identified is Deutsche Bau- und Bodenkbank A. G., which is engaged in financing housing projects and acting as trustee and administrator of Reich funds. In the insurance field, Meyer is a director of Allianz Lebensversicherungs A. G., most important life-insurance company in Germany, controlled by the private banking house, Merck, Finck & Co.

It is significant that among his industrial affiliations, Meyer includes membership on the board of three aircraft manufacturing concerns and one air line, the Deutsche Lufthansa A. G. With respect to the aircraft manufacturers with which he is associated, Junkers Flugzeug- und Motorinwerke A. G. is one of the largest producers, Henschel Flugzeugwerke A. G., is reported to be owned principally by Henschel und Sohn, while little information is available concerning Arado Flugzeugwerke G. m. b. H.

Meyer is also connected with three companies engaged in manufacturing communications equipment, two of which were controlled by International Telephone & Telegraph Co. In the manufacture of pencils Meyer occupies an important position as chairman of the board of two of the more prominent companies, Bleistift-Fabrik, vorm. Johann Faber A. G. (of which Johann Faber Pencil Co., Inc., of Delaware is a subsidiary), and A. W. Faber-Castell-Bleistift-Fabrik A. G. (the majority of whose shares is owned by Roland Count von Faber-Castell). Another company of which Meyer is chairman of the board is the Mechanische Weberei zu Linden, a manufacturer of textiles. In the case of the large chemical company, Rutgerswerke A. G., Meyer may be its president.

Other companies with which Meyer is connected are Eisenwerk Gesellschaft Maximilianshütte, a subsidiary of Mitteldeutsche Stahlwerke; Deutsch-Ostafrikanische Gesellschaft, which owns a large plantation near Batavia in the Dutch East Indies; and Mercedes Büromaschinen-Werke A. G., which manufactures business machines.

Meyer, a professor of law and economics at the Berlin School of Economics, is president of the Deutsch-Yugoslavische Gesellschaft and a member of the Academy of German Law.

Emil Meyer was born on March 6, 1886, in Wiesbaden. He is reported to reside at Nussbaumallee 52, Berlin-Charlottenburg. His known political, educational, and business affiliations are as follows:

Political and educational.—Akademie für Deutsches Recht, Berlin, Ausschus für Genossenschaftsrecht (Academy of German Law, Division of Citizens' Rights)—Member.

Wirtschaftshochschule, Berlin (Berlin School of Economics)—Professor of law and economics.

Banking.—Dresdner Bank, Berlin—Member of the management committee. Oldenburgische Landesbank, Oldenburg 10 (subsidiary of Dresdner Bank, R.M. 4,400,000)—Director.

Deutsche Ansiedlungsgesellschaft, Berlin (mortgage bank, 50 percent owned by Dresdner Bank)—Director.

Frankfurter Hypothekbank, Frankfurt am Main (mortgage bank, R.M. 12,000,000)—Deputy chairman of advisory committee.

Bank des Berliner Kassen-Verein, Berlin, R.M. 4,500,000)—Director.

Deutsche Bau- und Bodenbank A. G., Berlin—Director.

Insurance.—Allianz Lebensversicherungs-A. G., Berlin—Director.

Industrial.—Aircraft manufacture: Junkers Flugzeug- und Motorinwerke A. G., Dessau (R.M. 130,000,000)—Director.

Henschel Flugzeugwerke G. m. b. H., Kassel—Director.

Arado Flugzeugwerke G. m. b. H., Potsdam-Babelsberg—Director.

Air line: Deutsche Lufthansa A. G., Berlin—Director.

Manufacture of communications equipment: Standard Elektrizitäts-Gesellschaft A. G., Berlin (financing; controlled by International Telephone & Telegraph Co. (R.M. 6,000,000)—Director.

Mix & Genest A. G., Berlin (94 percent owned by Standard Elektrizitäts-Gesellschaft A. G.; (R.M. 11,200,000)—Director.

C. Lorenz A. G., Berlin (R.M. 9,500,000)—Director.

Pencil manufacture: Bleistift-Fabrik, vorm. Johann Faber A. G., Nürnberg—Chairman of board of directors.

A. W. Faber-Castell-Bleistift-Fabrik A. G., Stein bei Nürnberg—Chairman of board of directors.

Miscellaneous.—Eisenwerk Gesellschaft Maximilianshütte, Sulzbach-Rosenberg-Hütte (mining and metallurgy; subsidiary of Mitteldeutsche Stahlwerke)—Director.

Mercedes Büromaschinen-Werke A. G., Berlin (business machines)—Director. Rutgerswerke A. G., Berlin (chemicals; (R.M. 27,800,000)—President (Meyer's position is not certain in view of conflicting information).

Mechanische Weberei zu Linden, Hannover-Linden (textiles)—Chairman of board of directors.

Other.—Deutsch-Ostafrikanische Gesellschaft, Berlin (plantation; R.M. 10,000,000)—Director.

—Deutsch-Yugoslavische Gesellschaft, Berlin—President.

Gustav Overbeck

Gustav Overbeck is a member of the management committee of the Dresdner Bank and has numerous industrial affiliations, particularly in the fields of mining and foundry works, chemical enterprises, and brewery concerns.

Overbeck is considered to be an efficient official with no marked political attitude. Soon after the occupation of Czechoslovakia, the Dresdner Bank sent him to Prague where he was very active in matters pertaining to Aryanization and Germanization. Overbeck was appointed manager in the Dresdner Bank in 1941.

His banking and industrial connections are as follows:

Banking.—Dresdner Bank, Berlin—Member of the management committee.
Bank für Brau-Industrie, Berlin—Director (Bank for Brewery Industry; the Dresdner Bank is the chief shareholder).

Industry.—Mining, iron, and foundry works: Alexanderwerk A. G., Remscheid—Chairman of the board of directors (capitalized at R.M. 4,500,000, this company has a branch in London).

Eisenwerk Wulfel A. G., Hannover—Deputy chairman.

Erste Brünner Maschinen-Fabrik-Gesellschaft, Brunn—Deputy chairman.

Berg- und Hüttenwerk Gesellschaft Karwin-Trzynietz A. G., Teschen/O. S.—Director.

Bergbau A. G. Lothringen; Bochum—Director (this company is capitalized at R.M. 20,000,000; over 25 percent of the interest of this firm is held by the Wintershall A. G., Berlin, of which the majority shareholder is Wintershall Gewerkschaft, Lothringen).

Schlesische Bergwerke- und Hütten A. G., Beuthen—Director (this organization is capitalized at R.M. 16,200,000; its largest stockholders are the Schweizerische Gesellschaft für Metallwerte, Basel, and the Metallgesellschaft A. G., Frankfurt; the latter is largely controlled by I. G. Farbenindustrie A. G. and the Deutsche Gold- und Silber Scheideanstalt).

Vereinigte Oberschlesische Hüttenwerke A. G., Gleiwitz—Director.

Chemical works: Chemische Fabrik Grünau A. G., Berlin—Deputy chairman (this company is capitalized at R.M. 2,000,000; its chief stockholder is the Deutsche Gold- und Silber Scheideanstalt).

Burbach-Kallwerke A. G., Magdeburg—Director.

Brewery: Malzbierbrauerei Groterjan & Co., Berlin—Chairman of the board of director (52 percent of the interest of this company is owned by Engelhardt Brauerei A. G., Berlin, which in turn is controlled by the Dresdner Bank).

Engelhardt-Brauerei A. G., Berlin—Deputy chairman (see note above).

Dortmunder Ritterbrauerei A. G., Dortmund—Director (the Bank für Brau-Industrie holds more than a 25 percent interest in this company, which in turn is controlled by the Dresdner Bank; it is capitalized at R.M. 3,200,000).

Lindener Aktienbrauerei, Hannover-Linden—Director.

Miscellaneous.—Brandenburgische Grundwert A. G., Berlin (real estate)—Chairman of the board of directors.

Neudecker Wollkämmerei und Kammgarnspinnerei A. G., Neudeck (woolen textiles)—Chairman of the board of directors.

Vereinigte Böhmisches Glasindustrie A. G., Teplitz-Schöner (glass factory)—Chairman of the board of directors.

Westdeutsche Kaufhof A. G., Köln (trading company)—Deputy chairman (the chief stockholders of this firm are the Deutsche Bank, Dresdner Bank, and the Commerz und Privat Bank A. G.; it is capitalized at R.M. 27,000,000).

Sudentenländische Treibstoffwerke A. G., Brück (fuel)—Director.

Carl Arthur Pastor

Carl Arthur Pastor is a director of the Dresdner Bank, Berlin, and has extensive connections in the field of insurance. He is chairman of the board of directors in five insurance companies and deputy chairman in seven others. He also holds important positions in the large Röchlung iron and steel works and the Westdeutsche Bodenkreditanstalt, a mortgage bank in Cologne.

He was born on July 24, 1885, in Aix-la-Chapelle. His financial and industrial connections in 1942 were as follows:

Banking.—Dresdner Bank, Berlin—Director.

Westdeutsche Bodenkreditanstalt (mortgage bank), Cologne—Director.

Industrial—Iron and steel: Röchiung'sche Eisen und Stahlwerke G. m. b. H., Iklingen/Saar—Chairman, board of directors.

Gebr. Röchling K. G., Ludwigshafen/Rhine—Chairman, advisory board.

Gebr. Röchling, Eisenhandels-gesellschaft, Ludwigshafen/Rhine (iron trading)—Chairman, advisory board.

Miscellaneous.—Gemeinnützige Baugesellschaft für Achen und Burscheid A. G., Aix-la-Chapelle (public building construction)—Chairman, board of directors.

Rheinische Nadelfabriken Aachen, Aix-la-Chapelle (needle factory)—Deputy chairman, board of directors.

Baugesellschaft für elektrische Anlagen, Aix-la-Chapelle (construction of electric plants)—Director.

Gerbe, Lahmeyer & Co., A. G., Aix-la-Chapelle—Director.

Financial.—Insurance: Aachener Rückversicherungs-Gesellschaft, Aix-la-Chapelle (reinsurance)—Chairman, board of directors.

Aachener und Münchener Feuer-Versicherungs-Gesellschaft, Aix-la-Chapelle (fire insurance)—Chairman, board of directors.

Aachener und Münchener Lebensversicherungs-A. G., Potsdam (life insurance)—Chairman, board of directors.

Motag Versicherungs-A. G., Berlin (insurance)—Chairman, board of directors.

Nordstern Lebensversicherungs-A. G., Berlin (life insurance)—Chairman, board of directors.

Fortuna Rückversicherungs-A. G., Erfurt (reinsurance)—Deputy chairman, advisory board.

Nordstern Allgemeine Versicherung-A. G., Berlin (insurance)—Deputy chairman, advisory board.

Oldenburger Versicherungs-Gesellschaft, Oldenburg (insurance)—Deputy chairman, advisory board.

Rückversicherungs-Vereinigung-A. G., Berlin (reinsurance association)—Deputy chairman, advisory board.

Schlesische Feuerversicherungs-Gesellschaft, Breslau (fire insurance)—Deputy chairman, advisory board.

Silesia Allgemeine Versicherungs-A. G., Breslau (insurance)—Deputy chairman, advisory board.

Thuringia Versicherungs-A. G., Erfurt (insurance)—Deputy chairman, advisory board.

Colonia Kölnische Feuer- und Kölnische Unfall-Versicherungs-A. G., Köln (fire and casualty insurance)—Director.

Hamburg Bremer Feuer-Versicherungs-Gesellschaft, Hamburg (fire insurance)—Director.

Karl Pfeiffer

Karl Pfeiffer, a director of the Dresdner Bank, Berlin, is also on the directorate of Germany's extensive dye and chemical combine, I. G. Farbenindustrie, and is associated with numerous Farben-controlled companies. He is connected with the IGF bank, Deutsche Länderbank A. G., Berlin, and in addition, is a director of the Länderbank Wien A. G. which, as a subsidiary of the Dresdner Bank, has spearheaded Nazi economic penetration into southeastern Europe.

Pfeiffer was born on August 21, 1895, in Stockach/Baden. His address is given as Donnhäuser Strasse 18/20, Berlin-Schlachtensee.

His business and financial connections in 1942 were as follows:

Banking.—Dresdner Bank, Berlin—Director.

Deutsche Länderbank A. G., Berlin (I. G. Farben bank)—Member of the management committee and technical director.

Fugger Grundstücks A. G., Berlin (subsidiary of the above)—Member of the management committee and technical director.

Länderbank Wien A. G., Wien (subsidiary of Dresdner Bank)—Director.

Friedrichsberger Bank G. m. b. H., Berlin—Director.

Diskont-Kompagnie A. G., Berlin—Director.

Industrial.—I. G. Farbenindustrie A. G., Frankfurt am Main—Director.

Rheinische Stahlwerke A. G., Essen (IGF)—Director.

Wolff & Co. K. G. a. A., Walsrode (photographic supplies, rayon; IGF)—Director.

Dynamit A. G., vorm. Alfred Nobel & Co., Troisdorf (IGF)—Director.

Gustav Genschow & Co. A. G., Berlin (now merged with Dynamit)—Director.

Donau-Chemie A. G., Vienna—Director.

Universum-Film A. G. (Ufa), Berlin—Director.

Dr. Karl Rasche

Dr. Karl Rasche, member of the management committee of the Dresdner Bank, Berlin, since 1935, is a member of the new Free Masons, a political group built up around Himmler, and holds an influential position in the inner circles of the Nazi Party. He is a member of the board of directors of Accumulatoren-Fabrik A. G., Berlin, whose branches in Argentina and Brazil are on the Proclaimed List of Certain Blocked Nationals, and of Braunkohle-Benzin A. G., Berlin, which is connected with the I. G. Farbenindustrie and VIAG combines. Rasche is said to have authority to speak for the managing board of the Dresdner Bank.

Born in Westphalia on August 23, 1892, descended from an old Westphalian family, Rasche attended secondary school at Iserlohn in Westphalia and studied law, political economy, and history at the Universities of Münster, Munch, Berlin, Leipzig, and Bonn. He saw extensive service during the First World War on both the eastern and western fronts, and was awarded the Iron Cross and the Baltic Cross. After finishing his studies, he became an attorney in Düsseldorf and was active in several Westphalian courts. He later became a member of the board of directors of various west German companies. In 1933, he became a member of the management committee of the Westphalian Bank, Bochum. He is a member of the chief committee of the Central Union of Banks and Bankers, Berlin. He was politically active as a member of the Riga Legation, and recruiting officer for the Baltic troops. His special spheres of interest are publications on international law, export and import industries and their financing, the economy of the Rhine, the Westphalian industrial district, and regional bank questions. He is an expert as a bank examiner. Since 1935 he has been a member of the management committee of the Dresdner Bank, and he is believed to have been prominent in Aryanization matters.

His political, financial, and industrial affiliations in 1942, were as follows:

Banking and financial.—Dresdner Bank—Member of the management committee.

Industrial.—Cement: Perlmooser Zementwerke A. G., Wien—Chairman of the board of directors.

Dyckerhoff-Portland-Zementwerke A. G., Amoneburg—Deputy chairman of the advisory board.

Munitions: A. G. vormals Skodawerke in Pilsen, Prague—Member of board of directors.

Waffenwerke Brunn A. G., Prague—Director.

Iron: Eisen- und Hüttenwerke A. G., Bochum—Director.

Neunkircher Eisenwerk A. G., vorm. Gebr. Stumm Poldihutte, Prague—Director.

Mining: Sudetenlandische Bergbau A. G., Brussels—Director.

Mulheimer Bergwerks-Verein, Essen—Director.

Colliery: Essener Steinkohlenbergwerke A. G., Essen—Director.

Felten & Guillaume Carlswerk A. G., Köln—Director.

Miscellaneous.—Engelhardt-Brauerei A. G., Berlin (brewery)—Chairman, board of directors.

Rheinische Kunstseide A. G., Krefeld (artificial silk)—Deputy chairman of the advisory board.

Woll-Wascherei und Kammerei in Dohren, Dohren Bei Hannover (wool processing)—Deputy chairman of the advisory board.

Accumulatoren-Fabrik A. G., Berlin (storage batteries)—Director.

Braunkohle-Benzin A. G., Berlin (lignite and benzine; part of I. G. Farbenindustrie A. G. and VIAG combine)—Director.

Metallgesellschaft A. G., Frankfurt am Main (metals)—Director.

Rheinmetall Borsiz A. G., Berlin (heavy machinery)—Director.

Wintershall A. G., Berlin (potash)—Director.

Hellmuth Röhnert

Hellmuth Röhnert, director general on the board of the Dresdner Bank, although a comparative newcomer to German industry, is now one of the most prominent of the Nazi industrialists. He is general manager of the Hermann-Goering Werke, large armament and heavy industry combine. He is said to have profited largely from the German war production program.

Röhnert was born April 21, 1888. Very little is known about his early life. He is reported to have been a small industrialist who, facing bankruptcy in 1931, offered his services to the Vereinigte Stahlwerke (steel trust) and was rejected. Embittered by the refusal, he joined the Nazi Party, and his present career began with that event.

Röhnert's latest known address is Gruenwald, Berlin. In 1942 he had the following political, financial, and business connections:

Political.—Reichsgruppe Industrie, Berlin (industrial association organized by German Government)—Member of advisory board.

Banking.—Dresdner Bank, Berlin—Director.

Landesausschuss für Westfalen der Dresdner Bank, Berlin (Westphalian National Committee of the Dresdner Bank)—Member.

Insurance.—Friedrich Wilhelm Lebensversicherungs A. G., Berlin (life insurance)—Director.

Gerling Konzern Rückversicherungs A. G., Köln (reinsurance)—Director.

Industry.—Iron, steel, armaments: Rheinmetall-Borsig A. G., Berlin (iron and steel)—Member of executive committee.

Reichswerke A. G. "Hermann Goering," Berlin (iron and steel)—Member of management committee; member of technical committee.

Reichswerke A. G., Alpine Montanbetriebe "Hermann Goering," Linz/Donau (iron and steel)—Director.

Wohnungs A. G. der Reichswerke "Hermann Goering," Braunschweig (industrial housing)—Director.

Reichswerke-A. G. für Waffen- und Maschinenbau "Hermann Goering" (armament and machinery)—Chairman of board of directors.

Torpedo Werke A. G., Frankfurt am Main (torpedoes)—Chairman of board of directors.

Machinery and equipment: Alexanderwerk A. G., Remscheid (machinery)—Deputy chairman of advisory board.

Hermann Herzog & Co., A. G., Neugersdorf/Sachsen (trading in textile machinery)—Deputy chairman of advisory board.

Maschinenbau A. G., Balcke, Bochum (machines)—Director.

Accumulatoren-Fabrik (AFA), Berlin (storage batteries)—Director.

Kardex A. G. für Büreartikel, Saarbrücken (individual machines)—Chairman of board of directors.

Magdeburger Werkzeugmaschinen-fabrik G. m. b. H., Magdeburg (machine tools)—Chairman of advisory board.

Airplanes and motors: Junkers Flugzeug- u. Motorenwerke A. G., Dessau (airplanes and parts)—Chairman of board of directors.

Arado Flugzeugwerke G. m. b. H., Potsdam (airplanes)—Director.

Fahrzeug- und Motorenwerk G. m. b. H. vorm. Maschinenbau Linke-Hoffmann, Breslau (motors)—Chairman of advisory board.

Metal works: Busch-Jaeger, Ludenscheider Metallwerke A. G., Ludenscheid (metal works)—Member of management committee; member of technical committee.

Sächsische Metallwarenfabrik August Wellner Sohne A. G., Aue-Sachsen (metal products)—Chairman of board of directors.

Textiles: Deutsche Wollwaren-Manufaktur A. G., Gruenberg, Schlesien (woolens)—Deputy chairman of advisory board.

Public utilities.—Berliner Kraft- und Licht (Bewag) A. G., Berlin (power and light)—Director.

Navigation.—Reichswerke A. G. für Binnenschifffahrt "Hermann Goering," Berlin (inland navigation)—Chairman of board of directors.

Miscellaneous.—Kardex System G. m. b. H., Berlin (office equipment)—Chairman of board of directors.

Hardy & Co., G. m. b. H., Berlin—Director.

Gebr. Heyne G. m. b. H., Offenbach am Main—Member of executive committee.

Hans Carl Scheibler

Hans Carl Scheibler is a director of the Dresdner Bank, Berlin, and a member of the district committee for the Rhineland, Cologne, and Aachen of the Dresdner Bank. He is connected with three fertilizer firms, including the Thomasmehlgesellschaft m. b. H., Cologne, which produces fertilizers from the slag of the foundries August Thyssen A. G. and Dortmund Hoerder Huttenverein.

Scheibler was born on September 22, 1887. His last known address was 2 Breite Strasse, Cologne, and his known connections are the following:

Political.—Fachabteilung Thomasmehl in der Fachgruppe Kunstdünger der Wirtschaftsgruppe Gross-Ein- und Ausfuhrhandel, Berlin. (Professional Group of Artificial Fertilizer Producers in the Professional Group for Artificial Fertilizers of the Economic Group of the Wholesale Import and Export Business, Berlin)—Leader.

Financial.—Landesausschuss für Rheinland, Cologne, Aachen, **Dresdner Bank**, Berlin (District Committee for the Rhineland, Cologne, and Aachen, of the **Dresdner Bank**, Berlin)—Member.

Dresdner Bank, Berlin—Director.

Industrial.—Thomasmehlgesellschaft m. b. H., Cologne (produces fertilizers from slag of August Thyssen-Hütte A. G. and Dortmund Hoerder Huttenverein)—Manager.

Rheinische Presshefe und Spritwerke A. G., Monheim (yeast and distillery company; capital, RM. 2,000,000)—Deputy chairman of board of directors.

Dungerfabrik Euskirchen Scheibler & Co., Euskirchen (fertilizers)—Personally liable partner.

Chemische Fabrik Kalk G. m. b. H., Cologne (lime)—Partner.

Walther Schieber

Apparently Walther Schieber was one of the careerists within the **Nazi Party** who by his connections was able to gain prestige and influence in industrial circles.

It appears that Schieber gained the confidence and favor of outstanding **Nazi Party** members, for Funk is said to have appointed him to the position of Deputy Leader of the National Group for Industry, and Speer reportedly made him Chief of the Office for Delivery of Armament Goods in the Ministry for Armaments and Munitions. Other of his political appointments include the post of Leader of the Industrial Section of the Economic Chamber of Thuringia and membership on the advisory board of the Economic Chamber of Thuringia.

As an industrialist, Schieber appears to have been most successful. He started his business career in the **Gustloff Werke**, Weimar. This group which is owned by the **Nazi Party** is composed of five industrial corporations. One of these enterprises is the **Suhler Waffenwerke** (munitions factory) which was, reportedly, stolen from a Jewish family in 1933, and another is the **Hirtenberg Munitions factory** in Austria, which was incorporated into **Gustloff Werke** after the **Anschluss**. Subsequently Schieber became the leading figure in **Zellwolle und Kunstseide Ring**, which is considered the second largest synthetic fiber combine in Germany. He also was instrumental in the organization of **Thüringische Zellwolle A. G.** in Schwarzburg and as such is said to have brought **France Rayonne S. A.**, the French synthetic fiber combine, under control.

In the field of banking Schieber rose to the position of member of the supervisory board of the **Dresdner Bank** by 1944 from a membership on its provincial committee for central Germany, a position which he held in 1942.

Walther Schieber was born September 13, 1896, in Biermerstetten. He holds the degree of doctor of engineering. His address in 1942 was reported to be 5 Richard Wagner Strasse, Rudolstadt, Thuringia. His known connections, as of 1942, with certain specified exceptions, are listed below:

Political.—Gauwirtschaftsberater für Thuringia (Regional Adviser of Economics for Thuringia).

Wirtschaftskammer Weimar Thuringia (Economic Chamber of Thuringia)—Member of the advisory board.

Industrieabteilung der Wirtschaftskammer, Weimar, Thuringia (Head of the Industrial Division of the Economic Chamber of Thuringia).

Reichsgruppe "Industrie"—Deputy Chief.

Banking.—**Dresdner Bank** (in 1942 Schieber was a member of the provincial committee of the **Dresdner Bank** for central Germany; however by 1944 he had become a member of the **Dresdner Bank's** supervisory board)—Director.

Industrial.—**Gustloff-Werke**, Weimar (combine consisting of five industrial corporations which is reportedly owned by the **Nazi Party**; included the **Suhler Waffenwerke** and the Austrian **Hirtenberg Munitions factory** incorporated into the combine after the **Ausschluss**)—Chairman of the executive committee.

Zellwolle und Kunstseide Ring G. m. b. H., Berlin (Cell-Wool and Artificial Silk Group is considered second largest synthetic fiber combine in Germany)—General manager.

Thüringische Zellwolle A. G., Schwarzburg (acquisition and operation of enterprises for the manufacture, processing, and sale of textile fibers; capital RM. 10,000, 1938; the company has several affiliates and one subsidiary; Schieber is reported to have resigned as this company's works leader as of December 1943)—Chairman of the bank committee.

Lenzinger Zellwolle- und Papierfabrik A. G., Agerzell, Upper Danube, Austria (operates cell-wool and cellulose factories and a paper mill; capital, 1942, RM. 25,000; holds participations in a number of companies, included among which is **Westfälische Zellstoff A. G.**)—Chairman of the bank committee.

Schwabische Zellstoff A. G., Ehigen (Danube), Germany (construction and operation of cellulose factories, equipment, and byproducts; capital, 1938, R.M. 3,400,000)—Chairman of the bank committee.

Westfälische Zellstoff, Wildhausen, Westphalia (engaged in the construction and operation of a cellulose factory and in acquiring participations in enterprises in the same field; capital, R.M. 3,600,000; principal shareholders are L. und C. Steinmüller, Gummersbach)—Chairman of bank committee.

Spinnstoffwerk Glauchau A. G., Glauchau, Saxony (capital, 1938, R.M. 5,000,000; manufactures spun material (spinnstoffe) of all kinds and participates in similar enterprises; no principal shareholders listed; holds minority interests in two connected enterprises)—Director.

Spinnstoff-Gesellschaft G. m. b. H., Berlin-Schwarza (engaged in the manufacture of artificial fiber from casein; capital, 1938, R.M. 1,250,000)—Chairman of the advisory board.

Spinnstofffabrik Zehlendorf A. G., Berlin-Zehlendorf (capital, 1938, R.M. 3,160,000; manufactures and sells products in the field of chemical and textile industries)—Director.

Thüringer Rohstoff A. G., Weimar (this company is engaged in the surveying, exploitation, and utilization of mineral resources, especially within the scope of the second 4-year plan; capital, R.M. 1,000,000 as of 1938; holds a participation in the mining company Gevekschaft "Ottlar")—Deputy chairman of the advisory board.

Solanum G. m. b. H., Riesa Cottbus, Dresden-Peschelmühle—Chairman of the advisory board.

Schwarzenburger Saline Oberilm A. G., Stadtilm, Thüringia—Member of the supervisory board.

Alphalint Edelmetall G. m. b. H., Peschelmühle—Chairman of the advisory board.

Thüringer Porzellanmanufaktur, Rudolstadt-Volkstedt, Saxony (porcelain factory)—Director.

Dr. Hans Schippel

Dr. Hans Schippel is a member of the management committee of the Dresdner Bank, Berlin, a member of the management committee of the Berlin Stock Exchange, and deputy chairman of the Deutsch-Asiatische Bank, Berlin-Shanghai.

Schippel is also an important figure in the machinery and mining industries and has important public utility connections. He is a member of the board of directors of Klockner-Werke A. G., Duisberg, whose numerous branches throughout Latin America have been designated proclaimed-list nationals.

Schippel was born on December 22, 1880, in Potsdam. His career has included a widely diversified list of activities. He has served as temporary official at the Reich Ministry of Finance, was repeatedly sent abroad by the Reichsbank, and at one time was a member of a committee which was sent to China.

In 1931 Schippel was appointed one of the liquidators of the Danatbank, and subsequently became a member of the management committee of the Dresdner Bank. Reports conflict as to his political sentiments, but he is reported to have been responsible for the organization of the Dresdner Bank.

His financial and industrial affiliations in 1942 were as follows:

Banking and financial.—Dresdner Bank, Berlin—Member of the management committee.

Deutsch-Asiatische Bank, Berlin-Shanghai—Deputy chairman of advisory board.

Länderbank Wien A. G., Wien—Deputy chairman of advisory board.

Beamtenversicherungsverein des Deutschen Bank- und Bankiergewerbes A. G., Berlin—Member of board of directors.

Rheinisch-Westfälische Boden-Creditbank, Köln—Member of board of directors.

Rheinische Hypothekenbank, Mannheim—Member of board of directors.

Berliner Wertpapierbörse, Berlin—Member of management committee.

Insurance.—"Frankona" Rück- und Mitversicherungs A. G., Berlin—Chairman of board of directors.

Industrial.—Machinery: Maschinenbau und Bahnbedarf A. G., Berlin (machine and railway supplies)—Chairman of the board of directors.

Wanderer-Werke A. G., Siegmarschönau (machine and wheel factory)—Chairman of board of directors.

Bayerische Motorenwerke A. G., München (motor works)—Member of board of directors.

Brown, Boveri & Cie. A. G., Mannheim (electrical and other machinery)—Member of board of directors.

Daimler-Benz A. G., Stuttgart (motor company)—Member of board of directors.

Mining: Mansfeld A. G. f. Bergbau- u. Hüttenbetrieb, Eisleben (mining and foundry)—Deputy chairman of advisory board.

Klöckner-Werke A. G., Duisburg (mining)—Member of board of directors.

Utilities.—Berliner Kraft- und Licht (Bewag) A. G., Berlin (part of VIAG combine, power and light company)—Member of board of directors.

Deutsche Continental Gas A. G., Dessau (gas company)—Member of board of directors.

Miscellaneous.—Deutsch-Atlantische Telegraphengesellschaft, Berlin (telegraph company)—Deputy chairman of advisory board.

Koehlmann-Werke A. G., Frankfurt am Oder (starch and sugar factory)—Deputy chairman of advisory board.

Schultheiss-Brauerei A. G., Berlin (brewery)—Deputy chairman of advisory board.

Deutsche Erdöl A. G., Berlin (petroleum)—Member of board of directors.

Rabbethge & Giesecke A. G., Kleinwanzleben (sugar and byproducts)—Member of board of directors.

Berliner Wertpapierbörse, Berlin—Member of management committee.

Carl Otto Schmelzer

Carl Otto Schmelzer is a director of the Dresdner Bank, Berlin, and a member of that bank's provincial committee for Saxony. He also appears to hold a position of some importance in the Gerling Konzern, one of the leading German insurance groups, for he is an advisory board member of its provincial board for central Germany.

However, Schmelzer appears to be chiefly interested in the processing and manufacture of textiles. He holds directorial or supervisory positions with several of such companies. The most impressive of these enterprises appears to be Bremer Woll-Kammerei, Blumenthal, Lower Weser, Germany, capitalized in 1938 at RM. 10,400,000. In addition he is connected with several companies producing heavy machinery for the textile industry and railroads. Schmelzer also holds positions of importance in two political groups which operate to expedite the activity of the spinning and carding industry.

Schmelzer was born June 8, 1869, in Werdau, Saxony. In 1942 he was reported to be residing at Lichtentanne, Saxony, which is also the location of an enterprise operated by him and apparently owned by his family. His known connections as of 1942 are as follows:

Political.—Fachgruppe Kammgarnspinnerei und Lohn-Kämmerei, Berlin (Professional Group Worsted Spinning Mill and Wool Carding)—Member of advisory board.

Verein Deutscher Wolkämmer und Kammgarnspinner (Association of Representatives of the German Wool Carding and Worsted Mill Industries)—Chairman.

Banking.—Dresdner Bank (This bank is one of the Grossbanken)—Director.

Landes-Ausschuss für Sachsen der Dresdner Bank, Berlin (Provincial Committee for Saxony of the Dresdner Bank)—Member.

Insurance.—Landesbeirat für Mitteldeutschland der Gerling-Konzern A. G., Cologne (Provincial Advisory Board of Central Germany of the Gerling Konzern A. G., Cologne, one of the leading insurance groups in Germany)—Member.

Industrial.—Carl Schmelzer senior, Lichtentanne/Sachs—Coowner and technical director.

Geraer Strickgarnfabrik Gebr. Feistkorn A. G., Gera (engaged in the manufacture, processing, and sale of yarns of all kinds and in the participation and merger with other enterprises of the same textile branch; capital, 1938, RM. 3,015,000)—Chairman of the board of directors.

Bremer Woll-Kämmerei, Blumenthal/Unterweser, Lower Weser, Germany (engaged in washing and carding wool; capital, 1938, RM. 10,400,000)—Director.

Cammann & Co., A. G., Chemnitz (engaged in the manufacture of upholstering material and other products of the textile industry; capital, 1938, RM. 1,500,000; the shares are held by members of the Cammann family)—Deputy chairman of the board of directors.

Julius Römpler A. G., Zeulenroda/Thüringen, Saxony (engaged in the manufacture and sale of rubberized elastic and nonelastic knitted goods and textiles, bandages, dressings, and corsets; capital, 1938, RM. 1,008,000)—Deputy chairman of the board of directors.

Carl Hamel A. G., Siegmar-Schönau (produces textile machines and other machines and participates in similar enterprises; capital, RM. 1,963,200; this com-

pany holds two-thirds of the share-capital of the Carl Hamel Spinnund Zwimereimaschinen A. G., Arbon, Switzerland [Carl Hamel Spinning and Twisting Machinery, Inc., Arbon, Switzerland])—Director.

Waggon- und Maschinenfabrik A. G., vorm Busch, Bautzen, Saxony (engaged in the production and sale of railroad cars and machines of all kinds and in transactions connected therewith; capital, R.M. 3,500,000; subsidiaries are Scharfenberg Kupplung A. G., Berlin; capital, R.M. 400,000, participation 55 percent, and Seyboth-Feuerung G. m. b. H., Bautzen, Saxony, capital, R.M. 20,000, participation, 100 percent)—Director.

Dr. Heinrich Schmidt

Dr. Heinrich Schmidt (Doctor of Jurisprudence), a member of the board of directors of the Dresdner Bank, is associated with several German enterprises in the mining, fertilizer, and petroleum fields. He is chairman of the board of directors of Braunkohle-Benzin A. G., Berlin, manufacturers of synthetic gasoline, which is affiliated with the I. G. Farben and VIAG (Vereinigte Industrie-Unternehmungen Aktiengesellschaft) combines.

Dr. Schmidt was born on June 15, 1873, in Hildesheim. His present address is listed at 10 Prinzenstrasse (43 Georgstrasse), Berlin. His financial and business connections in 1942 were as follows:

Banking.—Dresdner Bank, Berlin—Director.

Industrial.—Mining: Bergbau A. G., Lothringen, Bochum—Chairman of the board of directors.

Bergbaugesellschaft Teutonia A. G., Hannover—Chairman of the board of directors.

Fertilizers and phosphates: Kali-Chemie, Berlin (fertilizers)—Director.

Wintershall A. G., Berlin (phosphates)—Chairman of the board of directors.

Petroleum and gasoline: Thüringer Erdöl A. G., Sondershausen (petroleum)—Director.

Braunkohle-Benzin A. G., Berlin (synthetic gasoline; affiliate of I. G. Farben-VIAG combines)—Chairman of board of directors.

Miscellaneous.—Deutsche Asphalt A. G. der Limmer u. Vorwohler (asphalt products)—Chairman of the board of directors.

Grubenfelder, Braunschweig—Chairman of the board of directors.

Voigt & Haefner A. G., Frankfurt am Main (electrical products)—Deputy chairman of the advisory board.

H. Bahlens Keksfabrik A. G., Hanover (biscuits, cookies)—Director.

Busch-Jaeger, Ludenscheider Metallwerke A. G., Ludenscheid (metal products)—Director.

Georg Talbot

Georg Talbot has a number of connections in industry as well as several in the fields of banking and insurance. His industrial connections include Vereinigte Stahlwerke A. G., Basalt A. G. Linz/Rhine, operating stone quarries throughout Germany, France, Holland, and Austria and capitalized in 1936 at R.M. 20,000,000; and a number of other enterprises engaging in such diversified fields of endeavor as the manufacture of vehicles for public and personal transportation, operation of local railways, and sugar refineries. In the field of banking, Talbot holds a directorship in the Dresdner Bank. His insurance affiliations include a leading member of the Rheinische Interessengemeinschaft as well as several other companies which are affiliated with that insurance group.

Georg Talbot was born February 16, 1864, in Aachen. He holds an honorary degree as doctor of engineering. In 1942 he was reportedly residing at Haus Grenzhof, Aachen. His known connections as of 1942 were as follows:

Banking.—Dresdner Bank, Berlin—Director.

Landes-Ausschuss für das Rheinland, Köln, Aachen der Dresdner Bank, Berlin (Provincial Committee for the Rhineland, Köln, Aachen region of the Dresdner Bank)—Member.

Industrial.—Vereinigte Stahlwerke A. G., Düsseldorf (steel trust; capitalized in 1939 at R.M. 460,000,000; total assets, December 1939, R.M. 2,277,994,000)—Director.

Deutsche Wagenbau-Vereinigung (Association of Transportation Vehicle Manufacturers)—Member of the management committee.

Waggonfabrik Talbot, Aachen (carriage factory)—Partner and manager.

Waggonfabrik Uerdigen A. G., Krefeld-Uerdigen (construction and utilization of railroad, street, and other cars. Capital, 1935, R.M. 3,636,000. The Eisenbahn-Verkehrsmittel holds almost 25 percent interest and Gustav Talbot & Cie. m. b. H., Aachen, has approximately a 14 percent interest)—Director.

Düsseldorfer Waggonfabrik A. G., Düsseldorf (manufacture of autos, railroad cars, streetcars, auto busses. Capitalized in 1936 at RM. 1,000,000, which is almost wholly owned by Waggon-Fabrik A. G.)—Director.

Aachener Kleinbahngesellschaft, Aachen (construction, purchase, and operation of narrow-gage and branch-line railroads; capital, 1935, RM. 6,000,000, of which the city of Aachen holds 50 percent and district of Aachen holds 25 percent)—Director.

Rhein. Elektrizitäts- und Kleinbahnen A. G., Aachen (operation of electric power stations and of the narrow-gage railroad in Aachen; capital, 1935, RM. 2,250,000; is wholly owned by the Aachener Kleinbahngesellschaft)—Director.

Basalt A. G., Linz/Rhine (purchase and lease of stone quarries; capital, 1936, RM. 20,000,000; has numerous subsidiaries in Germany, also France, Holland, and Austria)—Director.

Dessauer Werke für Zucker und Chemische Industrie A. G., Dessau (operation of sugar factories, distilleries, also production of chemical byproducts; capital, 1935, RM. 8,100,000)—Chairman of the board of directors.

Dessauer Zucker-Raffinerie G. m. b. H., Dessau (sugar refinery and production of chemical byproducts; capital, 1938, RM. 4,000,000; 99.85 percent controlled by the Dessauer Werke für Zucker- und Chemische Industrie A. G., Dessau)—Director.

Zucker-Raffinerie Hildesheim G. m. b. H., Hildesheim (sugar and distillery factory; capital, 1936, RM. 2,000,000, which is 50 percent owned by Dessauer Werke für Zucker und Chemische Industrie A. G., Dessau; has 11 subsidiaries)—Director.

Gemeinnützige Baugesellschaft für Aachen A. G., Aachen (small dwelling construction; capital, 1935, RM. 90,000)—Director.

Garbe, Lahmeyer & Co. A. G., Aachen—Director.

Insurance.—Aachener und Münchener Feuer-Versicherungs-Gesellschaft, Aachen (domestic and foreign insurance and reinsurance against all kinds of damages; capital, 1938, RM. 20,000,000; is a leading member of the Rheinische Interessengemeinschaft insurance group)—Director.

Aachener Rückversicherungs A. G., Aachen (reinsurance of all kinds; capital, 1935, RM. 5,000,000; Aachener und Münchener Feuer-Versicherungs-Ges. holds over 25 percent interest)—Director.

Versicherungs A. G., "Globus," Vienna (transport and damage insurance; capital, 1938, 300,000 Austrian schillings; premium receipts, 1937, 1,280,000 Austrian schillings; wholly owned by the Aachener- und Münchener Feuer-Versicherungs-Ges.)—Member of the management committee.

Thuringia Versicherungs A. G., Erfurt (domestic and foreign insurance and reinsurance against all kinds of damages; capital, 1935, RM. 9,000,000; premium receipts, 1934, RM. 16,664,864; Aachener und Münchener Feuer-Versicherungs-Ges. holds over 25 percent; Max Stürcke, director of the company, holds an unspecified interest)—Director.

Hans Ullrich

Hans Ullrich, general director of the Gothaer Lebensversicherungsbank A. G. (Gothaer Life Insurance Bank), and director of the Dresdner Bank, is actively engaged in the field of insurance. His close connection with the Nazi Party is evident from the fact that he was appointed by Staatsminister Dr. Franke as head of the Akademie für Deutsches Recht (Academy for German Law). He is also a member of the chairman's committee of the Reich Association for Private Insurance.

Hans Ullrich was born on March 15, 1889, in Eisfeld (District of Hildburghausen, in Thuringia). He is said to be descended from an old Frankish family. His father, Ernst Ehrhardt Ullrich, who was a school director, gave him a thorough education. After attending the Gymnasium (classical state school) at Eisenach, Ullrich studied law and political economy at the Universities of Göttingen, Munich, and Jena.

In 1911, Hans Ullrich successfully passed his first state examination in law. The following year, he obtained his degree of doctor of jurisprudence. During the war, Ullrich served with distinction as a platoon leader, administrative officer, adjutant, and battery commander. He was given the Iron Cross first and second class, as well as the Meiningen Distinguished Service Cross, a decoration for wounds received.

In 1920, Ullrich passed his second state examination, and in July of that year entered the Gothaer Lebensversicherungsbank. Within a short space of time, he rose to be the general director with full power to represent the bank in all its activities.

Some of his more outstanding works in the field of insurance are the following publications: *Der Währungszerfall, die Aufwertung und der Wiederaufbau bei den Privaten Deutschen Lebensversicherungsgesellschaften* (The Deterioration of Currency, the Revaluation and Reconstruction in the German Life Insurance Companies), 1926; special volume of yearbooks on national economy and statistics; *On the History of the New Gothaer Lebensversicherungsbank*; *The Policies in Investment of Capital of the German Insurance Companies in the Years of Reconstruction, 1924-28* (special number of the publication for the Whole Insurance Economy); *The Legal Regulations on Investment of Capital of Private Insurance Companies in the Principal Civilized Countries of the World, 1934*.

Hans Ullrich is a frequent contributor to numerous German publications on matters pertaining to insurance.

His political, banking, and insurance connections are as follows:

Political.—Comite Permanent des Congres Internationaux d'Acturaires (Permanent Committee of International Congresses of Actuaries)—Member.

German Association for Insurance Economy, Berlin—Deputy Head.

Academy for German Law—Head of the Reich Committee on Insurance.

Banking.—Dresdner Bank—Director.

Gothaer Lebensversicherungsbank A. G., Gotha—General director.

Insurance.—Reich Association for Private Insurance—Member of the chairman's committee.

Association of German Life Insurance Companies—Member of the chairman's committee.

Hans Hermann Rudolf Walz

Hans Walz, director of the Dresdner Bank, Berlin, and the Reichs-Kredit-Gesellschaft A. G., Berlin, has been associated with Robert Bosch G. m. b. H., Elektrotechnische Fabrik, Stuttgart, since 1912, and is at present the managing technical director of this company. He is active both in the fields of business, particularly banking, industry, and insurance, and in politics. His political connections lead one to suspect that he is sympathetic to the Nazi Party, since he holds the position of district agent for the Wurtemberg Economic Association of the German Labor Front, and is a member of the board of experts of the southwest district of the German Labor Front.

He was born on March 21, 1883, in the city of Stuttgart. Hans Walz's father, Johannes, was a teacher by profession and of evangelical faith. His mother's maiden name was Christiane Henne. After attending Carls Gymnasium, a secondary school, Hans Walz went to the Superior Business School in Stuttgart. Upon completion of his business education, he obtained a 2-year apprenticeship in the banking profession. Subsequently, Hans Walz became active in the banking profession and the fields of wholesale business and factory management in Germany, procuring a number of leading positions.

In 1912, he became manager of the private secretariat of Dr. Robert Bosch's company in Stuttgart, handling matters pertaining to property management. Rising rather rapidly, Hans Walz became a member of the board of directors of the company by 1919. In 1921, he was a regular member of the management committee, and within a short time obtained the position of official manager of the property administration of the company Robert Bosch G. m. b. H. (limited) of Stuttgart, which position he has held as recently as 1942.

On May 29th, 1926, Hans Walz married Hildegard Kälher, the daughter of the Ministeriat Counselor, Gustav Kälher. He has four children: Reinhard, born October 17, 1927; Dorothee, born June 25, 1929; Friedman, born April 22, 1933, and Machtild, born August 1, 1934.

His political, commercial, and business connections are as follows:

Political.—Company for Promotion of World Economy, Kiel—Member of the management committee.

Wurtemberg Economic Co., Stuttgart—Alternate chairman.

Union for Improvement of the Peoples Education, Stuttgart—Member of the management committee.

Alliance of Wurtemberg Industries, Stuttgart—Member of the managing board.

Chamber of Commerce and Industry, Stuttgart—Vice president.

Wurtemberg Business and Industry Conference of Stuttgart—Vice president.

Wurtemberg Economic Association of the German Labor Front—District agent.

Board of Experts of the South West District of the German Labor Front—Member.

Akademie für Deutsches Recht, Berlin—Member.

Banking.—Dresdner Bank, Berlin—Director.

Reichs-Kredit-Gesellschaft A. G., Berlin—Director.

Württembergische Bank, Stuttgart—Director.

Handels und Gewerbebank Heilbronn A. G., Heilbronn—Director.

Industry.—Robert Bosch G. m. b. H., Elektrotechnische Fabrik, Stuttgart—Managing technical director.

Vermögensverwaltung Bosch, G. m. b. H., Stuttgart—Manager.

Teppich-Werke Berlin Trepton, A. G., Berlin (carpet factory)—Chairman of the board of directors.

Otto Ficker A. G., Kirchheim/Teck (manufacture and wholesale trade in paper, envelopes, cards, etc.)—Director.

Kolk & Schüle A. G., Kirchheim/Teck (spinning and weaving; has three mills which belong to various industrial groups)—Director.

Insurance.—Victoria Feuer-Versicherungs A. G., Berlin; Victoria zu Berlin Allgemeine Verischerungs A. G., Berlin; Victoria Rückversicherungs A. G., Berlin.

Carl Wentzel

Carl Wentzel is a director of the Dresdner Bank and has extensive connections in the field of industry, banking, and insurance. He is described as a chief official (Oberamtmann), presumably in the Nazi Government.

Wentzel was born on December 9, 1876, in the town of Brachwitz. He is reported to be a director of the Mannesmannröhren Werke, Düsseldorf. This company, which is engaged in the production of metal objects of all kinds, especially pipes or tubes, having nine plants and three mines, is closely associated with Nazi economic activities. It is said that one of its officials is a liaison officer between the SS, and the main company.

Carl Wentzel's banking and industrial connection are as follows:

Banking.—Dresdner Bank, Berlin—Director.

Hallescher Bankverein von Kulisch, Kaempt & Co., K. G. a. A., Halle-Saale—Director.

Zuckerkreditbank A. G., Berlin—Chairman of the board of directors.

Industry.—Sugar: Resistaer Zucker-Raffinerie, Rositz, Kr. Altenburg (sugar refinery)—Chairman of board of directors.

Zuckerraffinerie Halle, Halle/Saale (sugar refineries)—Chairman of board of directors.

Zuckervertriebesgesellschaft Halle A. G. Halle-Saale (sugar industry)—Chairman of the board of directors.

Landes-Ausschuss für Mitteldeutscher Rohzucker fabriken, Halle-Saale—Member.

Heavy metal: Mannesmannröhren Werke, Düsseldorf (pipes, tubes, etc.)—Director.

Lignite: Braunkohlen- und Briketwerke Roddergrube A. G., Bühl, Bez., Köhl—Director.

Plant breeding: Rabbethge & Giesecke A. G., Klein-Wansleben—Director.

Factories owned by Wentzel.—J. G. Boltz-Salamünde, Teutschenthal (Wentzel's wife is owner, but Carl Wentzel has full executive powers); C. Wentzel, Teutschenthal.

Insurance.—Colonia, Kölnische Feuerer und Kölnische Unfallversicherungs A. G., Köln—Director.

Miscellaneous.—F. von Lochow-Petkus, G. m. b. H., Berlin—Director.

Joseph Wiehen

Joseph Wiehen's sole reported connection is membership in the management committee of the Deutsche Centralbodenkredit A. G., Berlin. This bank is described as the leading bank of the Gemeinschaftsgruppe Deutscher Hypothekenbanken (Union of German Mortgage Banks), which was established in 1930 by the Deutsche Bank.

Joseph Wiehen was born March 19, 1900, in Münster/Westphalia. He holds the degree of doctor of political science. He was last reported to be residing at Hohenzollernstrasse 26, Berlin-Wanusee.

Hugo Zinnesser

As of 1944 Hugo Zinnesser was a member of the management committee of the Dresdner Bank, one of the so-called Berliner Grossbanken. He had other important, although perhaps not as impressive, banking affiliations which included the Diskont-Kompagnie A. G., Deutsche Hypothekenbank A. G., both in Berlin,

and Pfälzische Hypothekenbank, Ludwigshafen. The last-named bank is reportedly under the control of the Reich Ministry of Economics.

In addition Zinnesser is listed on the boards of numerous enterprises in diversified fields of industrial activity, with many of which he has been associated since 1938. These firms include such enterprises as Hugo Schneider A. G., Leipzig, engaged in metal processing, of which the Dresdner Bank holds the controlling interest; Riebeck'sche Montanwerke A. G., Halle/Saale, engaged in the acquisition and operation of mines and chemical plants etc., which is almost wholly owned by Rheinische Stahlwerke A. G., Essen; Chemische Fabrik von Heyden A. G., Radebeul near Dresden, operating chemicals plants in Germany and other European companies; Feldmühle Papier und Zellstoffwerke A. G., Stettin-Odermünde, with 33 affiliates and subsidiaries (one of which, Casco Bay Timber Co., is located in the United States) operating cellulose processing plants and several breweries. In addition he is listed on the directorate of a Czechoslovakian chemical company, Chemische Werke Aussig-Falkenau G. m. b. H.

Zinnesser was born January 7, 1900, in Pfaffenhofen. He was reported in 1942 to be residing at 35-39 Behrenstrasse, Berlin. His known connections as of 1942 were as follows:

Banking.—Dresdner Bank, Berlin (this bank is one of the Grossbanken)—Member of the management committee.

Diskont-Kompagnie A. G., Berlin (the company is engaged in ordinary banking transactions; capital, R.M. 50,000,000 in 1938; principal shareholder, Deutsche Golddiskont Bank, Berlin)—Director.

Pfälzische Hypothekenbank, Ludwigshafen/Rhine (a mortgage institution under the control of the Reich Ministry of Economics, capital R.M. 6,800,000; the bank holds participations in the following: (a) Lombardbank A. G., Berlin; (b) sudeutsche Festwertbank A. G., Stuttgart; (c) Internationale Bodenkreditbank Basel, Switzerland)—Director.

Deutsche Hypothekenbank A. G., Berlin (ordinary banking transactions; capital in 1938, R.M. 8,000,000; total assets, R.M. 155,158,778 in 1937. Reich Commissioner for this bank is Hans Ruecke, Upper Government Councilor in the Reich Ministry of Economics)—Director.

Insurance.—Hermes Kreditversicherungs A. G., Berlin (the company is engaged in the insurance of credits on merchandise, etc.; capital in 1938, R.M. 5,005,000; total assets, R.M. 9,039,869 in 1937; principal shareholders, Mühener Rückversicherungs Gesellschaft, Munich)—Director.

Industrial.—Hugo Schneider A. G., Leipzig (the company operates enterprises in the field of the metal processing industry and connected industries; capital, in 1938, R.M. 4,200,000; the Dresdner Bank, Berlin, holds the controlling interest of about 51 percent; these companies are wholly owned enterprises: (a) Otto Müller A. G., Leipzig; (b) Hugo Schneider A. G. Vereinigte Glühlampenwerke G. m. b. H., Leipzig; (d) and Thermes A. G., Leipzig)—Deputy chairman of the board of directors.

Metal industry.—Riebeck'sche Montanwerke A. G., Halle/Saale (the company is engaged in the acquisition and operation of mines, chemical plants, and other enterprises which extract, process, and sell and transport coal, other minerals, and oil, etc.; capital, R.M. 50,000,000 in 1938; is almost wholly owned by Rheinische Stahlwerke, Essen; the company has two affiliates and one subsidiary, one of which is Bituma Bergbau und Chemische Industrie A. G., Karlsbad, Czechoslovakia)—Director.

Oehringen Bergbau A. G. i. Abw., (in liquidation) Berlin (the company is engaged in mining operations of all kinds; capital, R.M. 5,000,000; among its participations are Oberschlesisches Steinkohlen Syndikat G. m. b. H., Gleiwitz, Montan Cement G. m. b. H., Hindenburg (Silesia); Wasserwerke Deutsch Oberschlesien G. m. b. H., Hindenburg, Upper Silesia)—Chairman of the board of directors.

Metallwarenfabrik, verm. H. Wissner A. G., Zella/Mehlis/Thür (the company is engaged in the manufacture and sale of metal wire, bells, bicycle parts, and related articles; capital, R.M. 3,125,000 in 1938; the company has three subsidiaries)—Chairman of the board of directors.

Gottfried Lindner A. G., Ammendorf/Saalkr (the company produces and sells railway equipment, streetcars, etc.; capital, R.M. 3,500,000 in 1938; the company has one subsidiary and holds minorities in three other small companies)—Chairman of the board of directors.

G. Kärger, Fabrik für Werkzeugmaschinen A. G., Berlin (the company manufactures tools; capital in 1938, R.M. 1,800,000)—Deputy chairman of the board of directors.

Superphosphates and other chemicals.—Chemische Werk Albert, Mainz-Amöneburg (the company is engaged in the production and sale of superphosphates and similar fertilizers; capital, RM. 9,492,750 in 1938; the company holds participations in the following enterprises: (a) Dr. Kurt Albert G. m. b. H. Chemische Fabriken, Mainz Amöneburg, wholly owned; (b) Duisburger Kupferhütte, Duisburg, small minority interest; (c) Aktiengesellschaft für Zellstoff und Papierfabrikation, Ascheffenburg, Bavaria, small minority interest; and (d) Mattax-happij voor Chemische Waren, Rotterdam, almost wholly owned)—Deputy chairman of the board of directors.

Chemische Fabrik von Heyden A. G. Radebuel (near Dresden, Saxony) (the company is engaged in the construction and operation of chemical plants in Germany and abroad; capital, RM. 13,700,000 in 1938)—Deputy chairman of the board of directors.

Chemische Werke Aussig-Falkenau G. m. b. H., Aussig, Czechoslovakia—Director.

Textiles and fiber.—Feldmühle, Papier- und Zellstoffwerke A. G., Stettin-Odermünde (The company is engaged in the manufacture and processing of cellulose, paper, chemicals, etc., and in their sale; capital, RM. 32,000,000 in 1938; the company has 33 affiliates and subsidiaries, three of which are located outside Germany; they are (a) Hollandsche Papier en Cellulosemaatschappij N. V. Amsterdam, which is wholly owned; (b) Nordiska Travaru Eseport A/B, Helsingfors, also wholly owned; and (c) Caseo Bay Timber Co., Portland (Maine), approximately 25 percent owned)—Director.

Gruschwitz Textilwerke A. G., Neuslitz/Oder (the company manufactures articles made from wool, hemp, jute, cotton, and their substitutes; no principal shareholders listed; Participations: The company has eight subsidiaries and affiliates in Germany; Franz Koenigs, a banker on the board of Rhoduis Handel Koenigs Handel-Maatschappij, Amsterdam was listed, in 1938, on the board of this company)—Director.

Breweries.—Freiherrlich von Tucher'sche Brauerei A. G., Nürnberg (the company is engaged in the brewing and malt industry and in the sale of its products; capital, RM. 4,500,000 in 1938; the company holds interest in four small domestic enterprises)—Deputy chairman of the board of directors.

Reichelbräu A. G., Kulmbach (the company is engaged in the brewing industry and connected side lines; capital, RM. 3,506,000 in 1938; has a participation in two domestic breweries)—Deputy chairman of the board of directors.

Radeberger Exportbierbrauerei A. G., Radeberg (the company is engaged in the acquisition, lease, and operation of breweries in Germany and abroad and in connected transactions; capital in 1938, RM. 6,005,000; principal shareholder: Bank für Brauindustrie, Berlin, whose capital, in turn, is RM. 10,000,000, and whose principal shareholder is the Dresdner Bank; the company has one subsidiary, the Stadtbrauerei Hainschen)—Director.

Miscellaneous.—Süddeutsche Zucker A. G., Mannheim (the company is engaged in the manufacture and sale of sugar, of its byproducts, and agriculture; Capital, RM. 30,000,000 in 1938; principal shareholders: Gruppe Deutsche Bank, Gruppe Dr. Montesi Padug; the company has 17 subsidiaries and affiliates, of which the following are located abroad: (a) Hotzemploetz Zuckerfabrik A. G., A. G. Hotzenplotz, Upper Silesia; (b) Ackerbau G. m. b. H., Probstdorf/Vienna, Austria; and (c) "Aguila" S. A. Teanico Industriale, Trieste, Italy (an oil refinery))—Director.

Pfälzische Mühlenwerke, Mannheim—The company is engaged in the processing and grinding of grain and other cereals; capital, RM. 5,000,000 in 1938; principal shareholders are the Auer Muhlengruppe (mill group) and a Clemens Auer of Cologne)—Director.

CABLE FROM FRANCE SHOWING GERMAN PLANS FOR UNDERGROUND

From: Paris

Date: February 13, 1945.

Newspaper, France-Soir, February 10, referring to Vansittart's statement House of Lords on false Nazi passports, contains dispatch from Swiss frontier by special correspondent on German flight capital. Following are main facts as cited:

1. In orders dated January 22, 1945, on letterhead of German Ministry of War, Himmler informed all Gauleiters that certain party men in whom Hitler had confidence would be sent abroad for special missions.
2. German news agency DNB sent new correspondent to Stockholm and Goteborg named Andreas Bitchailler. This man is actually Doctor Hans Sturmer, and assistant of Goebbels.
3. Other important Nazis who have left Germany are alleged to be Joseph Liedersterch, alias Doctor Popitz, passport 65432, who went to Ireland; Peter Kreuser, alias Obergruppenfuhrer Baur, who went to Sweden.
4. In February 345 party members received orders to prepare to leave Germany.
5. On February 7 and 8 the Gestapo arrested 60 Germans who were about to cross the Swiss frontiers near Basle. Among these persons it is reported were Hugenberg, former director of UFA, and Eberhart, director of Siemens factories.
6. On December 6, 1942, 50,000 kroner were deposited in Stockholm Bank Limited in name of a certain Herr Friedmann, industrialist from Dresden. These funds are alleged to be held in behalf of Goering, who is also reported to have deposited 10,000 pounds sterling in Argentina through an intermediary.
7. Goebbels is reported to have property in Spain valued at 10,000,000 pesetas.
8. Von Ribbentrop is alleged to have \$1,000,000 put aside in Argentina through an intermediary, Pedro Rodriques Panchino. Siegfried Mauser, German Consul in Spain, is reported.

EXHIBIT No. 9

STATEMENT OF GEORG VON SCHNITZLER (MEMBER OF CENTRAL COMMITTEE OF I. G. FARBEN BOARD OF DIRECTORS) ON FEBRUARY 1933 MEETING ON FINANCING OF THE NAZI PARTY BY GERMAN INDUSTRIALISTS

At the end of February 1933, four members of the Vorstand (board of directors) of I. G. Farben, including Dr. Bosch, the head of the Vorstand, and myself, were asked by the office of the President of the Reichstag to attend a meeting in his house. The purpose of this meeting was not given. I do not remember the two other colleagues of mine who were also invited. I believe the invitation reached me during one of my business trips to Berlin. I went to the meeting, which was attended by about 20 persons who, I believe, were mostly leading industrialists from the Ruhr.

Among them present I remember:

Dr. Schacht, who at that time was not yet head of the Reichsbank again, and not yet Minister of Economics.

Krupp von Bohlen, who in the beginning of 1933 presided the Reichsverband der Deutschen Industrie, which later on was changed in the semiofficial organization, Reichsgruppe Industrie.

Dr. Albert Vögler, the leading man of the Vereinigte Stahlwerke.

Von Löwenfeld, from an industrial work in Essen.

Dr. Stein, head of the Gewerkschaft Auguste Victoria, a mine which belongs to the I. G. Dr. Stein was an active member of the Deutsche Volkspartei.

I remember that Dr. Schacht acted as a kind of host. While I had expected the appearance of Göring, Hitler entered the room, shook hands with everybody and took a seat at the top of the table. In a long speech he talked mainly about the danger of communism, over which he presented that he just had won a decisive victory.

He then talked about the Bundis (alliance) into which his party and the Deutschnationale Volkspartei had entered. This latter party, in the meantime, had been reorganized by Herr von Papen. On the end, he came to the point which seemed to me the purpose of the meeting. Hitler stressed the importance that the two aforementioned parties should gain the majority in the coming Reichstag election. Krupp v. Bohlen thanked Hitler for his speech. After Hitler had left the room, Dr. Schacht proposed to the meeting the raising of an election fund of, as far as I remember, R.M. 3,000,000. The fund should be distributed between the two Allies according to their relative strength at the time being. Dr. Stein suggested that the Deutsche Volkspartei should be included, which suggestion, when I rightly remember, was accepted. The amounts which the individual firms had to contribute were not discussed.

I did not take part in the discussion but reported the matter the next day or the overnext to Dr. Bosch in Frankfurt, who, together with Gen. Rat. Schmitz,

had reserved exclusively for themselves the handling of distribution of money to political parties, the press, etc., and had made a special appoint of Vertraulichkeit (secrecy) in this respect.

Dr. Bosch did, as far as I remember, not make any remark to my report, but shrugged his shoulders.

I never heard again of the whole matter, but I believe that either the büro of Goering or Schacht or the Reichsverband der deutschen Industrie asked the office of Bosch or Schmitz for payment of I. G.'s share in the election fund. As I did not take the matter up again, I not even at that time know whether and which amount had been paid by the I. G. According to the volume of the I. G., I should estimate I. G.'s share being something like 10 percent of the election fund.

EXHIBIT No. 10

BIOGRAPHIES OF GERMAN INDUSTRIALISTS

COUNT HANS BODO VON ALVENSLEBEN

Count Hans Bodo von Alvensleben, a Junker nobleman and landowner, is regarded as one of the most influential of Hitler's backers. In 1932, as president of the Herren Klub of Berlin, he was in close contact with the Junker nobility and important German industrialists who frequented that exclusive meeting place.

In January 1933 von Alvensleben attended the meeting at Hitler's home, together with Kurt von Schroeder, partner of the banking firm, J. H. Stein & Co., and a leading spirit of the professional organization of Rhenish industry. Von Alvensleben represented the Junkers who were closely tied up with the industrialists of the Ruhr through similar militaristic and nationalistic concepts. At this meeting, which Hindenburg and von Papen also attended, a final promise was given to aid Hitler in his political ambitions.

For his cooperation with the party, von Alvensleben is reported to have received an estate in Poland from Himmler in the latter's capacity as Reichs Commissioner in charge of all estates in occupied Europe.

Count von Alvensleben is now 63 years of age. His industrial connections are the following:

Industrial

Hein, Lehmann & Co. A. G., Düsseldorf (manufacturer of railway safety devices, steel construction for bridges, etc.; this company had a capital, in 1938, of RM. 4,000,000 and an interest in two subsidiary companies; the Bank für Industrie und Verwaltung, which is owned by the Administration, holds more than 50 percent of the company's stock)—Chairman of the board of directors.

Hilgers A. G., Rheinbrohl/Rhein (manufacturer of conduits, pipes, reservoirs, bridges, etc.; this company operates two works, and in 1938 had a capital of RM. 1,800,000; the principal shareholders of the company are Hein, Lehmann & Co. A. G., who own 63.94 percent of the stock, and the Bank für Industrie und Verwaltung A. G.)—Chairman of the board of directors.

Zuckerfabrik Dröbel G. m. b. H., Bernburg-Dröbel/Anhalt (manufacturer of sugar)—Chairman of the board of directors.

A. G. für Kohlensaure-Industrie, Berlin (manufacturer of chemical products, especially liquid carbonic acid, nitrogen, etc.; this company has several subsidiaries, and in 1938 had a capital of RM. 2,230,000; the Bank für Industrie und Verwaltung A. G. holds over 75 percent interest in this company)—Deputy chairman of the board of directors.

Deutsche Maizena-Werke A. G., Hamburg (manufacture of and distribution of starch products; this company has an interest in seven other companies, and in 1938 had a capital of RM. 7,000,000; the majority interest in this company belonged to the Corn Products Refining Co., New York)—Member of the board of directors.

Financial

Deutsche Centralbodenkredit, A. G., Berlin (the Deutsche Bank was instrumental in the establishment, in 1930, of the Gemeinschaftsgruppe Deutscher Hypothekenbanken (Union of German Mortgage Banks), a step which was preceded by extensive mergers in the field of mortgage banking; the Deutsche Centralbodenkredit A. G., in the leading institution of the aforementioned Gemeinschaftsgruppe, has been represented, for many years, on the board of directors of the Deutsche Bank, and a representative of the Deutsche Bank is always chairman of

the board of directors of this institution; in 1942 the capital was R.M. 43,000,000, the reserves were R.M. 35,000,000, the mortgage loans were R.M. 1,275,500, and the municipal loans were R.M. 271,600)—Member of the board of directors.

Union Allgemeine Deutsche Hagelversicherungs-A. G., Weimar (insurers against hail; in 1938, the capital of this company was R.M. 3,600,000; its principal shareholders were Allianz und Stuttgarter Verein Versicherungs A. G., who held 49.08 percent of the stock, and Münchener Rückversicherungs Gesellschaft, who held 49.08 percent of the stock)—Director.

HERMAN BUECHER

Herman Beucher, associated with AEG and Krupp for more than 15 years, is a calculating industrialist who has served three opposing German governments in his efforts to strengthen his own personal position. Originally a career diplomat, Beucher served the monarchy on several continents. The First World War brought to a close his diplomatic service and Buecher, then 26 years of age, allied himself with the Weimar Republic, becoming one of the most influential members of the National Economic Council (Reichswirtschaftsrat).

Up to this time Buecher's industrial interests had been primarily theoretical and advisory. In the twenties, however, he began his career with the I. G. Farben, Krupp, and AEG concerns, the last of which he successfully reorganized and developed to its present importance among the leading German industrial combines.

In 1933, Buecher joined the Nazis, a move which benefited the party, the AEG combine, and Buecher, himself. He thereafter became intimately associated with the party's efforts and the Government's industrial and financial projects. For example, Buecher is a director of the Reichsbank and the Berliner Handelsgesellschaft; he has numerous important connections in the field of public utilities in Germany and abroad; and, among other political posts, is an economic warfare director (Wehrwirtschaftsführer)—a post analogous to the one he held under the Weimar Republic. In 1942, furthermore, he was a member of Göring's 12-man Armaments Council.

He is now 63 years of age.

His political and industrial connections are the following:

Political

Academy of German Law—Member.

International Chamber of Commerce—Member.

Berlin Industrie und Handelskammer, Berlin (Board of Commerce and Industry).

Banking

Handelgesellschaft (Berliner Handels-Gesellschaft)—Member of board of directors.

Deutsch-Sudamerikanische Bank, A. G., Berlin—Director.

Deutsche Reichsbank—Director.

Industry

Iron and steel.—Mitteldeutsche Stahlwerke A. G. Riesa (steel corporation)—Director.

Public utilities.—AEG (Allgemeine Elektrizitäts Gesellschaft; General Electric Co.)—Chairman of the management committee.

AEG subsidiaries.—AEG-Union Elektrizitäts Gesellschaft, Vienna—Chairman of board of directors.

Olympia Burenaschinenwerke A. G. Enfurt (Office Machine Works, Inc.)—Chairman of board of directors.

Osram G. m. b. H., K. G., Berlin (subsidiary of AEG and Siemens Halske, also General Electric Co. and Bergmaan Electric Co. reportedly have interests in the company, which manufactures incandescent lamps)—Chairman of board of directors.

AEG Elektrizitäts-Aktieselskabet, Oslo—Director.

Geathom Als Thom-I. G. & Co. (S. A.) Madrid (over 25 percent participation of AEG)—Director.

Papierfabrik G. m. b. H. vormals Brüdern Kämmer Osnabruck (paper factory)—Director.

Grundstücks A. G., Marwitz, Berlin (real estate corporation)—Chairman of board of directors.

Other public utilities

Elektricitäts-Lieferung Gesellschaft, Berlin (electric power company, holding company of public utilities)—Deputy chairman of board of directors.

"Chade" Compania Hispano-Americana de Electricidad, Barcelona (electric company, probably public utilities)—Director.

Gesellschaft für elektrische unternehmungen A. G., Berlin (electric enterprises)—Director.

Internationale AEG, Amsterdam (General Electric Co.)—Director.

Accumulatoren-Fabrik A. G., Berlin (electric equipment for power stations)—Director.

Fabrica de Lamparas Madud SS, Madrid (manufacturer of incandescent lamps)—Director.

Elektrotreuhand i. L., Hamburg (Electric Trust in Liquidation)—Director.

Gemeinnützige Bau-A. G., Oberschoneweide, Berlin (public utility construction company)—Director.

Vereinigte Glühlampen und Elektrizitäts A. G. Ujbert bei Budapest (United Incandescent Lamp & Electric Corp.)—Director.

Otavi Minen und Eisenbahn Gesellschaft, Berlin (mining and railway company)—Member of executive committee.

Büssing-Wag. Vereinigte Nutzdraftwagen A. G., Braunschweig (United Utility Motor Vehicles Corp.)—Chairman of board of directors.

Shipping

Deutsch Werft A. G., Hamburg (German Shipbuilding Corp.)—Chairman of board of directors.

Miscellaneous

Fried. Krupp A. G., Essen (munitions)—Director.

Schlesische Elektrizitäts und Gas A. G. Glewitz (Silesian Electric & Gas Co., affiliated with VIAG)—Director.

DR. FRIEDRICH FLICK

Dr. Friedrich Flick, creator and head of one of Germany's largest industrial combines, has reportedly financed several political factions since the 1920's, when he first achieved the consolidation and control of the Vereinigte Stahlwerke. Although he has never actually held Government posts he has financed such movements as the German Army Secret Service (in contravention of the Versailles Treaty), the Deutsche Volkspartei, and the Deutschnationale Party. In 1931, he reached an understanding with Goering and the Nazi Party. Thereafter, both Goering and Flick benefited tremendously through mutual favors and each acquired important properties and concessions in Germany and abroad, and shared in the spoils of the German conquest of Europe.

Flick, virtually alone, controls the entire steel production in the Reich and is a dominant power in the joint steel and coal combines as well as in other outstanding industrial works. He was officially hailed in the Nazi press as a great industrial leader on his sixtieth birthday, in 1943.

Flick has been characterized in the American press as shunning publicity and hoping to pass as a moderate after the crash, thus insuring his industrial niche.

His industrial and financial connections are the following:

Financial

Banking.—Dresdner Bank, Berlin—Director.

Deutsche Reichsbank, Berlin—Member of the advisory board.

Insurance.—Allians Versicherungs A. G., Berlin (capitalized at RM. 16,000,000, it is one of the largest insurance companies in Europe; allegedly controlled by Merck Finck & Co. [Hitler's private banker] through Münchener Rucksversicherungs Gesellschaft)—Director.

Personal holding companies.—Friedrich Flick K. G., Dusseldorf (personal property of Flick and holding company for all his major interests)—Owner.

Netafina (holding company established after World War I in the Netherlands to protect his personal fortune; during the inflationary period in Germany in the twenties, he transferred considerable amounts to Holland and Switzerland; one of his intimate friends was Fran Koenigs, of Rhodius Koeniga Handelsmaatschappig in Amsterdam, with whom he succeeded in gaining control of a great number of old Rheinisch Westfälisches Werks).

Industrial

Steel works.—Vereinigte Stahlwerke A. G., Dusseldorf (German steel trust)—Director.

Mitteldeutsche Stahlwerke A. G., Riesa/Elbe (majority ownership held by Friedrich Flick K. G.; may be termed the No. 2 holding entity of the Flick enterprises; it is capitalized at R.M. 28,000,000)—Chairman of board of directors.

Sächsische Guss-Stahl Werke Döhlen A. G., Freital—Chairman of board of directors.

Hochofenwerke Lubeck A. G., Lubeck Herrenwyk (blast furnaces; regarded as one of Flick's war organizations; its other directors include Thyssen, Tengelmänn, Kappenberg, and von Schroder)—Chairman of board of directors.

Rombacher Huttenwerke G m b H., Rombach/Westmark (foundries; acquired after the Nazi occupation of Lorraine)—Chairman of board of directors.

Mining, iron, and coal.—Eisenwerke-Ges. Maximilianshütte, Sulzback-Rosenberg-Hütte (iron works; 80 percent owned by Mitteldeutsche Stahlwerke, above)—Chairman of board of directors.

Harpener Bergbau A. G., Dortmund (subsidiary of Eisenwerke Ges. Maximilianshütte, above; one-third owned by Hermann Goering; its directorate includes some of Germany's most prominent industrialists: Kurt von Schroder, Kimmich, von Vlissingen, the notorious Dutch Nazi, and Ernst Tengelmänn, who is alleged to have brought Goering and Flick together when the Nazis came into power)—Chairman of the board of directors.

Gewerkschaft des Steinkohlen- und Eisenstein-Bergwerks "Siebenplantten," Dortmund (coal and iron mines)—Member of mining management committee.

Anhaltische Kohlenwerke, Berlin—Chairman of board of directors.

Essener Steinkohlenbergwerke A. G., Essen (reputedly bought by Flick from the Stahlverein)—Chairman of board of directors.

Rheinische A. G. für Braunkohlen-Bergbau u. Brikettfabrikation, Cologne (coal and lignite; capitalized at R.M. 72,900,000; other directors are Thyssen, Schroder, and Vogler; affiliated with Rheinisch-Westfälisches Elektrizitätswerke through one of its subsidiaries)—Director.

Heavy machinery.—Linke-Hoffmann-Werke A. G., Breslau (subsidiary of Mitteldeutsche Stahlwerke, above)—Deputy chairman of advisory board.

Siegener Maschinenbau A. G., Siegen (owned by the Weiss family, its total assets in 1937 were R.M. 7,500,000; does not appear to be affiliated with Vereinigte Stahlwerke)—Deputy chairman of the advisory board.

Waggon- und Maschinenfabrik A. G., vorm. Busch, Bautzen (railroad cars and machinery; two other directors, Otto Steinbrinck and Friedrich Moller, are also on the board of Mitteldeutsche Stahlwerke, above)—Deputy chairman of advisory board.

Munitions.—Dynamit A. G., vormals Alfred Nobel & Co., Hamburg (majority stock held by I. G. Farben; another director is Tengelmänn)—Director.

Electricity.—Allgemeine Elektrische Gesellschaft (electrical combine with subsidiaries all over the world; in 1937 it was reputed capitalized at R.M. 120,000,000 with total assets of R.M. 431,000,000; at that time each of the following owned 25 percent of the stock of AEG: International General Electric of New York; Gesellschaft für Elektrische Unternehmungen; and Ludwig Lower A. G.; its board included Loser, of the Krupp empire, Gunther Quandt, Otto Wolff, and Balwin and Minor, of the International General Electric)—Director.

Chemicals and pharmaceuticals.—Schering A. G., Berlin (also owns 21.43 percent interest in Concordia Bergbau, majority control of which is vested in Vereinigte Stahlwerke, above)—Director.

Transportation.—Allgemeine Transportanlagen G. m. b. H., Leipzig—Director.

Political

Wehrwirtschaftsführer—Leader of the War Economy.

ALFRED KRUPP VON BOHLEN UND HALBACH

Alfred Krupp, who was born in 1907, represents the fifth generation to be associated with Germany's greatest armaments organization. As head of the Krupp organization he succeeded his father, Dr. Gustav Krupp von Bohlen und Halbach, who is credited with having been largely responsible for bringing Hitler to power.

Alfred Krupp admitted joining the Nazi Party in 1936 and having become a standarten Fuehrer (colonel) in the Nazi-sponsored National Flieger Korps.

He was recently arrested and is still under investigation by Allied counter-intelligence.

Alfred Krupp's business connections are as follows:

Industrial.—Friedrich Krupp A. G., Essen—Owner (1944).

Banking.—Dresdner Bank—Director.

DR. GUSTAV KRUPP VON BOHLEN UND HALBACH

Dr. Gustav Krupp von Bohlen und Halbach owns the great majority of shares of the Krupp combine, Germany's largest industrial and war production trust, and is considered to be one of the small group of industrial leaders largely responsible for bringing Hitler into power.

Long before 1931, large sums of money were being spent to finance Hitler and his party. Already in 1919 paper bands on packets of 1,000-mark notes which were circulating in Munich reactionary circles had the name of the Krupp concern printed on them. In 1933 Gustav Krupp was still supporting the Nazi Party. He is said to have organized a scheme whereby industrialists contributed one-half percent of their pay rolls to the Nazis.

Since 1934 he has had no business connections other than his own family enterprise, which has been reported to be wholly at the disposal of the Nazi party. Krupp's reward for his whole-hearted cooperation with the Nazi Party was in the form of heavy armaments orders and, in the early years of the present regime, some political recognition. He was also said to have provided financial aid to the Fuehrer in return for which Hitler checked labor troubles which annoyed the heavy industrialists.

Dr. Gustav Krupp has demonstrated in numerous ways his willing cooperation with the Nazi regime. He sent one of the first messages of congratulations to Hitler on his breaking with Geneva, and kept close to the chancellor. He has in turn received party recognition, including personal visits from Hitler, and has held the following posts: President of the Reich Union of German Industry, and General Councilor of Economy with responsibility of setting up a special committee for labor problems.

Dr. Krupp was born in 1870 at The Hague. A short diplomatic career preceded his connection with German industry. In 1906 he married Bertha Krupp of the armaments family and assumed the management of the Krupp works.

As far as is known both Dr. Gustav Krupp and his wife Bertha are still alive.

HERMANN VON HANNEKEN

Hermann von Hanneken represents the type of prominent Prussian industrialist reportedly very close to Hitler, who also played an active role in the Nazi Party hierarchy. He is said to be one of Germany's outstanding economic and organizational experts and was one of the key planners of the German 4-year plan, particularly the iron and steel phase. He has also served the German Government as Under Secretary of State and Chief of the Industrial Division of the Ministry of Economics.

He is associated with mining and utilities enterprises dominated by Goering, or owned and controlled by the Government itself, such as VEBAG, VIAG, and others. He has long been identified as the "boss" of the iron and steel industries.

Now 65 years of age, von Hanneken has held military as well as industrial posts in the Hitler regime. He held the rank of lieutenant general in the German Army and recently served as commander in chief of the occupation troops in Denmark, where he distinguished himself as a ruthless dictator.

As of 1942, von Hanneken had the following connections:

Political

Unterstaatssekretär (Under Secretary of State).

Reichswirtschaftsministerium (Reich Ministry of Economics)—Chief of the Industrial Division.

Eisen- und Stahl-Bewirtschaftung bei dem Beauftragten für den Vierjahresplan (Iron and Steel Management under the Delegate for the Four-Year Plan)—Generalbevollmächtigter (delegate general).

Industrial

Göring combine.—Reichswerke A. G. für Bergbau und Hüttenbetriebe Hermann Göring, Berlin (holding and operating company in the field of mining and foundry, capitalized at RM. 560,000,000 (1941); controlled by the Reich Government through Aktiengesellschaft Reichswerke "Hermann Göring")—Director.

Sudetenländische Treibstoffwerke A. G., Brux, Czechoslovakia (synthetic oil producer; capitalized at RM. 100,000,000 (1940))—Chairman of board of directors.

Sudetenländische Bergbau A. G., Brux, Czechoslovakia (mining)—Chairman of board of directors.

VEBAG group.—Vereinigte Elektrizitäts u. Bergwerks A. G. (VEBAG), Berlin (holding company for electric utility and mining enterprises; capitalized at RM. 150,000,000 (1939); wholly owned by the Prussian State)—Director.

Preussische Elektrizitäts A. G., Berlin (holding company for electrical interests; capitalized at RM. 110,000,000 (1939); approximately 90 percent owned by VEBAG)—First deputy chairman of board of directors.

Preussische Bergwerks- und Hütten A. G. (Preussag), Berlin (mining, foundry, and chemical production; capitalized at RM. 120,000,000 (1942); wholly owned by VEGAB)—Second deputy chairman of board of directors.

Bergwerksgesellschaft Hibernia A. G., Herna/Westf. (mining, warehousing, and shipping company; capitalized at RM. 150,000,000 (1939); wholly owned by VEBAG)—Director.

Other.—Vereinigte Industrie-Unternehmungen A. G. (VIAG), Berlin (holding company in diverse industrial fields; capitalized at RM. 230,000,000 (1939); wholly owned by the Reich)—Director.

Saargruben A.G., Saarbrücken (coal company; capitalized at RM. 75,000,000 (1939); wholly owned by the Reich)—Second deputy chairman of board of directors.

Roges Rhostoff-Handelsgesellschaft m. b. H., Berlin—Chairman of board of directors.

DR. HUGO HENKEL

Dr. Hugo Henkel, who succeeded his father as sole manager of Henkel-Werke in 1908, has led his company through two wars. He typifies the German industrialist whose chief interest in the Government is that he be a power behind it. As a producer of chemicals, moreover, Henkel had even stronger personal reason for alining himself with the Government, particularly a war-making Government.

In the early thirties he became politically affiliated with the Nazi Party. Subsequently his official governmental and commercial importance increased to such an extent that he is now one of the leaders of German finance and industry. He is a director of the Deutsche Bank and an adviser of the Reichsbank at Düsseldorf. He is an official adviser to the chemical industry and serves as a director of an I. G. Farben subsidiary as well as serving in his own family enterprises.

Furthermore, he has numerous associations in such fields as coal mining, cellulose manufacture, heavy machinery construction, etc. Now 64 years of age, he has had considerable experience in aiding his Government during two world wars, and has three sons now in their twenties (Jose, Konrad, and Paul) who are probably in a position to carry on in the tradition of Hugo Henkel, who was only 24 years of age when he joined his father's firm in 1905.

His political, banking, and industrial connections are the following:

Political

Ratsherr der Stadt Düsseldorf (town councilor).

Industrie- und Handelskammer, Düsseldorf (Industrial and Commercial Chamber of Commerce)—Adviser.

Industrieabteilung der Wirtschaftskammer, Düsseldorf (Industrial Division of Düsseldorf Chamber of Commerce)—Adviser.

Deutsche Arbeitsfront, Fachast Chemie, Berlin (Labor Front, Chemical Division)—Chemical adviser.

Fachgruppe Verarbeitung von Walen der Wirtschaftsguppe Chemische Industrie (chemical association), Berlin—Chairman.

Wirtschaftsgruppe Chemische Industrie, Wirtschaftskammerbezirk, Düsseldorf (Economic Group of Chemical Industry)—General director.

Banking

Deutsche Bank, Berlin (one of the six big banks)—Director.

Rheinisch-Westfälische Boden-Credit-Bank, Köln (mortgage bank)—Director.

Reichsbankstelle, Düsseldorf (Division of the Reichsbank, Düsseldorf)—District adviser.

Industry

Chemical.—E. Matthes & Weber A. G., Duisburg (production and trade in chemicals of all kinds, etc.; is subsidiary of Henkel & Cie., G. m. b. H., which holds all shares; capital (1938), RM. 1,500,000—Chairman of the board of directors.

Henkel & Cie., A. G., Düsseldorf (trading company of Henkel & Cie. G. m. b. H., Düsseldorf-Holthausen)—Director (Henkel family has 100 percent interest; capital (1938), R.M. 1,000,000).

Henkel & Cie., G. m. b. H., Düsseldorf-Holthausen (chemical and soap-flakes manufacturing company (trade-mark "Persil") which has always been known to be a very substantial enterprise but was not generally known to be as large as it is; since the outbreak of the war it has recapitalized from R.M. 24,000,000 to R.M. 200,000,000. The company is said to have a connection with I. G. Farben and Deutsche Gold- und Silberscheide-Anstalt; has 21 subsidiaries and affiliations—Adviser.

Brewery.—A. G. Schwabenbräu, Düsseldorf (operation of breweries, etc.; capital (1938), R.M. 6,006,000; shareholders: Preferred shares held by a consortium of Düsseldorf branch of Deutsche Bank, members of the board of management committee of the Schwabenbräu, etc.; has an interest in Brauerei Tivoli G. m. b. H., Krefeld)—Director.

Brauerei Tivoli G. m. b. H., Krefeld, (production and sale of beer, etc.; shareholders: A. G. Schwabenbräu, above, holds approximately 75 percent of shares; capital (1938), R.M. 2,100,000—Director.

Heavy machinery, construction, and metals.—Büttner Werke A. G., Uerdingen (production and sale of machinery, etc.; has an Austrian affiliate holds 30 percent interest; capital (1938), R.M. 1,500,000; Henkel is not listed on board in 1938)—Director.

Deutsche Gold- und Silver Scheideanstalt, vorm. Roessler, Frankfurt/M. (DEGUSSA). For many years DEGUSSA has been the leading concern in the field of precious metals and has also, chiefly for its own use, developed certain chemical branches, particularly in cyanides and sodium. Thus connections were built up with the firm of Henkel & Cie., G. m. b. H. (Düsseldorf) and I. G. Farben, which produced surplus quantities. DEGUSSA's own sphere of production, besides the refining of gold and silver, includes a variety of chemical products and the manufacture of special metal products, etc. Its stockholdings extend to metal and metal refining, platinum, glue, wax, leather, wood carbon, and an important company manufacturing lamps, etc. DEGUSSA and I. G. Farben have about an equal interest in Metallgesellschaft A. G. and, through the latter, are connected with the potash and copper concern, Salzdetfurth. The Henkel interests and I. G. Farben appear to be the principal stockholders. Has numerous subsidiaries and affiliates, including several in Austria nad Czechoslovakia. Capital (1939) R.M. 35,600,000—Director.

Duisburger Kupferhütte, Duisburg (copper mine; production of special copper, zinc oxide, cobalt, copper sulphate, etc.; has interests in several companies, including a Dutch one; principal shareholder, I. G. Farben (90 percent); capital (1938), R.M. 12,000,000)—Director.

Gladbacher Wollindustrie A. G., vorm. L. Josten M. Gladbach (woolens; production of woolens, etc.; principal shareholders, Henkel & Cie. G. m. b. H. (or Dr. Hugo Henkel), Düsseldorf (apparently 44 percent interest); capital (1938), R.M. 4,000,000)—Director.

Fr. Hesser Maschinen-Fabrik A. G., Stuffart-Bad-Cannstatt (machines; production and sale of machines, etc.; has one subsidiary; capital (1938), R.M. 1,175,000; Hugo Henkel not listed on board in 1938)—Director.

Coal, paper, woolens, and candy.—Deutsche Hydrierwerke A. G., Chemnitz (coal; operation of plants which process and refine raw materials, especially coal; has a subsidiary; principal shareholder, Henkel & Cie., Düsseldorf; capital (1938), R.M. 4,000,000).

Deutsche Tafelglas A. G. (Detag), Fürth (glass; production, processing, and sale of glass, etc.; has two subsidiaries and two affiliates; shareholders, Vopelius-Wentzel (qualified minority interest); capital (1938), R.M. 6,000,000; Henkel not listed on board in 1938)—Director.

Feldmühle Papier- und Zellstoffwerke A. G., Stettin-Odermünde (paper and cellulose; production and sale of cellulose, paper, etc.; has interests in numerous companies, including a Dutch, Finnish, and American one; numerous important people on board, including representatives from Berliner Handels-Gesellschaft, Dresdner Bank, etc.; shareholders not listed; capital (1938), R.M. 32,000,000)—Director.

Gebrüder Stollwerk A. G., Köln (chocolate and confectionery; production and sale of chocolate, confectionery, etc.; has 8 subsidiaries, including companies in Austria, Czechoslovakia, Hungary, Rumania; capital (1938), R.M. 9,000,000; Henkel not listed on board in 1938)—Director.

Advertising.—Ala Anzeigen A. G., Berlin (advertising, etc.; capital (1938), R.M. 500,000)—Director.

Miscellaneous

Werberat der Deutschen Wirtschaft (National Advertising Council of German Economy, created by law of September 12, 1933, to supervise public and private advertisements, under supervision of the Propagandaministerium; functions as a kind of Werbekammer, or advertising chamber)—Member.

DR. ALFRED HUGENBERG

Dr. Alfred Hugenberg, leader of the nationalist industrialists and Junker groups, has been variously described as the "giant shadow over Hitler," the "most dangerous man in Germany," and the "greatest constructive force of his Nation."

While he was chairman of the board of Krupp Works during World War I, Hugenberg concentrated on propaganda media and politics in support of Imperial Germany, to a large extent through the agency of Krupp representatives abroad. He is said to have built up a world-wide espionage network for supplying the German General Staff with military intelligence. After the war he expanded his international moving-picture and publishing enterprises. During this period, through his Berlin publishing company, August Scherl, he acquired control, in 1926, of the New York book firm, B. Westermann, Inc., which German stockholders have subsidized for almost 20 years. The company, closed in 1941 by Foreign Funds Control, has supplied the Nazi Government with publications concerning strategic military information and has disseminated German propaganda in this country.

Hugenberg was a member of every Reichstag of the Republic since the first, and was imbued with monarchist, nationalist, and militarist ideas. A foe of Chancellor Bruening, he was an early supporter of Hitler. In 1930 he publicly declared, "I am happy to know that Hitler's party, which symbolizes the coming Germany, has won such a brilliant electoral victory * * *. Now we are close to our goal. It will not be long before Germany awakens." The following year, he allied himself with Hitler in the so-called Harzberg front, which had as its immediate objective the overthrow of Chancellor Bruening.

He entered the German Cabinet in January 1933, when Hitler formed his Government of National Revolution. He was also nominated by Hitler as a member of the Reichstag, and has held several political posts. It is reported that Hugenberg retired from active public life either because of differences with Hitler or for considerations of his advanced age (now 80 years of age). He has maintained, nevertheless, his association with Vereinigte Stahlwerke and branches of his extensive publishing and propaganda interests. Some of the latter, such as the powerful UFA Film Co., have passed into the hands of the Nazis.

His industrial connections are the following:

Industrial

Vereinigte Stahlwerke A. G., Düsseldorf (steel trust)—Director.

August Scherl Handels- und Verwaltungs A. G., Berlin (trading and management)—Partner.

August Scherl, Nachfolger, Berlin (publishing subsidiary of Opreiba Privatverwaltung A. G., itself a subsidiary of Aussendienst G. m. b. H.)—Partner.

Alterum Verwaltungs A. G., Berlin (management company; subsidiary of August Scherl Handels und Verwaltungs A. G.)—Chairman.

Deutsches Gewerbehaus A. G., Berlin (holding company for real estate and publication companies; subsidiary of Aussendienst G. m. b. H.)—Chairman.

Baustoffwerke Rohbraken Hugenberg & Co., Rohbraken (construction material)—Partner.

Tornado Fabrik Elektrischer Maschinen und Apparate G. m. b. H., Berlin (electrical machinery)—Chairman.

Wehrmacht Presse-Verlag, Berlin (Printing Press for the Armed Forces)—Chairman.

DR. MAX ILGNER

Dr. Max Ilgner, the shrewd foreign minister of I. G. Farben, is the nephew of the notorious Hermann Schmitz and son-in-law of Dr. Karl Duisburg. He was one of the important industrial figures behind the Nazi regime who not only financed the rise of Hitler but sought to weld the interests of I. G. Farben and Nazism into an instrument of world power.

As head of I. G. Farben's financial department, Ilgner was one of the original group which planned its world-wide organization. He was the specialist in world patent and cartel agreements, and organized foreign markets for I. G. Farben's development and penetration into other continents.

Soon after the accession of Hitler to power, it was realized that nazism would offer excellent potentialities for expanding the interests of I. G. Farben, both in Germany and throughout the world. Because of the success of his Berlin bureau, from which emanated espionage and propaganda material to every country of the world, Ilgner became I. G. Farben's representative in the Nazi Party. His office, with its wealth of useful politico-economic data was subsequently used not for I. G. Farben's interests alone, but for the Reich as well. It became an adjunct of both the German Foreign Office and the German Ministry of National Economy, and its functions became an integral part of the German scheme for world conquest. So successful was the diplomatic work of Ilgner's bureau that, under the 4-year plan, the party, the Army, and I. G. Farben were allied for mutual benefit and profit.

Ilgner is one of the younger industrial leaders. He is 46 years of age, reportedly maniacal on the subject of German domination, and is regarded as one of the men who has already planned for Germany's post-war economy.

His political and industrial connections are as follows:

Political

Working Committee of Reich Groups for Industry and Commerce—Member.

Advisory Council of the German Group of the International Chamber of Commerce, Berlin—Member.

Business Political Committee of the International Chamber of Commerce, Paris—Member.

Committee on Money, Banking, and Credit in the Reichstand (Reich Bureau) of German Industries—Vice president.

German-Mexican Chamber of Commerce, Berlin—President.

German Economic Union for South and Central America, Berlin—Vice chairman.

Praesidium of the German-American Economic Union, Berlin—Member.

Directorium of the Institute for Inquiry into Trade Fluctuations, Berlin—Deputy member.

German Automobile Club, Munich—Vice president.

Carl Schurs Union—President.

German-Bulgarian Chamber of Commerce—Deputy chairman.

Admissions Committee of the Stock Exchange—Member.

Banking

Creditanstalt-Bankverein, Vienna—Director.

Deutsche Überseische Bank, Berlin—Director.

Industry (chemical)

I. G. Farbenindustrie, A. G., Berlin—Head of financial department.

Stickstoff-Syndicate (Nitrate Syndicate)—Member of the governing board.

Buna-Werke G. m. b. H., Merseburg—Deputy manager.

Donau Chemie A. G., Vienna—First deputy chairman of the board.

Chemische Werk Aussig-Falkenau G. m. b. H., Aussig—Director.

Deutsche Gasolin A. G., Berlin—Director.

Dynamit Nobel, Pressburg—Vice chairman of the board.

HANS KEHRL

Hans Kehrl, president of the large Phrix synthetic textile combine, has been one of the keymen in the Nazi economy. After his father's death in the middle 1920's, Kehrl gradually gained control of approximately 10 Phrix corporations and their foreign subsidiaries, and established himself in his present position of prominence in the artificial silk and heavy industries.

Kehrl has played an active role in Nazi Party politics. He has served as president of the Chamber of Industry and Commerce for Niederlausitz; as economic adviser of the Gau Kurmark of the NSDAP; and as leader of the textile industry group.

In the spring of 1942, Kehrl was entrusted by Speer with the task of reorganizing the German economy, especially the allocation of raw materials. He was made chief of one of the most important divisions of the Ministry of Economics and was the creator of the Reichsvereinigungen or National Peak Cartels, which aimed to enlarge the powers of big business, and to substitute business organizations for governmental controls. He also served as Commissioner General for Armaments.

Kehrl was born on September 8, 1900, in Brandenburg. His known connections are as follows:

Political

Leader of the economic group of textile industry.
 Chief of the Department for Mining, Iron, and Energy in the Reich Ministry of Economics.
 President of the Chamber of Commerce and Industry for Niederlausitz.
 Economic adviser of the Gau Kurmark of the NSDAP.

Industry

Textiles.—Zellulose A. G., Berlin—Chairman.
 Rheinische Kunstseide A. G., Drefeld—Chairman.
 Rheinische Zellwolle A. G., Krefeld—Chairman.
 Rheinische Zellwolle A. G., Siegburg—Chairman.
 Spinnstoffwerk Glauchau A. G., Glauchau—Chairman.
 Süddeutsche Zellwolle A. G., Kelheim—Chairman.
 Thüringische Zellwolle A. G., Schwarzsa/Saalbahn—Chairman.
 Westfälische Zellstoff A. G., Arnsberg—Chairman.
 Zellstoff-Fabrik Küstrin A. G., Küstrin—Chairman.
 Zellstoff Lenzing A. G., Lenzing—Chairman.
 Spinnstoff G. m. b. H. Schwarzsa, Berlin—Adviser.
 Phrix combine in Hamburg—President.
Heavy industry.—Alpine Montan A. G. "Hermann Goring," Donau—Member of the supervisory board.
 Brüxer Kohlenbergbau-Gesellschaft, Brussels—Member of the supervisory board.
 Sudetenländische Bergbau A. G., Brussels—Member of the supervisory board.
 Sudetenlandische Treibstoffwerke A. G., Brussels—Member of the supervisory board.
 Nord Böhmisches Kohlenwerks Gesellschaft in Brussels—Member of the supervisory board.

WILHELM KEPPLER

Wilhelm Keppler is an outstanding politician and industrialist who was already a relatively successful businessman when he joined the Nazi Party.

Keppler was very close to Hitler, and in 1932 was appointed by Hitler to work on problems in political economy. In March 1933 Keppler was elected to the Reichstag and several months later, in July, became a representative of Hitler in matters pertaining to political economy in the Reich Chancellery.

Keppler preceded Schacht as a financial expert for the Government and, after irreconcilable differences with the latter, was despatched to Austria. Upon his arrival there in March 1938 he succeeded in obtaining a postponement of the plebiscite proposed by Schuschnigg, who thereafter resigned in protest. Keppler's reward for effective accomplishment in this matter was appointment as Reich Minister for Austria. Among other equally important political posts which he held is that of Under Secretary in the German Foreign Office.

Keppler, who is said to be utterly ruthless and arrogant, took an important part in the undermining of countries which the Nazis planned to invade. He also cooperated with the German Army in its plans for Iran, involving the transfer of several thousands of "experts" to that country. In 1942 he was present at a ceremony held by the Moslem Society of Berlin at which Rashid Ali al Gailam gave an address. In 1943 Keppler expressed, on behalf of Foreign Minister von Ribbentrop, best wishes for India's independence.

In the industrial field Keppler has numerous connections with important companies, some of which are affiliated with I. G. Farbenindustrie, Vereinigte Industrie Unternehmungen A. G. (VIAG), the Reich holding company, and the Hermann Göring combine. He has been associated at least since 1938 with these groups. In the case of two Farben and one Göring affiliate, he holds the position of chairman of the board. He is also a director of Hibernia Bergwerksgesellschaft and Junkers-Flugzeug und Motorenwerke Junkers & Co. G. m. b. H., the latter of which is a large airplane factory.

His political and industrial activities, as of 1942, were as follows:

Political

Reichs Commissar for Austria.
 Under Secretary in the Foreign Office.
 Zentralstelle für die Wirtschaftspolitischen Organisationen der NSDAP (Central Office for the Economic Political Organizations of the NSDAP)—Head.
 Reichsstelle für Bodenforschung (National Office for Soil Research), Berlin—Director.

Industrial

Braunkohle-Benzin A. G. (capital, R.M. 100,000,000; I. G. Farbenindustrie and VIAG have participations), Berlin—Chairman of board of directors.

Deutsche Revisions- und Treuhand-A. G. (Auditors and trustees; VIAG has a 70-percent interest), Berlin—Chairman of board of directors.

Reichswerke A. G. für Erzbergbau und Eisenhütten "Hermann Göring (the original Hermann Göring concern) Salzgitter-Berlin—Chairman of board of directors.

Kontinental Ol A. G. (organized in 1941, Wintershall, I. G. Farben have participations), Berlin—Deputy chairman of board of directors.

Reichswerk A. G. Alpine Montanbetriebe "Hermann Göring" Linz/Donau, Austria—Director.

Hamburg-Amerikanische Packetfahrt A. G. (Hapag) (shipping company)—Director.

Hibernis Bergwerksgesellschaft (mining and smelting), Herne/Westphalia—Director (all shares indirectly owned by Prussian State).

Junkers-Flugzeug- und Motorenwerke Junkers & Co. G. m. b. H. (airplane factory of Berlin), Dessau-Berlin—Director.

Norddeutscher Lloyd (shipping company), Bremen—Director.

Preussische Bergwerks- und Hütten A. G., Berlin (mine-coal, petroleum, limestone, etc.; capital, R.M. 80,000,000; owned 100 percent indirectly by the Prussian State; this company has a 100 percent interest in the Amber Mines Inc., New York, 51 percent in the Hugo Barth G. m. b. H. Danzig, and 100 percent interest in Mirafior, S. A. Romana Miniera, Bucharest, Rumania)—Director.

Deutsche Umsiedlungs-Treuhand G. m. b. H. (auditing company), Berlin—Chairman of board of directors.

Saargruben A. G. (Saar mines; German Reich has a 100 percent interest in capital amounting to R.M. 50,000,000), Saarbrücken—Director.

Steyr-Daimler-Puch A. C., Vienna, Austria (manufacturers of automobiles, trucks, light railways, ball bearings, motorcycles, etc.; it has the controlling interest in (1) Autopalast, A. G., Linz, Austria, (2) Jugoslavische Steyr-Werke G. m. b. H., Ljubljana, Yugoslavia, and (3) Steyr-Solothurn-Waffen-A. G., Zurich, Switzerland. In 1938, the majority of the shares of Steyr-Daimler were transferred to the Reichswerke A. G. für Erzbergbau und Eisenhütten "Hermann Göring," Berlin-Salzgitter)—Director.

Fahrzeug- und Motorenwerke G. m. b. H., vorm. Maschinenbau Link-Hofmann (production and sale of motor vehicles and machines), Breslau—Member of advisory board.

Hapro Handelsgesellschaft für Industrielle Produkte (sales agency for industrial products), Berlin—Member of advisory board.

Magdeburger Werkzeugmaschinenfabrik G. m. b. H. (machinery), Magdeburg—Member of advisory board.

PHILIPP KESSLER

Philipp Kessler has been for many years connected with the Siemens Schuckert group. He is chairman of the management committee of the Bergmann Elektricitäts-Werke A. G., an important electrical company affiliated with Siemens-Schuckert-Werke, and has several other connections in the fields of machinery, mining, and real estate.

Kessler joined the Nazi Party sometime between the years 1922 and 1926, and has apparently remained a staunch supporter of the party. This is evidenced by the large number of important political posts that he now holds. In 1942 he was a member of the Armament Council, headed by Goering, Speer, and Funk.

He was born October 21, 1888, and is a prominent electrical engineer. His last known address is given as 22 Cimbernstrasse, Berlin-Bokolassee.

Philipp Kessler's known connections are as follows:

Political

Industrie- und Handelskammer, Berlin (Industry and Commerce Chamber)—Assistant director.

Fachgemeinschaft der Kison- u. Metallindustrie (industrial section of iron and metal industry)—Leader.

Industrie-Abteilung der Wirtschaftskammer, Berlin-Brandenburg (Industrial Division of Economic Chamber, Berlin-Brandenburg)—Leader.

Deutsche Reichspost (German Postal Service)—Member of advisory committee.

Deutsche Gruppe der Internationalen Handelskammer (German Group of the International Chamber of Commerce)—Member of advisory committee.

Reichsgruppe Industrie, Berlin (German Group of Industry)—Member of advisory committee.

Reichswirtschaftskammer, Berlin (German Economic Chamber)—Member of advisory committee.

Wirtschaftskammer Berlin-Brandenburg, Berlin (Economic Chamber, Berlin-Brandenburg)—Member of advisory committee.

Wirtschaftsgruppe Elektroindustrie, Berlin (Economic Group of the Electrical Industry)—Member of advisory committee.

Aussenhandelsstelle für Berlin, West-Brandenburg, und Pommern (Export Association for Berlin, West-Brandenburg, and Pomerania)—Member of management committee.

Industrial

Bergmann Elektrizitäts-Werks A. G., Berlin (cables, wires, bulbs, etc.; affiliated with Siemens-Schuckert-Werke and AEG)—Chairman of management committee.

Porzellanfabrik J. Schachtel A. G., Sophienau, Post Charlottenbraunn/Schles (porcelain for electrical apparatus; affiliated with Bergmann Elektrizitäts-Werks and Gesellschaft für Elektrische Unternehmungen)—Deputy chairman.

Brandenburgische Heinstätten G. m. b. H., Berlin (dwellings)—Director.

Heliowatt-Werke Elektrizitäts A. G., Berlin (electrical machinery and apparatus)—Director.

Verwertungsgesellschaft für Montanindustrie, Berlin (exploitation of mines)—Director.

DR. FLORIAN KLÖCKNER

Dr. Florian Klöckner, a wealthy industrialist, prominent in the fields of coal and iron, was an early contributor to the Nazi Party. Active in the iron industry for more than 50 years, he has been a partner of the well-known Klöckner & Co. since 1917, and is an official of a number of its affiliates.

He was a member of the German Reichstag from 1920 to 1933, presumably a representative of the conservative Catholic Center Party. His financial support of the Hitler Party is said to have been occasioned by an address of Fritz Thyssen.

During the present war, Klöckner, along with Hugo Stinnes and Friedrich Flick, has had an important influence on the coal trade in Belgium, and the firm of Flick and Klöckner is one of the German concerns which penetrated European industry.

Klöckner had the following industrial and financial connections in 1942:

Industrial

Klöckner Flugmotorenbau G. m. b. H., Hamburg (airplane motors)—Director.

Klöckner-Werke A. G., Duisburg (metals, processing, trade)—Chairman of board of directors.

Klöckner Humboldt-Deutz A. G. Köln-Deutz (metals, processing, trade)—Chairman of board of directors.

Eckhardt & Co. A. G., Hamburg (trade in metals and byproducts)—Director.

Gewerkschaft Victor Stickstoffwerke Gastrop-Rauxel (synthetic nitrogen)—Chairman, mining management committee.

Banking

Deutsche Bank, Berlin—Director.

JOHANN AUGUST VON KNIERIEM

Johann August von Knieriem is a member of the I. G. Farben board, is officially connected with two Farben affiliates, and acts for the combine as chief counsel in charge of legal patent questions.

He has been officially affiliated with the Farben group at least since 1929, and thus was associated with it during the time when Farben officials were financing the rise of Hitler to power.

Von Knieriem, recently arrested in Frankfurt, was flown to the United States in June 1945 in the custody of the Allied Intelligence Service. He was brought as a surprise Government witness in the suit in which the Standard Oil Co. of New Jersey is attempting to recover 2,500 patents seized by the Alien Property Custodian because of alleged German interest.

Von Knieriem had the following connections as of 1942:

Political

Akademie für Deutsches Recht, Berlin (Academy for German Law)—Member.
Ausschuss für G. m. b. H.-Recht (Committee for Corporate Law)—Member.

Ausschuss für das Recht des Geistigen Schaffens (Committee for the Law of Cultural Achievements)—Member.

Deutsche Arbeitsgemeinschaft für Gewerblichen Rechtsschutz und Urheberrecht (German joint association for the legal protection of artisans and copyright law)—Chairman.

Industrial

I. G. Farbenindustrie A. G., Frankfurt/Main—Member of management committee.

Ammoniakwerk Merseburg G. m. b. H., Leuna Werks/Kreis Merseburg (explosives; 75 percent owned by the I. G. Farben combine)—Manager.

Stickstoff-Syndikat G. m. b. H., Berlin (explosives; has collaboration agreements with I. G. Farben)—Member of executive committee.

HEINRICH KOPPENBERG

Heinrich Koppenberg, associated with a number of airplane and automotive industries, is a director of several Flick enterprises, and connected with the Vereinigte Stahlwerke combine. Besides his industrial tie-ups, Koppenberg is a Wehrwirtschaftsführer, or leader in the German war production program.

Koppenberg rose to prominence in the industrial field soon after the Nazis came to power, and since that time has occupied a high place in the list metal industry. It was reported that shortly after the occupation of Norway, Koppenberg headed an industrial delegation from the Goering group to Norway. Subsequently, he became the managing director for all Norwegian aluminum companies. The extensive plans for the expansion of this industry, however, fell through, and the venture is identified as the notorious Nordag Schandel. Koppenberg, nevertheless, continued to hold a leading position in several aluminum companies, one of which is prominent in the development of the Norwegian aluminum industry.

Koppenberg is also a managing director of the Dresdner Bank, and director of Pittler Werkzeugmaschinenfabrik A. G., one of the large machine tool works which had a manufacturing agreement with the National Acme Co. of Cleveland, Ohio, before the war. The present directorate of the latter organization includes the prominent Nazi, Herman J. Abs, and the Junker General Joachim von Stulpnagel.

An unconfirmed report in the spring of 1942 alleged that Koppenberg had been placed in a concentration camp at Dachau, because of his reputed comments to Hitler that the Junker Flugzeug- und Motorwerke A. G., of which he is chairman, could not increase its output. Further reports, however, indicate that Koppenberg was actively supporting the German war machine in 1943.

Koppenberg was born in 1880. His last known address is Berlin Gruenewald, Taunusstrasse 7.

His political and commercial connections are as follows:

Political

Wehrwirtschaftsführer (war production program)—Official.

Reichsgruppe Industrie, Magdeburg—Member of advisory board.

Banking

Dresdner Bank—Managing director.

Financial

Gesellschaft zur Verwaltung von Industriellen Werten m. b. H., Berlin (administration of industrial assets)—Manager.

Industrial

Airplane and automotive industries.—Deutsche Versuchsanstalt für Luftfahrt e. V., Berlin (aircraft research)—Chairman of management committee.

Fluzeug- und Motorenwerke A. G., Dessau (airplanes, machine tools, etc.; capitalized at R.M. 130,000,000, it is one of the largest German aluminum consumers)—Chairman of the management committee (not a director in 1936).

Hannoversiche Maschinenbau A. G., vorm. Egestoff (Hanomag) Hannover-Linden (automobiles and machines; 100 percent owned by Bochumer Verein für Gusstahlfabrikation A. G., a member of the Vereinigte Stahlwerke group; it is capitalized at R.M. 20,000,000 and its directorate includes Thyssen, von Flotow, and Vogler of Vereinigte Stahlwerke)—Director.

Waggon- und Maschinenfabrik, vorm. Busch, Bautzen (automobiles, machinery)—Director.

Fahrzeug- und Motorenwerke G. m. b. H., vorm. Maschinenbau Linke-Hofmann, Breslau (automotive products; a Flick enterprise)—Member of advisory board.

Iron and steel (Flick enterprises).—Mitteldeutsche Stahlwerke A. G., Riesa Elbe—directors.

Eisenwerk-Gesellschaft Maximilianshütte, Rosenberg (subsidiary of Mitteldeutsche Stahlwerke, above)—Director.

Light metals.—Dürener Metallwerke A. G., Berline-Barsigwalde (metals; 53 percent owned by Deutsche Waffen- und Munitions-fabriken A. G., and rumored to be affiliated with the Goering Works)—Director.

Mineralöl-Baugesellschaft m. b. H., Berlin (construction; believed to be prominent in the development of the Norwegian aluminum industry)—Chairman of board of directors.

Machine tools.—Pittler Werkzeugmaschinenfabrik A. G., Leipzig—Director (not on board in 1937).

Magdeburger Werkzeugmaschinenfabrik G. m. b. H., Magdeburg—Member of advisory board.

Transportation.—ATG (Allgemeine Transportanlagen G. m. b. H.), Leipzig—Director.

CARL KRAUCH

Carl Krauch reported to be Hitler's right-hand man, is the head of the I. G. Farbenindustrie and a director of a number of its subsidiaries.

He has had leading positions with I. G. Farben since 1928 and is said to be responsible for bringing closer cooperation between I. G. Farbenindustrie and the Nazis.

Krauch was born April 7, 1887, in Darmstadt, and is a doctor of philosophy and political science.

His political and industrial connections as of 1942 were as follows:

Political

General-Bevollmächtigter für Sonderfragen der Chemischen Erzeugung Beim Beauftragten des Führers für den Vierjahresplan (agent for special problems in the manufacture of chemicals with the General Deputy of the Führer for the 4-year plan).

Reichsamt für Wirtschaftsausbau (National Office for Economic Development), Berlin—President.

Wirtschaftsgruppe Chemische Industrie (Economic Group of the Chemical Industry)—Member of advisory board.

Industrial

I. G. Farbenindustrie A. G., Frankfurt/Main—Chairman of board of directors. Ammoniakwerk Merseburg G. m. b. H., Leunawerke, Krs. Mersburg (IGF 100 percent interest)—Business manager.

A. G. für Stickstoffdünge, Knapsack, Cologne (manufacture and sale of nitrogen products and derivatives; other directors are Hermann Schmitz and E. Weber-Andrae; I. G. F. owns majority of shares)—Deputy chairman of board of directors.

Braunkohle-Benzin A. G., Berlin (affiliate of I. G. F. and VIAG; capital RM. 100,000,000; Kurt von Schroeder is also a director)—Director.

Braunkohlenprodukte A. G., Berlin (owned 50 percent by Petschek & Co., Prague, Czechoslovakia, a banking firm; its purpose is scientific work in connection with the manufacture and refinement of lignite and its products)—Director.

Deutsche Gasolin A. G., Berlin (acquisition of plants and enterprises connected with fuel of all kinds; RM. 11,000,000; other directors are Max Ilgner of I. G. F. and Christian Schneider (I. G. F.), thus making a total of three I. G. F. people. This firm may be considered an I. G. F. affiliate on account of above and because it sells I. G. F.'s "Leuna" products and those of Riebeck's Montanwerke A. G., an I. G. F. affiliate)—Director.

FRITZ LEHMAN

Fritz Lehman, an important industrialist, is associated with some 30 companies affiliated for the most part with Felten & Guillaume Carlswerke A.G., Cologne, which in turn is an important subsidiary of the Arbed Konzern, Luxembourg, the third largest steel combine on the Continent.

Lehman also holds a number of important political positions and is a leader of the war economy program. He apparently received these posts as recognition for his loyalty and support of the Nazi Party.

Lehman was born May 19, 1882, in Trier. He was last reported to be residing at Rickler Wall 2/4, Cologne.

His known connections are as follows:

Political

Wehrwirtschaftsführer—A leader of the war economy program.

Bezirksgemeinschaft Eisen- und Metallindustrie, Cologne (Regional Division of Iron and Metal Industry in Cologne)—Leader.

Industrieabteilung der Wirtschaftskammer, Cologne (Industry Section of the Economic Chamber of Cologne)—Leader.

Industrie- und Handelskammer, Cologne (Chamber of Industry and Commerce, Cologne)—President.

Technischer Ueberwachungs-Verein, Cologne (Technical Supervisory Union)—Member of management committee.

Industrial

Subsidiaries of Arbed-Konzern, Luxembourg.—Eschweiler Bergwerks-Verein, Kohlscheid/Aachen (mining and briquet production; 1936 capital was 22,800,000 R.M.; 92 percent owned)—Chairman of board of directors.

Felten & Guillaume Carlswerk A. G., Cologne-Mulheim (wire and cable company, also light metal work, electrical apparatus, machinery in 1936 capital was R.M. 64,500,000 and its assets totaled R.M. 128,164,700; majority of shares held by Arbed-Konzern, Luxembourg)—Chairman.

Subsidiaries and affiliates of Felten & Guillaume Carlswerk A. G., Cologne.—Felten & Guillaume Carlswerk Eisen und Stahl A. G., Cologne-Mulheim (iron and steel; in 1936 capital was R.M. 18,000,000; 100 percent owned)—Chairman of board of directors.

Felten & Guillaume Eschweiler-Braht A. G., Cologne-Mulheim (wire works; in 1936 capital was R.M. 1,000,000; 100 percent owned)—Chairman of board of directors.

Walzwerke A. G., vorm. E. Böcking & Co., Cologne-Mülheim (steel mills, rolling mills, wire, etc.; in 1936 capital was R.M. 3,000,000; principal shareholder is Felten & Guillaume Carlswerk Eisen und Stahl A. G., Cologne)—Chairman of board of directors.

Kabelwerk Wilhelminenhof A. G., Berlin (cable works; in 1936 capital was R.M. 2,000,000; 100 percent owned)—Chairman of board of directors.

Süddeutsche Telefon-Apparate-, Kabel- und Drahtwerke A. G., Nürnberg (telephone apparatus, cable and wire works, in 1936 capital was R.M. 3,000,000; 100 percent owned)—Chairman of board of directors.

Braunkohlenbergwerk und Brikettfabrik Liblar G. m. b. H., Liblar (lignite mines and briquet manufacture; in 1936 capital was R.M. 3,200,000; 100 percent owned)—Member of advisory committee.

Liblar Tiefbau G. m. b. H., Liblar (deep construction company; in 1936 capital was R.M. 2,020,000; 100 percent owned)—Member of advisory committee.

Land-und Seckabelwerke A. G., Cologne-Nippes (cable works; in 1936 capital was R.M. 3,200,000; 99.9 percent owned)—Chairman of board of directors.

Franz Clouth Rheinische Gummiwarenfabrik A. G., Cologne-Mülheim (rubber products; in 1936 capital was R.M. 2,250,000; 95 percent owned)—Chairman of board of directors.

Norddeutsche Seckabelwerke A. G., Hordenham/Wezer (cable company; in 1936 capital was R.M. 2,400,000; 50 percent owned by Felten & Guillaume Carlswerke A. G., Cologne, and 50 percent owned by Siemens & Halzke A. G., Berlin)—Director.

Papierfabrik G. m. b. H., vorm. Brüder Kämmerer, Osnabrück (paper factory; in 1936 capital was R.M. 3,000,000; 50 percent owned by Felten & Guillaume Carlswerk A. G., Cologne, and 50 percent by AEG combine)—Member of advisory committee.

J. Pohlig A. G., Cologne-Zollstock (cable railways; in 1936 capital was R.M. 3,000,000; principal shareholder is Felton & Guillaume Carlswerk A. G., Cologne)—Chairman of board of directors.

Its foreign affiliations

Felton & Guillaume A. G., Fabrik elektrischer Kabel, Stahlund Kupferwerke, Vienna (steel and copper electric cable works; in 1936 capital was 10,125,000 shillings; 61.25 percent owned by Felten & Guillaume Carlswerk A. G., Cologne)—Chairman, board of directors.

Felton & Guillaume Kabel-, Braht- und Drahtseilfabrik Ung., A.G., Budapest (Hungarian branch of Felton & Guillaume Carlswerk A. G.; in 1939 capital was 3,750,000 pengoes; has interest in Austrian branch; Novosadska Fabrika Kable-Draht- und Drehtseil Fabrik Ungarische A. G., has participation)—Director.

Other connections

Dielektra A. G., Porz/Rhein—Chairman of board of directors.

Gummiwerke "Elbe" A. G., Klein-Wittenberg/Elber (rubber products; in 1936 capital was RM. 1,240,000—Chairman of board of directors.

Union Rheinische Braunkohlenkraftstoff A. G., Cologne (production of fuels, lubricants, and related products; Rheinbrau-Roddergrube (RWE) are controlling interests; in 1936 capital was RM. 45,000,000; total assets, RM. 120,890,000)—Director.

Bleichert Transportanlagen G. m. b. H., Leipzig—Member of advisory committee.

Gesellschaft für Forderanlagen Ernst Heckel G. m. b. H., Saarbrücken—Member of advisory committee.

Gesellschaft zur Erforschung Ausländischer Erzvorkommen m. b. H., Berlin—Member of advisory committee.

Gummiwerk Bellenstedt G. m. b. H., Ballenstedt—Member of advisory committee.

A. W. Mackensen Maschinenfabrik und Eisengiesserei G. m. b. H., Magdeburg—Member of advisory committee.

Deutsche Atlantische Telegraphen-Gesellschaft, Berlin—Director.

Deutsche Fernkabel-Gesellschaft m. b. H., Berlin (cable company; small minority interest held by the AEG combine)—Member of advisory committee.

Rheinische Braunkohlen-Tiefbaugesellschaft m. b. H., Cologne (deep construction company for lignite company; is affiliated with Rheinische A. G. für Braunkohlenbergbau und Brikettfabrikation, Cologne)—Member of advisory committee.

Rheinisches Braunkohlensyndikat G. m. b. H., Cologne (affiliated with Hubertus Braunkohlen A. G. Brüggel bei Liblar in which company the Gruppe Ignaz Petschek holds the majority of stock)—Member of advisory committee.

Gemeinnützige A. G. für Wohnungsbau, Cologne (construction and management of small dwellings; in 1936 capital was RM. 7,500,000; 50 percent owned by city of Cologne)—Director.

Foreign connections

Druca S. A., Luxemburg—Director.

Bergwerks A. G. "Pirin", Sofia—Director.

Kabelwerk Ozarow A. G., Warsaw (cable works)—Director.

KARL LINDEMANN

Karl Lindemann, chairman of the Advisory Board of the North German Lloyd, a director of the Hamburg America Line and long regarded as one of the outstanding shipping experts in Europe, gave no apparent assistance in putting Hitler in power. His sentiments toward the Nazi Party in its early days appear to have been at most lukewarm. As the party gained in strength, however, his attitude changed accordingly, and by 1937 his public utterances, as reported in the press, show him to have been one of the strongest supporters of Hitler's foreign policy.

Lindemann's close connection with the Nazi administration at present is indicated by his position on the advisory board of the Deutsche Reichsbank and his directorship in VIAG, large holding company for Reich interests and participations. He also holds the chairmanship of the German group of the International Chamber of Commerce, of the Institute for the Advancement of World Economy, and numerous additional semipolitical posts.

Lindemann's banking connections, in addition to that with the Deutsche Reichsbank include ownership of the private banking firm, C. Melchers & Co., and a position on the board of the Dresdner Bank. He is also a director of the Norddeutsche Kreditbank, a small banking house, successor to J. F. Schroeder, which besides holding numerous participations in shipping enterprises, had an interest in the German Government's propaganda news agency.

Lindemann's other affiliations include official connections with several marine insurance companies, and with a miscellaneous group of industrial enterprises. In 1942 his industrial and financial connections were reported as follows:

Shipping

Norddeutscher Lloyd, Bremen—Chairman of advisory board.

Hamburg-Amerika Linie, Hamburg—Director.

Industrial

Vereinigte Industrie-Unternehmungen A. G. (VIAG) (RM. 180,000,000 Reich holding company)—Director.

Norddeutsche Woll- und Kammgarn-industrie A. G., Belmenhorst (textiles)—Deputy chairman of advisory board.

Wollgarnfabrik Tittel & Krüger u. Sternwoll-Spinnerei A. G., Leipzig (textiles)—Deputy chairman of advisory board.

Mülheimer Bergwerksverein, Essen/Ruhr (utility holding company; capital, RM. 20,000,000; majority owned by Gewerkschaft Mathias Stinnes, Essen, of the Stinnes group)—Director.

Atlas-Werke, A. G., Bremen (shipbuilding; interlocking directorates with Mülheimer Bergwerksverein)—Chairman of board of directors.

Deutsche-Americanische Petroleum A. G., Hamburg (oil products; majority owned by Standard Oil of New Jersey)—Director.

Political

Akademie für Deutsches Recht, Berlin, Ausschuss für Seerecht (law association)—Member.

Aussenhandelsausschuss Reichsbank (foreign trade council)—Member.

Industrie und Handelskammer, Bremen (chamber of commerce)—Member.

Deutsche Gruppe der Internationalen Handelskammer, Berlin (International Chamber of Commerce)—Chairman.

Gesellschaft zur Förderung des Institute für Weltwirtschaft, Kiel (Institution for the Advancement of World Economy)—Chairman.

Landesausschuss für Nordwestdeutschland, Bremen—Member.

Banking and financial

Deutsche Reichsbank—Member of the advisory board.

Dresdner Bank, Berlin—Director.

Melchers & Co., Bremen (private bankers)—Owner.

Norddeutsche Kreditbank A. G., Bremen (connected with Norddeutsche Lloyd through interlocking directorate)—Director.

Insurance

Assecuran-Compagnie Mercur, Bremen (specializes in freight insurance; capital, RM 1,000,000; two insurance companies closely associated with Merck, Finck & Co., Allianz und Münchener Rückversicherungs, each hold 38.83 percent interest)—Director.

Hamburg-Bremen Feuer Versicherungs Gesellschaft, Hamburg (fire and reinsurance)—Director.

Hamburg-Bremer Rückversicherungs, A. G., (fire and reinsurance)—Director.

Miscellaneous

Deutsche Revisions- und Treuhand A. G., Berlin (auditing; 70 percent owned by VIAG, 30 percent by the State of Prussia)—Director.

KURT NEBELUNG

Kurt Nebelung is a very important figure in the industrial life of Saxony, holding positions with a long list of utility, iron and steel, and heavy industrial enterprises. In a number of these, the Saxon State is either complete or partial owner. Nebelung is connected with the great electrical combine, Allgemeine Elektrizitäts Gesellschaft, in his capacity as chairman of the board of the Sachswerk Licht- und Kraft A. G. of which AEG holds a 50-percent interest. He is also a director of Mitteldeutsche Stahlwerke A. G., which is an important Flick enterprise.

Nebelung is also prominent in banking circles, being president of Sachsische Staatsbank, Dresden, and holding posts of influence with other important banks.

The leading positions that Nebelung holds in a number of semipolitical groups as well as the fact that he was appointed to an official position on the Saxon State Bank on October 1, 1933, about a half-year after Hitler assumed absolute power in Germany, appear to indicate that Nebelung stands high in the councils of the Nazi Party.

Nebelung was born on March 19, 1889, in Leipzig and, according to latest reports, resides at 7 Walderseeplatz, Dresden-A1. His political, industrial, and financial affiliations as of 1942 were reported as follows:

Semipolitical

Industrie- und Handelskammer, Dresden (Chamber of Commerce and Industry)—Member of the advisory board.

Wirtschaftsgruppe Öffentlich-Rechtliche Kreditanstalten (Economic Group for Legally Authorized Credit Institutions)—Member of the advisory board.

Wirtschaftskammer für den Wirtschaftsbezirk Sachsen (Economic Board for the Saxon Economic District)—Member of the advisory board.

Zulassungsstelle an der Mitteldeutschen Bourse zu Leipzig (Admissions Committee at the Central German Stock Exchange at Leipzig)—Member of the committee.

Industrial

Sachsenwerk Licht- und Kraft A. G., Niedersedlitz (erection, operation, and sale of electrical installations, etc.; Allgemeine Elektrizitäts Gesellschaft is principal shareholder with other 50-percent interest)—Chairman of the board of directors.

Eltgas G. m. b. H. zur Förderung des Elektrizitäts und Gasabsatzes, Dresden (promotion and sale of electricity and gas)—Deputy chairman of the advisory board.

A. G. Sächsische Werke, Dresden (production and sale of electricity and gas, sale of coal and byproducts, etc.; a large company, capitalized at RM. 120,000,000, has numerous plants and interests in 20 companies; Saxon State has 100 percent interest)—Director.

Anhaltische Kohlenwerke, Berlin (operations of lignite mines; production of lignite, lignite briquettes, and electricity; until 1938 the majority of shares had been held by the Prague family Petschek and its American friends, but now it is in German hands; in 1938 a board of commissioners was chosen to carry out necessary agreements with the Reich authorities)—Director.

Mitteldeutsche Stahlwerke A. G., Riesa (operation of mines, iron foundries, steel and rolling mills, etc.; principal shareholder, Friedrich Flick Kommanditgesellschaft, with about 100-percent interest)—Director.

F. A. Lange, Metallwerke A. G., Aue/Sachs (production and sale of metal articles)—Deputy chairman of advisory board.

Auto Union A. G., Chemnitz (manufacture of motor vehicles has interests in four companies, among which one is in Brazil and another in South Africa)—Deputy chairman of advisory board.

Maschinenfabrik Hiltmann & Lorenz A. G., Aue/Sachs (operation of a machine plant)—Deputy chairman of advisory board.

Vomag Maschinenfabrik A. G., Plauen/Vogtl (production and sale of machines, especially printing machines, tool and textile machinery, motors, and trucks; principal shareholder, Allgemeine Deutsche Credit-Anstalt, Leipzig, Sächsische Bank, Deutsche Bank, Dresdener Bank)—Deputy chairman of the advisory board.

Sächsische Gusstahl-Werke Dohlen A. G., Freital (production and sale of iron and steel; has interest in several companies)—Director.

Vogtländische Metallwerke G. m. b. H., Plauen/Vogtl (manufacture of machine parts; Vomag Maschinenfabrik (see above) has 25 percent interest)—Director.

Staatl. Sächsische Hütten- und Blaufarbenwerke, Freiberg/Sachs Saxon State Foundry and Blue-Dye Works)—Director.

Erla-Maschinenwerk G. m. b. H., Leipzig (not listed in directory)—Member of the management committee.

Höntsche-Werke A. G., für Honz-, Eisen- und Glasbau, Niedersedlitz (construction of greenhouses, heating installations, etc., and chemical preparations)—Chairman of board of directors.

Mitteldeutsche Motorenwerke G. m. b. H., Leipzig (Central German Motor Works, limited liability company)—Chairman of board of directors.

Gesellschaft für Junkers Dieselmotorenmaschinen G. m. b. H., Chemnitz—Chairman of board of directors.

Spinnerei und Weberei A. G., Ebersbach (operation of a spinning and weaving mill; this company was founded by the Saxon State Treasury, Saxon State Bank in Dresden, Bank der Deutschen Arbeit A. G., firm of J. G. Frenzel in Sorau, and firm of Ernst Berndt G. m. b. H. in Leutersdorf)—Chairman of board of directors.

Fr. Küttner A. G., Kunstseidenwerke, Pirna (production of artificial silk)—Deputy chairman of advisory board.

Heinrich Thiele A. G., Dresden (manufacture of leather goods, military equipment, etc.)—Deputy chairman of the advisory board.

Riebeck-Brauerei A. G., Leipzig (brewery, capitalized at RM. 10,980,000; has interests in numerous companies)—Director.

Banking

Sächsische Staatsbank, Dresden (Saxon State Bank)—President.
 Sächsische Bank, Dresden—Member of management committee.
 Sächsische Bodencreditanstalt, Dresden (Saxon Land Mortgage Credit Institution)—Director.
 Thüringische Landescredypothekenbank A. G., Weimar (land mortgage bank)—Director.
 Thüringische Staatsbank, Weimar (Thuringian State Bank)—Member of the executive committee.

ALFRED OLSCHER

Alfred Olscher, member of the advisory committee of the Deutsche Bank, is associated with a number of organizations closely identified with the Nazi economy. He is a director of the A. G. Reichswerke Hermann Goering, of Friedrich Krupp, A. G., and of Siemens & Halske A. G. In addition, Olscher is on the management committee of the Government-controlled Reichs-Kredit-Gesellschaft, and is officially connected with VIAG, holding company for Reich interests.

Prior to the advent of Hitler, Olscher was connected with the Reich's Finance Ministry. Obtaining the position of high counselor in 1924, he rose to become the ministerial director in 1932. Judging from his industrial affiliations, Olscher appears to have definitely profited by the rise of Nazism in Germany.

Olscher was born on September 8, 1887. He served with the German Army during World War I, and was for a time stationed in Palestine. His early career was directed toward the field of finance.

Alfred Olscher's political, banking, and industrial connections are as follows:

Political

Akademie für Deutsches Recht, Berlin (Academy for German Law)—Member.
 Ehrengerichtshof der Deutschen Wirtschaft (Honorary Court of Germany Economy)—Deputy chairman.

Banking

Reichs-Kredit-Gesellschaft A. G., Berlin—Member of management committee.
 Creditanstalt-Bankverein, Vienna (Austrian branch of Deutsche Bank)—Deputy chairman.
 Deutsche Reichsbank, Berlin—Adviser.

Industry

Public utilities.—Vereinigte Industrie-Unternehmungen A. G., Berlin—Member of management committee.

Alpen Elektrowerke A. G., Berlin—Deputy chairman.
 Bayerische Wasserkraftwerke A. G., Munich—Deputy chairman.
 Bayernwerk A. G., Munich (electric power; owned entirely by Bavarian State)—Deputy chairman.
 Elektrowerke A. G., Berlin (electric power, owned entirely by VIAG)—Deputy chairman.

Ilse Berbgau A. G., Grube Ilse bei Senftenberg/N. L. (mining, electric power)—Deputy chairman.
 Steirische Wasserkraft- und Elektrizitäts A. G., Graz (water power and electric company for Gras district)—Deputy chairman.

Heavy industry.—A. G. Reichswerke Hermann Goering, Berlin—Director.
 Eisenwerk Maximilianshütte Gesellschaft Sulzbach-Resenberg-Hutte—Director.

Energie-Versorgung Württemberg A. G., Stuttgart—Director.
 Friedrich Krupp A. G., Essen—Director.

Mitteldeutsche Stahlwerke A. G., Riese/Elbe—Director.
 Siemens & Halske A. G., Berlin—Director.

Vereinigte Aluminum Werke A. G., Berlin—Director.

Film.—Universum-Film A. G., Berlin (UFA)—Deputy chairman.

Insurance

Allianz Lebensversicherungs A. G., Berlin—Director.

Miscellaneous

Westtiroler Kraftwerke A. G., Innsbruck—Deputy chairman.
 Iseder Hütte, Hannover (VIAG owns 25 percent)—Director.
 Innwerke A. G., Munich (VIAG holds 90.91 percent, Bavarian State 9.6 percent)—Director.

Oberschlesische Stickstoffwerke A. G., Königshütte—Director.
 Ostpreussenwerk A. G., Königsberg/Pr.—Director.

WALDEMAR VON OPPENHEIM

Waidemar von Oppenheim has been a partner of the 150-year-old family banking firm, Sal. Oppenheim et Cie., Cologne, since 1921. Following its Aryanization, he continued as a partner and co-owner of its legal successor, Pferdmeniges & Co., which took part in the penetration of banking institutions in occupied countries and is reported to have secured a minor participation in the International Bank of Luxembourg.

Von Oppenheim's close association with the Nazi Party is evidenced by the fact that he has been declared an "honorary Aryan" and is a member of a powerful Nazi clique centering around Kurt von Schroeder. In the spring of 1942 he was in Stockholm on a peace-feeling mission reportedly sent out by Goebbels and Hitler. The failure of his mission, it is reported, has discredited him in Nazi circles.

Von Oppenheim was born in 1894. His known connections are the following:

Banking

Pferdmenges & Co., Cologne (private bankers)—Co-owner.

Insurance

Allianz Versicherungs A. G., Berlin—Director; also director in 1930.

Industry

Elektrische Licht u. Kraftanlagen A. G., Berlin (electrical installations; subsidiary of Siemens & Halske)—Director.

Falten & Guillaume Carlzwerk A. G. Köln-Mülheim (cables and lighting equipment; subsidiary of Arbed Konzern, Luxembourg)—Director.

Franz Clouth, Rheinische Gummiwarenfabrik A. G., Köln-Nippes (technical rubber products; subsidiary of Felten & Guillaume)—Director.

Heinrich Auer Mühlenwerke A. G. Köln-Deutz (milling)—Director; also director in 1930.

Simons Mühlenwerke A. G., Neuse (milling; subsidiary of Hein. Auer)—Deputy chairman.

Deutsche Telephonwerke u. Kabelindustrie A. G., Berlin (telephone construction; affiliated with Elek. Licht u. Kraft.)—Director.

Schlesische Mühlenwerke G. m. b. H., Durweide (milling; subsidiary of Hein. Auer)—Director.

Hubertus Braunkohlen A. G., Brüggen/-Erft (lignite)—Director; also a director in 1930.

Eschweiler Bergwerks-Verein, Kohlscheid/Rhld. (mining, coal products, blast furnaces; subsidiary of Vereinigte Huttenwerke, Luxemburg)—Director.

Pfälzische Mühlenwerke, Mannheim (milling)—Director.

Preussisch-Rheinische Dampfschiffahrts-Gesellschaft, Köln (navigation and transportation on Rhine Basin)—Director.

Rheinische A. G. für Braunkohlenbergbau u. Brikettfabrikation, Köln (lignite; subsidiary of Rheinisch Westfälisches Elektrizitätswerke A. G.)—Director.

Stolberger Zink A. G. für Bergbau u. Huttenbetrieb, Aachen (zinc and other metals)—Director.

Gewerkschaft Victor, Castrop-Rauxel (mining)—Member of mining management committee.

DR. ROBERT PFERDMENGES

Dr. Robert Pferdmeniges, long associated with some of the most important industries in Germany, including the electrical and coal works, Allgemeine Elektrizitäts Gesellschaft, and Harpener Bergbau, has apparently profited greatly since his association with the Nazis. Following the Aryanization of Jewish enterprises he became coowner of Pferdmeniges & Co., legal successor to the banking houses, A. Levy and Sal. Oppenheim et Cie. The new company has participated in the penetration of banking institutions in occupied countries and is reported to have secured a minor holding in the International Bank of Luxembourg.

Pferdmenges was born in 1860. His financial and industrial connections are the following:

Banking

Bankhaus Pferdenges & Co, Cologne (large private banking institution)—Coowner and member of the board of directors (legal successors to A. Levy and Sal. Oppenheim et Cie., Cologne, the latter having been established in 1783).

Deutsche Central-bodenkreditbank A. G., Berlin—Director (also on the board are Count von Alvensleben, who was instrumental in helping Hitler gain the confidence of the Rhineland industrialists, and the Duke of Saxe-Coburg, a prominent member of the German nobility who actively supported Hitler).

Insurance

Rückversicherungs-Aktien-Gesellschaft Colonia, Cologne (reinsurance company capitalized at RM. 1,000,000, with interests in three other insurance companies)—Deputy chairman of the advisory board.

"Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs A. G. (insurance company, 25 percent owned by Rückversicherungs-Aktien-Gesellschaft Colonia)—Chairman of the executive committee.

Kölnische Rückversicherungs-Gesellschaft, Cologne (reinsurance company; 27 percent owned by "Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs A. G.)—Deputy chairman of the advisory board.

Kölnische Glas-Versicherungs A. G., Cologne (small glass insurance company; 100 percent owned by "Colonia" Kölnische Feuer- und Kölnische Unfall-Versicherungs, A. G.)—Chairman of the executive committee.

Nordstern Allgemeine Versicherungen, A. G., Berlin (general insurance company)—Director.

Gladbacher Feuerversicherungs A. G., M. Gladbach (fire insurance)—Chairman of the board of directors.

"Concordia" Lebensversicherungs A. G., Cologne (life insurance; Kölnische Rückversicherungs-Gesellschaft the principal shareholder)—Deputy chairman of the board of directors.

Industrial

Gladbacher Wollindustrie A. G., vorm. L. Joston, M. Gladbach (woolen industry; RM. 4,000,000 capital)—Deputy chairman of the advisory board.

Kabelwerk Rheydt A. G., Rheydt (cables and wires company; RM. 12,000,000 capital; owns a 93.5 percent interest in the Deutsche Kabelwerke A. G.)—Deputy chairman of the advisory board.

Klockner-Werke A. G., Duisburg (an important mining and smelting corporation owning numerous mines and foundries; it has interest in 12 other companies; capital, RM. 105,000,000)—Deputy chairman of the advisory board.

Schoeller'sche Kammgarnspinnerei Eitorf A. G. Eitorf (worsted mills; capital, RM. 2,440,000; majority of shares owned by the Schoeller family in Zurich and Düren)—Deputy chairman of the advisory board.

Allgemeine Elektrizitäts Gesellschaft, Berlin (large electrical German combine)—Director.

Deutsche Kabelwerke A. G., Berlin (production of electric connections and cables; it has six subsidiaries and is more than 93 percent owned by Kabelwerk Rheydt A. G.)—Director.

Damag A. G., Duisburg (a large machinery concern capitalized at RM. 26,500,000; this company has a large number of subsidiaries both in Germany and abroad as for example in Poland, Italy, England, and Spain; its board of directors includes some of the most influential individuals in Germany's financial and industrial life, among which it should be mentioned are Vögler of the Vereinigte Stahlwerke; Finck of Germany's largest private banking house, Marck Finck & Co., Kimmich of the Deutsche Bank, and Rudolf Stabe of the Deutsche Gold- und Silberscheide Anstalt)—Director.

Feltona Guillaume Carlswerk A. G., Cologne (a very large company capitalized at RM. 64,500,000 and specialized in the manufacture of cables and other wires for electric industry; it also trades in and manufactures all kinds of machinery and deals in iron, coal, and other mining products, and participates in official and private enterprises; has many important subsidiaries, and through its major stockholder, the Arbed Konzern, Luxemburg, penetrates into Hungary, Argentina, and Poland)—Director.

Mitteldeutsche Stahlwerke A. G., Berlin (a very large steel and iron producing enterprise with a capital of RM. 28,000,000; this company is generally assumed to be the main company in the Flick group; it is also 100 percent owned by Flick's holding company, the Friedrich Flick Kommandit-Ges.)—Director.

Harpener Bergbau A. G., Dortmund (a large coal mining corporation capitalized at RM. 60,000,000, operating many mines with numerous subsidiaries or interests

in other companies; its principal shareholders are Eisenwerke Gesellschaft Maximilianshütte, which has the majority of the shares and F. Fentner Van Flissengen, Utrecht, which holds 10 percent; very powerful figures in Germany's financial and industrial life are found on its board of directors as, for instance, Ernst Tengelmann, who is alleged to have played an important part in bringing Hermann Goering and Flick together when the Nazis came into power, Kurr von Schröder, the notorious German banker and financier, and Kimmich, of the Deutsche Bank)—Director.

Rheinische Kunstseeide A. G., Krefeld (artificial silk company capitalized at RM. 7,400,000)—Director.

Vereinigte Stahlwerke A. G., Dusseldorf (a very large and most important German steel trust capitalized in 1939 at RM. 460,000,000)—Director.

HANS PILDER

Dr. Pilder was a member of the German Democratic Party who joined the NSDAP in 1934. He is reported to be an opportunist who will join any party which promises success, and a man of decided ambition.

Pilder is connected with various types of industry, among which are iron works, transportation facilities, public utilities, magnesite works, etc. His positions in these companies appear, for the most part, to have been acquired since his affiliation with the Nazi Party.

He first gained recognition in the Dresdner Bank in Berlin in 1937 and 1938. After that time, he was identified with foreign business and was also active in the Dresdner Bank's program of expansion in central Europe. He was reported to have placed himself entirely at the disposal of the Nazis.

Hans Pilder's address is given as 34/38 Kronprinzenallee, and his known connections are as follows:

Political

Deutsch-Bulgarische Handelskammer, Sofia (German-Bulgarian Chamber of Commerce)—Management committee.

Banking

Dresdner Bank, Berlin—Member of management committee.

Deutsch-Sudamerikanische Bank A. G., Berlin—Member of the advisory committee.

Länderbank Wien A. G., Vienna—Deputy chairman.

Societatea Bancara Romana, Bukarest/Rumanien—Deputy chairman.

Allgemeiner Jugoslavischer Bankverein A. G., Belgrad—Director.

Industriefinanzierung A. G., Ost, Berlin—Director.

Insurance

Nordstern Lebensversicherung A. G., Berlin—Director.

Industrial

Norddeutsche Eisenwerke A. G. (iron works) Berlin—Chairman.

Deutscher Eisenhandel A. G., Berlin (iron trading)—Director.

Europäische Tanklager- und Transport A. G. (transportation)—Director.

Steirische Magnesit Industrie A. G. (magnesite) Vienna—Chairman.

Veitscher Magnesitwerke A. G., Vienna (magnesite)—Chairman.

Magnesit-Industrie A. G., Pressburg/Slovakia (magnesite)—Director.

Natronzellstoff- und Papierfabriken A. G., Berlin (cellulose, paper)—Chairman.

Norddeutsche Portland-Cement-Fabrik, Misburg (cement)—Director.

Pittler Werkzeugmaschinenfabrik A. G., Leipzig (machine tools)—Deputy chairman.

Julius Berger Tiefbau A. G., Berlin (erection of underground structures)—Director.

Charlottenburger Wasser- und Industrierwerkes A. G., Berlin (erection of waterworks)—Director.

Deutsche Maizons-Werke A. G., Hamburg (manufacturing and sale of generators)—Chairman.

Deutsche Wollenwaren-Manufaktur A. G., Grunberg Schlesian (woolen textiles)—Deputy chairman.

Hageda A. G., Berlin (trading drugs and chemicals)—Deputy chairman.

"Kopa" A. G., Berlin (retail stores)—Deputy chairman.

Hamburgische Baukasse A. G., Hamburg (real estate credit)—Chairman.

Baugesellschaft Norddeutschland m. b. H., Hamburg (real estate)—Director.
 Gesellschaft für Industriebeteiligungen m. b. H., Hamburg (industrial participation)—Chairman.

Universum Film A. G. (UFA), Berlin (movies)—Director.

Miscellaneous

Treuhand-Vereinigung A. G., Berlin—Chairman.

N. F. & Ph. F. Reemtsma, Altona-Bahrenfeld—Member, advisory committee.

Rietschel & Hennenberg G. m. b. H., Berlin—Member, advisory committee.

PAUL PLEIGER

Paul Pleiger is a prominent Nazi, who holds important and influential positions in German political and industrial spheres of activity. Originally he was a small iron manufacturer in the Wupperthal Metallwaren, but he is now one of the two managers in the mammoth enterprise Reichswerke A. G. für Bergbau und Hüttenbetriebe, Hermann Göring.

It has not been definitely ascertained how early he became affiliated with the Nazi Party, but by 1939 he was identified with the Hermann Göring combine and was extremely active in the political affairs of the party. He is considered one of the most Nazi-minded of German industrialists and as top official in the Speer ministry was responsible for European production generally. A testimonial of his invaluable support to the Nazi war machine was the award of a wartime decoration, the Knights Cross with Swords of the War Service medal, upon the recommendation of Speer and Göring. It was the first time this decoration had been bestowed on an industrialist.

Pleiger's services to the party and the war program have received recognition also by his appointment to several semipolitical posts. His experience in industry won for him several important positions, such as chief of the Zentralamt of the Reich Ministry for Armaments and Armament Production; head of the Reichsvereinigung Kohle, and chief of Reichsstelle Kohle. In effect he is minister of coal and lignite supply of Germany and occupied Europe.

Born at the turn of the century on September 28, 1899, in Buchholz über Hattingen/Ruhr, Pleiger was one of those individuals destined to play a leading role in the Nazi economy.

His connections as of 1942 were as follows:

Political

Gau Westfalen-Süd (District Economic Councilor of South Westphalia).

Verein zur Wahrung der Schifffahrtsinteressen des Westdeutschen Kanal-Gebietes, Dortmund (Union for the Protection of Navigation of the West German Canal District)—Adviser.

Provinz Westfalen—Provincial Councilor.

Kreisausschuss des Ennepe-Ruhr-Dreises (local committee of the National Party, Ruhr district)—Member.

Banking

Deutsche Reichsbank, Berlin—Adviser.

Industry

Mining and iron.—Reichswerke A. G. für Berg- und Hüttenbetriebe, Hermann Göring, Berlin—Manager.

Reichswerke A. G. für Erzbergbau- und Eisenhütten, Hermann Göring, Berlin—Manager.

Berg- und Hüttenwerksgesellschaft Ost. G. m. b. H., Berlin—Manager.

Hüttenverwaltung Westmark G. m. b. H. der Reichswerke, Hermann Göring, Berlin—Manager.

A. G. für Bergbau- und Hüttenbedarf, Salzgitter—Chairman.

Bergbau A. G. Ewald-König, Ludwig, Herten/West—Chairman.

Bergwerksverwaltung Oberschlesien G. m. b. H. der Reichswerke Hermann Göring, Kattowitz/Oberschlesien—Chairman. (The above is the administrative board of the Upper Silesian Company of the Hermann Göring Works.)

Deutsche Bergwerks- und Hüttenbau G. m. b. H., Berlin—Chairman.

Preussengrub A. G., Berlin—Chairman.

Stahlwerke Braunschweig G. m. b. H., Berlin—Chairman.

Südtenländische Bergbau A. G., Brück—Chairman.

Witkowitz Bergbau- und Eisenhütten-Gewerkschaft, Mährisch Ostrau-Witkowitz—Chairman. (Affiliated with the Skoda Werke, Czechoslovakia.)

Poldihütte, Prague—Deputy chairman.

Saargruben A. G., Saarbrücken—Deputy chairman.

Coal.—Reichsstelle für Kohle, Berlin—Head of the National Board for Coal. Reichsvereinigung Kohle (Reich Coal Union)—Manager.

Reichswerke A. G. Alpine Montanbetriebe "Hermann Göring," Linz/Donau (coal mines)—Manager.

A. G. der Kohlenwerkstoffverbände, Bochum (union of coal industries)—Chairman.

Deutsche Kohlenhandels G. m. b. H., Berlin—Chairman.

Steinkohlengewerkachaft der Reichswerke "Hermann Göring," Heesen b. Hamm/West. (coal company of the Hermann Göring Works)—Chairman.

Bergbau A. G. Ewald-Koenig Ludwig (an affiliate of Reichswerke A. G. für Berg- und Huttenbetriebe "Hermann Göring")—Director.

Fuel.—Sudetenländische Treibstoffwerke A. G., Oberleutensdorf—Chairman.

Cellulose.—Westfälische Zellstoff A. G., "Alphalini," Arnsberg, West.—Chairman.

Housing.—Wohnungs A. G., der Reichswerke "Hermann Göring," Braunschweig (an affiliate of Reichswerke A. G. für Berg- und Hüttenbetriebe "Hermann Göring")—Chairman.

Public utilities.—Vereinigte Elektrizitätswerke Westfalen A. G., Dortmund (United Electrical Works of Westphalia)—Director.

Gesellschaft für Elektrometallurgie Dr. Heinz Gehm (electrometallurgy company)—Chairman of the advisory committee.

Railways.—Kleinbahn Bossel-Blankenstein G. m. b. H., Herbede/Ruhr—Manager.

Brewery.—Engelhardt-Brauerei A. G., Berlin—Director.

Insurance.—Provinzial-Lebensversicherungsanstalt von Westfalen, Münster/West.—Member of the executive committee.

Commercial.—Industrie- und Handelskammer zu Bockum (chamber of commerce)—Adviser.

Agfu A. G. für wirtschaftliche Unternehmungen des Ennepe-Ruhr-Kreises; Gevelsberg/West.—Director.

Miscellaneous

Waagner-Biro A. G., Wien—Director.

Gesellschaft für Praktische Lagerstattengorschung G. m. b. H., Berlin—Member of the executive committee.

Gemeinde Buchholz Ennepe/Ruhrkries—Bürgermeister.

Buchtal A. G. Keramische Betriebe der Reichswerke Hermann Göring (an affiliate of Reichswerke A. G. für Berg- und Hüttenbetriebe "Hermann Göring").

ERNST POENSGEN

Ernst Poensgen, associated with the Vereinigte Stahlwerke since 1926 and now chairman of its management committee, was one of the men responsible for swinging the support of that gigantic steel enterprise behind the Nazis. He is reported to have espoused the cause of razism in 1932 and to have served during the 1930's as a director of the Transocean News Service, one of the German propaganda machines. Under Hitler, Poensgen's influence in German business steadily increased until he became one of the most outstanding figures in the warrior economy created by the Nazis.

Poensgen began his business career at the turn of the century with the Phoenix Steel Co., which was later absorbed by Vereinigte Stahlwerke. During World War I he served with the German occupation authorities in Belgium. Today, in addition to his position at the head of the Steel Trust, Poensgen holds equally important posts with a number of its subsidiaries and affiliates, and is associated with several official economic organizations. In 1937 he was named a director of the Dusseldorf international exposition to demonstrate to the world the aims and accomplishments of the 4-year plan for German economic self-sufficiency.

Poensgen, now almost 75 years old, heads a family which is strongly entrenched in the industrial life of Germany. Its 10 members who are active in business occupy a total of managerial positions in heavy industry. Left undisturbed in their posts, this group of men would be well equipped to participate in the revival of German militarism.

In 1942 Ernst Poensgen's political, financial, and industrial connections were as follows:

Political

Bezirksgruppe Nordwest der Wirtschaftsgruppe (Northwest District Group of the Economic Group)—Leader.

Eisen Schaffende Industrie, Dusseldorf (iron producing industry)—Leader.
Industrieabteilung der Wirtschaftskammer Dusseldorf (Industrial Division of the Economic Chamber of Dusseldorf)—Leader.

Wirtschaftsgruppe Eisen Schaffende Industrie (Economic Group of Iron Producing Industry)—Leader.

Reichsgruppe Industrie, Berlin (German Group for Industry)—Member of advisory committee.

Reichswirtschaftskammer, Berlin (German Economic Chamber)—Member of the advisory committee.

Akademie für Deutsches Recht, Berlin, Ausschuss für Kartellrecht (Academy for German Law, Committee for Cartel Law)—Member, German Armament Board; representative of heavy industry.

Industrial

Vereinigte Stahlwerke A. G., Dusseldorf (steel trust)—Chairman of management committee.

Siegener Eisenbahnbedarf A. G., Siegen (railroad material; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

August Thyssen-Hütte A. G., Duisburg-Hamborn (iron and steel; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Bandoisenwalzwerke A. G., Dinslaken/Niederrhein (rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Bochumer Verein für Gesteinsfabrikation A. G., Bochum (iron and steel; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Deutsche Eisenwerke A. G., Mulheim/Ruhr (iron and steel; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Deutsche Rohrenwerke A. G., Dusseldorf (tubes, pipes; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Dortmund-Hoerder Huttenverein A. G., Dortmund (iron, steel; owned by Vereinigte Stahlwerke)—Deputy chairman.

Gelsenberg Denzin A. G., Gelsenkirchen (coal and derivatives; owned by Vereinigte Stahlwerke and several of its subsidiaries)—Deputy chairman.

Gesenkirchener Bergwerks A. G., Essen (foundries, rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Hüttenwerke Siegerland A. G., Siegen Westf. (foundries, rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Ruhrstahl A. G., Witten (rolling mills; subsidiary of Vereinigte Stahlwerke)—Deputy chairman.

Westfälische Union A. G. für Eisen- und Drahtindustrie, Hamm/Westfalen (steel wire; 100 percent owned by Vereinigte Stahlwerke)—Deputy chairman.

Bergbau- u. Hutten-A. G. Friedrichshütte, Herdorf (mining, iron works; subsidiary of Vereinigte Stahlwerke)—Director.

Gebr. Böhler & Co. A. G., Vienna (steel works; subsidiary of Böhlerstahlwerke A. G., Zurich, in which Vereinigte Stahlwerke has a large minority interest)—Director.

Hannoversche Maschinenbau A. G., vorm. Georg Egstorff (Hanomag), Hannover-Linden (machinery; subsidiary of Bochumer Verein, itself 100 percent owned by Vereinigte Stahlwerke)—Director.

Eisenwerk-Gesellschaft Maximilianshütte, Rosenberg (blast furnaces, rolling mills; subsidiary of Mitteldeutsche Stahlwerke, itself a subsidiary of Siegenger Eisenindustrie, whose shares are held by the Flick family)—Deputy chairman.

Mitteldeutsche Stahlwerke A. G., Riesa/Elbe (steel works; subsidiary of Siegenger Eisenwerke whose shares are held by the Flick family)—Director.

Gewerkschaft Junkerath/Rheinpr. (mine)—Chairman of mine.

Committee Stahlwerks-Verband A. G., Dusseldorf (iron and steel products)—Chairman.

Westfälisch-Anhaltische Sprengstoff A. G., Chemische Fabriken, Berlin (chemicals and explosives)—Chairman.

Industrierterraine Düsseldorf-Reisholz A. G., Düsseldorf (industrial real estate)—Director.

Kali-Chemie A. G., Berlin (minerals)—Director.

Salzbergwerk Neu-Stassfurt, Berlin (minerals)—Director.

Walther & Cie. A. G., Cologne-Dellbrück (boiler factory)—Director.

GUNTHER QUANDT

Gunther Quandt, owner of the Accumulatoren-Fabrik A. G., who is, in addition, associated with such important enterprises as the Allgemeine Elektrizitäts-Gesellschaft and Wintershall A. G., is said to have willingly supported Hitler's plans for world mastery.

Quandt was first introduced to nazism through Paul Joseph Goebbels, whom he engaged as a tutor for his son. Subsequently, Quandt's wife divorced him, and in 1931 she and Goebbels were married. Although Quandt and Goebbels became embroiled in a disagreement in 1933, this trouble was apparently settled some time later and Quandt returned to favor with the Nazi hierarchy. Quandt and Goebbels are said to have become associated in a number of financial ventures after this incident.

Quandt, who is now 64 years old, started his business career at the age of 19 by taking over the management of his family's textile factories. He made rapid progress and soon expanded into other fields of endeavor.

In 1942, he had the following business connections:

Banking

Deutsche Bank, Berlin—Director.

Westfalenbank A. G., Bochum/Westfalen—Director.

Insurance

Gerling-Konzern, Rheinische Versicherungsgruppe A. G., Cologne (reinsurance; subsidiary of Gerling-Konzern)—Chairman.

Friedrich Wilhelm Lebensversicherungs A. G., Berlin (life insurance; subsidiary of Gerling-Konzern)—Chairman.

Gerling-Konzern, Röchversicherungs A. G., Cologne (reinsurance; 100 percent subsidiary of Gerling-Konzern, Rheinische Versicherungsgruppe A. G.)—Deputy chairman.

Carling-Konzern, Lebensversicherungs A. G., Cologne (life insurance; 100 percent subsidiary of Gerling-Konzern, Röchversicherungs A. G.)—Deputy chairman.

Industrial

Allgemeine Elektrizitäts-Gesellschaft, Berlin 1930 (electric trust)—Director.

Accumulatoren-Fabrik A. G., Berlin (storage batteries; 1929 Quandt owns 75 percent of the stock)—Chairman of management committee.

Deutsche Waffen- und Munitionsfabriken A. G., Berlin (not listed) (arms and ammunition; probably belongs to the Quandt interests)—Chairman of management committee.

Durener Metallwerke A. G., Berlin (miscellaneous metals—subsidiary of Deutsche Waffen- und Munitionsfabriken A. G.)—Member of management committee.

Berlin-Erfurter Maschinenfabrik Henry Pels & Co. A. G., Berlin (machinery; 100 percent subsidiary of Deutsche Waffen- und Munitionsfabriken A. G.)—Chairman.

Concordia Elektrizitäts A. G., Dortmund (electrical installations; subsidiary of Accumulatoren Fabrik A. G.)—Chairman.

Dominitwerke G. m. b. H., Berlin (electrical apparatus; subsidiary of Accumulatoren-Fabrik A. G.)—Chairman.

Fartrix-Werke G. m. b. H., Berlin (flashlights and batteries; subsidiary of Accumulatoren Fabrik A. G.)—Chairman.

1930 Wintershall A. G., Kassel (potash)—Deputy chairman.

Bergbau A. G., Lethringen, Bochum-Garthe (mining; subsidiary of Wintershall A. G.)—Deputy chairman.

Gewerkschaft Victor-Stickstoffwerke, Castrop-Bauxel (nitrogen products; owned by Wintershall A. G.)—Member of mining committee.

Gewerkschaft Wintershall, Heringen (mining)—Chairman of mining committee.

Gebrüder Draeger Tuchfabrik, Pritswalk (textile factory)—Co-owner.

Draeger-Werke G. m. b. H., Potsdam-Habelsberg (textiles)—Manager.

Byk-Guldenwerke Chemische Fabrik A. G., Berlin (chemicals)—Chairman.

Deutsche Wollenwaren-Manufaktur A. G., Grünberg/Schlesien (woolen products; subsidiary of four German Grossbanken under leadership of Dresdner Bank)—Chairman.

Deutsches Tuchsyndikat G. m. b. H., Berlin (German cloth syndicate)—Chairman.

Hermann Herzog & Co. A. G., Heugersdorf/Saxony (textile finishing; subsidiary of Concordia Spinnerei & Weberei)—Chairman.

Busch-Jaeger, Lüdenschneider Metallwerke A. G., Lüdenschied/Westfalia (electrical installation apparatus; indirectly affiliated with the Reichswerke A. G. für Waffen und Maschinenbau Hermann Göring)—Deputy chairman.

A. G. für Verkehrevesen, Berlin (railroads and other transportation)—Director.

Daimler-Benz A. G., Stuttgart (automobiles)—Director.

Deutsches Kalisyndikat G. m. b. H., Berlin (potash syndicate)—Director.

Kamagernspinnerei Stöhr & Co., A. G., Leipzig (wool yarn, worsteds)—Director.

Vereinigte Kugellagerfabriken A. G., Schweinfurt (ball bearings; subsidiary of SKF of Sweden)—Director.

KARL RASCHE

Karl Rasche, prominent Rhineland industrialist, is a member of the new Free Masons, a political group built up around Himmler. He is a member of the inner Nazi circle, and is said to have taken an active hand in the Aryanization program.

Rasche's industrial interests are centered in fields important to the war effort. He is prominently associated with major enterprises producing steel, armaments, machinery, chemicals, and coal. Several of the enterprises with which he is officially connected are subsidiaries of the Farben group. Rasche is also associated with several important heavy industry concerns in Czechoslovakia, absorbed by the Hermann Goering combine after the occupation of that country. He is also connected with Viag, large holding company for the Reich interests, is on the management committee of the Dresdner Bank, and a director of that bank's Austrian subsidiary.

His connections, as of 1942, were as follows:

Banking

Dresdner Bank, Berlin (second largest German commercial bank; assets at end of 1942, RM. 5,735,000,000)—Member of management committee.

Länderbank Wien A. G., Vienna (formed by Dresdner Bank to cover its Austrian interests; later used as an instrument of penetration; total assets, 1942, RM. 627,000,000)—Director.

Hardy & Co., G. m. b. H. Berlin (private financing; in 1938 acquired the current business of Gebr. Arnold and S. Blüchroeder)—Chairman of the board.

Westdeutsche Bodenkreditanstalt, Cologne (land credit institution; capital, 1941, RM. 6,000,000; assets, RM. 244,000,000)—Chairman of the board.

Insurance

Gerling Konzern Lebensversicherungs A. G., Cologne (one of the more important companies in the leading Gerling Konzern; insurance in force, 1939, RM. 990,000,000; premium income, RM. 50,300,000)—Director.

Erste Allgemeine Unfall und Schadenversicherungs Gesellschaft, Vienna (casualty company; capital in 1942, RM. 10,000,000; Giuseppe Volpi was chairman of the board)—Deputy chairman of the board.

Industrial

A. G. vormals Skodawerke in Pilsen, Prague (leading ammunition and armament factory in Europe; absorbed by Reichswerke A. G. Hermann Göring)—Director.

Waffenwerke Brünn A. G., Prague (armament factory; absorbed by Reichswerke A. G. Hermann Göring)—Director.

Sudetenländische Bergbau A. G., Brück, Czechoslovakia (mining construction in the Sudeteland; absorbed by Reichswerke Hermann Göring)—Director.

Rheinmetall Borsig A. G., Berlin (iron, steel, machinery; capital, 1939, RM. 50,000,000; was controlled by Reichswerke Hermann Göring)—Director.

Wintershall, A. G., Berlin (potash mines; owned by Gewerkschaft Wintershall, the largest German potash syndicate and second only to I. G. Farben in chemical production; the syndicate is controlled by Günther Quandt and the Rostberg family; Wintershall A. G. was capitalized, in 1939, at RM. 150,000,000 and had many subsidiaries in potash, oil, and finance)—Director.

Accumulatoren-Fabrik A. G., Berlin (storage batteries; capital, 1936, RM. 21,250,000; Günther Quandt owns 75 percent of the stock; has numerous subsidiaries in Germany, Hungary, Sweden, Norway, Holland, Yugoslavia, and Finland)—Director.

Metallgesellschaft A. G. Frankfurt am Main (non-ferrous metals, mining, chemicals, artificial rubber; capital, 1939, R.M. 42,000,000, principally held by I. G. Farben, directly and through the Deutsche gold and Silber Scheideanstalt, the British Metals Corp., and the Schweizerische Gesellschaft für Metallwerke)—Director.

Felten Guillaume Carlswerke A. G., Cologne (metal cables and wires; capital, 1936, R.M. 64,500,000; principally owned by the Arbed Konzern of Luxemburg; the latter in turn is controlled by the Barbanson family of Belgium, the Societe Generale de Belgique, and the Banque de Bruxelles)—Director.

Braunkohle-Benzin A. G., Berlin (fuels extracted principally from lignite; capital, 1939, R.M. 100,000,000; 12.6 percent owned by I. G. Farben; other large German groups own small participations)—Director.

Essener Steinkohlenbergwerke A. G., Essen (coal mining; holds fifth place as to quota in the coal syndicate; capital, 1942, R.M. 75,000,000; controlled by the Flick group through Harpener Bergbau)—Director.

Eisen und Hüttenwerke A. G. Bochum (rolling mills, machinery; capital, 1936, R.M. 4,000,000; subsidiary of Bergbau A. G. Lothringen, Bochum, itself affiliated with Wintershall)—Director.

Mülheimer Bergwerks Verein, Essen (coal mining; capital, 1936, R.M. 20,000,400; majority of stock held by the Stinnes group)—Director.

Neunkircher Eisenwerk A. G., vormals Gebrüder Stumm, Neukirchen, Saar (iron and steel; firm founded in the fifteenth century; control passed to French hands after the last war; Otto Wolff acquired majority later and the Stumm family, owners since 1803, retained a large interest; capital, 1939, R.M. 40,000,000)—Director.

Dyckerhoff-Portland-Zementwerke A. G., Mainz-Amönenburg (cement and related products; capital, 1936, R.M. 20,000,000; majority of stock held by the Dyckerhoff family; has numerous subsidiaries in Germany, Holland, and Iceland).

Perlmöser Zementwerke A. G., Vienna (portland cement and related products; capital, 1942, R.M. 19,480,000; principal shareholders are "Holderbank" Financiere Glarus A. G., Glarus, through the Cementia Holding A. G., Zurich, the Dresdner Bank, and the Länderbank, Vienna)—Chairman of the board.

Rheinische Kunstseide A. G. Krefeld (artificial silk; controlled by Phrix Werke A. G., which is second only to I. G. Farben in the production of artificial wool; capital, 1941, R.M. 10,000,000)—Deputy chairman of the board of directors.

Well Wäscherei und Kammerei in Döhren, Döhren bei Hamover (cleaning and carding of wool; capital, 1936, R.M. 6,020,000)—Deputy chairman of the board of directors.

Engelhardt-Brauerei A. G., Berlin (brewing and related branches; has many subsidiaries in Germany; capital, 1936, R.M. 11,100,000; majority of stock held by Dresdner Bank)—Chairman of the board of directors.

PHILIPP F. REEMTSMA

Philipp F. Reemtsma is a general partner in the cigarette concern of H. F. & Ph. F. Reemtsma K. G., an enterprise controlled by the Reemtsma family.

The Reemtsmas were inveterate foes of the Weimar Republic and have been extremely prosperous under the banner of national socialism. Their success under the Nazis may be measured by the fact that the Reemtsma concern and 16 other companies accounted for 95 percent of the cigarette industry's entire output. The Reemtsmas obtained a cigarette monopoly in Danzig and the control of a host of small companies, all of which may have been facilitated by the Nazis in exchange for loyal support.

Philipp F. Reemtsma is also connected with one of the largest individual rayon concerns in Germany, Vereinigte Glanzstoff Fabriken A. G., Wuppertal-Elberfeld (western Germany), in turn indirectly controlled by the Deutsche Bank, of which he is a director.

Outstanding among Reemtsma's political posts are those of Leader of the German War Economy, membership in the Reich Group for Industry, and chief of the technical subsection of the cigarette industry in the Economic Group for Food Industry.

Philipp Reemtsma was born on December 22, 1893, in Osterholz Scharmbek. His address as of 1942 was 51 Parkstrasse, Hamburg Klein Flottbeck. His known connections as of 1942 were as follows:

Political

Wehrwirtschaftsführer—Leader in the German War Economy.

Ratsherr d. Hansestadt Hamburg—Member of the Hamburg City Council.

Reichsgruppe Industrie (Reich Group for Industry)—Member of the advisory board.

Industrie und Handelskammer, Hamburg (Chamber of Industry and Commerce, Hamburg)—Member.

Fachuntergruppe Zigarettenindustrie in der Wirtschaftsgruppe Lebensmittel-industrie Berlin (Technical Subsection of the Cigarette Industry in the Economic Group for Food Industry)—Leader.

Banking

Deutsche Bank, Berlin—Director.

Deutsche Reichsbank, Berlin—Member of advisory board.

Industrial

Vereinigte Glanzstoff Fabriken A.G., Wuppertal Elberfeld (one of the largest individual rayon manufacturing concerns in Germany; also engaged in operation of chemical-producing plants; capital, in 1937, RM. 76,500,000; total assets in 1936, RM. 119,033,709; almost entirely owned by AEN Algemene Kunstzijde Unie N.V. Arnheim, Holland, which is in turn apparently controlled by the Deutsche Bank, Berlin)—Director.

H. F. & Ph. F. Reemtsma, Hamburg (a large cigarette producing company, a limited partnership with the three Reemtsma brothers as general partners; under the Nazis this firm obtained a cigarette monopoly in Danzig)—Owner.

HERMANN RÖCHLING

Hermann Röchling, one of the keymen in the Nazi war machine, is said to have been one of Hitler's strongest financial backers. He is a member of a powerful and active industrial family which controls an enormous sector of the Saar-Lorraine heavy industry and exerts considerable influence in other fields as well.

Röchling's long and devious industrial career attests the fact that his chief concern was that German industry remain paramount regardless of the government in power. During World War I, he took over the mines of Alsace-Lorraine and northern France and stole large quantities of machinery from the French factories, having first secured the consent of the Kaiser. After 1918 the highest French tribunal sentenced him and one of his brothers in absentia. However, the pressure of international business proved paramount and soon Röchling was again functioning in cooperation with his French and industrial friends, the brothers de Wendel.

Röchling is said to have participated in the construction of the Maginot Line and is alleged to have persuaded Hitler, Göring, and the German General Staff of the expediency of building the Westwall. Profits made by the Röchling companies in both these projects are reported to have been enormous. Subsequently, reconversion of the Maginot Line, undertaken between 1941 and 1943, was entrusted to the Röchling combine.

After the annexation of Alsace-Lorraine, Hermann Röchling was named a trustee of the Carlshuetten block of the Lorraine mining industry and thus shared in the spoils with Flick, Klöckner, Göring, and Stumm.

Röchling's support of the Nazi war machine has been further rewarded by his appointment to a number of honorary economic-political posts. He was instrumental in establishing the Moselle district group which absorbed and integrated the mines in that sector as well as the mines of Luxembourg and Westerwald. By the organization of such groups throughout Germany and occupied territory and through participation with the Flick steel combine, the Krupp Works, and several powerful ore magnates, Röchling successfully coordinated the activities of the iron and steel industry for the war effort. In May 1941, he was appointed one of the nine Pioneers of Labor by Hitler as a reward for distinguished service rendered to the Reich.

His connections, as of 1942, were as follows:

Political

Wehrwirtschaftsführer—Member of the Wehrwirtschaftsrat, known as the Military Economic Council.

Rüstungsrates—Member of the Armament Council within the Ministry for Armament and Munitions.

Wirtschaftsgruppe Eisenschaffende Industrie, Berlin (economic group, iron-producing industry)—Member of the advisory board.

Reichsvereinigung Eisen und Stahl (Reich union of the iron and steel industry, created in 1942 for the complete control of all iron and steel workers in the greater German Reich)—President.

Pioneer of Labor (special honor for distinguished service rendered to the Reich and conferred by Adolf Hitler).

Bezirkgruppe Südwest der Wirtschaftsgruppe Eisenschaffende Industrie, Saarbrücken (southwest regional group of the economic group of iron-working industries)—Leader.

Wirtschaftsskammer für den Bezirk Saarland-Pfalz (Economic Chamber for the District Saarland-Pfalz)—Leader.

Industrie und Handelskammer, Metz (Chamber of Commerce and Industry)—Leader.

Wirtschaftskammer Westmark, Saarbrücken (Westmark Economic Chamber, Saarbrücken)—Member of the advisory committee.

Verein Deutscher Ingenieure (Association of German Engineers)—Honorary member.

Verein Deutscher Eisenhüttenleute (Association of German Metallurgists)—Member of board of directors.

Kaiser Wilhelm Gesellschaft für Züchtungsersuchung, Müncheberg (Kaiser Wilhelm Society for the Study of Breeding)—Member of the administrative board.

Deutsche Museum, Munich (German Museum)—Chairman of board of directors.

Deutsche Akademie, Munich (German Academy)—Senator.

Bezirksgruppe Moselland der Wirtschaftsgruppe Eisenschaffende Industrie (district group Moselle of the economic group, iron-producing industry)—Leader.

Banking

Deutsche Reichsbank—Member of the advisory committee.

Landes-Ausschuss für des Saarland Dresdner Bank, Berlin (Saar District regional committee of the Dresdner Bank, Berlin)—Member.

Geb. Röchling Bank, Saarbrücken (has 11 branches; in July 1939 absorbed Treuhand und Kreditbank A. G.)—Partner.

Röchling & Co. Bank, Basle, Switzerland (established 1923)—Partner.

Röchling'sche Eisen- und Stahlwerke G. m. b. H., Völklingen (principal unit in Röchling combine; has capital of RM. 36,000,000)—Deputy manager.

Geb. Röchling Eisenhandelsgesellschaft, Ludwigshafen/Rhein (a Röchling company)—Partner.

Buderus'sche Eisenwerke A. G., Wetzlar (blast furnaces, cement factory; iron foundries for stoves, ovens, ore diggings, limestone quarry; in 1939 stock capital was RM. 26,000,000, total assets, RM. 45,112,668)—Director.

Stahlwerke Röchling-Buderus A. G., Wetzlar (steel mills; in 1939 capital was RM. 3,000,000; 50 percent owned by Buderus'sche Eisenwerke and 50 percent owned by Edelstahlwerk Röchling A. G., Völklingen)—Chairman of board of directors.

Saargruben A. G., Saarbrücken (operation and management of mines in the Saar; in 1937 capital was RM. 50,000,000; is wholly owned by the German Government)—Director.

Eisenwerk Gesellschaft Maximilianshütte, Rosenberg, Oberpfalz (iron works and foundries, in 1937 capital was RM. 26,250,000; is 80 percent owned by Mitteldeutsche Stahlwerke G. m. b. H. Riesa/Elbe, itself wholly owned by the Flick combine)—Director.

Continental Elektricitäts-Union A. G., Basle (electrical holding company; capital was 20,000,000 Swiss francs; is 70 percent owned by Preussische Elektricitäts A. G., Berlin, and its affiliated companies)—Member of executive committee.

Kraftwerke Wehrden G. m. b. H., Völklingen/Saar (steam power plant; in 1937 capital was RM. 2,000,000; is affiliate of Continentale Elektricitäts-Union A. G., Basle)—Director.

Heinrich Lanz A. G., Mannheim (tractors, threshing machines, etc.; in 1937 capital was RM. 2,000,000 and assets totaled RM. 28,350,642)—Director.

Hallesche Salzwerke und Chemische Fabrik Kalbe A. G., Calbe/Saale (salt and chemical works; in 1937 capital was RM. 2,925,000 and its assets totaled RM. 8,236,620)—Chairman of board of directors.

Boggererz A. G., Blumberg/Baden (extraction of ores in South Baden; in 1937 capital was RM. 2,000,000)—Director.

Brown, Boveri & Cie. A. G., Mannheim (production of electrical machinery and apparatus; in 1937 capital was RM. 12,000,000; affiliated with Brown, Boveri concern of Baden, Switzerland)—Director.

Allgemeine Baugenossenschaft 1904, Völklingen (building association)—Chairman of board of directors.

DR. KURT SCHMITT

Dr. Kurt Schmitt, Germany's insurance expert, belonged to that group of financial and industrial leaders who were in sympathy with the Hitler movement for some years prior to 1933. He achieved prominence in the Allianz insurance company (with which he had been associated even before World War I), and served in 1932 as chairman of the Reich Federation of Private Insurance companies. He did not begin his spectacular career which brought him fame as an industrialist and financier, however, until his appointment by Hitler as the Reich's Minister of Economics in June 1933, and his designation, several months later, as a party member.

Ministry of Economics.—It is reported that Schmitt had had some differences with Schacht in the Economics Ministry in 1934, and that for economic considerations had disapproved of the party's anti-Jewish measures. His public utterances, however, urged blind support of Hitler in 1933 and 1934. In his first public address, for example, he declared that "the great idea of New Germany was the 'leadership principle,'" and that, in his short period of cooperation with the Chancellor, realized what great future Germany had found in Adolf Hitler. It was, he added "not too much to demand that the German Nation should yield itself to his will."

During his year's service in the Economics Ministry, Schmitt had almost dictatorial powers over the entire commercial and financial system of Germany. He may be credited with the plan for the organization of all branches of German economic life into the 12 industrial groups which have so successfully intensified their productive efforts in behalf of the Nazi Government. He retired from this post in 1934.

Activities in insurance and industry.—Schmitt continued to serve the Reich in financial and economic fields and gained even greater prominence. Since 1938 he has acted as president of the Münchener Rückversicherungs Gesellschaft. This organization, under his guidance, took the lead in penetrating the insurance business of occupied countries and in forming the so-called Munich Pool which all European insurance companies were obliged to join. Schmitt also became head of AEG and Deutsche Continental Gas Gesellschaft, and for some time has been regarded as a representative of the iron and steel industry. In addition he held such political posts as General Counsel for Economic Affairs, vice chairman of the Berlin Chamber of Commerce, and in 1943 presided over the Inter-European Insurance Conference at Budapest.

His financial and commercial connections are the following:

Political

Wehrwirtschaftsführer—Director of Economic Defense.

Reichsversicherungsausschuss (Reich Minister of Economics created, by decree of December 29, 1939, this organization to act in an advisory capacity to the Minister on insurance problems)—Deputy chairman.

Akademie für Deutsches Recht (Academy of German Law)—Member.

Ausschuss für Beamtenrecht—Member of committee for rights of employees).

Ausschuss für Finanz- und Steuerrecht—Member of committee for finance and taxes.

Zentralausschuss der Deutschen Reichsbank, Berlin—Member of control committee of Deutsche Reichsbank.

Insurance

Münchener Rückversicherungs-Gesellschaft, München (largest reinsurance company in the world)—Chairman of executive committee.

Allianz Versicherungs-A. G., Berlin (together with the Münchener Rückversicherungs-Gesellschaft, München, dominates German insurance through the Allianz Konzern)—Deputy chairman of board of directors.

Allianz Lebensversicherungs-Gesellschaft A. G., Berlin (insurance; 30 percent owned by Allianz Versicherungs A. G.)—Chairman of the board of directors.

Bayerische Versicherungsbank A. G., München (affiliate of Münchener Rückversicherungs-Gesellschaft, München)—Director.

Frankfurter Versicherungs-A. G., Frankfurt/Main (Allianz Versicherungs A. G., and Münchener Rückversicherungs-Ges., Berlin, hold substantial interest)—Director.

Karlsruher Lebensversicherung A. G., Karlsruhe (life insurance)—Director.

Kraft Versicherungs-A. G., Berlin (Allianz Versicherungs A. G. and Münchener Rückversicherungs-Gesellschaft hold substantial interests)—Director.

La Pace, S. A. Assicurazioni e Riassicurazioni, Mailan (insurance and reinsurance)—Deputy chairman of board of directors.

Wiener Allianz, Versicherungs-A. G., Wien (Austrian branch of the Allianz Konzern)—Deputy chairman of the board of directors.

Erste Allgemeine Unfall- und Schadens-Versicherungs-Ges., Wien (casualty and accident)—Director.

Pilot Reinsurance Co. of New York, N. Y.—Director.

Industrial

Allgemeine Elektrizität-Gesellschaft (AEG), Berlin—Chairman of the board of directors.

Deutsche Continental Gas Gesellschaft, Dessau (construction and management of gas plants)—Chairman of the board of directors.

Gewerkschaft Westfalen, Aheln (coal and coke, subsidiary of Deutsche Continental Gas Gesellschaft, Dessau)—Chairman of management committee.

Süddeutsche Zucker-A. G., Mannheim (manufacture and sale of sugar, etc.; Gruppe Deutsche Bank und Disconto-Gesellschaft; Gruppe Flegelheimer; Gruppe Dr. Scatesi Padua)—Director.

Essener Steinkohlenbergwerke A. G., Essen (coal affiliate of Vereinigte Stahlwerke)—Director.

Aktienbrauerei zum Lowenbrau, Munchen (brewery)—Deputy chairman of the board of directors.

DR. HERMANN SCHMITZ

Hermann Schmitz, one of the most important persons in Germany, has achieved outstanding success simultaneously in the three separate fields, industry, finance, and government, and has served with zeal and devotion every government in power. He symbolizes the German citizen who out of the devastation of the First World War made possible the Second. Ironically, his may be said to be the greater guilt in that in 1919 he was a member of the Reich's peace delegation, and in the 1930's was in a position to teach the Nazis much that they had to know concerning economic penetration, cartel uses, synthetic materials for war, etc.

Industry.—Schmitz, the finance king of Germany's greatest corporation, I. G. Farben, first became associated with industrial enterprises after the First World War. Since the 1920's he has served in the management of Vereinigte Stahlwerke and I. G. Farben, and is almost entirely responsible for the remarkable progress and expansion of I. G. Farben in Germany and abroad. In 1930, for example, at a time of great crisis, he was able to unite the explosives industry of 10 European countries into a European Explosives Convention of which he was president until the outbreak of war. He conceived the plan for economic penetration to the end that sons and family members of I. G. Farben executives should emigrate to other countries and become citizens in order to protect the company's foreign interests during wartime. His own brother, Dietrich Schmitz, became a naturalized American citizen and head of I. G. Farben's American subsidiary, General Aniline & Film Corp.

Finance.—Initially a banker, Schmitz's career was temporarily halted by his war service in 1914. Since the 1920's, however, he has been a member of the central committee of the Reichsbank, and recently served as director of the Bank for International Settlements, of which the Reichsbank was a founding member.

He is a reparations expert, has participated in bankers' discussions regarding credits to Germany, and has presented an original plan concerning the issuance of currency and the extension of credits.

Government.—During the First World War Schmitz served for a year as economic adviser to the Ministry of the Treasury. He has continuously served in an advisory capacity to the heads of the governments of Germany. He was a member of the Economic Advisory Board and Minister of Economics in the Von Hindenburg Cabinet. Later he served as economic adviser to Chancellor Bruening. Schmitz is one of the early supporters of Hitler and collaborated with the Nazi Party in making I. G. Farben a vast spying organization. Actually, many I. G. Farben officials became intimately associated with the movement and many received important political appointments. Schmitz, himself, was named a member of the Hitler-appointed Reichstag and a Leader in the War Economy (Wehrwirtschaftsfuehrer).

Now 64 years of age, Schmitz may be regarded as a triple threat in Germany, where he achieved remarkable industrial and political collaboration, and abroad, where he achieved economic penetration.

GEORGE VON SCHNITZLER

George von Schnitzler, a prominent member of the management committee of the I. G. Farbenindustrie, has been identified with the Nazi Party since its beginning.

He represented I. G. Farben at the meeting of February 1933 when the big German industrialists agreed to finance Hitler's election for the office of Chancellor. As a result of a later meeting held in Goering's palace in 1934, von Schnitzler is said to have contributed R.M. 1,000,000 to the party and to have launched Goering upon his career in the Third Reich.

In addition to his connection with I. G. Farben and with its subsidiary companies, von Schnitzler has held a number of political posts. He has served as deputy leader of the economic group of the chemical industry in Berlin and as a member of the management group of the Committee for Industrial Propaganda.

Von Schnitzler is connected both with the Nazi Party and the Farben interests by personal as well as official ties. He is a nephew of Dr. von Rath, the founder of the Farben interests. His cousin, William von Meister, was formerly an executive of General Aniline & Film Corp. His daughter married Dr. Herbert Scholz, an outstanding Nazi, who was one of the first secretaries in the German Embassy in Washington and Consul General in Boston until his deportation from the United States in 1941.

Early in 1944 von Schnitzler was reported to be in Spain arranging for an expansion of Farben interest in that country.

Von Schnitzler's political, banking, and industrial connections were reported as follows in 1942:

Political

Wirtschaftsgruppe Chemische Industrie, Berlin (Economic Group for Chemical Industry)—Deputy leader.

Ausschuss für Industrielle Wirtschaftswerbung (Committee for Industrial Propaganda)—Member of management committee.

Werberat der Deutschen Wirtschaft, Berlin (National Advertising Council of German Economy)—Member.

Banking

Frankfurt-Hessischer Beirat der Deutschen Bank, Berlin (Frankfurt-Hesse Committee of the Deutsche Bank)—Member.

Industrial

I. G. Farbenindustrie A. G., Frankfurt am Main—Member of management committee.

Kalla & So., A. G., Wiesbaden-Diebrich (photographic supplies, subsidiary of I. G. Farben)—Director.

Ala-Anzeigen A. G., Berlin (all kinds of advertising; Cura Revisions u. Treuhand G. m. b. H. of Berlin and Cautio Treuhand G. m. b. H. of Berlin hold about 92 percent of the capital)—Director.

Chemische Werke Aussig-Falkenau G. m. b. H., Aussig (chemicals)—Director.

KURT VON SCHROEDER

Kurt von Schroeder, Germany's outstanding private banker and partner of the Cologne banking house, J. H. Stein, since 1921 is closely identified with a number of powerful industrial combines. So concerned was he with the success of these war-making industrial interests that within a decade he made two attempts to gain political support for their protection.

After the last war he was one of the chief backers of the Rhineland separatist movement which had as its objective the preservation of the armaments industry which could not legally function within Germany itself. This movement failed and von Schroeder together with his partners waited for another opportunity, to expand their heavy industry. Hitler was their magnificent opportunity, and von Schroeder took advantage of the German crisis of 1933. He arranged a meeting in his own home of van Papen, von Hindenburg, and Hitler, in an effort to unify the various industrial and political factions. This meeting led to Hitler's subsequent appointment as Chancellor. Von Schroeder and the Nazi Party were mutual beneficiaries of this close association: von Schroeder gained industrial power and political prestige and the party acquired financial and industrial support.

After the Nazis gained control of the Government, von Schroeder became a leader of the Private Bankers Group, adviser to the Reichsbank, and its representative on the directorate of the Bank for International Settlements. In

return he developed the pattern for the penetration of German banking into the financial institutions of occupied Europe, and was among those responsible for the integration of banking facilities with industry for the benefit of the Nazi political machine. He was also appointed by Himmler as SS Senior Group Leader and became increasingly popular by generally appearing in public in his Elite Guard uniform.

In addition to his other activities, von Schroeder appears to have been active in the dissemination of Nazi propaganda. Following the German surrender, Allied authorities discovered a propaganda press in the von Schroeder home in Cologne.

Von Schroeder, now 56 years of age, has been a dominant power in financial, industrial, and political groups for 20 years. Moreover, his influence is said to be exerted outside the Reich as well as in Germany proper, and he is reported to have been instrumental in bringing Laval to power in Vichy.

Kurt von Schroeder's known connections are as follows:

Political

Swedish Consul General.

International Chamber of Commerce—Member of administrative committee.

Gau Economic Chamber of Cologne—President.

Council of Reich Post Office—Member of advisory board.

German Industrial and Commerce Assembly—Presiding member.

Reich Board of Economic Affairs—Member.

Deutsche Reichsbahn—President of administrative board.

Trade Group for Wholesale and Foreign Trade—Manager.

Akademie für Deutsches Recht (Academy of German Law)—Member.

City of Cologne—Councilor.

University of Cologne—Member of board of trustees.

SS Senior Group Leader.

Iron Cross of First and Second Class.

Kaiser Wilhelm Foundation—Senator.

Advisory Council of German-Albanian Goods Clearing Bureau—Member.

Working Committee of Reich Group for Industry and Commerce—Deputy chairman.

Banking

Deutsche Reichsbank, Berlin—Adviser to board of directors.

Wirtschaftsgruppe Private Bankgewerbe—Leader.

Deutsche Verkehrs-Kredit-Bank, A. G., Berlin (controlled by Deutsche Reichsbahn)—Chairman of board of directors.

Bank for International Settlements—Member of the directorate.

J. H. Stein & Co., Cologne—Partner (Banque Worms was French correspondent).

Deutsche Ueberseesische Bank (controlled by Deutsche Bank, Berlin)—Director.

Insurance

Colonia Kölnische Versicherung A. G., Cologne (fire and casualty insurance; Aachener und Munchener Feuer Versicherung-Gesellschaft, Aachen, has 27 percent participation, and Rückversicherung Aktiengesellschaft Colonia, Köln, has 25 percent participation; Robert Pferdmenes of Oppenheim & Cie., and Felix Theusner of Deutsche Bank, on directorate)—Director.

Concordia Lebensversicherungs A. G., Cologne (life insurance; Die Kölnische Rückversicherung-Gesellschaft has 90 percent participation; Robert Pferdmenes on board of directors)—Director.

Kölnische Rückversicherungs-Gesellschaft, Cologne (reinsurance of all kinds, domestic and foreign; Colonia Kölnische Feuer und Kölnische Unfall Versicherung A. G., Cologne, has 40 percent participation and International Allgemeine Versicherung A. G., Stetten, has 40 percent participation; Robert Pferdmenes on directorate)—Director.

Industrial

Rheinisch-Westfälische Industriebeteiligungs A. G., Mulheim/Ruhr—Director.

Iron and steel.—Mitteldeutsche Stahlwerke A. G., Riesa/Elbe (iron, steel, and rolling mills; Friedrich Flick Kommanditgesellschaft, Berlin, has 100 percent participation)—Director.

Adlerwerke A. G., Frankfurt-am-Main (machinery; through board of directors connected with Flick combine, I. G. Farben, and Siemens-Schuckertwerke)—Deputy chairman of advisory board.

Manufacturing.—Felten und Guillaume Carlswerk A. G., Cologne/Mulheim (wire industry; subsidiary of Arbeit Konzern, Luxembourg)—Head of advisory board.

Rheinische Zellwolle A. G., Siegburg, Cologne (textile thread; J. H. Stein aided establishment of firm)—Head of advisory board.

Vereinigte Glanzstoff Fabrik, Wuppertal/Barmen (AKU (Algemeene Kunstzijde Unie N. V., Arnheim, controlled) production of rayon and other synthetic fibers)—Director.

Mitropa (Mitteleuropäische Schlafwagen und Speiswagen A. G., Berlin) (sleeping cars; controlled by Deutsche Reichsbahn)—Head of advisory board.

Mining and coal production.—Rheinische A. G. für Braunkohlenberg-Bau und Brikettfabrikation, Cologne (lignite, mining, and briquets, acquisition and sale of mining companies; Friedrich Flick and Fritz Thyssen are on board of directors Braunkohlenberg-Bau and Briketwerke Roddergrubbe A. G.)—Deputy chairman of advisory board.

Braunköhlen Benzin A. G., Berlin (production of fuel and lubricants; I. G. Farben aided in the establishment of company and Grube Leopold A. G. has an interest)—Director.

Harpener Bergbau A. G., Dortmund (coal mining, coke, etc.; Eisenberg-Gesellschaft Maximilanshütte has participation; Friedrich Flick, Robert Pferdmenges, also Oscar Schlitter, of Deutsche Bank, on board of directors)—Director.

Union Rheinische Braunköhlen Kraftstoff A. G., Cologne (coal products)—Director.

Chemical products.—Guane Werke A. G., Hamburg (fertilizers and chemical products of all types)—Director.

Public utilities

C. Lorenz A. G., Berlin (manufacture and trading of telephone and telegraph apparatus, etc.; International Telephone & Telegraph Co., New York, has participation)—Director.

Mix & Genest A. G., Berlin (telephone, telegraph, etc., apparatus; Standard Elektricitäts Aktiengesellschaft has 94 percent participation)—Director.

Standard Elektricitätswerke A. G., Berlin (company participating in financing electrical companies as well as engaging in companies producing high and low voltage; International Telephone & Telegraph has participation)—Director.

Explosives

Dynamit A. G., Troisdorf (explosives; an affiliate of I. G. Farben)—Director.

Construction

Gemeinnützige A. G. für Wohnungsbau, Cologne (leasing and construction of small dwellings; State of Cologne has 50 percent participation)—Director.

Boswau & Knauer A. G., Berlin (construction company; J. H. Stein on board of directors)—Deputy chairman of advisory board.

HERMANN VON SIEMENS

Hermann von Siemens, a director of the Deutsche Bank, is closely identified with the giant Siemens electrical concern. He is one of Germany's most important industrialists. He has limited his industrial interests exclusively to the institutions owned and managed by the Siemens concern, and in these he holds only three official positions, namely, the board chairmanships in Siemens & Halske A. G., Siemens Planawerke, and Siemens-Schuckertwerke. Both Siemens-Schuckert and Siemens & Halske have interlocking directorships with Vereinigte Stahlwerke, often referred to as the German Steel Trust.

Hermann von Siemens is named as one of the most notorious industrial backers of the Kaiser's bid for world conquest. He belonged to the Hindenburg committee and was one of the German capitalists who financed Hindenburg's election campaign. He is also listed as one who financed Hitler, helped to build the war machine, and advanced the Nazi cause in the economic penetration into one European country after another. This is further indicated by the fact that in 1935 Siemens received formal Nazi indoctrination in a labor camp, following which Hitler visited Siemensstadt and addressed the workers. As a result, the company began to receive vast orders from the Government and cooperated closely with the party.

Hermann von Siemens had the following financial and industrial connections in 1942:

Banking

Deutsche Bank, Berlin—Director.

Industrial

Siemens & Halske A.G., Berlin (this company, which had a capital of RM. 107,000,000 in 1938 and RM. 400,000,000 in 1942, challenges the position of the General Electric Co. as the largest manufacturer of electrical equipment in the world; the German Government has delegated to this company the responsibility for supplying within Germany the major share of the electrical requirements of the German war machine; the company also rates as Germany's third largest producer of airplane motors; it is affiliated with numerous enterprises in Germany as well as in France, Japan, Italy, England, Greece, Czechoslovakia, and South America and has sales organizations on all the five continents; since 1930 the subsidiaries have had more independence and the parent company has taken on the features of a holding company; Siemens has always had strong connections with the banks particularly through the Electrische Licht und Kraftanlagen A.G., a public utility holding company).

Siemens Planiawerke (engaged primarily in the production of carbon and graphite electrodes and alloy products; its capital which, as of 1937, was RM. 18,000,000, was 66½ percent owned by Siemens & Halske)—Chairman of board of directors.

Siemens-Schuckert Werke (this RM. 120,000,000 company is another major entity in the Siemens combine; it has extensive international agreements in which such companies as Westinghouse Electrical Manufacturing Co., of New York, and Brown Boveri & Cie., of Switzerland, participate. It is controlled by Siemens & Halske A. G.)—Chairman of board of directors.

DR. HEINRICH VON STEIN

Dr. Heinrich von Stein is the owner of the private banking house of J. M. Stein, Cologne, in which Kurt von Schroeder, a prominent member of the Nazi Party, is a partner.

That Stein, as well as his partner Schroeder, was an active Nazi is indicated by the fact that Stein was a director of Preussengrube A. G., an affiliate of Reichswerke A. G. für Berg- und Hüttenbetriebe "Hermann Göring." In 1938, Stein was also on the executive council of the board of directors of Vereinigte Stahlwerke A. G., Düsseldorf, the giant steel cartel, as well as a director of numerous other companies in the industrial, utility, and banking fields.

During the First World War, as evidence of his support of the German cause, he received a number of honors, included among which were the Iron Cross II and the Service Cross. He figured prominently in the Rhenish separatist movement. This movement proposed to establish a separate State which could evade Allied control and the required dismantlement of these factories concentrating on war manufactures. Stein and other leading industrialists hoped thus to acquire a free hand to do as they wanted with their plants. Stein, in furtherance of this objective, publicly addressed one of the first separatist mass meetings.

When the successful accomplishment of this plan appeared hopeless the bankers and industrialists abandoned it and instead gave their support more completely to Hitler and the Nazi movement.

They then began to operate their war factories, first secretly and intensively, and later for the rearmament of Germany. Among the active participants who worked intimately with Hitler to support him in his rise to power, Baron Kurt von Schroeder, the other major partner in the Stein Bank, and Stein's associate, representing the industrialists and their financiers; Count von Alvensloben, who represented the Junkers, and was closely tied up with the heavy industrialists of the Ruhr; and Franz von Papen, standing for various militaristic groups. From 1933 on, the interest of the Rhineland industrialists and those of the Nazi regime were inextricably interwoven.

Dr. Stein's financial, business, and professional connections are reported to be as follows:

Banking

J. R. Stein, Cologne (the leading bank of German heavy industry)—Stein is one of the two senior partners.

Commerzbank A. G., Hamburg and Berlin—Director.

Deutsche Schiffsbeleihungsbank, A. G., Hamburg—Director.

Rheinisch-Westfälische Boden-Credit-Bank, Cologne—Deputy chairman of the advisory board.

Rheinisch-Westfälische, "Revision" Treuhand, A. G., Cologne—Deputy chairman of the advisory board.

Utilities

A. G. für Energiewirtschaft, Berlin—Director.

Elektrizitäts-A. G., formerly W. Lahneyer & Co., Frankfurt am Main—Director.

Rheinische Energie A. G., "Rhenag," Cologne—Director.

Insurance

Concordia Lebensversicherungs, A. G., Cologne (life insurance)—Director.

Kölmische Glasversicherungs, A. G., Cologne (glass insurance)—Director.

Industrial

Iron foundries, coal mines, and mining.—Eisen- und Hüttenwerke A. G., Cologne—Director.

Eisenwerk-Gesellschaft Maximilianhütte, Rosenberg, Oberpfalz—Director.

Essener Steinkohlenbergwerke A. G., Essen—Director.

Klöckner-Werke A. G., Rauzel—Director.

Stolberger Zink A. G. für Bergbau und Hüttenbetrieb, Aachen—Director.

Steel works.—Mitteldutsche Stahlwerke A. G., Berlin—Deputy chairman of the advisory board and director.

Vereinigte Stahlwerke A. G. Düsseldorf—Director.

Waggon- und Maschinenfabrik A. G., formerly Busch, Bautzen (railroad car and machine works)—Director.

Miscellaneous

Mansa-Mühle A. G., Hamburg (animal and vegetable oil, flour, etc.)—Director.

Hotelbetriebs, A. G., Berlin (hotel management)—Director.

Persieche Teppich Gesellschaft A. G., Berlin (rugs and carpets)—Chairman of the board of directors.

Harpener Bergbau A. G.—Director.

Professional

Member of the central committee of the Reichsbank, Berlin.

Member of the curatorium of the University of Cologne.

Member of Kaiser Wilhelm Association for the Advancement of Science.

Member of the Association for Advancement of the Institute for Sea Transport and World Economy.

Member of the Society of Friends and Promoters of University of Cologne; Cologne Club; German Automobile Club; Rotary Club, and others.

PAUL STEIN

Paul Stein, who today is prominently connected with several I. G. Farben subsidiaries and affiliates, was one of the initial promoters of Hitler. He was an active member of the Deutsch-Nationale Volkspartei which was instrumental in putting Hitler into power.

Paul Stein was present at the famous meeting held in February of 1933 at the home of the president of the Reichstag, and attended by some 20 prominent German industrialists and bankers such as Krupp von Bohlen, Schacht, Vogler, Carl Bosch, and Georg von Schnitzler. Hitler spoke at this meeting and told of the alliance which his party had made with the Deutsch-Nationale Volkspartei mentioned above. The audience was sufficiently impressed to raise a large sum of money which was used to elect Hitler to the office of Chancellor, an important stepping stone in his rise to power.

Paul Stein is an important official of the Gewerkschaft Auguste Victoria, a mining company which belongs to I. G. Farbenindustrie, as well as of the Rheinische Stahlwerke, a very large steel corporation which is 47.7 percent controlled by I. G. Farbenindustrie. He is also connected with the Gesellschaft für Teerwertung m. b. H., an affiliate of Vereinigte Stahlwerke.

Stein is connected with the Deutsche Bank, Berlin, by membership on its Rheinisch-Westfälischer advisory board. His semiofficial positions comprise membership on the advisory board of the Economic Chamber for Westphalia and Lippe, and the vice presidency in the Chamber of Commerce and Industry of Münster.

Paul Stein's semiofficial, banking, and industrial connections as of 1942 were follows:

Semiofficial

Wirtschaftskammer für Westfalen und Lippe, Dortmund (Economic Chamber for Westphalia and Lippe)—Member of the advisory board.

Industrie- und Handelskammer, Münster (Chamber of Commerce and Industry)—Vice president.

Banking

Rheinisch-Westfälischer Baurat Essen der Deutschen Bank, Berlin (Rheinisch-Westphalian Committee of Deutsche Bank)—Member of the committee.

Industrial

Rheinische Stahlwerke, Essen (steel works, incorporated; capital, RM. 150,000,000; I. G. Farbenindustrie holds 47.7 percent shares; Gruppe Krawehl-Waldthausen, Essen, is also a large stockholder)—Director.

Dorstener Eisengiesserei- und Maschinenfabrik A. G., Harvest-Dorsten (iron foundry and machine building)—Deputy chairman of the advisory board.

Gerwerkschaft Auguste Victoria, Marl-Büls (mining corporation; 91 percent interest held by I. G. Farben-industrie)—Substitute chairman of the mine management committee.

Gesellschaft für Teerverwertung m. b. H., Duisburg (company for extraction for tar; Vereinigte Stahlwerke A. G. holds 35.51 percent interest)—Director.

A. Riebeck'sche Montanwerke A. G., Montanwerke A. G., Halle/Saale (mining corporation; Rheinisch Stahlwerke (see above) holds 88.2 percent interest)—Director.

Gewerkschaft Stein V., Marl/hülz (mining company).—Substitute chairman of the mine management committee.

Miscellaneous

Finanzausschuss Dr. C. Otto & Co., Bochum (finance committee)—Chairman, Zulassungs- und Prüfungsstelle für Öffentlich Bestellte Wirtschaftsprüfer, München (admission and examining bureaus for licensed public accountants)—Chairman.

HUGO STINNES

Hugo Stinnes, known until his death in 1924 as the coal king of Germany, was one of the industrialists who gave strong backing to the imperialistic schemes of the Kaiser's Government during World War I, and who after the defeat of 1918 played an active part in the initial phase of rallying the forces of German reaction for a second attempt at world domination. Following his death, his sons, led by Hugo Stinnes, Jr., took over the management of his vast industrial interests and continued their father's policy of supporting reaction and militarism in Germany.

In 1919 Stinnes joined a number of other prominent industrialists in founding the Anti-Bolshevik League. He is said to have supported a number of such organizations and to have maintained close relations with the political henchmen whom he selected as his front in these activities. It is reported that in the years 1920-23 Stinnes contributed large sums of money to totalitarian movements in Germany and that the Nazis were one of the groups which he favored most.

It was Hugo Stinnes' sons and heirs who in 1925 furnished the money to convert the Nazi weekly publication, the Volkische Beobachter, into a daily newspaper. As already pointed out, the principal successor to the elder Stinnes was Hugo Stinnes, Jr., who is today, like his father before him, an important figure in the German coal industry. In 1942 the commercial and industrial affiliations of Hugo Stinnes, Jr., were as follows:

Industrial

Gewerkschaft Mathias Stinnes, Essen (coal mines)—Chairman of mining committee.

Math Stinnes G. m. b. H., Mülheim/Ruhr (coal mines; affiliated with Gewerkschaft Mathias Stinnes and Mülheimer Bergwerks-Verein)—Chairman of mining committee.

Gewerkschaft Diergardt-Mevisson I-III, Rheinhausen-Mochemmerick (coal mines; subsidiary of Mülheimer Bergwerks-Verein)—Chairman of mining committee.

Mülheimer Bergwerke-Verein, Essen (coal mines—subsidiary of Gewerkschaft Mathias Stinnes)—Chairman.

Rheinische-Westfälisches Kohlen-Syndikat, Essen (coal association of which Vereinigte Stahlwerke is the principal member)—Director.

Ruhrgas A. G., Essen (fuels; subsidiary of Rheinisch-Westfälisches Kohlen-Syndikat, Essen, in which Vereinigte Stahlwerke, Krupp, Stinnes, etc., are interested)—Director.

Steinkohlen-Elektrizitäts A. G., Essen (electric energy for mines owned by the members of the Rheinisch-Westfälisches Kohlen-Syndikat)—Director.

Atlantic Hotel A. G., Hamburg (hotel management)—Chairman.

Hamburger Hof A. G., Hamburg (hotel management)—Chairman.

Hotel Nassauer Hof A. G., Wiesbaden (hotel management)—Chairman.

Kohlen-Import und Poseidon Schifffahrt A. G., Königsberg/Pr. (coal import and transportation; subsidiary of Hugo Stinnes firm)—Chairman.

"Midgard," Deutsche Seeverkehrs A. G., Nordenham (sea transportation and herring fisheries)—Chairman.

Rheinisch-Westfälische Bergwerks G. m. b. H., Mülheim/Ruhr (mining)—Chairman.

Vereinigte Berliner Kohlenhändler A. G., Berlin (wood, coal, and coke)—Chairman.

Norddeutsche Oelmühlenwerke A. G., Hamburg-Altona (oils and fats)—Chairman.

Glaswerke Ruhr A. G., Essen (glass)—Chairman.

Preussisch-Rheinische Dampfschiffahrts-Gesellschaft, Cologne (transportation on the Rhine and tributaries)—Chairman.

Hugo Stinnes Reederei A. G., Hamburg (sea transportation)—Chairman.

Dampfschiffahrts-Gesellschaft für den Nieder- und Mittelrhein, Düsseldorf (transportation on the Rhine)—Director.

"Eisenhof" A. G. für Eisen-Röhren- und Metallhandel, Mannheim (tubes, pipes)—Chairman.

Ruhröl A. G., Mülheim (oil)—Chairman.

Atlas-Werke A. G., Bremen (machinery)—Deputy chairman.

Felbmühle Papier- und Zellstoffwerke A. G., Stettin-Odermünde (paper and related products)—Deputy chairman.

Generatorkraft A. G. für Tankholz und Andere Generatorkraftstoffe, Berlin (wood-burning generators for automobiles)—Director.

Steinkohlen-Elektrizitäts A. G., Essen (STEAG) (an affiliate of Bergbau A. G., Ewald-König Ludwig which is affiliate of Reichswerke A. G. für Berg- und Hüttenbetriebe "Hermann Göring")—Director.

WILHELM TENGELMANN

Wilhelm Tengelmann joined the Nazi Party in 1930 and has been a very prominent and active member. In 1933 he became an SS leader and representative of the President of the Prussian Ministry on economic matters. Apparently he has maintained these connections for he is still an SS leader and confidential adviser of the Prussian Prime Minister in the legal committee. He is also a Leader of the War Program (Wehrwirtschaftsführer).

Wilhelm Tengelmann is extremely prominent in the coal industry, in which he has innumerable semiofficial and industrial connections. His other industrial interests include enterprises in the shipping, locomotive, fuel, and chemical fields. In all, he has some 80 activities of a widely diversified nature; and the list of his official connections include firms affiliated with I. G. Farben, Vereinigte Stahlwerke, and the Flick combine.

Tengelmann is a director of the Commerz Bank A. G., Berlin and a deputy chairman of the advisory board and a member of the auditing committee of the Deutsche Industriebank, Berlin. The latter is Reich-controlled and financed the war effort.

In addition to these German affiliations, Tengelmann has extensive connections in foreign countries, and is well-known in international industrial and financial circles.

As of 1942 he had the following connections:

Political

Leader of the Economic Warfare Program (Wehrwirtschaftsführer).

SS Leader.

Mining committee of the Essen Labor Board—Member.

Westfalian-North Labor Board at Münster—Member.

Committee of the German Chamber of Commerce in Switzerland—Member.

Labor committee on mining industry of the German Labor Front—Member.

Labor committee of the National Industrial Union II, Mining, German Labor Front (Arbeitsausschuss der Reichsbetriebsgemeinschaft II, Bergbau, Deutsche Arbeitsfront Gelsenkirchen)—Member.

Reich efficiency committee, Berlin—Member.

Reichsgruppe Industrie, Berlin (Reich Group for Industry)—Member.

Reichswirtschaftskammer, Berlin (Reich Economic Board)—Member of the Military Economic Council and Committee for Personnel Training and Efficiency.

Confidential adviser of the Prussian Prime Minister in the Legal Committee (Vertrauensmann der Preussischen Ministerpräsidenten in Juristischen Ausschuss).

German Labor Front—Deputy administrator of the district plant community.

Personnel committee of the Reich Coal Association—Member.

Committee on syndicate problems of the Reich Coal Association—Deputy chairman and member of the presiding council.

Association of German miners—Member of the management committee.

District group for Ruhr mining of the Wirtschaftsprüfungsgesellschaft Bergbau—Member of the advisory board.

Union for Promotion of Scientific Mining Research—Member of the advisory board.

Dortmund Head Mining Bureau, Westphalian Division of Mining Committee—Member.

Advisory committee of mining experts of the Trustees of Labor for Westphalia—Member.

Association for Mining Interests (Verein für die Bergbaulichen Interessen, Essen)—Deputy chairman and member of business committee.

Wirtschaftsgruppe Kraftstoffindustrie, Berlin (Wirtschaftsgruppe for motor fuel)—Member of the advisory board.

Buhrverband Essen (Essen-Ruhr Association), Essen (activity unknown)—Member of the management committee.

Industrie- und Handelskammer, Munster (Chamber of Commerce and Industry)—Member of the advisory board.

Banking

Commerzbank A. G., Berlin—Director.

Deutsche Industriebank, Berlin (Reich-controlled; finances war effort)—Deputy chairman of the advisory board and member of the auditing committee.

N. V. Maatschappij Algemeen Beheer (Dutch Trust Company)—Deputy chairman of the advisory board.

Industrial

Coal and byproducts.—Hydrierwerk Schelven A. G., Gelsenkirchen-Buer (production of benzine from coal)—Chairman of the board of directors.

Oberbayerische A. G. für Kohlenbergbau (Upper Bavarian Corporation for Coal Mining), Munich—Chairman of the board of directors.

Rheinisch-Westfälisches Kohlen-Syndikat, Essen (VS affiliate)—Deputy chairman of the advisory board and member of several committees.

A. G. der Kohlenwertstoff-Verbünde (coal processing association), Bochum—Chairman of the board of directors and of presiding board.

Bergwerksverband zur Verwertung von Schutzrechten der Kohlentechnik G. m. b. H., Dortmund Eving (mining association for the sale of patents relating to coal)—Director.

Steenkolen-Handelsvereniging, Utrecht (coal trading association)—Director.

Steinkohlen-Elektrizitäts A. G., Steag., Essen (coal-electric corporation)—Director.

Wasserwerk für des Nördliche Westfälische Kohlenrevier, Gelsenkirchen (waterworks for north Westphalian coal region)—Director.

Kohlen- und Briкетwerke A. G., Basel—Chairman of the executive committee.

Oberrhein Reederei u. Kohlenhandels A. G., Basel (freighting and coal trading)—Chairman of the executive committee.

Kaiser Wilhelm Institut für Kohlenforschung, Mülheim-Ruhr (institute for coal research)—Member of the Executive Committee.

Deutsche Kohlenhandelsgesellschaft Luders, Moentze & Co., Bremen (coal trading)—Chairman of the advisory board.

M. Stromeyer Kohlenhandelsgesellschaft m b H., Mannheim (coal trading)—Chairman of the advisory board.

Westfälische Kohlenverkaufsgesellschaft Vollrathe, Weck und Co., Berlin (company for the sale of coal)—Chairman of the advisory board.

Wining.—Bergwerksgesellschaft Hibernia A. G., Herne Westfalen (mining company controlled by State)—Chairman of the management committee.

Westfälische Berggewerkschaftskasse, Bochum—Member of the management committee.

Preussische Bergwerke- und Hutten A. G., Berlin (mining and smelting company owned by the State)—Director.

Saargruben-A. G., Saarbrücken (mines owned by State)—Member of the board of directors.

Utrecht "Meibe" (Gesellschafterversammlungen der Zechenvereinigung Malbe) (association of mining companies)—Deputy chairman of the advisory board.

Montan-Revisions G. m. b. H., Essen (mining auditing)—Member of the advisory board.

Chemicals.—Chemische Werke Hüls G. m. b. H., Marl—Chairman of board of directors.

Henkel & Cie. A. G., Düsseldorf (connected with I. G. Farben)—Chairman of the board of directors, chairman of the advisory board, and member of the personnel committee of the board of directors.

Stickstoffwerke Ostmark A. G., Berlin—Deputy chairman of the advisory board.

Stickstoff-Syndikat G. m. b. H., Berlin—Member of the executive committee.

Shipping.—Rheinschiffahrt A. G., vorm. Fendel, Mannheim—Chairman of the board of directors.

Bremen-Mindener Schifffahrt A. G., Bremen—Director.

Deschimag-Deutsche Schiff- und Maschinbau A. G., Bremen (ship and machine construction)—Director.

Badische A. G., für Rheinschiffahrt und Seetransport, Mannheim—Chairman of the board of directors.

Locomotives and airplanes.—Wiener Lokomotiv-Fabrik A. G., Vienna—Deputy chairman of the advisory board.

Henschel Lokomotiv-Fabrik, Kassel—Member of the executive committee.

Henschel & Sohn G. m. b. H., Kassel—Member of the advisory board.

Henschel-Kenzern—Member of the personnel committee.

Henschel-Flugsoug-Werke A. G., Berlin—Deputy chairman of the advisory board.

Henschel-Flugmotorenbau G. m. b. H., Kassel—Chairman of the advisory board.

Fuels.—Rütgerswerke A. G., Berlin (petroleum)—Director, member of the presiding board.

Ruhrgas A. G., Essen (VS affiliate)—Director, member of labor and shareholders' financial committee.

Miscellaneous

Reismann-Grene G. m. b. H., Essen (activity unknown) Member of the advisory board.

Mannheimer Lagerhaus-Gesellschaft, Mannheim (activity unknown)—Chairman of the board of directors.

W. Ruhenstroth G. m. b. H., Güterlach (activity unknown)—Chairman of the board of directors.

Klein, Schanzlin & Becker, A. G., Frankenthal/Pfalz (machinery, pumps, etc.)—Director.

Bernward Leineweber K. G., Berlin (ready-made articles of dress)—Director.

Standard Maatschappij, Rotterdam (activity unknown)—Member of the board of directors.

Rhenus A. G., Basel (branch of Rhenus A. G., Berlin, forwarding and commission agents)—Member of the executive committee.

Professional

Verein Deutscher Ingenieure, Berlin (Association of German Engineers)—Member of the management committee.

Gesellschaft der Freunde und Förderer des Rheinischen Landesmuseum, Bonn (Friends and Patrons of the Rhine Province Museum)—Member of the executive committee.

Akademie für Deutsches Recht, Berlin, Ausschuss für Bechtzfragen des Wirtschaftsausbau (Academy for German Law, Committee on Legal Questions of Economic Structure)—Member.

Deutsches Museum von Meisterwerken der Naturwissenschaft und Technik, Munich (German Museum of Masterpieces of Natural Science and Technical Management Committee)—Member.

Emschergenossenschaft, Essen (cooperative association)—Member.

Haus der Deutschen Kunst, Munich (House of German Art)—Member.

Haus der Deutschen Technik, Munich (House of German Technical Science)—Member.

Haus der Technik e. V., Essen (House of Technical Science)—Member of management committee.

Reichsgemeinschaft der Technisch-wissenschaftlichen (Reich Society for Scientific Technical Work)—Member.

Unterausschuss für Terminologie in der Organization der Gewerblichen Wirtschaft und in der Wirtschaftlichen Gesetzgebung (Subcommittee on Terminology in Industrial Economy and in Economic Legislation)—Member.

Euraterium Technisch-Wissenschaftliche Lehrmittelzentrale, Berlin (Supervisory Council on Technical-Scientific Educational Bureau)—Chairman.

Reichsinstitut für Berufsausbildung in Handel und Gewerbe, Berlin (Institute for Professional Training in Commerce and Industry)—Chairman.

FRITZ THYSSEN

Fritz Thyssen, former head of the Vereinigte Stahlwerke, the German steel trust, played a decisive role in the rise of Hitler to power by contributing liberally to the coffers of the Nazi Party and by influencing his fellow industrialists to join him in support of the Fuehrer. In reward for his efforts on behalf of national socialism, Thyssen was showered with political and economic favors by the Third Reich. He enjoyed almost unlimited power and prestige under the Nazi regime until his break with Hitler in 1939 over the decision to invade Poland and precipitate the Second World War.

This incident and Thyssen's subsequent publication of his "confession" that he had financed Hitlerism provide a curious parallel with the history of his father, August Thyssen. Through a similar confession in 1918 the elder Thyssen, despite his record as a staunch backer of pan-Germanism, succeeded in convincing the Allies that the sole responsibility for the German aggression should be placed upon the Kaiser's Government, and that the penitent German industrialists must not be blamed for the support which they had been forced to give to the imperialistic schemes of the Hohenzollerns. Apparently influenced by the recantations of August Thyssen and his associates, the credulous Allies made no effort to reform German industry after the last war. The result of this policy of omission was that men like Thyssen were allowed to retain their vast industrial fiefs and to pass them on intact to their heirs and successors, whom they had rigorously schooled in the tradition of war-making.

Thyssen defied French.—It was against this background that Fritz Thyssen took over control of the extensive holdings of his family following the death of his father in 1926. The new German steel baron had already achieved a large measure of fame throughout the Reich by his successful defiance of the French during their occupation of the Ruhr in 1923. He it was who led the German coal producers in their refusal to operate their mines during the occupation. Like Hitler, Thyssen consistently regarded the Treaty of Versailles as "a pact of shame" which must be overthrown if the Fatherland were to rise again.

Fired by this fanatic nationalism, Thyssen set out along the same road as his father had taken before him. August Thyssen had combined with such men as Hugenburg, Kirdorf, and the elder Krupp to promote the All-Deutscher Verband (the Pan-German League), which supplied the rationale for the Kaiser's expansionist policies.

His son became an active member of the reactionary Stahlhelm, and later, through meetings with Göring and others of his ilk, began to flirt with the Nazis. Finally, after the crash of 1931 had brought German industry to the verge of bankruptcy, he openly embraced the cause of national socialism.

Solicits support of industrialists for Hitler.—During the next 2 years Thyssen dedicated his fortune and his influence to the single purpose of bringing Hitler to power. In 1932 he arranged the now famous meeting in the Dusseldorf Industrialists' Club, at which Hitler addressed the leading business men of the Ruhr and the Rhineland. At the close of Hitler's speech Thyssen cried, "Heil Herr Hitler," while the others applauded enthusiastically. By the time of the German Presidential elections later that year Thyssen had succeeded in eliciting contributions to Hitler's campaign fund from all of the big industrial combines. He himself is reported to have spent 3,000,000 marks on the Nazis in the year 1932 alone.

During January 1933 Thyssen served as intercessor between von Hindenburg, von Papen, and Hitler. He brought them together at a secret meeting which laid the basis for the appointment of Hitler as Reichschancellor. At this juncture Thyssen viewed Hitler as a leader who had aroused in Germany "a new spirit of nationalism that is essentially healthy and necessary and serves as a bulwark against communism."

Nazis reward Thyssen for aid.—In payment for his services, Thyssen was nominated by Chancellor Hitler to be State Counselor with a seat on the Economic Board of the Reich. He was also appointed supreme economic authority for western Germany. Through a reorganization of the vereinigte Stahlwerke, Thyssen's participation in that lucrative enterprise was increased at the expense of the Reich itself. Profits soared as his steel mills, munition plants, and shipyards worked at capacity to fill the orders created by Hitler's rearmament program. Thyssen's star was at its zenith.

Beginning in 1936, however, a rift began to appear between Thyssen and Hitler over certain Nazi policies and practices. Thyssen now claims that in particular he took exception to the Nazi doctrine of racial and religious discrimination, although apparently he had not previously concerned himself with this matter despite the fact that Hitler's point of view had been available in *Mein Kampf* since 1925. In any case, Thyssen's open defiance of the Nazis was not provoked by this issue but by the signature of the German-Soviet nonaggression pact in 1939. He indicated that he would not countenance any strategy which even temporarily diverted Germany from her avowed mission of opposing the Soviet Union. Following the outbreak of war in September 1939, Thyssen and his family fled to Switzerland, where he announced that he was "still a German" but "no longer a Nazi." In retaliation for his desertion, Thyssen's immense holdings in Germany were confiscated by the Reich.

Thyssen curries Allied favor.—Thyssen now commenced his efforts to win favor with the Allies. During 1940 in Paris, where he had gone from Switzerland, he released his "confession," which, like that of his father in 1918, was calculated to whitewash its writer of all blame for having plunged Germany into the holocaust. With feigned innocence he related his parting statement to Hitler: "My conscience is clear. I feel free of any guilt. My sole error was that I believed in you, Adolf Hitler, the Fuehrer, and the Government you led. I believed with all the ardor of one passionately German." Then, having disclaimed his long and profitable association with the Nazis, and, as he undoubtedly hoped, having absolved his own conduct in the view of the Allies, he offered to them his services and those of his fellow industrialists in effecting a rapprochement with Germany: "Peace is to be had. The price is not high. It is easy to arrange. * * * We still have men who hold the reins."

Following the fall of France Thyssen took up residence in the unoccupied zone in a villa at Cannes. From there he began a series of attempts to escape to the New World. He made unsuccessful overtures to come to the United States. He tried several times to reach Argentina, where he owned important agricultural and industrial enterprises, around which he apparently hoped to rebuild his shattered empire.

In February 1941, however, the French authorities at Vichy delivered Thyssen and his wife to the Gestapo, which shipped them back to Germany. From that time until the German surrender there were many conflicting stories and rumors as to the treatment which Thyssen was receiving from the Nazis. It was variously reported that he was being held in a concentration camp, that he was staying in the luxurious Hotel Adlon in Berlin, that he was under the protection of Göring, and that he was the center of a number of political maneuverings—by implication, anti-Nazi plots.

In May 1945 he turned up in a concentration camp in northern Italy. In a statement issued to the press at that time Thyssen, still angling for a pardon from the Allies, made much of the misfortunes which he had suffered at the hands of the Nazis following his break with Hitler: "I was wrong. I quite know my responsibility. I helped them. I was misled. But I have been punished." Despite his announced remorse at having aided the Fuehrer, however, he went on to indicate a continuing sympathy for Hitler and many phases of Hitlerism: "I was of the opinion that at first the policy of Hitler was not so bad at all. He came under the influence of the bad men in his party." And: "I personally believe the German people are not ready for democracy."

Plots resurgence of German war industry.—Thyssen has offered a suggestion for the Allies to follow in their reconstruction of Germany. It is that the Rhineland should be made an independent state, "a nation like Holland and Belgium." Thus, Thyssen, once the fervid nationalist, now professes to advocate the quartering of the Reich. He does not elaborate upon the reasons for this shift, but his proposal has a familiar ring. After the last war a group of German financiers and industrialists led by Kurt von Schröder and Heinrich von Stein, the Cologne bankers, launched a Rhineland separatist movement, for they saw in the creation of an independent Rhineland a means of emancipating the giant industries of

Dusseldorf, Essen, and Cologne from the restrictions imposed by the Treaty of Versailles on the manufacture of war products within the borders of the Reich. Apparently Thyssen, the arch-foe of Versailles and the principal promoter of the Fuehrer, is already busy devising schemes to sabotage the peace now in the making.

ALBERT VOGLER

Albert Vogler, head of Vereinigte Stahlwerke, large steel combine, has been listed among Germany's top industrialists since World War I. Vogler has also been active politically, and has used his political connections to work with other leaders, such as Krupp, Kirdorf, Stinnes, Thyssen, Röchling, and Mannermann to further the interests of German industry.

During World War I, this group put pressure on the Government to obtain more and more power abroad. In 1919, Vogler and other industrialists founded the so-called Anti-Bolshevik League. From 1921 to 1924, and again in 1933, Vogler was a member of the Reichstag.

In February of this latter year, Vogler, with other well-known industrialists, attended the meeting at which plans were made for financing the campaign to elect Hitler to the office of Chancellor. The financial aid voted at this meeting placed Hitler in office in March 1933 and started him on his political career.

In addition to his connection with the great steel combine, Vogler is officially connected with the giant electrical apparatus group, Siemens and Halske and Siemens Schuckert-werke. His close ties with the Nazi administration are indicated by his presence on the advisory board of the Deutsche Reichsbank, and his appointment to membership in the armament council, directed by Hermann Göring.

Vogler's connections as of 1942 were as follows:

Political

Kaiser Wilhelm Gesellschaft zur Förderung der Wissenschaften, Berlin (Kaiser Wilhelm Society for the Advancement of Science)—President.

Akademie für Deutsche Recht, Berlin, Aueschuss für Kartellrecht (Academy for German Law, Committee for Cartel Law)—Member.

Gau Senate of Westfalen-Süd.—Vice president.

Armament Council—Member.

Banking

Deutsche Reichsbank, Berlin—Member of advisory committee.

Industrial

Vereinigte Stahlwerke A. G., Düsseldorf (steel trust)—Chairman.

Bochumer Verein für Gusstahlfabrikation A. G., Bochum (iron and steel, rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Gebr. Böhler & Co., A. G., Berlin (iron and steel products; subsidiary of Böhlerstahlwerke, Zurich, which is closely affiliated with Vereinigte Stahlwerke)—Chairman.

Deutsche Edelstahlwerke A. G., Krefeld (fine steel; subsidiary of Vereinigte Stahlwerke)—Chairman.

Deutsche Röhrenwerke A. G., Düsseldorf (tubes, pipes; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Dortmund-Hoerder Hüttenverein A. G., Dortmund (foundries, rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Gelsenkirchener Bergwerke A. G., Essen (coal and byproducts; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Hüttenwerke Siegerland A. G., Siemen/Westfalen (foundries, rolling mills; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Ruhrstahl A. G., Witten/Ruhr (foundries and rolling mills; subsidiary of Vereinigte Stahlwerke)—Chairman.

Westfälische Union, A. G. für Eisen- u. Drahtindustrie-Hamm/Westf. (wire mill; 100 percent owned by Vereinigte Stahlwerke)—Chairman.

Demag A. G., Duisburg (Machinery; jointly owned by Vereinigte Stahlwerke and Maschinenbau Unternehmungen)—Director.

Hannoversche Maschinenbau A. G., vormalis Georg Egestorff (Hanmag) Hannover-Linden (machinery; subsidiary of Bochumer Verein für Gusstahlfabrikation A. G.)—Chairman.

Ruhrgas A. G., Essen (fuels; subsidiary of Rheinisch-Westf. Kohlensyndikat comprising Vereinigte Stahlwerke, Krupp, Stinnes, etc.)—Chairman.

Braunkohlen- und Brikettwerke Roddergrube A. G., Brühl, Bez. Köln (lignite; subsidiary of Rheinisch-Westfälisches Elektrizitäts-Werke, itself principally owned by the Prussian State, VIAG, etc.)—Chairman.

Rheinische-Westfälisches Elektrizitätswerk A. G., Essen (electric power; owned by Prussian State, VIAG, etc.)—Chairman.

Harpened Bergbau A. G., Dortmund (mining; affiliated with Mitteldeutsche Stahlwerke, itself a subsidiary of Siegerner Eisenindustrie A. G., owned by the Flick family)—Deputy chairman.

Siemens & Halske A. G., Berlin (electrical apparatus)—Director.

Siemens Schuckert-Werke A. G., Berlin (electrical apparatus)—Director.

Henschel & Sohn G.m.b.H., Kassel (locomotives and machinery)—Member of advisory committee.

KURT WEIGELT

Kurt Weigelt has been active in Germany's domination over the industrial and financial life of occupied countries. He has been variously described as "one of the leading German bankers who now control the German monopoly of European banking"; "the most important man in the planning of the new order"; "considered today the most outspoken representative of the aspirations of German industry"; and as "definitely a Nazi."

Kurt Weigelt is reported to have financed Hitler in the early days of fascism. His background reflects his long-entertained views on the German necessity for expansion. In furtherance thereof, he traveled extensively throughout the world promoting the colonial expansion of Germany. When the Nazis came to power in 1933, Weigelt became president of the "Fuehrer Ring" or Leader's Council, an organization which published a yearly volume devoted to the problem of the Germanization of the European continent. He also created the Gesellschaft für Europäische Wirtschaftsplanning und Grossraumwirtschaft, an association for European Economic Planning and Living Space Economics.

Weigelt is manager of the Deutsche Bank, largest of German banking institutions. He is also director of the Deutsche-Asiatische Bank, Shanghai, a company formed for the purpose of promoting trade with and investments in the Far East. In addition, he participates in the management of four colonial trade companies in the former German East Africa and the Dutch East Indies, as well as in that of a mining company in Afghanistan. In the industrial field, Weigelt is connected with a large number of corporations, the most important of which are Rütgerswerke A. G. and Kali-Chemie A. G., both prominent in the chemical field. He is also officially connected with a number of subsidiaries and affiliates of these two organizations.

Among other affiliations worthy of note, are Deutsche Luft-Hansa A. G., the largest German air line which was used as an instrument of penetration into South America, and Transocean G. m. b. H., the official Nazi organ for the propagation of news abroad.

Weigelt's known connections are as follows:

Industrial

Colonial companies.—Afghanische Minen G. m. b. H., Berlin (mining property situated in Afghanistan)—Chairman of board of directors.

Deutsch Ostafrikanische Gesellschaft, Berlin (RM. 10,000,000; colonial plantation company founded in 1887 in former German East Africa; large coffee, sisal, tea, and copra plantations)—Deputy chairman of board of directors.

Cultuur Mij. Talang, Padan, Batavia (coffee plantation in the Dutch East Indies; subsidiary of Deutsch-Ostafrikanische Gesellschaft)—Chairman of board of directors.

Neu-Guinea Compagnie, Berlin (large colonial company situated in former German East Africa; coffee, tea, sisal, and copra; maintains branches in Spain)—Chairman of board of directors.

Straits und Sunda Syndikat's Administratiekantoor, Batavia Amsterdam (Dutch investment and security company)—Deputy chairman of board of directors.

Chemicals.—Rütgerswerke A. G., Berlin (chemical products, primarily tar; capital in 1936, RM. 27,800,000)—Chairman of board of directors.

Bakelite G. m. b. H., Berlin (RM. 1,100,000; bakelite and plastic products enterprise; 11.86 percent owned by Rütgerswerke A. G.)—Director.

Silesia, Verein Chemischer Fabriken, Ida- und Marienhütte Saaru/Kr. Schweidnitz (RM. 1,500,000; organic chemicals, artificial fertilizers, and dyestuff concern; 98.2 percent owned by Rütgerswerke A. G.)—Director.

VEDAG (Vereinigte Dachpappen-Fabriken A. G., Berlin) (RM. 6,000,000; tar products and roofing materials enterprise; subsidiary of Rütgerswerke A. G.)—Director.

Siemens-Planawerke A. G. für Kohlenfabrikate, Berlin (carbon and graphite electrodes and allied products; two-thirds owned by Siemens & Halske and one-third by Rütgerswerke A. G.)—Director.

Kali-Chemie A. G., Berlin (chemical concern, primarily potash)—Director.

Bergwerksgesellschaft Glückauf-Sarstadt m. b. H., Berlin (RM. 1,650,000; potash mine; fully owned by Kali-Chemie A. G.)—Director.

Gewerkschaften Salzbergwerk Neu-Stassfurt und Salzbergwerk Neu-Stassfurt II, Löderburg über Stassfurt (RM. 12,000,000; potash enterprise; 99 percent owned by Kali-Chemie A. G.)—Director.

Miscellaneous

Deutsche Luft-Hansa A. G., Berlin (largest German air-line company)—Deputy chairman of board of directors.

Deutscher Aero-Lloyd A. G., Berlin (air-line company affiliated with Deutsche Luft-Hansa A. G.)—Chairman of board of directors.

Transocean G. m. b. H., Berlin (official Nazi propaganda agency established to provide news for foreign consumption)—Deputy chairman of board of directors.

Drumen S. A., Barcelona—Deputy chairman of board of directors.

Grüflich Dela Zichysche Urkuter Bergwerke A. G., Budapest (Hungarian company with which Weigelt was identified as late as 1925; capital, 1,500,000 pengő in 1936; manganese mines)—Deputy chairman of board of directors.

Baumwollspinnerei Germania, Epe/Westphalin (RM. 2,500,000; primarily yarns, but also cotton textiles enterprise; 60 percent of stock in Dutch (unidentified) hands, remainder in German possession)—Director.

Deruluft—Chairman of board of directors.

Berliner Gaswerke, Berlin (public utility)—Director.

Biox A. G., Dresden—Director.

Gewerkschaft Deutschland, Berlin—Director.

BARON TILO VON WILMOWSKY

Baron Tilo von Wilmowsky, a brother-in-law of Gustav Krupp, is deputy chairman of Friedrich Krupp A. G. and of several of its subsidiaries. Von Wilmowsky represents Krupp's interest in the Reichsautobahn-Gesellschaft, the company formed by the Government to construct Germany's vast system of military motor highways.

The fact that von Wilmowsky was closely connected with German national undertakings is brought out by his directorship in the Government-owned Reichs-Kredit-Gesellschaft and his membership in the advisory committee and administrative board of the Deutsche Reichsbahn, the Government-owned railways. He is also a member of the executive committee of the Landerbank of Vienna, an institution now controlled by the Dresdner Bank.

As a background for Wilmowsky's active interest in the welfare of national Germany, it is noteworthy that during World War I he was chief of the Civil Chancellory of the Governor General of occupied Belgium.

Von Wilmowsky's known connections are:

Banking

Reichs-Kredit-Gesellschaft A. G., Berlin (owned by the Government through VIAG)—Director.

Landerbank Wien A. G., Wien (controlled by the Dresdner Bank)—Member of executive committee.

Insurance

Berliner Hagel-Assecuranz-Gesellschaft von 1832 A. G., Berlin (insurance against damage by hail; affiliated with Nordstern All-gemeine Versicherungs, itself a subsidiary of Aachener und Münchener Feuer Versicherungs and other leading companies)—Chairman.

Industrial

Fried. Krupp A. G., Essen (iron-steel-armaments)—Deputy chairman.

Fried. Krupp Germaniawerft A. G., Kiel-Saarden (machinery; 100 percent owned by Fried. Krupp A. G.)—Deputy chairman.

Fried. Krupp Grusonwerk A. G., Magdeburg (machinery; 100 percent owned by Fried. Krupp A. G.)—Deputy chairman.

Berndorfer Metallwarenfabrik Arthur Krupp A. G., Berndorf (metal products; subsidiary of Fried. Krupp A. G.)—Deputy chairman.

A. G. für Unternehaugen der Eisen- und Stahlindustrie, Berlin (participations in iron and steel organizations; 100 percent owned by Fried Krupp A. G.)—Deputy chairman.

Deutsche Reichsbahn, Berlin (railroads of Germany; owned by the Government)—Member of advisory committee.

Reichsautobahnen, Berlin (auto transportation; subsidiary of Deutsche Reichsbahn)—Member of advisory committee.

Mitropa Mitteleuropäische Schlafwagen- und Speisewagen A. G., Berlin (sleeping cars; railroad cars; subsidiary of Deutsche Reichsbahn, owned by the Government through VIAG)—Director.

Deutsche Zentraldruckerei A. G., Berlin (printing)—Director.

Rentengutsgesellschaft Merseburg, Schkeudits (industrial real estate; affiliated with Landkraftwerke Leipzig A. G., which in turn is owned by several public utility companies)—Chairman.

WILHELM ZANGEN

Wilhelm Zangen, who today is one of Germany's most prominent industrialists, with important banking and political connections, is reported to have financed Hitler in the early days of nazism. All his life he has been connected with heavy industry. At an early age he worked as an apprentice in the August Thyssen Hütte and other metallurgic concerns. For the last 15 years he has been connected with the Mannesmannröhren-Werke combine, which has a long history of association with Germany's expansionist policies.

The leading figures of the Reich-organized industrial self-government groups are without a doubt dominated by the largest companies. The ubiquitous Wilhelm Zangen is the leader of the Reichgruppe Industrie. He is also chairman of the Eisen und Stähle Gemeinschaft (Iron and Steel Union) which is second in importance in the controlling organization in the steel industry. His deputies are Schwede, of Vereinigte Stahlwerke, and Scheer Hennings, of the Hermann Goering concern. The board otherwise consists of representatives of the Flick combine, Arbed, Otto Wolff, the Hermann Goering concern, and the Hoesch combine.

Zangen's political connections include membership as a representative of heavy industry on the committee for central planning under the direction of Speer. He is also one of the leading men in the German 4-year plan and took part in the reorganization of Nazi war industry which had as its goal, according to Hans Kehrl, president of the Economic Chamber and director of the Hermann Goering Works, to clean up a "maze of ordinances and decrees."

Zangen's present-day industrial connections include managerial positions in such important firms as Allgemeine Elektrizitäts Gesellschaft (AEG) and Demag A. G., Duisburg, whose board members indicate close relationship with the Vereinigte Stahlwerke and the Flick combine. He is chairman of the executive committee of Mannesmannröhren-Werke, a tube and pipe factory with several subsidiaries. This group known as the Mannesmann combine, is apparently connected with the Vereinigte Stahlwerke through representation on its board. Zangen is also a director on the Deutsche Revisions und Treuhund A. G., an auditing company affiliated with the Government-owned VIAG.

Wilhelm Zangen is a member of the group of leading German bankers who, before the German defeat through penetration into the banking systems of occupied countries, exercised almost monopolistic control over European banking. He is a director of both the Deutsche Reichsbank and the Deutsche Bank. He is also on the board of Salzdettfurth A. G., which is a subsidiary of a group of the largest German banks. Another company in which he is a director is Schiess A. G., which is controlled by the Deutsche Bank.

His known connections as of 1942 were as follows:

Political

Düsseldorf Chamber of Commerce and Industry—Vice president.

Rheinisch-Westphalian Stock Exchange, Düsseldorf—Member of management committee.

Academy for German Law, Berlin—Member.

Verein Deutscher Eisenhüttenleute (Association of German Iron Foundry Men), Düsseldorf—Member.

Insurance

Allianz Versicherungs A. G., Berlin (this firm, which is an outstanding insurance carrier of Germany, is closely connected with Münchner Rückversicherungsgesellschaft, the largest reinsurer in the world; these two firms are also interested in the Karlsruher Lebensversicherungs A. G., one of the major German life insurers; the chairman of the board of directors is August von Finck, senior partner of the Munich banking firm, Merck, Finck & Co., which is reported to be Hitler's bank; the vice chairman, Kurt Schmitt, is probably Germany's leading insurance expert).

Industry

Allgemeine Elektrizitäts Gesellschaft (AEG), Berlin (General Electric Company)—Director.

Mannesmannröhren-Werke, Düsseldorf (production of tubes and sheet metal, operation of coal mines; at the beginning of the war it was the sixth largest steel and mining concern in Germany; its capital as of 1943 was RM. 180,000,000. Since the death of the five Mannesmann brothers, the controlling stock ownership has apparently come into the hands of the Deutsche Bank, the steel-trust circles, and the Siemens concern)—Chairman of management committee.

Mannesmannröhren-Werke Komotau A. G., Komotau, Czechoslovakia (its capital of RM. 60,000,000 is 100-percent controlled by Mannesmann, Germany)—Chairman of the board.

Mannesmann Stahlblechbau A. G., Berlin (prior to 1938, this was a firm owned by Jews and was called Wolf Netter & Jacobi Werke Kom. Ges. a Akt.; it manufactures all types of tin, and its capital of RM. 5,000,000 is 100 percent owned by Mannesmannröhren)—Chairman of board of directors.

Maschinenfabrik Meer A. G. M. Gladbach (manufacture of machines, spare parts, factory equipment, etc.; its capital, which as of 1938 was RM. 1,800,000, is 100 percent owned by Mannesmannröhren)—Chairman of board of directors.

"Kronprinz" A. G. für Metallindustrie, Solingen-Ohligs (metal, steel, and iron products, machine and spare parts; its capital, which as of 1938 was RM. 6,000,000 was 76 percent owned by Mannesmannröhren)—Chairman of board of directors.

Prager Eisen-Industrie-Gesellschaft, Prag (operation of iron-processing plants, stone quarries, iron mines, etc.; its capital as of 1942 was 280,000,000 koruny; the majority of the shares is held by a concern consisting of the Mannesmannröhrenwerke A. G., Komotau, and the Zivnostenska Banka, Prague)—Deputy chairman of advisory board.

Demag A. G., Duisburg (produces heavy machines and mine equipment, bridge equipment, etc.; its capital as of 1939 was RM. 26,500,000)—Director.

Deutsche Revisions und Treuhand A. G., Berlin (this firm occupies itself with auditing, control, supervision, and liquidation transactions; its capital, which as of 1938 was RM. 1,000,000, was 70 percent controlled by VIAG, which in turn is owned by the German Government).

Saldetfûrth A. G., Berlin (second largest potash concern in Germany; it also operates important copper, salt, and lignite works; its capital as of 1939 was RM. 44,000,000; its principal shareholders are Solvay, Delbrich Schlickler & Co., in Berlin, and a group of large commercial banks, namely, the Deutsche Bank, the Commerz Bank, Dresdner Bank, and the Allgemeine Deutsche Credit Anstalt)—Director.

Schiess A. G., Düsseldorf (manufacture and sale of machines of all types; its capital, which as of 1938 was RM. 8,000,000, was 50.12 percent controlled by the Deutsche Bank)—Director.

Schwabenbrau A. G., Düsseldorf (operation of breweries, manufacture of malt; its capital as of 1938 was RM. 6,000,000).

Westfälisch-Anhaltische Sprengstoff A. G., Chemische Fabriken, Berlin (manufacture of chemicals of all types, especially explosives; its capital as of 1938 was RM. 28,000,000).

Südosteuropa-Handels Gesellschaft, Vienna (south European trading company; this firm is a branch of a company which has its seat in Berlin; capital as of 1942, RM. 500,000).

SS GUARDS SPARED HOSTAGES TO WIN ALLIED FORGIVENESS

(By Curt Riess)

MUNICH, June 28.—Prominent hostages held by the Nazis are alive today only because the SS defied Hitler's demand for their execution.

SS leaders had been given strict orders to kill all hostages before permitting them to fall into the hands of the Allies. Fearful for their own skins, the SS men spared the lives of their prisoners in the hope that the Allies would be less severe in punishment.

MYSTERY CLEARS

Mystery surrounding the fate of the hostages was cleared up in conversations I had with various prominent personalities. One of them was Marquardt, Count Schenk von Stauffenberg, cousin of the Stauffenberg who attempted the July 20 assassination of Hitler.

He and a dozen other prominent hostages who were locked away by the Gestapo after the assassination attempt, passed through Munich along with four members of the family of Stauffenberg, all of whom were supposed to have been executed. Countess Prettenberg, Mrs. Fritz Thyssen, and Mrs. Erich Heberlein, were also in this group.

SPIRITED AWAY

These people and about 140 other prominent persons were kept in prisons and concentration camps. When the Allies and Russians approached they were swiftly spirited away. They were finally concentrated in Dachau, after having been changed from prison to prison more than 15 times.

In Dachau there were about 150 prominent personages, representing 22 nations. Among them were the Schuschnigg, Schacht, Gen. Halber Leon, Leon Blum, Niemoller, and Captain Best.

HIMMLER INTERCEDED

According to Stauffenberg, all those rightly or wrongly concerned with the July 20 attempt would have been killed at once if Himmler hadn't interfered. Stauffenberg doesn't know why, but he thinks that Himmler hoped to get something for himself.

All those present in Munich told me that they were very upset about statements Pastor Niemoller had made at a Naples press conference. While all of them were opposed to the Nazis, they still conserve strong German nationalist feelings. They declare that Niemoller spoke without dignity. "It isn't possible to say bad things about Germans to representatives of other nations."

"NICE OLD MEN"

This is just one indication of their ideas of nazism and Germany. When I asked about Schacht, I was told that Schacht was completely calm and certain nothing will happen to him. "He is really such a nice old man and suffered so much from the Nazis that the Allies shouldn't do anything to him," I was told.

Thyssen also emerged as a "nice old man." Nobody mentioned that Schacht and Thyssen were among the first people to aid Hitler.

THYSSEN DEFENDED

I talked at great length with Mrs. Thyssen, who was greatly upset to be separated from her husband, whose health is very bad. Mrs. Thyssen still carries the airs of a great lady. She maintains that her husband and she spent 28 months inside an insane asylum after the Gestapo arrested them on the French Riviera in September 1940. When I asked why they hadn't left France earlier, she replied, "The French Government guaranteed we would be left alone."

She defends her husband, saying he had only the choice between having communism in Germany or aiding Hitler. "Since 1934," she says, "she was horrified by Hitler and the Nazis."

She is absolutely certain that nothing will happen to Thyssen and intends to leave with him as soon as possible for Switzerland. Someone remarked that Switzerland wouldn't take Thyssen. She smiled, "We have very good friends there."

ANSWERS SUBMITTED BY THE ALIEN PROPERTY CUSTODIAN TO
QUESTIONS OF SUBCOMMITTEE ON WAR MOBILIZATION

Question. What has been the policy of the Office in eliminating personnel with enemy connections from vested business enterprises—in particular, what has been the policy with regard to the former management of General Dyestuff Corporation?

Answer. The broad policy of the Office in eliminating enemy personnel from vested corporation has been stated in the second Annual Report (p. 43). The Custodian "usually will nominate at least one director and possibly more, depending upon his holdings in the corporation and the suitability of the incumbent directors. If there is a taint of enemy influence, the Custodian will take action as drastic as the circumstances require. He may even elect an entire new board of directors and put in a new management. The Custodian believes that by such action he has freed all the corporations (and other enterprises) under his control from their former connection with the enemy."

Let me describe our action in dealing with Schering Corporation as an example of how the policy works out. On April 18, 1942, we vested 99.9 percent of the outstanding common stock of Schering Corp. of New Jersey and 52 percent of the outstanding preferred stock. The remainder of the common stock was vested at a later date. The president and several other officers and employees of the corporation had been removed from their positions in January 1942, on the order of the Secretary of the Treasury. Schering Corp. is now managed by a board of five directors elected by us. None of the five incumbents are carry-overs from the prewar board. A new president was elected at our instance and we also made other changes in management personnel.

We vested all of the 8,678 outstanding shares of common stock of General Dyestuff Corp. on June 30, 1942. At our instance, three of the four directors resigned and the board was enlarged from four to five directors at a stockholders' meeting on July 13, 1942. Our proxy then reelected one director and elected four new directors, two of whom were members of the staff of this Office. We have since caused the board of directors to be enlarged to seven, and have elected seven directors, none of whom are members of our staff. The present directors of General Dyestuff Corp. (as of December 21, 1944) are: Louis A. Johnson, Matthew J. Hickey, Jr., George A. La Vallee, Victor Emmanuel, Thomas A. O'Hara, George W. Burpee, A. C. Spurr.

We brought about the resignation of Mr. E. K. Halbach as president and as a director of the corporation in July 1942. The new management employed Mr. Halbach, who is a United States citizen, as full-time consultant, since they felt that they could not dispense with his experience in the business. At the instigation of the Custodian, Mr. Halbach has also submitted his resignation as a consultant, and such resignation is presently under consideration by the board of directors in the light of the necessity for obtaining a successor of adequate experience and technical competence. The directors have been instructed to pursue policies which will make the reemergence of enemy influence impossible and, in my opinion, are carrying out these policies.

Question. Why is Mr. Halbach so important to General Dyestuff Corp. that it has not been possible to sever his connection with the company?

Answer. On February 7, 1945, I strongly recommended to the board of directors that the resignation submitted by Mr. Halbach at my instigation be accepted. I have requested and shall be pleased to submit for the record a statement from the management of General Dyestuff setting forth their views and contemplated position.

[Telegram]

AUGUST 1, 1945.

HON. JAMES E. MARKHAM,
Alien Property Custodian, Washington, D. C.

A check today will all members of the board of directors of General Dyestuff Corp. discloses that the members of the board do not know anyone of equal technical ability, competence, and experience whom the company could secure at this time to take the place of E. K. Halbach as consultant to the company and believing that his separation from the company as a consultant at this time would adversely affect the war effort, the board authorizes me to advise that they are of the opinion that the best interests of this company would not be served by the acceptance of Mr. Halbach's resignation at this juncture.

LOUIS JOHNSON,
President, General Dyestuff Corp.

Question. Why have you not vested the patents which, after the outbreak of the European War, were transferred from I. G. Farbenindustrie to the General Aniline & Film Corp., and from Schering A. G., and Sherka Chemical Co., to the Schering Corp.?

Answer. We felt that it was not necessary to vest directly the patents transferred to the General Aniline & Film Corp., and the Schering Corp., since we had already established full control over these patents by vesting all enemy ownership interests in these corporations. We vested almost 98 percent of the outstanding voting stock of General Aniline & Film Corp., and 100 percent of that of the Schering Corp. In addition, we vested the interests of I. G. Farbenindustrie in the contracts pursuant to which the assignments to General Aniline & Film Corp., were made, and all interests of I. G. Farbenindustrie and its associated companies in patents and patent applications which stand of record in the United States Patent Office in the name of General Aniline & Film Corp.

All assets of General Aniline & Film Corp., and Schering Corp., including their patents, thus came under the control of the Government. A direct vesting of the assigned patents therefore was not necessary for the removal of the patents from enemy ownership and control.

Question. Why did not the Office of Alien Property Custodian vest the AKU subsidiaries in the fall of 1944 when the report of its investigation was completed and submitted to its executive committee?

Answer. At its meeting of September 27, 1944, the executive committee of the Office of Alien Property Custodian considered the investigation report of the Division of Investigation and Research which covered the American Enka Corp., American Bemberg Corp., and North American Rayon Corp., and the committee unanimously recommended that the custodian refer the matter to the State Department informally for comment. After many informal discussions between representatives of the Department of State and of this Office, the Department of State requested the Alien Property Custodian not to vest the interests of AKU in the American subsidiaries at that time but instead to enter into an understanding with the Netherlands Government providing for further investigation in Holland of the ownership and control of AKU after the liberation of that country. The Department did not object to the vesting of any direct German interest in the American subsidiaries and specifically stated that the ultimate decision to be taken with respect to the AKU interests must be made by the Alien Property Custodian. It was decided to postpone the final decision on the AKU cases until after further investigation in Europe for the following reasons:

(1) The Secretary of State vigorously expressed the opinion that the American subsidiaries should not be vested at that time in view of the fact that the Netherlands Government had serious disagreements with certain findings in our investigation report, that the admitted German ownership interest in AKU was only 30 percent, and that further investigation in Holland to clear up these points could take place in the near future. Although the Secretary of State left the responsibility for a final decision in this matter to the Custodian, his letter was in effect an urgent suggestion that this agency refrain from vesting at that time pending further investigation since he believed that vesting would adversely affect the foreign relations of this country, for which the requesting Department was chiefly responsible.

(2) We believed that residents of Germany were in a position to control AKU and did actually exercise substantial control over American Bemberg and North American Rayon, and that this Office should regard AKU as an enemy national and therefore vest its interests in all of the Americans subsidiaries. We recognized, however, that we did not possess all of the facts or definite evidence of either the de facto control or of the extent of German ownership of AKU. Since the liberation of Holland was anticipated daily and since investigations in Germany and the Netherlands could be expected to commence shortly, it seemed reasonable to us to delay the final decision on the case until after such investigations. The Chief of our Division of Investigation has recently been in Europe arranging for such further investigations.

Question. The report of the Kilgore committee, published in 1944, suggested that the present patent laws could be revised so as to make foreign-originated patents subject to compulsory licensing on a reasonable royalty basis. Would you, Mr. Markham, care to state your views on the merits of this suggestion?

Answer. I am in sympathy with the purposes of the committee's suggestion that the American patent law could be revised in the direction of subjecting all future foreign-originated patents to a system of compulsory licensing, on a reasonable royalty basis. The purposes, I take it, are to prevent suppression of the

use of patented inventions by foreign nationals who obtain American patents for their inventions, and also to prevent the practice of using foreign-originated patents for purposes of cartel agreements implying control of output, prices, marketing territories, etc.

Compulsory nonexclusive licensing would tend to remove the problem of suppression or limited utilization of the inventions and in general make it impossible for the patent device to furnish a legal or semilegal basis for international cartels. This is especially true if compulsory licensing works on a mandatory basis and does not depend upon the proof of the intent of suppression or abuse of the patented inventions. As our patent law stands producers can always assert that foreign-originated devices and processes would not be available to them unless they accepted the restrictive provisions imposed upon them by the foreign patentee. This may or may not be a rationalization on their own part. The point is that under compulsory nonexclusive licensing such an assertion would no longer be relevant.

On the other hand, I am, of course, aware of several objections that might be raised against your committee's proposed reform. In the first place, it might be argued that it would be a serious mistake to discriminate against foreign-originated patents by subjecting them to compulsory licensing, because such discrimination would lead to retaliatory measures in the other countries of the world. But many important foreign countries, such as England, France, and Canada, already possess legislation designed to subject foreign-originated patents to compulsory licensing. Even if the proposed measure should lead to an increase in the number of countries adopting such legislation, the effect would be salutary as regards the economic welfare of this country as well as the rest of the world. Surely, if the patent device could be prevented from furnishing a vehicle for the establishment of international cartels, an important step would be made toward the elimination of such cartels.

But quite aside from these facts, the charge of discrimination is out of place in speaking of the proposed measure. It is not valid since the proposal is directed against practices which, by general consent, are regarded as obnoxious. Even if it were true that foreign-originated patents have been subjected to no more abuse than have patents which originated domestically, the proposed measures would still be fully justified. It is a poor practice to object to a reform which seeks to abolish an unmistakable evil just because there exists a similar evil which the proposed measure would not reach. Moreover, there is no evidence to the effect that foreign originated patents have not been subjected to more flagrant abuse than have domestically originated patents. While it may be granted, on principle, that the average foreign businessman or inventor is not any more guided by the desire to maximize his profits through the use of monopoly rights than is the average American businessman or inventor, it is nevertheless true that the American economy has been placed at the mercy of foreign individuals or firms dominated by hostile governments. This situation must not be allowed to recur in the future.

A second possible objection is that the proposed measures would cause foreign inventors to refrain from seeking American patents and to attempt to keep their inventions secret, possibly by not obtaining patents anywhere, even in their home country. This objection does not apply to those foreign inventors whose objective is limited to the exploitation of their inventions by making them available to others on a royalty basis, since such exploitation requires disclosure. But it may be relevant as regards those inventors who wish to exploit their inventions as manufacturers in the American market. Inasmuch as this form of exploitation would entail the establishment of subsidiaries in this country, the proposed measure would force them into sharing the American market with domestic producers. To avoid this they might be willing to assume the risk of keeping their inventions secret, in the hope that the profit derived from their absolute monopoly for an indeterminate period of time would be greater than that which would be derived when sharing their inventions at reasonable royalties for the life of the patent. This possibility exists, at any rate, with respect to inventory relating to new processes, in which case the foreign inventor would not provide any clue as to the nature of his invention through the type of products which he manufactures and sells in this country. The chances of maintaining secrecy are considerably smaller in those instances in which the inventions relate to new products or improvements in old products, since the articles themselves provide a clue as to the nature of the invention. Nevertheless, some foreign inventors might be willing to assume the risk of secrecy. But I am inclined to believe that the loss to the economy arising from the fact that some

invention may be known and exploited by only one producer is compensated by the gain that would be realized through compulsory licensing.

A more serious problem arises from your committee's suggestion that a designated Federal agency could determine the amount of reasonable royalty after representations by the foreign inventor and the prospective domestic licensee. I should like to draw attention to the difficulties in which a Government agency might find itself when attempting to determine reasonableness of royalty charges. There are hardly any economically sound or customarily accepted standards for determining reasonableness of royalties. Although such an agency could avail itself of the assistance of the private parties involved in licensing, it would have to pass final judgment on the reasonableness of the terms before they go into effect. And at times the royalties demanded by the patentee may be so high, or the bids made by the prospective licensee so low, as to prevent an agreement between the private parties. In such cases the administrative burden of the agency would be greatly enlarged, since it would have to rely on its own judgment, or on the judgment of hired technicians and experts in the patent field, to prove the unreasonableness of the demands of either the licensors or licensees.

A second serious problem concerns the treatment of foreign-originated patents which make insufficient disclosure of inventions. In my judgment such patents can and should be invalidated by the courts. Where know-how cannot be reduced to words, blueprints, or formulas but can be conveyed only through demonstration and observation, the licensee should always have the right to demand know-how. In spite of these problems I believe that the proposal for compulsory licensing of foreign-originated patents is worthy of careful consideration. It may well find a place as a part of a comprehensive program for dealing with international cartels.

Question. In the prepared statement submitted to this subcommittee you included a list of enemy enterprises which have been vested by your Office in both wars. I notice that one of these is the Bosch Magneto Co. This subcommittee is very interested in knowing why these enterprises reverted back to German ownership. We would like to know what measures, particularly in the case of the Bosch Magneto Co., could have been taken by the Custodian of the First World War or by the Government to prevent the return of a controlling interest of Bosch Magneto Co. to German ownership.

Answer. May I point out at the outset that your subcommittee has printed a very complete account of the actions taken by the Custodian of the last war in his administration of Bosch Magneto Co. I refer you to exhibit No. 653, part 16, of the hearings on Cartel Practices and National Security. I am glad, however, to add whatever I can to this report, on the basis of information which has been compiled by members of our staff concerning the activities of the World War I Custodian. As I see it, Mr. Chairman, there was very little the former Office of the Alien Property Custodian or any other Government agency could have done, in view of existing legislation and prevailing business practices, to prevent the return of Bosch Magneto Co. to German control after the last war. I think this fact is best understood in light of some of the steps taken by the German Bosch after the last war to regain a foothold in the American market and then to extend its foothold to a controlling interest in the American Bosch.

(1) In December 1918, the World War I Custodian sold the Bosch Magneto Co. to Americans, who changed its name to American Bosch Magneto Corp. By 1921 the German Bosch had established a new American branch, under the name Robert Bosch Magneto Co., Inc., to manufacture and sell products similar to those being produced by the American Bosch. The two companies became embroiled almost immediately in trade-mark and patent litigation. Although some action could have been taken to prevent the new owners of American Bosch from continuing use of the Bosch trade name, thereby forestalling the ensuing conflict, I do not think there was anything that could have been done within the framework of existing law to prevent the German Bosch from reestablishing a branch in the United States.

(2) The controversy over patents and trade names between the new American branch and American Bosch was duplicated in almost every world market by the American Bosch and German Bosch. At the core of this controversy was the fact that both the American and German firms were using the well-known BOSCH trade name on their products. It might have been possible to prevent this difficulty, in part, if the World War I Custodian had required the American purchasers to adopt new trade-marks for their products. In the present war we have taken just this action in the case of the photographic products formerly manufactured under the German-originated trade name AGFA. These products

are now being sold under the name ANSCO. In the case of American Bosch after the last war, however, the new American management fought bitterly with the German Bosch for almost 10 years for the privilege of obtaining exclusive use of the BOSCH trade name, which rated high in consumer acceptance in the world's markets.

The extended and expensive litigation over patents and trade-marks, plus the developing business depression of 1929 and 1930, brought the American Bosch to a point where it was ready to come to terms with German Bosch. Here, again, I would say that, as far as we can tell from our examination of the record, most of these developments appear to have been beyond the control of any Government agency. After entering into a general settlement to adjust their trade name difficulties, the American and German companies executed other cartel agreements covering the allocation of markets and use of patents.

(3) About the time that all outstanding litigation between the American and German concerns was being settled, the World War I Custodian, who still held the proceeds of sale of the World War I Bosch Magneto Co., began to consider the claims of the original owners under the terms of section 9 of the Trading with the Enemy Act and under the Settlement of War Claims Act of 1928. During the years 1929 and 1930 the World War I Custodian through regular administrative procedures allowed claims totaling more than \$4,000,000 to Robert Bosch of Germany and his associates. Allowance of these claims at this time was particularly advantageous to Robert Bosch since it coincided with the decision of the American Bosch to come to terms with the Germans and placed liquid funds in the hands of German Bosch at a time when the money could be used to purchase stock of the American concern at depressed prices. I submit, however, that the Custodian had no discretion; he was obliged to approve the claims and thereby carry out the mandate of Congress.

(4) As part of the over-all settlement reached between the American and German Bosch in 1929 and 1930, it was agreed to merge the American Bosch with the new American branch of the German Bosch. As a result of this transaction, which was accompanied by a new issuance of stock to German Bosch, the German company increased further the majority interest it already held in the American Bosch. A merger of this kind probably became inevitable when Robert Bosch established its new branch in the United States in 1921. Although the establishment of the branch could not have been prevented, a more vigilant application of the antitrust laws might have forestalled the merger that occurred in 1930.

(5) Even before the 1930 merger, Robert Bosch of Germany had begun to purchase stock of the American Bosch in the open market largely with funds, as I have already mentioned, obtained from the former American Custodian under World War I claims. So that even before the merger was effected the Germans owned almost 70 percent of the outstanding American Bosch stock, which was increased to 77 percent as a result of the merger. The open-market purchases of American Bosch stock by the German Bosch at the depressed market prices of later 1929 and 1930 were presumably legitimate and beyond the control of any Government agency. In this connection we should remember that the Bosch Magneto Co. of World War I was sold by the then Custodian in 1918 to a group of men, who, it was believed, would operate the company strictly in the interests of the United States. Consequently, the firm was sold without any safeguard, such as a voting trust, to prevent its stock from passing back into German hands. But the maximum duration even of a voting trust is usually only 10 years and it is possible that a voting trust in the case of Bosch Magneto Co. might not have prevented the Germans from reestablishing their control.

(6) By exercising its controlling stock interest the German Bosch was able to place a majority of its nominees on the board of directors of American Bosch and to select most of the management officials of the company. The combination of majority stock control and majority representation on the board of directors was sufficient to impress any policies or programs the German Bosch cared to originate upon its American subsidiary. In this situation, too, it seems clear that no action could have been taken by the Government to interfere with the selection of American Bosch's management after a majority of the company's stock had passed into the hands of German Bosch.

(7) Once the German-dominated management had been installed in the American firm it was easy to get American Bosch to approve additional measures which would attach it firmly to the international industrial organization controlled by Robert Bosch. In 1930 and 1931 the German and American companies concluded a series of sales and patent agreements which had the effect of confining

the manufacturing and sales activities of American Bosch to designated geographic areas and limiting the range of products it was permitted to manufacture. These agreements were clearly illegal under the antitrust laws and they were set aside under a consent decree entered into after my office had vested American Bosch. It should be noted, however, that the cartel agreements were secret and considering the circumstances under which they were made it is highly unlikely that the Government could have prevented their execution. Had the pending bill for compulsory registration of private international trade agreements been in effect at that time, it might have been possible by antitrust action to prevent the American and German Bosch companies from entering into their restrictive agreements.

(8) Between 1934 and 1937 Robert Bosch loaned the American Bosch about \$1,800,000 through a cloaked Dutch banking company. In 1938 the German Bosch accepted repayment of the loan in newly issued common stock of American Bosch. The device of causing the American subsidiary to become indebted to the German parent and then taking stock of the American concern in repayment, in order to extend the control of German Bosch over American Bosch, was a practice which no Government agency could have controlled under existing legislation.

(9) In the area of patents some corrective measures might have been taken by the Government while Bosch Magneto was under its control in the last war and after it was sold to American interests which might have made it at least more difficult for the German Bosch to reestablish its control. While Bosch Magneto was under the control of the World War I Custodian, the Federal Trade Commission, which for part of that time was responsible for the licensing of enemy patents, made a strong effort to make the patents of Bosch Magneto generally available to American manufacturers on a royalty basis for the life of the patents. This policy was successfully resisted by the management installed by the then Custodian to operate the company. Accordingly, when the company was sold in 1918 it was sold with its patent assets intact, and 10 years later any of these patents which had not expired were inherited by the German Bosch when it reestablished control over the company.

Government policy might have assisted American Bosch in the 1920's in its extensive litigation battle with German Bosch had there been on the books a compulsory licensing law for foreign-originated patents. Without the compulsory licensing requirement the German Bosch was able to develop important new patents, register them with the United States Patent Office, and thereby prevent the development of similar inventions by the American company. Once the German Bosch had patented its inventions, the American company faced the possibility of infringement suits whenever it attempted to develop similar products.

So, as I stated at the beginning of this discussion on Bosch Magneto, there appears to have been comparatively little that any Government agency could have done to prevent the return of American Bosch to German control under then-existing law. As I pointed out, in retrospect there were some steps the Government might have taken to make it more difficult for the Germans to reestablish their control. It is highly speculative, however, whether in the end these measures would have been adequate to prevent the return of a controlling interest in American Bosch to German Bosch.

I may add that we are alive to these problems and are drafting legislation which would enable the Government to bar the reentry of divested enemy interests into domestic enterprises.

Question. As I understand your statement, you have not succeeded thus far in abating illegal cartel contracts. Why has no definite policy for handling these contracts been put into effect?

Answer. It is incorrect to say that we have no definite policy for handling illegal cartel contracts. It is our policy to abrogate them insofar as we have the legal authority to do so. This policy has resulted in actual abrogation in only a few cases thus far (that is, the Standard Oil case, American Bosch, Woburn Degreasing). The delay in achieving substantial results has resulted largely from the extraordinary number of difficult legal and policy questions involved.

Examples of legal problems which arise, many of them extremely difficult and unique, are—

(1) Whether an antitrust violation in fact exists.

(2) If such violation does exist, whether such violation nullifies the rights of American parties completely or merely makes the specific provision unenforceable without affecting other rights under the patents.

(3) The effect of illegality in cases where patents have been assigned, rather than licensed, to Americans; whether restitution of consideration paid is a condition precedent to nullification; whether the doctrine of *pari delicto* would apply to actions to abrogate brought by us.

(4) Whether summary action against American assignees or licensees could be taken or whether action must be preceded by administrative hearings and determinations.

(5) Whether the declaratory judgment act would enable us to institute court proceedings to determine the rights of the Americans.

(6) Procedural problems arising where action by the Antitrust Division is pending or contemplated with reference to the same subject matter.

(7) Whether illegal agreements contemplating continuing arrangements were automatically abrogated by the outbreak of the war.

Some of the problems are illustrated by the opinions of Judge Wyzanski in *Standard Oil Co. v. Markham*, copies of which are submitted herewith. In addition to the legal questions, we are confronted with major policy questions. The following are some examples:

(1) Whether it is a proper function of the Office of Alien Property Custodian to undertake action amounting, in effect, to enforcement of the antitrust laws or whether such matters should be left to the Department of Justice, which has primary responsibility for enforcement of those laws. The "exclusive remedy" of the antitrust law may bar action by this Office (compare the *Standard Oil* case).

(2) Whether this Office, upon discovery of what appeared to be an antitrust violation, should take drastic, vigorous, and immediate steps, leaving it to the courts to protect any legitimate interests possessed by Americans, or whether, in the light of legal doubts, it should first resolve to its own satisfaction its legal authority to act and collect the maximum factual information needed for successful prosecution of such action as it took.

(3) Clearance of proposed procedures with other interested Government agencies especially the Antitrust Division, in order to avoid confusion and inconsistency in the parallel operations of this Office and the other agencies.

The mere enumeration of the above problems indicates the magnitude of the task facing the Office in attempting to abrogate illegal contracts. It is clear that some of these questions cannot be resolved except by the courts or by Congress. Arbitrary action by us would have resulted in unwarranted hardships to American citizens, confusion and disruption in the ordinary process of Government action by other agencies, and would have brought the actions of the Government into disrepute in those cases where the specific action by this Office was found to have been beyond its authority or unsupported by sound legal documents.

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

Civil Action, No. 26-414

STANDARD OIL COMPANY (NEW JERSEY), STANDARD OIL DEVELOPMENT COMPANY, STANDARD CATALYTIC COMPANY, AND JASCO, INCORPORATED, PLAINTIFFS,
vs. JAMES E. MARKHAM, AS ALIEN PROPERTY CUSTODIAN, DEFENDANT

MEMORANDUM

June 1, 1945

WYZANSKI, J.

This is an action under Sec. 9a of the Trading With the Enemy Act. Standard Oil Company and three associated companies have brought this action to recover from the Alien Property Custodian thousands of United States patents and certain shares of stock in various corporations. Plaintiffs allege that they are the owners of these assets; that they acquired them, with a single exception, from I. G. Farbenindustrie by outright purchase; that the Custodian vested these assets in himself by two vesting orders; and that plaintiffs are entitled to have these assets returned.

One of the several defenses asserted by the Custodian is that plaintiffs are not entitled to most of these assets because they were acquired by plaintiffs by agreements which violated the antitrust laws of the United States. To raise this defense the Custodian has made allegations in paragraph V of his answer, has made an offer in evidence of a letter heretofore called Government Serial No. 149

written by Mr. Teagle to Mr. Riedeman, marked Exhibit D-62 for identification, and is prepared to make other offers of evidence. Plaintiffs have seasonably objected to the introduction of this evidence on the ground it is irrelevant.

This type of defense and offers of this type of evidence are novelties in proceedings under Sec. 9a of the Trading With the Enemy Act. So far as research of counsel and of the court can discover, it has not previously been decided whether when an American corporation seeks to recover from the Alien Property Custodian property of which it claims ownership the corporation should be denied relief on the ground that in acquiring or using that property it violated the antitrust laws of the United States.

In considering the validity of this defense the first point is to observe the inevitable breadth of the Custodian's contention. If the Custodian is correct in his contention that relief should be denied where the claimed property was acquired in violation of the federal antitrust laws, it would seem that relief should also be denied where the claimed property was acquired in violation of any other federal law, or any state law, or any foreign law. There is no hierarchy of laws in which the antitrust laws are given peculiarly high rank. And the antitrust laws, as the Supreme Court has recently recognized in *Hartford Empire Co. v. United States*, 323 U. S. 386, 415, have no provision that patents used in violation of these laws shall be forfeited. Moreover, if the Custodian is correct in this contention that relief should be denied where he is the person charged with a seizure unauthorized by law, it would seem that relief should also be denied where the person charged with the wrongful taking is a common thief, at least if the suit where the issue arises is because of the nature of the property involved or because of the nature of the relief sought in an equity suit. The Custodian has no more statutory interest than any other person in the enforcement of the antitrust laws.

Indeed, if the Custodian's defense under the antitrust laws were to prevail here, it is difficult to see why, aside from the restraints imposed by self-discipline and a consciousness of the risk of impeachment and removal, the Custodian would not be at liberty to sequester and keep all property in the United States acquired in violation of law, regardless of whether there had been the slightest connection between the owner of the property and the enemy. This would mean that whenever property was acquired in violation of any law the offender ran the risk of the penalties prescribed by that law and also the risk of the unprescribed forfeiture of the property at the whim of an administrative official.

The unsoundness of the Custodian's defense under the antitrust laws is revealed not alone by the breadth of its necessary implications, but by cases such as *Connolly v. Union Sewer Pipe Co.*, 184 U. S. 540, 549-551 and *A. B. Small Co. v. Lamborn & Co.*, 267 U. S. 248, 258. These cases hold that where a person engaged in and acting pursuant to a conspiracy to violate the antitrust laws makes a contract which is not inherently invalid he can enforce that contract against the other party. Similarly, where a person has acquired property by a contract in restraint of trade he can recover the property from a wrongful taker. *California Cured Fruit Ass'n. v. Stelling et al.*, 141 Cal. 713, 75 Pac. 320, 322. These authorities illustrate the rule that a party to a previous illegal contract agreement or combination with others, restraining competition in that business, is not deprived of legal protection of his property in that business. American Law Institute, *Restatement of Contracts*, Sec. 519; Willison, *Contracts*, (Rev. Ed.) Sec. 1661. Such a rule embodies the broad principle that while one who has acquired property in violation of law is subject to whatever personal penalties and infirmities of title that law provides, he is not an outlaw and his title to property is not subject to collateral attack.

The case at bar is quite unlike *Sola Electric Co. v. Jefferson Electric Co.*, 317 U. S. 173, or *Continental Wall Paper Co. v. Voight & Sons Co.*, 212 U. S. 227. Those cases hold that where two parties make a contract which is itself unlawful under the antitrust laws a court will not enforce or grant a remedy upon that contract. In refusing to assist parties to consummate their unlawful bargains the court is obedient to the direct command of the law; it is not entering upon a collateral inquiry or attaching to prior unlawful conduct penalties unauthorized by statute. The distinction is too familiar to require elaboration. See *A. B. Small Co. v. Lamborn & Co.*, supra; American Law Institute, *Restatement of Contracts*, Secs. 518, 519, 598, 607.

Although the Custodian places no reliance on *Morton Salt Co. vs. G. S. Suppiger Co.*, 314 U. S. 488, perhaps a word should be said about its doctrine, particularly since it is in square conflict with the second illustration given for Sec. 519 of the *Restatement of Contracts*, cited two paragraphs above. As explained in *Hartford Empire Co. vs. United States*, 323 U. S. 386, 415-416, the

Morton Salt Co. case stands for the proposition that so long as a patent owner is using his patent in violation of the anti-trust laws he cannot restrain infringement of it by others. In the instant case plaintiffs, whatever may have been their past conduct, are not currently using the patents here involved in violation of the anti-trust laws. For some time the patents have been vested in the Custodian. Moreover, their use has been circumscribed for three years by the stringent terms of an outstanding decree of the United States District Court for the District of New Jersey. Thus the doctrine of the *Morton Salt Co.* case which is limited to current violations of the anti-trust laws by the patentee does not apply. Furthermore it would be a bold interpretation which would carry the doctrine of that case beyond giving an infringer a defense against a patentee. It is hard to suppose that the Supreme Court meant to indicate that anyone may without accountability to a patentee take from him a patent he is using in violation of the anti-trust laws. See *Hartford Empire Company vs. United States*, supra.

In summary, I conclude that it is not open to the Alien Property Custodian to defend his seizure of the patents and shares of stock involved in this case on the ground that plaintiffs have acquired them by violating the anti-trust laws. To allow such a defense would permit a collateral attack contrary to accepted principles of contract and property law, would add to the anti-trust laws a sanction not authorized by Congress, and would establish a precedent whereby any person, whether or not a public officer, could retain with impunity property which he had unlawfully seized from an owner who had happened to acquire the property in violation of some national or local law.

Objection Sustained.

U. S. D. J.

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

Civil Action, No. 26-414

STANDARD OIL COMPANY (NEW JERSEY), STANDARD OIL DEVELOPMENT COMPANY, STANDARD CATALYTIC COMPANY, AND JASCO, INCORPORATED, PLAINTIFFS,
vs. JAMES E. MARKHAM, AS ALIEN PROPERTY CUSTODIAN, DEFENDANT

MEMORANDUM ON CUSTODIAN'S PETITION FOR RECONSIDERATION OF THE MEMORANDUM OF JUNE 1, 1945

June 6, 1945

WYZANSKI, J.

The Custodian suggests that my memorandum of June 1, 1945, does not squarely meet all his contentions as to the admissibility of evidence tending to show that the plaintiffs have violated the antitrust laws.

The Custodian asks me to assume that on the basis of the testimony I shall eventually find that on the dates the Custodian vested in himself the patents, corporate shares and other assets here involved, (1) that legal title to some of those assets was in plaintiffs; (2) that, however, the principal beneficial ownership to such assets was in I. G. Farbenindustrie, and (3) that plaintiffs' rights were merely to share in the managing or licensing of those assets and to share in the income or royalties from them. If I should make these findings the Custodian says that I might normally enter a decree establishing licensing and royalty rights in the plaintiffs. But the Custodian urges that I ought not to enter such a decree because the plaintiffs' rights are, in his view and in his terminology, "future executory contractual interests" springing out of agreements which were in violation of the antitrust laws. Were my decree to establish such rights, the Custodian says that this Court would be enforcing an agreement in violation of law and this Court would be lending its aid to a restraint of trade.

There are at least two answers to the Custodian's contention.

First, even in the situation assumed by the Custodian, unlike the situation in *Sola Electric Co. vs. Jefferson Electric Co.*, 317 U. S. 173, this Court would not be enforcing the unexecuted part of an unlawful bargain at the suit of one party against the other party. This Court would be merely declaring that there existed a certain status between two parties in property seized by an outsider. It is to be remembered that even on the Custodian's assumptions, this suit could not be

converted into a proceeding sounding in contract to recover considerations which I. G. Farbenindustrie had agreed to transfer to plaintiffs in the future. This suit is primarily a proceeding by plaintiffs to recover assets which they claim I. G. Farbenindustrie had already transferred to plaintiffs in the past, and is perhaps alternatively a proceeding to have a declaration of the status of plaintiffs' property rights in assets formerly owned by I. G. Farbenindustrie and now owned by the Custodian. When a question of the status of property rights is at issue an inquiry as to whether the status was acquired in violation of a statute is irrelevant and collateral unless the statute otherwise provides. The reasons are given in my memorandum of June 1, 1945, and are supported by *Geddes vs. Anaconda Mining Co.*, 254 U. S. 590, 592-595; *California Cured Fruit Ass'n. v. Stelling*, 141 Cal. 713, 75 Pac. 320, 322 Am. L. Inst., *Restatement of Contracts*, S. 519.

Second, there is no risk in the present case that any decree by this Court establishing rights in the plaintiffs in the assets here involved would aid in the current carrying out of an unlawful plan. The plaintiffs are already operating under the decree of the United States District Court for New Jersey. They may use their rights in these patents, corporate shares and other assets only as that decree provides. No one suggests that that decree is inadequate protection against future use of these assets in violation of the antitrust laws. There is no merit in the Custodian's reply that the basic agreements were illegal *ab initio* and therefore the rights existing thereunder cannot be exercised. To refuse to recognize these rights when there is now no prospect of their future use in violation of law would be a confiscation of these rights on account of past misconduct and would also involve the imposition of a sanction not authorized by the antitrust laws or by usual principles of equitable relief.

Independently of other contention, the Custodian has also advanced the suggestion that if I. G. Farbenindustrie made transfers of titles or interests to plaintiffs these transfers were in violation of the antitrust laws and therefore the transferor, I. G. Farbenindustrie, and its successor, the Custodian, have a right of rescission. This suggestion is in conflict with *Geddes v. Anaconda Mining Co.*, 254 U. S. 590, 592-595. There it was held that the shareholders of the Alice Gold & Silver Company which was charged with having made a sale of property to the Anaconda Copper Mining Company in pursuit of a purpose of both companies to violate the Sherman Anti-Trust Act could not have that sale set aside. As Mr. Justice Clark said at p. 593; "It is now the settled law that the remedies provided by the Anti-Trust Act of 1890 for enforcing the rights created by it are exclusive and therefore, looking only to that Act, a suit, such as we have here, would not now be entertained." The reasoning of the Court makes it plain that there is no right of rescission by a seller, or one in his shoes, against a purchaser who in purchasing violated the antitrust laws, regardless of whether the seller was also violating those laws.

My ruling of June 1, 1945, sustaining plaintiffs' objection, stands.

Question. In 1942 Mr. Crowley stated before the Senate Committee on Patents that the Office of Alien Property Custodian would seek out and break by whatever means may be available any restrictive holds which foreign-owned patents may have on American industry. What has been accomplished in carrying out this pledge?

Answer. Mr. Crowley's statement was that he proposed to seek out restrictive holds which patents under his jurisdiction had upon American industry and to break them by whatever means might be available. As a first step all enemy-owned patents were seized, and where it could be done without injury to American rights they were thrown open to the public. At the same time, all nonemies claiming an interest in them were required to report such interest together with copies of the documents upon which the reporter relied to support his claim of interest. About 6,000 persons and companies filed reports covering about 50,000 patents, including in this number reports relating to nonenemy foreign patents. An elaborate file was set up on these reports and the attention of other agencies of the Government, particularly the Antitrust Division of the Department of Justice, was called to them. Copies of many of the contracts filed were furnished to the Department of Justice and in several cases, such as those of American Bosch and Merck & Co., the Custodian has cooperated with the Department in obtaining consent decrees by which such contracts were terminated. Where interests of enemies in these contracts were found such interests were vested. As a result, the enemy has been deprived of any property in them.

Some of the problems which have arisen in connection with these contracts, and in attempting to remove restrictive provisions from them, have been discussed in the answer to the preceding question.

EXHIBIT No. 13

SUBMITTED BY HERBERT H. LEHMAN, DIRECTOR GENERAL, UNITED NATIONS
RELIEF AND REHABILITATION ADMINISTRATION

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION,
Washington 25, D. C.

Hon. H. M. KILGORE,
United States Senate, Washington, D. C.

DEAR SENATOR KILGORE: The attached statement on living standards in the several European countries is submitted in accordance with your request of June 15.

With the exception of data identified as having been taken from a League of Nations report, much of the material has been assembled from confidential and restricted documents.

I trust that the statement will prove useful as background for the forthcoming hearings of the Subcommittee on War Mobilization.

Very sincerely yours,

HERBERT H. LEHMAN, *Director General.*

LIVING STANDARDS IN EUROPE

This statement represents a synthesis of material available in the files of the UNRRA bearing on living standards in Europe. With the exception of data identified as having been taken from Food Rationing and Supply 1943-44, League of Nations, it has been assembled from confidential and restricted documents.

While the sources are considered reasonably reliable, the difficulties of obtaining data on which to base estimates during the course of the war and the magnitude of the task of estimating consumption levels under wartime conditions should be taken into account in its use.

Most of the information relates to food consumption. Because food is the one item making up the standard of living for which need and consumption are presently susceptible to scientific measurement and because of its importance, comparative analysis is more possible in this field than in others.

The material is presented as follows:

- (1) The comparative food situation in European countries.
- (2) Statements on individual countries summarizing the situation with respect to food, clothing, housing, and other aspects of family living on which there is reasonably good information.

THE COMPARATIVE FOOD SITUATION IN EUROPEAN COUNTRIES

The estimated calories in the per capita daily diet presented in table I show (average food consumption based on total supplies available for human consumption. The estimate for the "normal consumer" shows the level of consumption by people without access to illegal channels of distribution.

TABLE I.—*Estimated calories, per capita daily diet, prewar and 1942-43, selected European countries*

	National averages			Normal consumer
	Prewar	1942-43	1942-43 as percentage of prewar	
Greater Germany ¹	3,270	2,780	85	2,320
The Netherlands.....	3,055	2,460	80	1,950
Belgium.....	3,105	1,715	55	1,415
Norway.....	3,220	1,980	61	1,590
Greater Bulgaria ²	3,665	3,210	88	1,590
Denmark.....	3,455	3,285	95	
France ³	3,400	2,430	71	1,465
Italy.....	2,085	2,505	94	1,155
Albania ⁴	1,560	1,420	91	
Yugoslavia ⁵	3,330	2,620	79	1,190
Rumania ⁶	3,975	3,845	97	2,005
Greece.....	2,885	1,975	68	

¹ Prewar Germany, Alsace-Lorraine, Austria, Sudetenland.² Includes territory annexed from Yugoslavia, Greece, and Rumania.³ Excludes Alsace-Lorraine.⁴ Prewar borders.⁵ Prewar Yugoslav boundaries; 1942-43 Croatia and Serbia.⁶ 1942-43 excludes territory ceded to Bulgaria and Hungary.

The changes that occurred in the estimated calories available in 1942-43 and early in 1945 are evident in table II despite the differences in boundary lines apparent in the two tables. The fact that farmers are not as a rule greatly affected by food rationing and that food scarcities are most serious in urban centers is very apparent in this table also.

TABLE II.—*Estimated calories, per capita daily diet, first quarter 1945, selected European countries*

	Estimated calories			Percentage of prewar
	Urban	Rural	National average	
Belgium.....	1,715	2,900	1,910	66

Yugoslavia:				
Deficit areas.....	1,600	1,770	1,760	64
Surplus areas.....	2,450	2,900	2,800	102

The composition of the diet is as significant from the point of view of nutrition as the calorie content. A League of Nations report, Food Rationing and Supply, 1943-44, shows legal food rations in the autumn of 1943 by individual foods. These are presented in table III.

The data apply to legal rations only, however. These may or may not have been available to the consumer. Actual consumption in occupied areas was often far below official rations. Food scarcities are greatest in the urban centers where consumption depends on the size of the official ration, the availability of commodities in the shops, the purchasing power of wages, and additions from the black market.

TABLE III.—Legal food rations in the late autumn of 1943

(Grams per week; 1 ounce = 28.4 grams)

NOTE.—Several countries not given in the table above ration one or more commodities (in grams per week): Bread: Tunis (3,500); Turkey (3,150); Rice: Japan (2,310); Sugar: Australia (455); New Zealand (340); Japan (170); Meat: Australia (680-1,815); Fats: Australia (229); Tea: Australia (55); New Zealand (55); Newfoundland, persons over 10 years (55), under 10 years (15).

Local rationing.—A partial list of locally rationed commodities not mentioned in the table above is as follows:
Fruit and vegetables: Germany, Protectorate, Italy, Norway, Belgium, France, Finland.
Fish: Germany, Protectorate, Italy, Norway, Belgium, France, Finland.
Poultry: Belgium, France.

minced meat loaf, 16 points; canned fish and fruit, 12 points (large tin); canned vegetables: Beans, 4 points; tomatoes, 6 points; peas, 4 points; condensed milk, unsweetened, 4 points (tin); cereal breakfast foods: rolled oats, 2 points; wheat flakes, 4 points; rice, sago and tapioca, 4 points; dried peas, beans, 1 point; lentils, 2 points; dried fruits, 6 points, dates, 8 points; biscuits: plain, 4 points; sweet, 8 points.

13 1 pound of preserves may be exchanged for 1 pound of sugar. During July an extra 1 pound allotted for home-preserving.

16 Additional ration of 1 pound of certain imported and home produced jams for each 4-week period beginning Sept. 19, Oct. 17, Nov. 14.

17 In addition bacon and ham rationed at 115 grams per week per person.

18 Expectant mothers receive an extra 7d a week of meat on child's ration book.

19 Expectant mothers receive 3,980 grams a week on child's ration book in addition to normal consumer ration. Mothers of children under 12 months receive priority supply of 3,980 grams a week.

20 Normal consumer gets from 0.5 to 1.25 shell eggs per week and 1.5 dried eggs. Expectant mothers, infants between 6-18 months and certain classes of invalids get fresh eggs at rate of 3 a week. Children under 5 years get twice the dried egg allotment. Expectant mothers also get one shell egg and two packets of dried egg on child's ration book per allocation period.

21 Tea only, persons over 5 years (coffee free).

22 These rations refer to Northern Italy; according to the latest information on Southern Italy, New York Times, Feb. 4, 1944, increased imports from the United Nations will allow civilians behind the combat lines 1,400 grams of bread a week as compared with the present ration of 875 grams.

23 German workers in Italy receive rations prevailing in Germany.

24 Rural and urban.

25 Locally rationed, priority to children, sick, expectant and nursing mothers, men in unhealthy occupations. According to the New York Times, July 15, 1943, the ration was 200 grams per week.

26 In addition, from June to September 1943 consumers were allotted 500 grams barley, 250 grams potato flour, 125 grams rice and an undisclosed cheese ration.

27 It is reported that from November 1943 the ration of potato starch of 31.25 grams a week has been halved and the rations given above should accordingly be reduced by some 15 grams.

28 Miners receive 4,500 grams of potatoes.

29 It is reported that from November 1943 the rations have been reduced by 20 percent.

30 May 1943—1,000 grams allowed for jam making.

31 Normal consumer receives 1,120 grams skimmed milk.

32 Including 30 grams of quark.

33 Children 0-14 years receive 15 grams of cocoa powder.

34 Expectant and nursing mothers, and men in unhealthy occupations get same rations as children 3-4 years.

35 Instead of 140 grams of jam, 105 grams of honey may be obtained.

36 In addition 25 grams of sausage.

37 Adolescents 14-18 years get 1,750 grams, old people 3,500 grams of skimmed milk.

38 Expectant and nursing mothers receive the same ration as children under 3 years.

39 Including 280 grams of flour in terms of bread.

40 Skimmed milk locally rationed.

41 Expectant and nursing mothers receive the same ration as children 1-5 years, sick people 1,750 grams.

42 Children under 2 years receive the same ration.

1 Weekly rations: Calculated on basis of 4.3 weeks per month.

2 100 grams of flour equals 130 grams of soft bread.

3 Generally including dried beans and peas.

4 Meat: As purchased including bone and waste, unless otherwise indicated.

5 Fats: All fats including butter, margarine, lard and vegetable oil.

6 Substitute or mixture.

7 Additional sugar for home canning on application.

8 As an alternative, consumer may buy the same amount of sugar.

9 Meat consumers receive 2 coupons per week. Each buys 1/4 pound of meat in category A (smoked and cured meats, sliced bacon, etc.); 3/4 pound in category B (fresh and some cured meats (ham), boneless steak, etc.); 1 pound of category C (meat with some bone as for instance sirloin steak); 1 1/4 pounds of category D (meat with high bone content), fancy meats and meat with more than 50 percent bone content are unrationed. Meat rationing suspended March 1944.

10 As an alternative—40 grams of tea per week. Both coffee and tea for persons over 12 years of age.

11 *Point rationing*.—1. Meat, fat, cheese: These commodities are rationed on a common point basis (red coupons). Each consumer irrespective of age and occupation receives 10 points a week; the average point value of meat in September 1943 (100 items) was 6.9 points, of fat (7 items) 6.4 points, and of cheese (7 items) 4.5 points. Examples of point values per pound of some important items were as follows: Meat: Beef—porterhouse steak (12 points), rump roast bone-in (8 points), flank meat (7 points), hamburger (7 points), veal loin chops or roast (10 points), round steak cutlets or roast (12 points), lamb-mutton—loin chops or roast (9 points), leg, whole or part (6 points), breast and flank (1 point); Pork—tenderloin (10 points), loin roast whole, half or end cuts (7 points), ham, whole or half (7 points); Bacon, slab or piece, end on (5 points), Canadian style, sundry sausage (7 points); Fresh sausage, group 1, 100 percent meat content (6 points); Sausage meats (not included in 100 items taken above), beef brains (1 point), beef kidneys (3 points), veal liver (8 points), real tongue (4 points), lamb-mutton brains (1 point), lamb-mutton liver (4 points). Fats: Lard (3 points), margarine (4 points), butter, creamery butter (16 points). Cheeses: Cheddar (8 points), cream cheese (3 points), creamed cottage cheese, containing more than 5 percent butterfat (3 points).

2. Canned goods (fruits, juices, vegetables, concentrated soup) and sauce, frozen fruit and vegetables and dried fruits are rationed on a common point basis (blue coupons). Each consumer receives 48 points per calendar month (or 11 points a week). Examples of typical point values in September 1943 for cans weighing about 1 pound are given below: Apricots (18 points), pineapple (20 points), berries, all varieties (9 points), grapefruit juice (2 points), tomato juice (3 points), asparagus (12 points), tomato catsup or chili sauce (2 points), beans, fresh lima (18 points), peas (16 points), beans, green or wax (8 points), carrots (6 points), spinach (11 points), tomatoes (14 points); frozen foods (over 12 oz. to 16 oz.): all fruits and berries (12 points), beans, baked (6 points), corn, cut (12 points), spinach (12 points); all fruit juices (2 points); prunes and raisins (4 points per pound).

Extra allowance upon application.

3. 4,536 grams of sugar allowed for jam making for the whole period May 24-Oct. 31.

4. *Point rationing*.—The following goods are rationed on a common point basis: Canned meats and fish, canned baked beans, biscuits, dried fruits, pulses, cereals, canned fruits and vegetables, condensed milk and porridge oats. Each consumer, irrespective of age and occupation, receives 20 points for a 4-week period. Examples of typical values per pound are given below: Canned meat and meat products: Pork sausage, 8 points;

¹ Weekly rations: Calculated on basis of 4.3 weeks per month.

² 100 grams of flour equals 130 grams of soft bread.

³ Generally including dried beans and peas.

⁴ Meat: As purchased including bone and waste, unless otherwise indicated.

⁵ Fats: All fats including butter, margarine, lard and vegetable oil.

⁶ Substitute or mixture.

^a 1 kilogram of sugar for preserving in addition—May 31-June 27. Normal consumer receives 50 grams of sweets, children 75 grams.

¹¹ Normal consumer gets 400 grams of skimmed milk.

¹² Expectant and nursing mothers receive the same ration.

¹³ Rationed according to supply. Ration for May 1943—16 grams a week.

¹⁴ Including 475 grams of flour in terms of bread.

¹⁵ Including 700 grams of flour in terms of bread.

¹⁶ Rice, semolina, oatmeal, biscuits reserved for children.

¹⁷ Rural and urban communities respectively.

¹⁸ Expectant and nursing mothers receive the same ration.

¹⁹ Oatmeal and barley.

²⁰ Since May 1943 rationing through retailers on basis of family size, ordinary consumption and economic position.

²¹ Butter.

²² Potato flour.

²³ Consumers with tobacco card receive reduced rations.

²⁴ Weekly value. Special ration 5 F. marks from Sept. 16-30. Fish locally rationed.

²⁵ Double amount of cheese can be obtained on the fat ration.

²⁶ Children under 6 months receive 340 grams; children 6-12 months receive 170 grams.

²⁷ Expectant and nursing mothers receive 4,200 grams.

²⁸ Children under 7 years.

²⁹ Wine is rationed at 1 litre per week for normal consumers, 2 for heavy workers, 3 for very heavy workers.

³⁰ Département de la Seine.

³¹ Rural and urban, respectively.

³² Expectant and nursing mothers get 3,500 grams per week.

³³ Locally rationed.

³⁴ Including 60 grams of flour in terms of bread.

³⁵ Including 300 grams of rice per month.

³⁶ Children and old people receive 30 grams of sweets per week.

³⁷ Including 200 grams of rice per month.

³⁸ Chocolate.

³⁹ Including 55 grams of chocolate.

⁴⁰ Including 30 grams of chocolate.

⁴¹ The higher figure relates to Budapest, the lower to rural districts.

⁴² Margarine and lard only—butter irregularly distributed.

⁴³ Expectant and nursing mothers receive the same ration.

⁴⁴ Children under 12.

⁴⁵ According to supply.

⁴⁶ Expectant and nursing mothers receive the same ration.

⁴⁷ Young persons 6-14 years.

⁴⁸ Jews employed in war industries receive normal consumer rations. Those not so employed receive half.

⁴⁹ According to official information relating to December 1943 potato rations were 4,000 grams and milk rations 1,750 grams for "normal consumers." Had it been possible to take these figures into account calorie figures of total "normal consumer rations" would have turned out about 100 calories more than indicated below.

⁵⁰ Including 70 grams of flour in terms of bread.

⁵¹ Children under 14 years get 50 grams of sweets and all consumers receive 50 grams of chocolate.

⁵² Normal consumer gets 1,300 grams and adolescents 14-20 years receive 1,750 grams skimmed milk per week.

⁵³ Children under 2 years receive 60 grams of rice. Children 2-4 years receive 60 grams of oatmeal.

⁵⁴ Expectant and nursing mothers receive the same ration.

⁵⁵ Night workers receive from 175 to 225 grams of meat.

TABLE III.—*Legal food rations in the late autumn of 1943—Continued*
(Grams per week; 1 ounce = 28.4 grams)

Explanation: r = rationed; l. r. = locally rationed; p. r. = point rationing; blank = no information

IRELAND¹⁰⁷ Butter.¹⁰⁸ Tea only.**SPAIN**¹⁰⁹ Rations vary inversely with income.**SWEDEN**¹¹⁰ Swedish rationing system contains about 40 different professional categories. The maximum and minimum rations are indicated above.¹¹¹ Bread free in restaurants.¹¹² Including 70 grams of potato starch.¹¹³ Instead of 100 grams of sugar, consumers are permitted to buy 140 grams of sirup¹¹⁴ and 125 grams of artificial honey.¹¹⁵ During the second two weeks of July, the above rations were reduced by 20%. Mut-¹¹⁶ ton free since February 1944.¹¹⁷ Extra allowance of 38 grams per week of butter allowed for period from Jan. 10 to¹¹⁸ Feb. 21.¹¹⁹ Cream free.¹²⁰ Expectant mothers receive additional 330 grams of cheese a week.¹²¹ Expectant mothers receive 3 eggs a week.¹²² Children 3-17 receive 6 grams of cocoa per week.¹²³ Normally half of the normal consumer ration. It may sometimes be somewhat¹²⁴ higher or lower.**SWITZERLAND**¹²⁵ Consumers are permitted to exchange coupons of certain foodstuffs at the following¹²⁶ rates (Autumn 1943): 250 points of meat = 100 grams of cheese; 100 points of beans, peas,¹²⁷ or 100 grams of butter = 200 grams of cheese; 1 liter of milk = 1,000 grams of cheese.¹²⁸ In addition certain quantities of food released from time to time on the so-called¹²⁹ "blind" coupons. It would appear that, in December, extra cereals for a normal con-¹³⁰ sumer amounted to 195 grams a week.¹³¹ Including 95 grams of flour in terms of bread.¹³² The chocolate ration is 35 grams per week, other candy 10 grams.¹³³ In addition 50 grams of egg powder.¹³⁴ Points per week for coffee, tea and cocoa.¹³⁵ In addition 25 grams of egg powder.¹³⁶ Including 185 grams of flour in terms of bread.**Source: Food Rationing and Supply 1943-44, League of Nations.**¹ Weekly rations: Calculated on basis of 4.3 weeks per month.² 100 grams of flour equals 130 grams of soft bread.³ Generally including dried beans and peas.⁴ Meat: As purchased including bone and waste, unless otherwise indicated.⁵ Fats: All fats including butter, margarine, lard and vegetable oil.⁶ Substitute or mixture.⁷ These rats refer to Northern Italy; according to the latest information on Southern Italy, New York Times, Feb. 4, 1944, the eased imports from the United Nations will allow civilians behind the combat lines 1,400 grams of bread a week as compared with the present ration of 875 grams.⁸ Rural and urban communities respectively.⁹ Pulses and potato flour.¹⁰ Special distribution of 1 kilogram sugar in month of August.¹¹ All consumers receive 500 grams of tinned fish per week.¹² Normal consumers receive 750 grams and adolescents 1,750 grams of skimmed milk¹³ per week.¹⁴ Children under 12 years receive 100 grams of rice.¹⁵ Expectant and nursing mothers receive the same ration.¹⁶ Adolescents 12-15 years receive 3,500 grams, 16-18 receive 1,750 grams.¹⁷ Germans receive the same rations as in the Reich. Information regarding Jews¹⁸ differs but according to information available their rations for bread (395 grams per week)¹⁹ and sugar (45 grams per week) are about half normal consumer rations and they receive²⁰ no meat, fat, or milk.²¹ Poles not entitled to wheat bread, wheaten flour, rolls, luxury pastry, and cakes.²² Poles not entitled to veal and pork, ham, poultry game, salt, fresh and smoked fish,²³ sardines and mackerel, anchovies, marinated fish and crabs.²⁴ Information as regards the fat differs but it is reasonable to assume that normal²⁵ consumers and children receive none.²⁶ "Privileged" refers to official employees and workers in industries performing special²⁷ tasks for the Germans and their families.²⁸ Bucharest only.²⁹ 250 grams are oatmeal, the rest maize flour.³⁰ Including 150 grams of flour in terms of bread.³¹ Pulses.³² Belgrade.**YUGOSLAVIA—SERBIA**¹⁰⁰ Belgrade.

The caloric value of these legal rations for the "normal consumer" in the autumn of 1943 is compared with April 1942 in table IV.

In most countries legal rations were increased in 1943, due largely to a good harvest; in some countries of which Germany is one, the improvement was substantial. Imports of cereals, sugar, and to some extent fats are largely responsible for the improvement in Finland, Norway, and Belgium.

¹ Food Rationing and Supply, 1943-44, League of Nations, 1944, p. 22.

Workers' diets in 1943 compared with prewar consumption and with normal requirements are presented in diagrams I and II.

The conclusions of the League of Nations report with respect to the relative position of the different countries in 1943 is as follows:

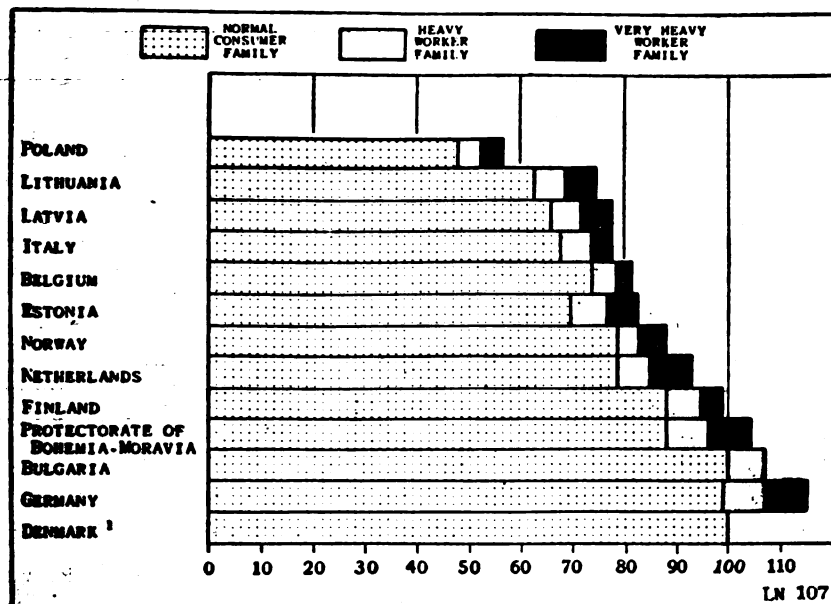

"The theoretical calorie intake appears up to prewar levels in Denmark, Germany, Bulgaria, Rumania, and Hungary; in most cases, and in Germany in particular, the intake is sufficiently high to meet the accepted average requirements of 3,000 calories a day per adult male. In the protectorate, Belgium, Finland, the Netherlands, and Norway, rations represent between 2,500 and 2,800 calories per adult male, which in most areas is lower than before the war; the national averages, however, cannot (on the basis of official rations) be considered critically short, though more or less severe shortages occur among special consumer groups. In the Baltic states, Slovakia, France, and Italy, rations represent between 2,400 and 1,500 calories. Both physiological needs and peacetime consumption were far from identical in these countries, but rationing is drastic in all cases. The average rations are too low to permit of full working efficiency and optimum health.

"In Poland, Greece, parts of Yugoslavia, and by all indications occupied Russia, rations in 1942 were so low that actual famine was frequent. In 1943 the situation in these areas, except possibly occupied Russia for which information is lacking, conditions have recently improved. Still, levels of consumption are so low that many people, particularly in the towns, would appear to live in a state of semistarvation" (pp. 52-53).

In the spring of 1944 average weekly food rations were those set forth in table V.

STATEMENTS ON INDIVIDUAL COUNTRIES

GERMANY

Prewar government control over consumption of specific commodities was prompted by the policy of self-sufficiency. Measures took the form of prescriptions on the use of specific raw materials and substitutes, propaganda and price controls. There were no great scarcities. Up to the outbreak of war good-quality consumer goods were, with few exceptions, freely available at controlled prices for everyone who could afford them.

The day war broke out the situation changed radically. Food and soap were rationed immediately; textiles, footwear, and fuel shortly thereafter; 1942 marked a new stage in German rationing. There was marked deterioration in the supply of consumer goods and services to civilians. Production was slowed up and valuable stocks destroyed by the air war. The wholesale destruction of dwellings vastly increased the demand for household furniture, clothing, and textiles.

Of all consumer goods food rations were most stable—on the whole the food ration at the beginning of the fifth year of war did not compare too badly with those at the end of 1939.

The clothing ration deteriorated constantly. In 1943 the clothing ration for most articles was suspended for all nonpriority adults. There was a similar development in various categories of household goods. With intensified war the sale of household articles to other than air-raid victims and the war-disabled was frequently suspended in the raided districts and cut to a minimum in the rest of the country.

Food

The restrictive effects of rationing of the German diet had not become serious by the end of 1943. The average daily calorie intake had fallen barely 10 percent. A feature that distinguished the German situation from that of the occupied countries was the relatively few occasions on which it was necessary to change the rations because of supply fluctuations. The major reason, of course, for Germany's comparatively good food situation was her policy of raiding the food stores of the occupied countries.

The war years had, however, brought considerable deterioration in the quality of the diet with animal products representing less than one-fifth of total calories. By late 1944 the German food situation began to deteriorate at an accelerated pace. Rations were reduced to a bare minimum for maintenance of health and activity and daily intake was less than 1,900 calories.

Clothing

Clothes rationing, begun a few weeks after the outbreak of hostilities, imposed drastic restrictions and limited clothing purchases well below customary standards. Moreover purchasers frequently found it impossible to purchase the needed garments.

The continually increasing discrepancy between demand and supply led to the suspension of the rationing for all adult nonpriority holders. This suspension was still in force in December 1943. Available evidence indicates a drastic decrease in quality of existent goods by that date. The extreme shortage of leather made special difficulties for footwear. By the end of 1943 one serviceable pair of shoes made it impossible to obtain a permit.

Housing

Germany entered the present war with a serious housing shortage. Since March 1943 there has been a general cessation of new building. Air raids by the end of 1943 had made several millions homeless and compulsory billeting regulations calculated to leave no empty space in the premises were made effective in June 1943.

GREECE

Complete and accurate information as to the standard of living in Greece, both for prewar and war years, is incomplete, either as to the areas covered or the commodities considered, or both, but the following statement includes the most satisfactory figures available at present.

Food

Greece, although essentially an agricultural country, normally imported large quantities of cereals, particularly wheat, in the form of livestock for slaughter; milk products; and all its sugar supply. Right from the beginning of this war, as soon as Greece was cut off from outside sources, the food situation started deteriorating, climaxing in the year 1941-42, during which starvation was spread all over the country. The prewar estimated average consumption of foodstuffs for the period of 5 years, 1933-37, is computed as 403 kilograms per capita with a caloric content of 2,433. Half of the caloric content was derived from grains, showing a poorly balanced diet.

No country in Europe has suffered more from a shortage of foodstuffs during the years of occupation than Greece. The importation and distribution of grain through the Joint Relief Commission beginning in 1942 improved food conditions somewhat in the Athens-Piraeus area, but not to any appreciable extent in other parts of the country. Ration allowances of bread and other essential foodstuffs through the JRC were very low and even the meager quantity allowed was often unobtainable for weeks at a time. The black market with its prohibitive prices could replenish the low ration allowance only for an extremely low percentage of the population. A satisfactory determination of the standard of living during the period of enemy occupation is not possible because, except for the ration allowance of foodstuffs, other essentials of life could only be obtained at varying black market prices, and some of them like clothing and footwear were entirely unobtainable.

Cost of living

It is estimated that according to Greek standards in the year 1938 the minimum cost of living in Greece was approximately 11,000 drachmae, or \$73, per capita annually (National Bank of Greece Year Book for 1939). For a family of four the average earnings were sufficient to cover this cost for each member. This cost of living was based on the expenditure needs of a small urban family. It represents a level of living inferior to the internationally agreed upon standard of minimum subsistence.

After liberation the Bank of Greece in April 1945, made a study of the cost of living in Athens for a "minimum subsistence" and a "bare subsistence" and of the percentages of these subsistence levels obtainable with the income of civil servants and wage earners. The analysis was made to show the monthly costs for a family of two and a family of four at each of the levels. No effort was made to ascertain the availability of supplies of all commodities included, nor was the study based upon an examination of existing consumption patterns. However, as their designations imply, they are assumptions of minimum and bare needs and as such

are reasonable. According to the bank's analysis a family of two at the "minimum" level requires an income of 15,497 drachmae, or \$103, per month and a family of four requires 21,463 drachmae, or \$143, per month.

To purchase the "bare subsistence" commodities a family of two requires an income of 10,061 drachmae per month, whereas a family of four must have 14,240 drachmae per month.

According to the scales of earnings prevailing in Athens now, the following table shows the percentage of the two indexes which wage and salary earners are able to obtain:

	Percentage of minimum subsistence commodities which can be purchased according to extremes (lowest and highest) of incomes	Percentage of bare subsistence commodities which can be purchased according to extremes (lowest and highest) of incomes
2-PERSONS FAMILY		
	<i>Percent</i>	<i>Percent</i>
Civil servant.....	31.1 to 59.4.....	55.7 to 91.4.....
Employee.....	37.4 to 64.5.....	57.6 to 99.4.....
4-PERSONS FAMILY		
Civil servant.....	31.7 to 48.5.....	47.8 to 73.....
Employee.....	32.6 to 52.2.....	49.2 to 78.7.....

It must be noted that the day laborers who do not work a full month are not able to provide their families with the insufficient percentages shown above. Moreover, it must further be noted that prices are highly unstable and are advancing so that the condition shown may grow progressively worse. This is especially true for the month of May 1945, during which the previously existing inflationary trend took a sharp upward movement, causing the disappearance of many essential commodities from the market. Black-market commodity prices during this period were absolutely out of reach for 99 percent of the population. It required a half a year's earnings of a full-time employed laborer to purchase a pair of shoes and an equally fantastic amount of currency to purchase clothing. Obviously, pensioners and indigents who are extremely numerous, though not specifically identified as a class, are faced with grave want.

Conditions in the rocky islands of the Aegean, including Dodecanese, were even worse. In Piraeus, the main port of Greece, which has been the favorite air-raid target of the German and Allied air fleets, as well, a drive for the collection of money and clothing was launched.

Shelter

The shelter condition in Greece presents another acute problem for solution. One thousand four hundred villages have been destroyed or bombed throughout the mountainous and remote regions of Greece as a result of German reprisals. There was heavy destruction in the dwellings of the suburban areas of Athens and Piraeus during the December-January civil conflict. As a result, it is estimated that close to a million people have been rendered homeless.

Health

The unprecedented number of people stricken with malaria and tuberculosis in Greece represents a major problem in any program of relief and rehabilitation. Local investigations have revealed that in some areas approximately 70 percent of the population suffers from malaria. In other areas approximately 60 percent are tubercular.

YUGOSLAVIA

Food

Prewar conditions.—The diet in Yugoslavia before the war was unbalanced and unsatisfactory with about 80 percent of all caloric intake derived from cereals, more than half of which was corn. Although the average caloric intake was very high, the diet was poor. One half of all peasant households, because of small farms and their low productivity, were not able to produce enough

food for themselves. Members of such households had to look for seasonal and other work off of their farms. Thus, considerable areas were called "passive." Since employment opportunities were scarce, food consumption in the closing months of the crop year often bordered on starvation in many areas. Actually the rural population in "passive regions" had to be supplied by the government with relief shipments of cereals.

On the other hand the northeastern parts of Yugoslavia had a considerable surplus of cereals, meat, fats, and eggs, and the country regularly exported quantities of these products. These exports, however, were not an expression of real surpluses of food above and beyond the actual needs of the country, but of the low purchasing power of the broad strata of the people of Yugoslavia. It is with good reason that these exports were referred to as "hunger exports."

Wartime developments.—With the occupation and dismemberment of Yugoslavia in 1941 Germany took over the food-surplus areas in the north and utilized the surpluses. In other areas, reduced seeding, reduced numbers of livestock, lack of seed, fertilizers and implements and the steady guerrilla fighting combined with scorching reduced the available food supplies to a point where malnutrition and near starvation were prevalent in many areas. The rationing system in the cities—none was in existence for rural areas—was only nominal with only periodical distribution of food. The black market, based on barter, was the prevailing system of food provisioning.

Starvation of hundreds of people occurred after the liberation of the Dalmatian coast in November and December 1944. Even at the conclusion of hostilities there existed some surplus cereals in the original surplus areas but due to lack of transportation they could not be moved. Reports indicate that prices differ within areas of less than 50 miles in the relation of 10 to 1. At the close of hostilities in the northern parts of Yugoslavia in May 1945 urban people had a starvation ration of 35 to 40 grammes of bread daily. Airborne supplies were necessary to prevent large-scale starvation.

Clothing

A large proportion of peasants wore home produced garments and sandals, but on the whole the clothing standards were very low. Before the war Yugoslavia consumed about 50,000 tons of textiles and textile raw materials, of which more than 40,000 tons were imported.

There was no import of textiles or shoes through the 4 years of war and the Allied sources estimated the deficiency in clothing as of October 1944 at 70 percent.

Housing

Both rural and urban housing in Yugoslavia was poor before the war. Thus for example in the prewar province of Drina the rural population of 1,250,000 had in all 106,000 beds at their disposal. In Belgrade more than half of the people suffering from tuberculosis slept not only in the same room, but in the same bed with other people.

It is estimated that approximately one-seventh of all families in Yugoslavia have had their houses destroyed or badly damaged. In fact, certain areas which changed hands dozens of times and in which the Germans pursued a policy of scorching, are completely obliterated.

Health

Although Yugoslavia had before the war some of the most advanced public health legislation in the world, lack of physicians, medical facilities, etc., in addition to other factors, were responsible for a very poor state of health of the population. Bad nutrition was perhaps one of the worst reasons for it, but bad housing, bad clothing, and general backwardness were the basic contributing factors. Infant mortality was one of the highest in Europe (about 145 in 1938). Malaria, tuberculosis, and other diseases were widespread.

Because of conditions prevailing during the war there has been serious deterioration in the level of health and it may take years before even the low prewar standards are reached.

ITALY

Food

From reports received from the field it is apparent that until recently the food situation in urban centers of liberated Italy was worse than it had been under Axis rule.

Conditions in Rome may be considered to a certain extent typical of that prevailing in other large urban centers of southern and central Italy. In considering this information, however, it should be remembered that it does not give a

complete picture of the food situation in Italy since a large section of the Italian population, especially in the south and in the center, is employed in farming, and the food situation for the farmers has not changed very substantially during the last 2 years.

Official reports indicate that Nazi-Fascist distribution of basic foodstuffs in Italy, including Rome, in June 1943 corresponded on the average to 916 calories per day. This figure includes all foodstuffs rationed on a nation-wide scale, i. e., bread, alimentary paste or rice, edible fats and sugar. The officially rationed foodstuffs distributed in Rome after liberation corresponded to the following daily calorie value:

July 1944	645	December 1944	791
August 1944	792	January 1945	707
September 1944	817	February 1945	780
October 1944	793	March 1945	815
November 1944	717	April 1945	951

As this table shows, there has been some improvement in the food distribution since liberation, yet the amounts distributed at fixed prices under the official rationing system are even now less than one-half the calories regarded as the minimum normal daily calorie intake for an average adult.

The main reasons for the decreased distribution of essential foodstuffs made after the liberation were:

1. The almost complete disruption of the country's transportation system;
2. The smaller amount of available supplies because of decreased local production; and
3. The deterioration of distribution controls due mostly to fear of further depreciation of the country's currency and the consequent hoarding of foodstuffs by the farmers.

The difference between the calories obtainable through rationed commodities distributed at fixed prices and the minimum necessary for subsistence must be acquired by the average Italian in the open (black) market. Black-market prices prevailing in Rome under Allied rule show a marked increase over those prevailing in that city under Nazi-Fascist occupation. This was obviously a consequence of the scarcity of available foodstuffs for the reasons given above and of the inflationary process rampant in liberated Italy.

In evaluating the consequences of the rise in prices during the period under consideration it should be remembered that rigidly controlled salaries and wages increased at a much slower rate than free market prices, thus making the situation of the civilian population in Italian urban centers even more difficult.

A comparison of black market prices in the city of Rome prevailing in September 1943 (about 9 months before the city's liberation), in November 1944 and in April 1945 is given below:

Price in lire

Commodity	Unit	September 1943	November 1944	April 1945
Bread	Kilogram	20	85	95
Wheat flour	do	35	100	125
Rice	do	35	280	(?)
Potatoes	do	7	45	44
Beef	do	67	390	850
Olive oil	Liter	180	485	417
Butter	Kilogram	125	800	925
Sugar	do	42	630	1,250
Eggs	Each	6	35	23
Milk	Liter	5	55	70

Rationed foodstuffs distributed in Rome to normal consumers since liberation and their caloric values by whole calendar months were as follows:

Items	July 1944		January 1945		April 1945	
	Kilograms	Calories	Kilograms	Calories	Kilograms	Calories
Bread.....	6.200	17,143	6.200	17,143	6.000	16,590
Meat.....	.185	719	.100	193		
Pasta.....			.600	2,092	1.510	5,265
Flour.....					.800	3,197
Oil.....	.050	446	.240	2,140	.277	2,470
Cheese.....	.012	46				
Fish.....	.100	156				
Wine (liters).....			.375	23	9.556	588
Vegetables.....	.200	606	.100	191	.100	66
Sugar.....	.100	656	.029	119	.090	309
Average daily calories.....		645		707		951

Clothing

Although there was a pronounced shortage of textiles in Italy during the war, Italy's needs were somewhat less acute than those in other Axis-controlled territories. With the outbreak of war, Italy lost more than 90 percent of her cotton supply; her factories, however, were in part converted to the production of synthetic fabrics.

Rationing of clothing in Italy began in November 1941. Points allowed for a year to various groups of persons were as follows:

	Points
Type A cards, adults (aged 15 or over).....	120
Type B cards, boys and girls (aged 5 to 14, inclusive).....	96
Type C cards, small children (aged 1 to 4, inclusive).....	72
Typical values of these points in 1943 were:	
Man's shirt.....	14
Man's suit.....	83
Man's overcoat.....	85
Woman's winter dress.....	44

During the war shoes were particularly scarce and substitutes for leather consisting of special textile uppers with composition soles and heels were widely used.

After liberation the scarcity of clothing and shoes increased materially since such articles are produced mainly in the northern provinces and practically no imports from abroad were possible. The need for clothing in devastated areas was, and still is, particularly acute. To relieve this need, used clothing in considerable quantities is now being imported from the United States. The presence of a very active black market in clothing further emphasizes present civilian shortages.

Housing

Because of shortages of fuel and electric current a series of restrictions were placed on heating and lighting throughout Italy during the war.

During the first months after liberation heating and, in part, lighting, were entirely unavailable because of lack of coal and electricity. Although with the liberation of the north, the lack of electricity has been relieved in part, that of coal continues to be extremely acute, and there is expected to be very little of it available for heating purposes this winter.

Destruction of housing as a result of the war has been heavy in southern and central Italy, although it was concentrated mainly in port and combat areas. In port areas whole city blocks have been wiped out. In Naples, for example, 10 percent of the dwellings are reported to have been completely destroyed; 14 percent heavily damaged; and an additional 43 percent damaged. Destruction has been most serious in combat areas. Cassino is perhaps the best-known example, but there are many other towns which have suffered extremely heavy damage if they happened to fall in areas where protracted fighting took place. As a result of the destruction, the homeless have had to be evacuated to refugee camps or billeted in only partly damaged buildings in the same community.

The problem of relieving these conditions continues to be difficult because of the acute shortage of transportation, materials, and supplies.

CZECHOSLOVAKIA

Food

By the spring of 1942 approximately 97 percent of Czechoslovak food commodities were rationed. Quantities were varied by age, sex, and occupation. The "normal consumer" was permitted 1,685 calories daily; children were allowed less and workers more—resulting in an average per-capita ration of 2,390 calories. By the fall of 1943 the ration for the "normal consumer" was 1,740 calories.

It must be emphasized, however, that these rations indicate a claim to a certain quantity of food and were by no means a guaranteed ration. This is especially true of meats and fats. Indeed, the Czechoslovaks suffered from a serious shortage of protein and calcium foods. Further, staple foods such as bread deteriorated greatly through the use of potato flour and the fat content of milk was reduced one-third.

There was a significant shift in the type of food commodity consumed. The figures below show the percentage change compared to 1929-30 for certain major food items:

	Percent
Bread and flour.....	-20
Potatoes.....	+55
Meat and meat products.....	-52
Fats.....	-39
Eggs.....	-51

The following table shows a detailed break-down of gram allowances for the population in Bohemia and Moravia. Allowances were increased somewhat for those engaged in heavy work. The food situation in agrarian Slovakia was a little better than in Bohemia and Moravia.

Average weekly adult food consumption, 1931-32, and weekly rations for the normal consumer, specified dates, Bohemia-Moravia

[Quantities in grams]

	Average adult weekly consumption, 1931-32		Weekly rations for "normal consumer"			
	Manual worker	Clerical worker	Original ration, Oct. 8, 1939	Dec. 23, 1940-Jan. 19, 1941	Dec. 22, 1941-Jan. 18, 1942	Apr. 13-May 10, 1942
Bread and flour.....	3,475	2,804	2,900	2,250	2,250	2,000
Meat.....	730	968	500	500	400	300
Fats.....	407	421	210	160	169	164
Butter.....	78	171	70	35	40	35
Lard.....	237	175	70	35	20	20
Margarine.....	62	48	70	90	109	109
Milk.....	3.21	3.71	1.751	1.751	1.751	1.751
Eggs (units).....	3.5	5.3	(?)	1	1	1.5
Potatoes.....	2,076	1,513	(1)	(1)	3,000	² 2,500-10,000
Fruit.....	683	1,038	(1)	³ 500	³ 250	⁴ 250
Sugarless jam.....	20	26	(1)	(1)	⁵ 350	⁵ 350
Sugar.....	593	550	400	300	⁵ 300	⁵ 250
Coffee.....	18	25	(6)	(7)	7.5	-----

¹ Unrationed.

² For storing.

³ Apples for children.

⁴ Oranges for children.

⁵ If jam ration is used, the sugar allowance was 75 grams only.

⁶ 20 coffee or 2.5 tea.

⁷ 2.5 tea.

Clothing and footwear

From the earliest days of the Nazi occupation Czechoslovakia experienced a clothing and footwear deficiency. With all the textile, clothing, and footwear factories either dismantled or used solely for war production, the stocks available to civilians were soon exhausted. After 4 years of strict rationing, the validity of all clothing and shoe rations was revoked in the early part of 1943, and sales were formally forbidden. Even repair shops were closed down to free manpower for occupations essential to the German war machine.

Shelter

While no detailed studies are available on Czechoslovak shelter and housing conditions during the war, it is known that large numbers of Czechs were dispossessed from their houses and apartments to make room for evacuees from the old Reich. In order to conserve fuel and manpower during recent winters it was forbidden to heat public buildings, restaurants, hotels, theaters, cinemas, shops, schools, and prisoners' barracks.

Health

As in other countries occupied by the Germans, general health conditions have deteriorated. In particular, dietary deficiencies have contributed to an increased incidence of disease. While there are no statistics available on the mortality rate and the state of health in Czechoslovakia, a clear indication of conditions is given by the fact that the number of tuberculosis patients in one Prague hospital had increased 100 percent 2 years after the occupation. Reliable estimates of the mortality rate from tuberculosis in Prague showed a 5.6 percent increase in 1940, 26.4 percent in 1941, and 35.2 percent in 1942. The deportation of many doctors and dentists and the closing of medical schools for a number of years was an added complication.

FRANCE

Food

Legal rations as compared with Germany, 1943.—The League of Nations publication, Food Rationing and Supply, 1943-44, gives the following figures as of the autumn of 1943:

	Daily calorie intake from—									
	Bread	Cereal	Potatoes	Sugar	Meat	Fat	Milk	Cheese	Eggs	Total
FRANCE										
Normal consumers.....	780	30	100	70	45	65	-----	20	5	1,115
All consumers.....	770	35	100	75	60	95	85	20	5	1,245
GERMANY										
Normal consumers.....	900	75	400	170	95	200	60	25	5	1,930
All consumers.....	958	80	400	175	117	235	115	25	5	2,110

NOTE.—Normal consumers are adults over 21 and under 70 not engaged in heavy work.

Average consumption in 1943-44.—Estimated average consumption in 1943-44 compared with prewar consumption was as follows:

Commodities	Kilograms per head per year		
	Prewar	1943-44	1943-44 percent of prewar
Flour and meal.....	115.0	127.0	110
Potatoes.....	167.0	147.0	88
Sugar (refined).....	22.0	10.6	48
Meat and offals.....	48.0	24.0	50
Fats and oils (fat content).....	12.2	5.8	48
Liquid milk:			
Whole.....	103.0	64.0	62
Skim.....	(?)	20.0	(?)
Cheese.....	5.4	2.7	50
Eggs.....	9.6	5.0	52
Fruits.....	34.0	12.5	37
Vegetables (including tomatoes).....	55.0	37.0	67
Wine.....	180.0	75.0	42

Nutrients in the food consumed.—Generally speaking the farm population has been far better fed than the urban because they are not dependent upon the rationed supplies. It is estimated that in 1943-44 approximately 16 percent of the bread grain, 60 percent of the whole milk, 60 percent of the fats, and 30 percent of the meats consumed by the farm population came from off the ration.

The following table shows the nutrients in prewar food consumption and those in 1943-44. It is evident that the nonfarm population fared far worse than the farm.

Nutrient	Prewar total population	Nutrients per head per day, 1943-44		
		Total population	Farm population	Nonfarm population
Calories	2,970	2,230	2,820	1,900
Proteins (grams)	81	69	89	58
Animal	34	30	27	17
Vegetal	47	49	52	41
Fats (grams)	80	41	50	36
Carbohydrates (grams)	380	360	450	310

Recent situation.—The rations in the summer of 1944 and for February and March, 1945 were as follows:

	Summer 1944	February-March 1945
Bread (grams daily)	300	350
Cheese (grams weekly)	50	20
Meat (grams weekly)	180	150-250
Fats (grams monthly)	135-180	150-250
Sugar (grams monthly)	500	500

It was not possible to provide even these rations in all areas. For example, in Paris only 100 grams of the monthly ration of fats was distributed in February.

According to a reliable source, official food rations during the past winter amounted to 1,255 calories while the total obtainable food was slightly short of 2,000 calories. Legal rations in Paris were as follows:

	Calories
October 1944	1,650
November	1,280
December	1,320
January 1945	1,240

The situation in midspring 1945.—Meat: Livestock numbers have fallen sharply during the war, especially during the last 12 months, owing to various factors but in particular to German requisitions. In contrast with an annual prewar production of 1,465,000 tons of meat, there has been a loss of nearly 300,000 tons. Cattle feed supplies fell from 5,410,000,000 units in 1938 to 3,882,000,000 in 1942 and 2,580,000,000 in 1945. The present meat ration of 150 to 250 grams a week could not be supplied for periods of several weeks in many cases, and in some places there has been no meat at all.

Fats: Excess slaughter of cattle, and of cows in particular, cut milk yields and produced a decline in butter production. Before the war the average per capita consumption of edible fats and oils in France was at least 13 kilograms yearly, of which more than half was provided by imports. Current production may provide no more than a ration of 200 grams (7 ounces) a month for ordinary consumers. In southern France (Montpellier) the fat ration has been about 160 grams (5½ ounces) monthly. No butter was distributed in Paris in January.

Milk: The present milk ration is only three-fourths of a liter per day for children up to 6 years, pregnant women, and persons on special diets. Owing to transportation inadequacies, the difficulties of distribution are considerable, and are further aggravated by the lack of milk cans, containers, etc. In many cases it is impossible to supply this restricted ration.

Sugar: The beet crop could not be fully processed owing to lack of coal for the factories, the coal available being reserved for immediate needs.

Clothing and footwear

In 1938 France utilized 500,000 metric tons of textile raw materials, of which 90 percent were imported. About 270,000 tons were absorbed by the clothing industry.

In 1942 the tonnage of textile materials allocated to the French civilian clothing industry by the Germans was only 35,000 tons (about 13 percent of 1938); it was 28,000 tons in 1943 and it would have been 27,000 tons in 1944.

A table of the different quantities produced in 1938, 1943, and 1944 follows:

	In units			Percent- age, 1944 of 1938
	1938	1943	1944	
Tailor-made men's clothes.....	3,200,000	2,800,000	1,700,000	22
Tailor-made women's clothes.....	7,000,000	3,072,000	768,000	11
Tailor-made men's linen.....	2,500,000	800,000	200,000	8
Tailor-made women's linen.....	1,600,000	600,000	150,000	9
Ready-to-wear men's clothes.....	8,600,000	4,000,000	994,000	11
Ready-to-wear women's overcoats.....	3,000,000	373,000	125,000	4
Ready-to-wear women's linen.....	20,000,000	4,000,000	2,500,000	12
Ready-to-wear men's linen.....	55,000,000	11,000,000	3,500,000	6

¹ Approximately.

During the winter of 1945, and aside from top priorities factories working for the military, it could be said that the French clothing industry was practically at a standstill.

During the period of German occupation, the leather stocks of France were ruthlessly exhausted by the occupying powers. It is said that the manufacture of 9,000,000 pairs of leather shoes per annum, providing one pair every 4 years for each Frenchman, was a maximum that could not be exceeded.

In 1945, the French authorities plan to produce 40,000,000 pairs of shoes, but this is conditioned by the import of 18,000 tons of tanning extracts and of 19,000 tons of sole leather.

Coal rations for private households

During the occupation, the amount of coal allotted to households depended on the number of people living there. For the winter of 1941-42, a family of from one to three received 8 hundredweight of coal, and a further 4 hundredweight for every two additional people. In Paris, the ration was still smaller; a small family got only 4 hundredweight of coal.

Since liberation, the situation has not improved and, in fact, the 1944-45 winter was practically the worst the French population ever suffered.

The present production of coal in France does not exceed two-thirds of the prewar production and the latter did not cover all French needs by twenty to thirty million tons a year.

BELGIUM

Food

Legal rations.—According to the League of Nations' publication *Food Rationing and Supply* the legal rations entitled the Belgian normal consumer to 1,555 calories per head per day in the autumn of 1943. The ration was only 1,355 in April 1942.

Estimates of total consumption.—Estimates of the average consumption of principal foodstuffs for the total population during the prewar period and 1943-44 follow:

Commodities	Kilograms per head per year		
	Prewar	1943-44	1943-44 as percent of prewar
Flour and meal.....	118.0	98.0	83
Potatoes.....	168.0	205.0	122
Sugar (refined).....	28.0	24.0	86
Meat and offals.....	44.0	21.0	48
Fats and oils (pure fat content).....	16.7	6.0	36
Liquid milk, whole.....	78.0	18.0	23
Eggs.....	10.2	1.2	12
Cheese.....	3.3	2.5	76
Vegetables.....	41.0	60.0	146
Fruits.....	25.0	24.0	96

Nutrients in the food consumed.—Of course, there were sharp differences between the consumption among farmers and nonfarmers. The following table gives the quantities of nutrients contained in food supplies consumed per head per day.

Nutrient	1943-44			
	Prewar total population	Total population	Farm population	Nonfarm population
Calories.....	2,900	2,020	2,870	1,850
Proteins (grams).....	75	58	88	52
Animal.....	28	18	31	15
Vegetable.....	47	40	57	37
Fats (grams).....	91	38	62	33
Carbohydrates (grams).....	400	360	490	330

The present situation.—The food situation in Belgium is still fairly bad. A comparison between the daily legal rations of normal consumers early in 1944 and early in 1945 follows:

[In grams]

	Dec. 12, 1943-Jan. 21, 1944	Dec. 17, 1944-Jan. 16, 1945		Dec. 12, 1943-Jan. 21, 1944	Dec. 17, 1944-Jan. 16, 1945
Bread.....	300.0	350.0	Cheese.....	6.6
Meat.....	20.0	35.0	Potatoes.....	500.0	500.0
Margarine.....	6.6	13.3	Pulses.....	8.3	4.2
Butter.....	8.3	3.3	Jams, jellies.....	20.0	30.0
Sugar.....	33.3	33.3	Oatmeal.....	8.3

These rations represented 1,462 calories in the early period and 1,595 in the later.

All rations are not met in full; the deficit has been most marked in butter and to a lesser extent in margarine. Black market operations are still flourishing.

Clothing and footwear

The clothing situation in Belgium during the war was probably no better than that in France. According to a report of October 1943, the Belgians were at that time in immediate need of 1,200,000 complete outfits, one-third for men, one-third for women, and one-third for children.

As of October 1943, one pair of shoes per hundred inhabitants was released for children under 16. No one over that age was allowed to buy shoes.

Coal rations for private households

Coal rations for Belgium were 220 pounds for the February-March period in 1943 for a household of one to four persons. Every additional four persons was allotted 110 pounds. During the winter of 1942-43, families of two or more persons to whom gas was not available were supposed to receive a special ration of 275 pounds of coal for kitchen use. There were reportedly extra rations for sick people and prospective mothers but these were hard to obtain. The situation with regard to firewood was equally difficult and other means of heating were not effective. Gas pressure was generally low. Electric heaters were expensive and of poor quality. Heating systems using benzine, alcohol, or gasoline were useless because fuel was unobtainable.

LUXEMBURG

Food

Before the liberation, Luxemburg was submitted to the same system of rationing as in use in the Reich itself; the legal rations were therefore those of Germany, i. e., much higher than in France, Belgium, or Holland. The daily average for the farm population in 1943-44 was around 3,200 calories and for the nonfarm population around 2,250 calories.

The legal rations since liberation according to a speech by the Minister of Supply of the Luxemburg Cabinet on May 17, 1945, are as follows: September 1944, 1,750 calories; December 1944, January 1945, and February, 1,350 calories; March, 1,440 calories; April, 1,540 calories; May, 1,830 calories.

Heavy workers received an average of 500 more calories per day per head.

NORWAY, THE NETHERLANDS, DENMARK

The food situation in 1943-44

The League of Nations' study on Food and Rationing, 1943-44, gives detailed break-downs of ration allotments for various countries including Norway, Denmark, and the Netherlands. Among other data there is included a comparative estimate of workers' diets in percentages of prewar consumption standards which gives these figures for the families of very heavy workers: Norway, approximately 88 percent; Netherlands, approximately 93 percent; Denmark, approximately 100 percent; Germany, approximately 115 percent.

In summarizing its classifications this report states that as of 1943 the theoretical calorie intake appeared to be up to prewar levels in Denmark, Germany, Bulgaria, Rumania, and Hungary. In most cases the intake was high enough to meet the accepted requirements of 3,000 calories a day per adult male. The Netherlands and Norway were grouped in a second category whose rations reached between 2,500 and 2,800 calories per adult male, figures which, in most areas, were lower than before the war. On the basis of the authorized rations it is stated that the levels of the national averages could not be considered critical though more or less severe shortages occurred among special consumer groups.

Another report on the food situation in European countries gives these estimates of quantities of nutrient content in food supplies consumed per head per day in terms of calories:

	Prewar	1943-44
Norway.....	2,800	2,310
Denmark.....	3,250	3,020
Netherlands.....		2,160

Recent conditions

Denmark.—In 1944 the prospects were that indigenous food supplies in 1944-45 would be slightly in excess of those in the previous year. Certain surpluses were built up or maintained to the end of the war. In the weeks following liberation several installments of food, particularly butter and pork, were sent to nearby countries such as Norway and the Netherlands.

Norway.—The 1944 harvest in Norway was unexpectedly low in the staple crop of potatoes. Early reports of the fish catch for the season of 1945 indicate that the yield is large in most varieties of fish.

The Netherlands.—The circumstances accompanying liberation in the Netherlands, resulting in a division between the liberated area and the occupied region, aggravated the food problem in the western half of the occupied region with heavy urban centers during the winter of 1944-45. In some instances near-famine conditions prevailed. In order to alleviate the worst shortages special measures were taken by the Allies just before and just after liberation. For example, the Allied Air Forces flew in special consignments of food to be dropped from planes and provisions were made for supplying intravenous feeding in some of the worst cases of malnutrition. Recent reports suggest that sufficient supplies have been brought into the earlier liberated area to bring the average consumption up to 2,000 calories per day.

Clothing

Denmark.—The war cut Denmark off from her normal sources of textile raw materials and finished products and forced her to rely on domestic production and raw materials and upon substitutes. In order to supplement available supplies of wool use was made of rabbit wool, cow hair, and horse hair. No cotton was available but a substitute known as Cotonin was produced by a special process from flax and hemp tow. This fiber when mixed with rayon staple fiber (cellwool) was woven into material suitable for workmen's clothing. The general leather shortage affected the shoe supply situation in Denmark less than it did in most countries. It appears that Germany made little attempt to deprive Denmark of her hides, leather, or leather manufactures. However, leather production for a time was down to only 60 percent of the prewar level. The deficiency of various kinds of leather led to the manufacture of wooden-soled footwear and to the tanning of fish skins.

Norway.—The supply of textiles was affected during wartime by shortages of raw materials, particularly cotton, and the resulting failure to replace garments

as they wore out. German requisitions aggravated the shortages in some notable cases such as the rather thorough going requests for certain types of sports clothing and for woolen blankets. Some idea of current needs may be gathered from a reference to the imports in a representative prewar year (1938):

	Tons		Tons
Wool-----	758	Cotton yarn-----	3, 656
Wool waste-----	138	Linen and hemp yarn-----	1, 057
Raw cotton-----	324	Artificial silk yarn-----	356
Cotton waste-----	982	Pure silk cloth-----	167
Hemp-----	3, 225	Cotton piece goods-----	4, 788
Jute-----	1, 136	Woolen piece goods-----	1, 962
Woolen yarn-----	1, 372		

The Netherlands.—The clothing shortage was felt early in the war. The Germans from the outset requisitioned all raw materials stored in clothing factories, and in August 1940 instituted clothes rationing on a level insufficient to meet elementary needs. Further restrictions were added from time to time and new requisitions of textiles were called for in December 1944. To make matters worse, Germans used part of the clothing industry which might have been producing for local consumption on orders for the armed forces. Requests by the Netherlands authorities have been particularly heavy for permission to make purchases of grey cotton cloth, woolen yarns, ready-made garments for both men and women, industrial clothing and household textiles.

Shelter

Denmark.—Denmark suffered, on the whole, much less destruction by bombing than did most German-occupied territories. There was a severe shortage of housing facilities, however, during the war due mainly to the influx of German officials and German workers and to forced evacuations from fortified areas. Some deterioration took place and repairs lagged but relatively the situation was better than might be expected in an occupied country.

Norway.—The German occupation severely aggravated the housing problem not only through the overcrowding brought about by the heavy influx of German military and civilians but also by the outright destruction of buildings. A careful estimate of the number of dwellings and apartment buildings destroyed during the hostilities in 1940 places the figure at 7,500. In the autumn of 1940 some 30,000 persons were still reported homeless in the northern part of the country. By 1943 less than 2,000 houses, or roughly 20 percent of the 7,500 homes estimated destroyed had been rebuilt. From time to time there was new destruction as a result of commando raids along the coast. In the autumn of 1944 the Germans resorted to widespread destruction on a major scale in the northern province of Finnmark, in conjunction with a scorched-earth policy. A fairly reliable estimate contended that one-fourth of the buildings in the Province may have been destroyed, or roughly an equivalent of 2,500 dwellings. At the time of liberation, therefore, the shortage of housing may have been somewhere in the neighborhood of the initial figure of destruction in 1940, namely 7,500 buildings.

The Netherlands.—Considerable damage was caused during the initial German invasion to housing facilities, while Allied bombings from time to time helped to aggravate the shortage. It was estimated at the beginning of 1943 that 13,000 families were still "doubled up" in Rotterdam as a result of the German bombing in 1940. Many dwellings along the coast were destroyed or made uninhabitable by the Germans in connection with their fortification plans.

POLAND

Food situation

The food situation in Poland has been among the worst in Europe. In large cities like Warsaw and Lodz, thousands died of starvation. The frightful shortage of food could not attributed only to a decline in agricultural production. In 1942 the Germans exported from territory that comprised approximately 50 percent of Poland, more than twice the amount of rye, wheat, flour, and bran formerly exported from all of Poland. Eighty percent of the 1942 harvest was confiscated by Germany. A German report for November 1942 (Report of the Bureau of Agriculture and Alimentation of the Warsaw District) discloses that in October 1942 the "normal consumer" was receiving 75 grams of meat per week. Beginning in March 1941 the Polish population was not permitted to obtain wheat flour, fruit, poultry, onions, and honey.

There was considerable disparity between official rations and food actually obtainable and fantastic price levels prevailed in the black market. Before liberation, the price index of foodstuffs on the black market was 3,300 for Warsaw. (July 1937=100.)

Health situation

The extremely serious food situation has led to physical exhaustion of the population and to reduced resistance to disease. Health conditions in Poland are among the worst in Europe. By February 1942 there were an estimated 50,000 deaths from typhus. Malnutrition; shortage of hospitals, doctors, medical supplies; break-down of health services; lack of adequate housing facilities in towns ruined by bombardment; lack of fuel for heating; lack of wearing apparel and footwear contributed to the spread of disease. In the first half of 1941, the incidence of tuberculosis in Warsaw was 300 percent of the incidence in the corresponding half of 1940. Rickets, bone diseases, dysentery, and infantile diarrhea prevail.

Clothing situation

Five years of war have completely exhausted prewar stocks of clothes in Poland. The clothing situation has been especially disastrous for children. Before liberation, the only people receiving clothing coupons were those farmers who got them as a premium for supplying food-stocks in excess of their quotas. Neither the peasant, the worker, nor the office employee had the right to purchase footwear, underwear, nor any other clothing at normal prices.

On December 31, 1935, there were 1,870,000 spindles and 47,000 looms in the cotton industry in Poland; in addition there were 799,000 spindles and 14,000 looms in the woolen industry; 36,500 spindles and 1,700 looms in the linen industry, and additional ones producing jute and silk. In 1938 Poland exported textiles to the value of 59 million zlotys, and yet the clothing shortage occurred because all manufacturing was exclusively for the Germans.

There were over 525,000 children in Poland in 1943 who were in desperate need of clothing.

Housing situation

There are no over-all statistics available on the devastation of the cities and villages of Poland. All available information indicates however that the housing situation in urban communities in Poland is very serious. Sixty-one Polish towns were bombed within the first few hours of the German invasion. It is estimated that in Warsaw 85 percent of the houses on the left bank of the Vistula have been destroyed and 25 percent of the houses in Praga, a suburb of Warsaw, have been destroyed. In round figures, this means the loss of 525,000 habitable rooms out of a total of about 600,000. According to the calculations of the Provisional Government of the Polish Republic, the following materials will have to be used during the next 10 months in the reconstruction of Warsaw: 40,000,000 bricks, 60,000 cubic meters of sand, 20,000 tons of cement, 30,000 tons of lime, 373,000 square meters of glass, 610,000 square meters of bituminous paper, 200,000 square meters of tarred paper, 25,000 cubic meters of timber for building, 10,000 cubic meters of joiners' timber, and 8,000 tons of steel fittings. While some of the big Polish cities were captured intact, due to the hasty retreat of the Germans, others are in the same condition as Warsaw. The situation in rural communities is better than in the cities. Nevertheless, in 1942 alone, 348 villages were burned to the ground, 1,800 villages were evacuated, and all of their inhabitants either killed or deported.

LETTER OF TRANSMITTAL

WAR DEPARTMENT,
CIVIL AFFAIRS DIVISION,
Washington, October 26, 1945.

HON. HARLEY M. KILGORE,
*Chairman, Subcommittee on War Mobilization,
United States Senate, Washington, D. C.*

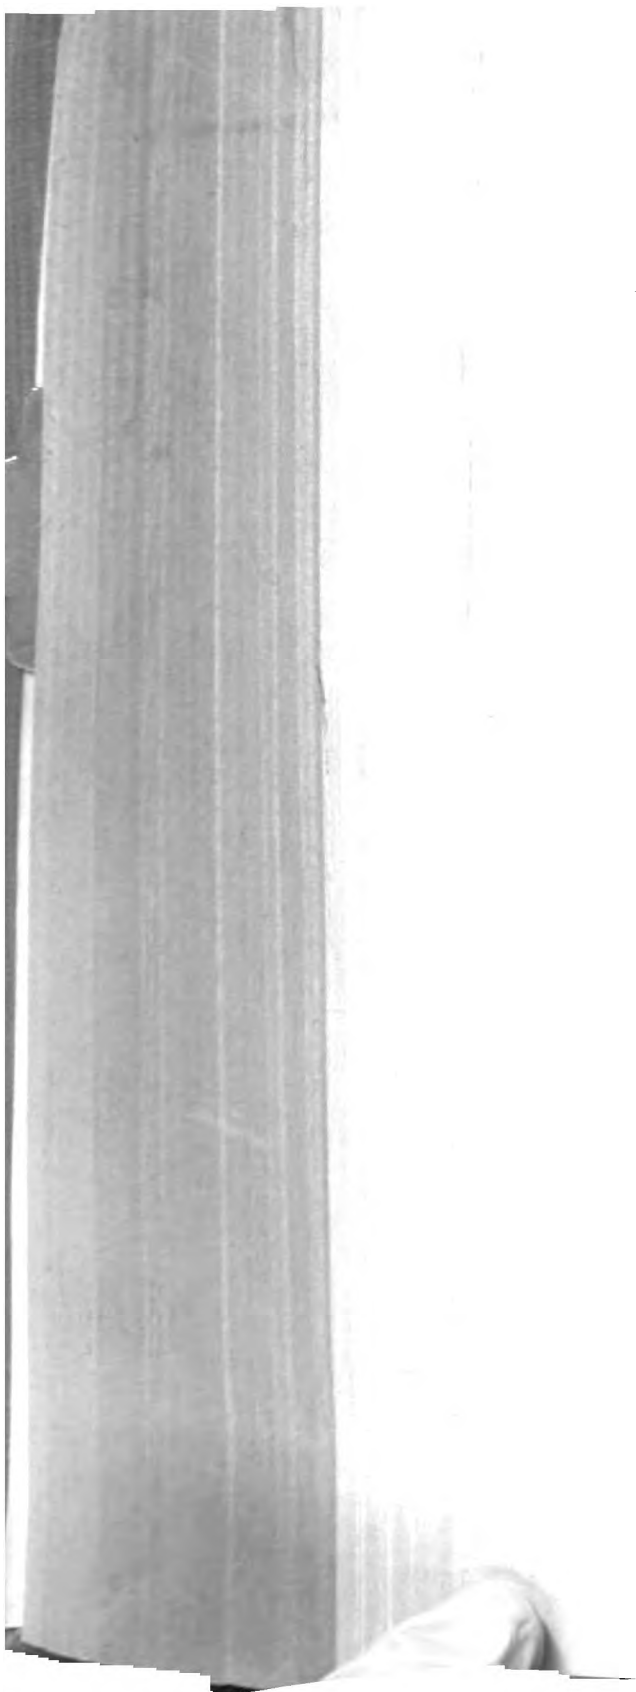

DEAR SENATOR KILGORE: Your letter dated October 24, 1945, requesting copies of correspondence between Puhl and Funk, of the Reichsbank, was received today.

There are four letters in the group bearing dates of March 19, 23, and 30 and April 6, 1945, copies of which have been delivered to you. The letters are not classified, and consequently you are free to make such use of them as may be desired.

Sincerely,

J. H. HILLDRING,
*Major General,
Director, Civil Affairs Division.*

III

INTRODUCTION

The letters printed in translation below, written from Switzerland by Emil Puhl, former vice president of the Reichsbank, to Walther Funk, former president of the Reichsbank and Minister of Economics for the Reich, were recently uncovered by United States investigators searching the records of German industrial and financial institutions. They describe the manner in which the Germans, when defeat was imminent, were able to use neutral countries to build up a network of economic and political reserves for future aggression. These letters, submitted by the War Department at the request of the subcommittee, supplement the evidence presented at subcommittee hearings on the war-making techniques and resources which still remain at Germany's disposal.

As indicated in the testimony of the State Department before this subcommittee, in the course of the war representatives of the United States, Great Britain, and France approached neutral governments and requested that they uncover and immobilize German assets subject to their jurisdiction and prohibit transactions involving such assets. The purpose of these requests was to cut off Germany's economic reserves in neutral countries and to destroy the base for further German aggression. It was recognized by all that if these requests were effectively carried out it would be a serious blow to Germany's war effort and to Nazi plans for another war.

In the early part of 1945 representatives of the three Governments sent a delegation, headed by Mr. Lauchlin Currie as the personal representative of the President of the United States, to negotiate with the Swiss Government. This so-called Currie Mission was considered successful in obtaining an agreement by the Government of Switzerland to take all necessary measures for uncovering and completely immobilizing German assets subject to its jurisdiction. Shortly after the Currie Mission left Switzerland, Emil Puhl, a leading Nazi banker, visited Switzerland and entered into negotiations with Swiss officials with a view to counteracting the effect of the Currie Mission. His progress in negating the Allied efforts is reported in these letters to Funk, who has been indicted as a war criminal. Puhl's repeated emphasis on future Swiss-German relationships shows how Nazi financiers hoped to save themselves from the consequences of military defeat and resume their activities on an international scale after the war was over. Puhl expressed satisfaction with his achievements in his final letter, written April 6, 1945, when the Allied armies were overrunning Germany:

The result of my drawn-out endeavors can be summarized in stating that it is quite a considerable achievement which is thought to be impossible by many sides that under the present general, political and military conditions we have come to a written agreement with a Swiss institution. Every day, I could almost say every hour, I was able to convince myself of how many German-Swiss connections exist which will not stop now after it has been possible to find a basis for the continuation of certain payments.

* * * * *

The basic importance of the concluded agreement lies in the fact that the absolute stopping of payments between Germany and Switzerland which our opponents tried to obtain did not materialize and that payments within the framework of justified German-Swiss relations can be continued. I myself have wondered whether there was any sense to continue with the discussions. For us to break off the negotiations would have been a cheap success for our opponents. Our Legation was very much of the same opinion. The fact that also President Weber [of the Swiss Nationalbank] repeatedly and strongly advised me to continue in my endeavors made a forceful impression. He pointed out that under the given present day conditions an agreement between the Nationalbank and the Reichbank would be of far reaching importance beyond the present day. I was glad to hear about the respect in which our institution and signature is held in the world.

All in all I believe that we can be satisfied that we succeeded in obtaining the above described arrangements for German-Swiss payments. Whatever form events will take, such connections will always exist between our countries, and the fact that there exists a contract agreement may be of considerable importance for the future.

Despite the efforts of the Currie mission and the assurances of the Swiss Government that German accounts would be blocked, the Germans maneuvered themselves back into a position where they could utilize their assets in Switzerland to support their war effort, could acquire desperately needed foreign exchange by the sale of looted gold, and could conceal economic reserves for another war. These moves were made possible by the willingness of Swiss Government and banking officials, in violation of their agreement with the Allied Powers, to make a secret deal with the Nazis. The Puhl-Funk correspondence makes it clear that the principal concern of the Swiss was the prospect of future business dealings with a postwar Germany, irrespective of its political character and its relationships to the peace- and freedom-loving nations of the world.

As indicated in the preliminary report of this subcommittee on eliminating Germany's war potential, neutral governments were integrated into the Nazi plans for global war. The facilities of these governments were used to cloak economic penetration by the Nazis and to assist them in the concealment of their external assets after military defeat. These assets must be seized in order to destroy Germany's economic potential for another war as well as to rehabilitate those countries who were victims of German attack. German reserves in foreign countries are still held inviolate by the protective laws and attitudes of governments with close prewar commercial ties with the Nazis. United Nations collaboration is necessary in order that effective steps may be taken to eliminate economic reserves in neutral countries which are still serving German aggressive aims.

HARLEY M. KILGORE,
Chairman, Subcommittee on War Mobilization.

ELIMINATION OF GERMAN RESOURCES FOR WAR

ADDITIONAL MATERIAL SUBMITTED BY THE WAR DEPARTMENT

Puhl, Vice president.

ZURICH March 19, 1945.

To the President of the German Reichsbank,
Minister of Economics Dr. WALTHER FUNK,
Berlin C III, Reichsbank.

VERY HONORABLE MINISTER OF THE REICH: It has been already a few days since I arrived in Switzerland and it is possible for me to evaluate somewhat the situation. I could say that in general it is much worse than I even imagined in my most pessimistic expectations. By this I don't mean the general situation, which mostly depends on the press. It is a fact that the press is being substantially influenced by the Anglo-Saxons and it does not seem that any changes in this respect are possible. The opinion I heard in responsible circles is for us of much greater importance. It is becoming more and more apparent that the decree of 17-February to block German accounts is of a political character and was given in order to appease the Anglo-Saxons. It is still impossible to find out how fargoing are the concessions made to the Anglo-Saxons. It is the opinion of very pessimistic observers that a registration of German accounts and shares in Switzerland will soon take place. At some later date this will be made available in some way to the enemy. It would be superfluous for me to say what this would mean to our firms which have innumerable connections with the Swiss economy. The fact that the National Bank is unfortunately being more and more eliminated by government agencies made on me the most unpleasant impression. According to the decree of 17 February all payments for Germany are to be made in the National Bank but the permission as to their disposition is being issued by the "verrechnungstelle". This way the National Bank ceased to be independent in that respect. Mr. Weber was apparently attacked very fiercely by his closest colleagues because he gave in in this respect. The fact that the "verrechnungstelle" is a very bureaucratic institution and further that it is going to charge ¼% for granting the permission, which is an exorbitant fee, makes the business trade even much harder. It further even managed to stop the payment of money which was transferred from the Reichsbank for use of our Embassy.

The large number of cables from the Reichsbank on Mr. Hirs' (general director of the National Bank) desk proved to me how fargoing is the stagnation in the German-Swiss payments relations. I was shocked to find out that also the account of the Reichsbank has been blocked. This way Switzerland is trying to use our financial reserves for her own purposes. I found out from the different conversations I held, that there is no doubt that it is the intention of

Switzerland to take away from us the German credits and to charge it against Swiss claims. Among other things I have been informed that payments for German firms will be made at the National Bank in France and this bank would not care how the equivalent in Reichsmarks will be paid to the receiver. I don't have to add that I expressed on this occasion my great surprise about this kind of procedure. Friday and Saturday I had endless discussions with President Weber and General-Director Hirs, but unfortunately so far without any results. A meeting at the local National Bank is scheduled for to-day (Monday 19 March 1945) at 4 o'clock and representatives from Government agencies in Bern will attend this meeting. I am planning to present the following demands:

1. The Reichsbank account at the National Bank should be exempted from the seizure and should be kept as a free account. To support my point of view I shall bring their attention to the fact that in 1931, when Germany introduced her foreign currency policy, the accounts of the note banks were kept free. No blocked accounts ever existed at the Reichsbank as it would happen now with the Reichsbank account at the National Bank. Therefore I shall demand reciprocity.

2. I shall ask for exact regulations, covering the execution of all transactions, so there should be no delay in carrying out payments made and approved. I shall also express our surprise that payments for our Embassy have been denied, which constitutes an unfriendly move of the highest degree towards a friendly power.

3. I shall ask to be put in a position to make gold sales with the purpose to fill up our account at the National Bank, in case it should get exhausted. On this occasion I shall ask the question whether the embargo on gold, which was decided against us, is also being applied in case of other note banks. I shall most strongly protest against the discrimination of Germany and the German Reichsbank. In this respect I heard from Mr. Weber that the Anglo-Saxons agreed that certain payments of ours be made in gold (Embassy expenses, welfare of prisoners of war, affairs of a protective power). Anyway it is my opinion that I should make a general demand for acceptance of gold. Should these demands not be satisfactorily complied with, I shall declare that we will have to take under consideration whether we should continue to keep in force agreements as the Standstill agreements, payments of interest of the Funding Bonds of the Conversion Bank, payments to insurance companies and many more. I will also have to ask to be allowed to pay certain amounts from our accounts in foreign currency and not in Swiss Francs. To this category belong payments to the German Embassy at the Vatican, which we are unable to provide by any other way. Unfortunately I have no illusions about the outcome of the negotiations after the highest authorities have decided to carry on a policy of "boot licking" to the British and Americans. The fear of the Russians must be the main factor responsible for this policy. They are looking towards the Anglo-Saxons for protection. It is further interesting that the public does not know anything about the many strong demands which were made by our opponents from Switzerland in the political and military field. It seems that the American and British delegation made here a more or less good impression. By the way the second gentleman from the American delegation had the good "American" name Schmidt.

I would like you, very honorable Minister, to consider these statements as a private information. When the session is over I shall forward an official report to the Foreign Office by way of the Embassy. I keep here constantly in touch with the Embassy. It is my opinion that it is not the intention of the Swiss to break off relations. However as things stand at present and because of the specific way the Swiss carry on negotiations, whereby every single point has to be clarified, it should be anticipated that unfortunately the negotiations will last for a long time. Therefore I should like to ask you to decide whether I should continue the negotiations until reaching a more or less satisfactory result, or whether they should be interrupted or discontinued.

On my trip I was further very disappointed with my stay in Basle. Mr. Hechler's health condition seems to be much worse than I had anticipated. Though he is back in the bank, his condition is serious. When he saw me off, he could hardly walk up the little ramp at the station. We wish him with all our heart a speedy improvement. Fortunately his new housekeeper is taking good care of him and he would like to thank you once more for your intervention to send this lady to Switzerland. The management of the Bank for International Settlements disappointed me in so far as they asked my approval to postpone this year the publishing of the final financial statement and also the payment of dividends. Since we are the largest stockholder it is natural that this payment is for us of great interest. Though I naturally understand the point of the President of the Bank for International Settlements to strengthen the bank internally at the present time as much as possible, I objected very strongly from the German viewpoint to the idea of not paying the dividends. To-day we really need every single franc and the dividends amount to a few hundred thousand francs. Because of my objection an official questionnaire will be sent to the Presidents of note banks and I think, Mr. President, that you and the two other gentlemen should favor the opinion of paying the dividends. Should we be overruled by the remaining presidents of note banks it cannot be helped, but we should anyway support our point of view.

The management of the Bank for International Settlements received the approval of the American delegation for the trade negotiations, to accept from us gold to cover the interest due from us. Using the slogan of "the stolen Belgium gold" the British and Americans were peddling in an unimaginable way and driving everybody crazy here. The President of the Bank for International Settlements is going to Paris shortly, to pay a formal visit to the new President of the Banque de France on the occasion of the latter's taking over the new office.

Mr. Jakobsen is going to Stockholm via London. He was invited by a national-economic institution in New-York to give there a short lecture on financial problems in Europe. Evidently there is a great interest for economic problems of Central Europe and Mr. Jakobsen is considered to be an expert on these problems. It is interesting that it was mentioned in the invitation that, though it should be a short lecture only, both the travel expenses from Europe to America and back and a four weeks stay in the United States will be paid for. (Mice are caught with bacon).

As significant of the interest of the American delegation towards German affairs one considers here the fact, that they bought tickets for the concert of Furtwangler which was to be held in Zurich, but which due to the stench made on the part of the Socialists did not take place.

Yesterday, Sunday, I visited Mr. von Wedel, who was brought to Samaden by Swiss friends. He is under good care of Prof. Ruppana, a friend of Saurbruch. I have though the impression that his condition is a very serious one. His weight is hardly 100 lb. and I could best describe his condition by quoting a Swiss Lady (of French origin) in whose company he dined "that death was sitting at our table."

Personally, I am suffering a lot because of lack of any news from Germany. May I ask you to authorize Reichsbankdirektor Reinhardt to find some way to transmit to me and Reichsbankdirektor Reinel either by the way of the Bank for International Settlements, the Embassy, or the National Bank any news concerning my family and my home. I hope that you and your wife are all right. My compliments and heartiest regards and

Heil Hitler, yours very obedient,

ZURICH (SWITZERLAND), 23 March 1945.

DR. WALTHER FUNK,
*Reich Minister of Economy and
President, Deutsche Reichsbank,
Berlin C-111.*

DEAR MR. MINISTER: I hope my last report of 19 March has been received by you. In writing my report of today, I feel rather depressed over the course of the present negotiations here in Switzerland although my discussions with the (Swiss) National Bank have finally taken a turn somewhat for the better.

In the meeting of 19 March which I mentioned in my last report, I had an opportunity to discuss the subjects which you had brought to my attention. It seemed that at any rate the National Bank understood our conception of the problem. Likewise the representatives of the Swiss government such as Messrs. Hotz and Homberger showed some appreciation of our position. As regards the gold question however, they emphasized over and over again that they did not desire gold but preferred coal or iron. As a matter of fact, these gentlemen expressed themselves about the Swiss banking system and its role in a way which was not very flattering to their system. Again I had the impression that the banks inclusive of the National Bank are not consulted very frequently at the present time by the government authorities. No discussion at all was made of the fact that in addition to an exchange of commodities there exists banking and payments of actual funds which, of course, constitutes a part of industrial economy and is of benefit to the nation. This observation is extremely strange considering the economic direction of a nation such as Switzerland, i. e. a country which after all has large financial interests and capital investments throughout the world. On the whole the Swiss regard economic relations with us solely as a matter of a bilateral exchange of commodities.

The situation as well as our negotiations are even more complicated by the influence exercised upon purely economic events by the foreign

policy which is becoming increasingly worse. It is obvious that the Anglo-Saxons have led the Swiss to make such far reaching commitments to them as to sacrifice vital Swiss interests in other spheres including all financial and other payments with Germany.

The meetings of the succeeding days progressed insofar as we discussed a payment plan in which was to be applied to the account of the Reichsbank at the National Bank. This fortunate progress was due to no small extent to the efforts of the National Bank. The payment plan was to include also the credits of the Reichsbank in the hands of private loan banks. The plan was to allot certain sums of money to the various phases of financial transactions. The plan was to remain in effect for approximately half a year. This would have enabled us to exercise a free reign within the limits of that sum of money, that is, we would not be subjected to the bureaucratic methods of approval which is customary here as far as the individual payments are concerned.

The plan provided for an allocation of definite amounts covering interests from coal, interest from holding funds, funding bonds, new credits, debits in France, German-Swiss transactions on a small scale, insurance traffic, transfer of financial creditors, that is bond holders, electric power, etc. The sum total of these amounts approximately balanced our credits. For practical purposes a condition thus would have been achieved which would have made it possible to continue payments without letting the economic circles involved feel the existing limitations and approval methods.

Furthermore the Nationalbank declared itself ready to continue accepting gold. We had thought of an amount of approximately 15 million francs. The Swiss did not intend to "buy" this gold from us but to accept it in payment of payments to diplomatic legations, military establishments, interned personnel, and the Red Cross. It goes without saying that this procedure is merely another name for it. Although these negotiations as usual involved considerable "rope pulling" we nevertheless arrived at a fairly reasonable basis of operation.

Yesterday, Thursday, Legation Councillor Kohli, the representative of the political department, suddenly informed me that the Swiss government could not approve this payment plan. The government did not know, he said, whether or not adequate amounts were reserved for the individual allocations, and it was feared that other Swiss creditors not included in this plan might remain at a disadvantage. He recommended therefore to drop the payment plan entirely and suggested that the Reichsbank simply submit requests for payment to Zurich. These requests were to be checked here in Zurich and to be paid in emergency situations with due regard for our limited credits.

I turned this plan down forthwith and called attention to the fact that the recommendation was impracticable from a technical point of view, not to say absurd. I pointed out that such a plan would cause us to send to Zurich continuous payment requests which we had already paid in marks. We would not know of course whether or not these requisitions would be filled with the result that a large number of unfilled requisitions would collect before long; present difficulties encountered in postal transactions would tend further to aggravate this situation. Such unfilled requisitions are considerable even now. I was shown long lists of unaccomplished payments by

every bank that I visited. From a technical point of view the conception of the term emergency case does not apply at all. For example in our holding sector it was said that only those Swiss banks should receive the interest in funds which were in a weak condition. As a matter of fact the thought that brought up was that our payment requisitions should be governed by that point of view. In other words, this would require the Reichsbank to pass judgment on the soundness of the Swiss banks in its foreign transactions. I need not emphasize that such a plan was out of the question. Yet, even though the Swiss accounting agencies had chosen such a procedure, none of the holding banks would have tolerated it and would have shortly cancelled the holding agreement. I saw absolutely no appreciation of the operations of the banking system, the very existence of which depends on credit.

Conditions are similar in all other respects. In case of the funding bonds which are guaranteed by the Reich, it would be especially inconvenient to cash individual coupons simply because the owner may be "in need," whereas the Reich would become delinquent in the payment of the other coupon.

It goes without saying that these impracticable propositions are based on a political background. On the one hand the political authorities probably are concerned over the danger that a payment system which functions only half way would not satisfy the hostile tendencies of the Allies. On the other hand agitation has been spread meanwhile by ambitious politicians as, for instance, Duttweiler with the object of rallying interests which claim to have suffered damage in Germany. Recent additions have been furnished these circles by Swiss citizens who have returned to Switzerland because of the air raids. It is well known that ambitious individuals like Duttweiler invariably take advantage of the dissatisfaction complex in order to put a halt to these tendencies which are detrimental to the due execution of economic problems in difficult times. The government prefers to sacrifice many other Swiss interests which are justified but do not raise such a loud clamor.

All in all the discussions caused me to realize more and more the fact that a lack of appreciation of realities and not to say ignorance had the first word. The conceptions under discussion were extremely narrow and on a very low level. The people here refused to recognize the destructive effect of a blocking system which will bring about a manipulation of funds so to speak.

I realized that no real study had been made of the inter-relationship and the more far reaching effects of a compulsory administration of funds because foreign creditors had lost money. No one seems to realize that any form of compulsory administration in a nation based on peace time economy will bring about interference in commercial transactions, lower the influx of foreign investments, interrupt banking, render it difficult to maintain competition in commercial transactions and so forth. The fact that a nation at war requires a compulsory administration naturally is considered an entirely different matter. Simply because of the presence of a few clamoring voices the Swiss are willing to disregard the interests of large sections of the Swiss economy, individual Swiss creditors, and many other circles. Of course, influence is exercised also by the fact that the Swiss expect us to meet with the catastrophe in the future and say that everything

will be done with shortly and it may be just as well to discontinue negotiations without delay.

Naturally I strongly objected to allow these arguments with the result that it was decided to discuss the matters further with the Swiss authorities and to bring them also before the federal council. An answer is expected by Tuesday or Wednesday of next week. I would have preferred to depart immediately and have stated so officially. I remarked that in times like these there was no point in carrying on endless discussions while we would be more useful at home working in the interests of our hard fighting nation.

However, if you, dear Mr. Minister, are of a different opinion, I shall remain here and wait for the answer promised by the Swiss. It may be possible after all that my statements have made some impression. Besides, Minister Koecher of our legation, who sends his compliments, is likewise of the definite opinion that we should leave nothing untried in order to arrive at a satisfactory and reasonable solution, that is, to make possible a transaction of payments which would function at least to some degree of satisfaction.

Today I shall call on Mr. Joehr, president of the Kreditanstalt, whom I know to side with us for logical reasons. It may be possible that he can take action in Bern. Moreover, I intend to discuss matters in detail tomorrow with the directors of the Nationalbank, these gentlemen not being here today. As far as the Reichsbank itself is concerned, the discussions hold very little promise. I also remarked that the entire negotiations resembled the case in which the farmer had placed his cow in the barn of his neighbor; and that this neighbor now informed the farmer that he was using the cow for himself but would kindly permit him to attend the butchering and perhaps express a wish as to who should receive the front quarters or the hind quarters. To be sure in that connection it must be admitted that the bad neighbor would butcher the cow even though the farmer did not arrive.

Regarding the sale of gold to the Nationalbank, I was firmly determined to send for the gold at Constance on my own initiative for the Nationalbank was highly insistent claiming that our enemies might take some counter measures against the Swiss government. However, my experiences of last night have caused me to defer this plan. I do not believe that I can assume responsibility for sending additional valuables into Switzerland unless the disposal is more highly clarified than it has been in the past.

While I am submitting this report to you as president of the Reichsbank in such great detail, I have sent a telegram today to the foreign office informing it of the proceedings. In the event that you are of a different opinion as to the basic procedure I would appreciate your informing me so. Otherwise I shall wait to see what counter proposals the Swiss will make next week and then request the final decision.

I continue to be overrun by requests originating with the Swiss bankers and economists. The action taken by the Bern government has created a great deal of bad blood. Tension is said to exist even within the Swiss government, due to the fact that individual federal councillors do not agree with the politics favored by Mr. Stucki. However, it is doubtful whether this is of much help to us at the moment.

Almost hourly my thoughts return to Berlin and you may well imagine how uncomfortable and unsatisfactory my position here is.

I have had no word from my family and have been unable to send word to them from here. Perhaps Mr. Reinhardt may be permitted again to try informing my wife that I am as well as conditions permit.

I hope, dear Mr. Minister, that both you and your wife are in good health. With best regards and Heil Hitler, very respectfully yours,
(PUHL, Vice President, Reichsbank).

PS: This is my fourth report. The first report was sent from Wurzburg, the second from Constance, and the third from Zurich.

I also enclose further a letter from the Nationalbank wherein the Nationalbank refuses to make payment to the Japanese. May I ask that this letter will be forwarded to Mr. Wilhelm, Director, Reichsbank, with the information that I had discussed the matter with Mr. Kitamura when he called on me. He asked us to supply him with gold but I refused his request. Perhaps it is possible to employ our large credits in yen for that purpose.

ZURICH (SWITZERLAND), 30 March 1945.

Dr. WALTHER FUNK,
*Reich Minister of Economy and
President, Deutsche Reichsbank,
Berlin, C-111.*

DEAR MR. MINISTER: Yesterday I took the liberty of sending you a wire from the German legation at Bern as follows:

After great efforts the discussions have led to positive results insofar as the Swiss are now prepared to permit disposal of Reichsbank credits in conformity with a plan on which we have agreed. Generally speaking, these payments are the same as those which we have made in the past and which we would automatically pay even though a blocking system had not been introduced. Thus any blocking of payments which the enemy might have intended to force upon Germany in this respect has been broken. Furthermore, the Swiss are prepared to purchase gold provided it is used for definite purposes such as payment of legations, military personnel, etc. Unfortunately, the negotiations cannot be concluded today by means of correspondence between the Reichsbank and the Nationalbank as planned because of the holidays when all offices are closed. Likewise it was impossible to comply with the intention of bringing gold to Switzerland.

We have a definite promise that both matters will be accomplished by the middle of next week. The negotiations are greatly handicapped and delayed by the internal differences of opinion especially between the national bank and the Swiss government. I shall report in detail by letter tomorrow.

I shall render an official report by wire to the foreign office upon final conclusion of the discussions.

As you may gather from the foregoing, our negotiations have made some progress in the meantime. In my last report, I mentioned that the Swiss had assured us that they would go into the matter and all of its ramifications once more despite the fact that they were opposed to the entire matter on principle at the time. I was disappointed at the time because the Swiss were of the opinion that it would take considerable time to arrange another meeting. However, I have learned that the Swiss meanwhile have worked hard on the matter and that many discussions with interested parties have taken place.

Mr. Vieli, Director of the Swiss Kreditanstalt, who has been head of the Swiss legation in Rome for a number of years and is an old acquaintance of mine discussed the conferences with me stating that serious efforts were made to arrive at a reasonable solution. I took

advantage of the time to enter into a series of discussions. Quite a number of interested Swiss parties came to me on their own initiative and requested such conferences. Thus, for instance, I saw Mr. Joehr, president of the Kreditanstalt, Mr. Jäberg, president of the Bankgesellschaft, Mr. Speich, president of the Bankverein, Mr. Zoeli, director of the Eidgenössische Bank, Mr. Rens, director of the Basler-Handelsbank, and a member of the Swiss holding committee, Mr. Tuerler, director of the Bankverein, and Mr. Rasi, director of the Eidgenössische Bank.

At any rate my efforts have been successful insofar as influential members of Swiss economy at Bern have advocated the reasonable regulation of the problems and a continuation of the payment transactions between Germany and Switzerland. All realize the fact that the blocking of German credits has a far reaching effect also upon Swiss interests at home. There is a difference between blocking Croatian and German credit. It is realized that the blocking regulation had been sacrificed on the altar of politics in haste and is contrary to "democratic procedure"; that is, those concerned had not been consulted. The Swiss now are surprised at the repercussions caused by this measure.

Opposition has visibly increased against minister Stucki who promised the Allies to block German credits. On the other hand none of the government authorities nor the Nationalbank dare to take any action or assume any responsibility for steps which might be contrary to the general political trend of conforming strongly with Allied desires. Consequently the most simple problems must be submitted to the federal council, a body which is divided in its own opinion. That is the reason for the horrible delay in the negotiation.

All of this has created an unfavorable political background for our discussions which originally were intended to confine themselves to conferences between the two banks alone. The negotiations gradually develop more and more into a continuation of the negotiations held by our economic delegation. Since that conference did not produce a definite agreement, but provided merely for a *modus vivendi*, my discussions lack a firm foundation in this respect.

My negotiations have been attended continuously by members of the local legation in order to insure a continuity of the general policies. The assistance given me by the legation in this respect has been considerable. Our discussions on banking matters were greatly overshadowed by political considerations, at least indirectly so. It is obvious, therefore, that all political events reflected upon our own business affairs. A most unpleasant incident was created by the publication of the attached manifest which made minister Stucki practically a martyr. No explanation has been given as to the origin of this manifest and the reason for its publication at this time. I do not know to what degree the Allies have made efforts to sabotage a reasonable regulation of the payment transactions between Germany and Switzerland. Nevertheless, there are indications that the Allies observed the proceedings closely.

Therefore, I anticipated the meeting of 28 March with some degree of anxiety. It was found that even the highest authorities in Switzerland have become convinced that some sound action is absolutely necessary to prevent a complete rupture in the economic relations between Germany and Switzerland as a result of the blocking of

credits. This showed that my many discussions were successful after all. Without going into the technical details I may state that Switzerland basically is prepared to continue payment transactions with Germany. In other words Switzerland does not wish to create a condition which would mean a break in relations. The Swiss realize that any financial transaction between two nations as constantly pointed out by me is founded on a legal basis which is broken when the obligations are not met.

It does not matter in that connection what consequences might arise from such a rupture, that is, whether it might lead to a cancellation of a treaty, confiscation of property, discontinuation of diplomatic relations, protests, legal processes, etc. In any case the result will be complete destruction of economic relations.

We are now considering an agreement with Switzerland which would de facto abolish the complete blocking of the Reichsbank accounts, the Reichsbank being the carrier of German-Swiss payment transactions. In general we have agreed on a payment plan which provides for payments as follows:

- Interest gained from coal credits;
- Interest gained from holding credits;
- Interest and amortizations gained from funding bonds;
- Interest and amortizations gained from new credits;
- Requirements of inter-state trade on a small scale;
- Capacities of insurance companies in the year 1944;
- Interest gained from debits in francs in the year 1944;
- Coverage of the deficit in the transfer funds of the bookkeeping agreement between Germany and Switzerland as of 31 December 1944;
- Subsidy given the transfer fund from outstanding obligations up to 30 April 1945;
- Capital emergencies, especially for Swiss nationals returning from Germany;
- Funds placed at the disposal of the Reichsbank for small payments in Switzerland;
- Supply of electric power.

In the case of the individual payments we shall determine amounts to cover requirements temporarily until 1 May. We agreed further to continue the regulation subsequent to that date. The allocation of such a short period of time may be of benefit also to Germany. By that time we shall be in a better position to see how many funds have been used as a result of unfilled requisitions for payment, what payments have been placed to our account and what other requirement there might be.

Essentially the payment plan covers payments which we would make even though no blocking regulations existed. The amounts to be determined in part shall consist of general amounts while the employment of detail amounts may be determined by the interested parties. This agreement in fact wipes out the payment blockade against Germany which the Americans and British have made such strenuous effort to achieve. It leaves the Reichsbank a free hand to make dispositions in detail and does not subject it to approval by the Swiss clearing house.

I was successful further in imposing a condition which, though small, is quite important, that is, to free all of our payments from the

extremely high approval charges of one half percent. I entered into a discussion of the approval problem not only in our own behalf but on the urgent request of the German Chamber of Commerce in Switzerland as well. Since the blockade extends also to German firms residing in Switzerland and these are compelled to pay the charge for each approval, these business establishments would have to pay the charge whenever they withdraw funds for the payment of wages, taxes, and many other items. The high cost of this charge thus practically constituted a special tax imposed upon German-Swiss firms as compared with firms of purely Swiss ownership. In the case of the large German firms located here such as Siemens, I. G. Farben, and many others, these expenditures amounted to several hundred thousands of francs each year. This charge which is actually prohibitive for small establishments will be drastically reduced or dropped entirely. In that respect the local German firms may be thankful to the Reichsbank.

The problem concerning gold continues to represent a special subject of my negotiations. Here too it was revealed that considerable internal differences of opinion exist in Switzerland and rendered my situation quite difficult. There is a considerable difference in views between the Nationalbank and the government authority. Whenever the government representative made a concession to me in that respect, the Nationalbank refused to confirm. On the other hand, whenever the Nationalbank and I reached an agreement the government representative refused to give his approval. Various opinions are represented even within the Nationalbank itself. The underlying reason for this may be the fact that the Nationalbank considers itself forced against the wall so to speak by the blocking regulation which make it responsible for the administration of the blocked accounts, but delegates the right of approval to the clearing house.

Unfortunately the Nationalbank has been forced to make great sacrifices in connection with its independence in business administration all of which may have been the cause of misunderstanding and accusations.

Besides, everyone in Switzerland hesitates to enter into an agreement with us for fear of the wrath of the Allies. There is a general "buck passing" and nobody will assume responsibility.

The foregoing clearly illustrates that the independence of the banks is a thing of the past. We in Germany have solved this problem better insofar as the forced control of funds is concerned by permitting the Reichsbank freedom of action in the administration of its own affairs. This left the Reichsbank in a position to enter into negotiations, a factor which no longer exists in Switzerland to a like degree.

The foregoing shows further that the problem of further valuation cannot be solved by the "independent" banks, but that they will become political problems of the government, with the banks acting as agents at best.

Nevertheless, our negotiations have resulted in a continued acceptance of gold from Germany although this gold is to be used for the payment of legations, military expenditures, prisoners of war, Red Cross, etc. This problem is of great importance because it incorporates the maintenance of the ability of the German government to pay its obligations.

Mr. Koecher of our legation asked me repeatedly to do everything in my power to give financial insurance to the maintenance of this service. The allocation of gold for these purposes is justified in every respect inasmuch as the services mentioned above probably must be performed for quite a period of time and will benefit German nationals.

When I saw that on the whole we had made fair progress by Holy Thursday, I was ready to issue instructions to transfer the gold from Constance to Bern on Saturday before Easter. This was in agreement with Mr. Rossi, vice-president of the Nationalbank and representative of that part of the directorate which is located at Bern.

Suddenly, word came from Zurich yesterday that this was not feasible for technical reasons. We went as far as to furnish one half of the amount of gasoline required for the transfer of the gold. Whether or not the refusal may be traced to a fear of assuming responsibility and a desire to submit the matter first to the federal council, I do not know. I was told that the reason for the refusal was the fact that no business transactions took place during the Easter holidays; that is true of course. We must not forget that Switzerland is the land of Zwingli and Calvin who was an even greater reformer. I gained the impression that a matter such as transporting gold was not proper during these days of absolute inactivity. This inactivity extended even to the theaters and movie houses which were closed from Good Friday to Easter Monday; even business houses were prohibited from exhibiting their wares in the show windows on those days. The city is completely dead and I am able to write this report today, Good Friday, only thanks to the accommodation of a secretary of the consulate who happens to be on Holiday duty. Everyone has gone into the country even though the weather is terrible.

There are at present three tons of gold marked for shipment to Zurich while one and a half tons have been allocated for future payments on B. I. Z. interests. Inasmuch as there are six tons of gold lying at Constance, I would have liked to transfer the remaining 1.5 tons also to the Nationalbank. Our legation considers that amount absolutely necessary in view of the ever increasing costs involved in the expenditures mentioned above. This problem likewise was the source of a continuous game of hide and seek among the Swiss gentlemen with the result that no one cared to assume responsibility. However, it may be that I shall find a safe place for these 1.5 tons of gold.

At my insistence we negotiated until yesterday afternoon. I might say that the Swiss did not lack in paying me personal attentions, such as arranging a large breakfast in my honor yesterday. Of course, this fact became immediately known to our enemies. It is remarkable further that Swiss bankers and industrialists again and again called on me despite the fact that the enemy observed everything. Unfortunately the Easter holidays cause an interruption in our negotiation. In general we have agreed to place all of our negotiations in documentary form after the holidays by means of correspondence between the Nationalbank and the Reichsbank.

I hope also to find a definite solution to the gold problem after the holidays and pray nothing will happen in the meantime. The correspondence probably will be quite voluminous for a large number of subsidiary problems must be regulated. For example, the installation of a number of special accounts is a matter which requires discussion.

Above all I have insisted on our receiving free francs in return for free Reichsmarks which the Reichsbank might release for any reason. That is important as it will enable us to use these francs to transfer funds into a third country. I would charge Mr. Hinz, Reichsbank councillor, with the technical execution of this correspondence. In addition to Reichsbank Director Reinel, Mr. Hinz has given me valuable assistance here; he has been placed on temporary duty with the legation head by Mr. Wilhelm. The difficult postal connections would require that Mr. Hinz be given certain powers. Eventually his assignment here may develop into a permanent representation of the Reichsbank. Such representative positions have proven to be quite effective in the case of other banks.

Owing to the unfavorable political situation I do not feel that my mission here should be concluded until all concerned have signed and the gold has been transferred. In that connection I wish to confirm the authority conferred upon me by Reichsbank Director Reinhardt to remain here until matters have been settled. The local German authorities are of the same opinion. Any action on our part which might cause the plan for an agreement to collapse would be a success for our enemies.

Being separated from home at the moment is a heavy moral burden. During the Easter holidays I shall return to Germany and go to Constance. It is simply impossible for me to remain here where everybody is celebrating while Germany is in such dire distress. I would have preferred to return to Berlin; that, however, is impossible there being no fairly rapid communication of any kind. To travel by plane is out of the question. The Tuesday after Easter I shall resume my work here and hope to complete it shortly. Personally I am still very much worried not having heard from my family. Local reports seem to indicate that the region where my wife resides is already included in the combat zone. I am greatly concerned over our Reichsbank in Berlin.

I hope that you, dear Mr. Minister, and your wife are well. In any case I wish to take this opportunity to extend you Easter greetings. I add my greetings to my colleagues in the Reichsbank Directorate. Being without a secretary it is impossible for me to keep up correspondence to any extent.

With best regards and Heil Hitler,

Very respectfully yours,

(Sig.) PUHL, *Vice President.*

Puhl, Reichsbank Vice President.

BERN, 6 Apr. 1945.

To: President of the Reichsbank, the Minister for Economics

DR. WALTHER FUNK,

Berlin C 111, Reichsbank.

Previous communication: My report of 30 Mar. 1945 (1 copy, 7 enclosures).

Yesterday after long efforts the results of my discussions here were put down in writing. The discussions of the last days which partly were very detailed were developed on the basis described in my last report. Right after the Easter Holidays which I spent in Germany

the work was again taken up with great zeal. New questions arose for discussion again and again. Also my talks took the usual course of such international negotiations. After a somewhat favorable beginning a severe crisis during the second week, then an agreement on the main points and then shortly before the conclusion a series of new, more or less difficult points.

Today (Friday) the matter was supposed to be approved by the Swiss Bundesrat (Confederate Council) and then signed this afternoon. But I heard just now that for technical reasons the draft did not pass the Bundesrat. Now it can not be brought up again before Tuesday of the following week. We do not think that this is an intentional delay. Therefore, we shall have to postpone the signature until Tuesday. Since I agree with the gentlemen from the legation that nothing will be changed in the results reached in the negotiations, I sent the following telegram to the Foreign Office today:

Discussions concerning the exchange of payments have been concluded. The signing will take place after the approval of the Bundesrat, which was supposed to take place today but which due to technical reasons will not take place until the following Tuesday.

The result is as follows: In future substantially the account of the Reichsbank with the National Bank will be used for all German-Swiss payments. For this account the blocking has been suspended to the extent that payments will be made after a payment plan agreed on for the time being for three months to start on Feb. 1. This plan includes the items of the interest for coal credits, holding credits, funding bonds, new credits, franc debits, requirements of inter-state traffic on small scale, insurance traffic, transfer service, electric power, and a certain amount for the free disposal of the Reichsbank. I have obtained that Reichsbank dispositions will be free of charge.

This success which means that we have practically broken the payment blockade desired by the enemy and which enables the continued existence of numerous German-Swiss public and private contracts, was only possible by concluding the transfer arrangements on the basis earlier considered by us for the same period.

I further succeeded in inducing the Nationalbank to make further gold purchases to insure the fulfilment of Reich liabilities towards Switzerland as protecting power of prisoners of war and internees, for Red Cross and Reich representatives. I gave instructions for the transfer of three tons of gold to Bern today. Because of fundamental considerations suddenly arising in Basel the BIZ (Bank for International Settlements) did not take over any gold, as had been known at the Reichsbank.

I intend to depart for Berlin in the Swiss courier automobile this coming Tuesday together with Reinel.

As the form in which the results of our negotiations are to be written up we have chosen an exchange of notes between the Swiss National Bank and the German Reichsbank. A copy of the drafts of these notes, as far as our accounts are concerned, is added to this report as enclosures Nos. 1, 2, and 3. The fact that the Accounting Office (Verechnungstelle) is giving instructions to the Nationalbank on how to conduct its accounts is worth noticing and indicative of the existing situation.

In the gold question, however, the Nationalbank has kept its independence which is a good thing. I succeeded in concluding a gold transaction involving about three tons, in spite of the fact that this is certainly very disagreeable to our opponents. The draft of the exchange of notes in the gold transaction is added as enclosures Nos. 4 and 5.

The transfer of the gold took place today. I instructed Reichsbankdirector Reinel to take charge of the transfer, and the Nationalbank had obligingly sent its Director Schwegler to come along to Constance.

The result of my drawn out endeavors can be summarized in stating that it is quite a considerable achievement which is thought to be impossible by many sides that under the present general, political and military conditions we have come to a written agreement with a Swiss institution. Herein also lies the significance going far beyond the various regulations. It has become possible to avoid the breaking of the thin thread of German-Swiss economic relations, a danger which was brought about through the blocking of German accounts by the Swiss Government to an extent probably not expected by it. Every day, I could almost say every hour, I was able to convince myself of how many German-Swiss connections exist which will not stop now after it has been possible to find a basis for the continuation of certain payments. The various branches extend very far, be it in respect to redeeming obligations of the Reich or payments for our diplomatic service, for our prisoners of war, for other public obligations of all kinds, or be it in respect to the possibility of settling obligations between banks, insurance companies and numerous firms, or just small matters as the maintenance of border traffic with Lichtenstein, for which the prince there had asked special consideration from me.

In future the account of the Reichsbank with the Nationalbank will be the main carrier of German-Swiss payments. However, we received assurances that in issuing permits covering the accounts of our private banks with the Swiss private banks a somewhat liberal policy will be followed. Looking at the state of affairs, though, these transactions will not be considerable. The fact that the practice of unblocking the accounts of Germans living in Switzerland and German firms established there will be liberal as we were assured by the Swiss gentlemen repeatedly, will be a pleasing side effect, though of no immediate concern to us.

The basic importance of the concluded agreement lies in the fact that the absolute stopping of payments between Germany and Switzerland which our opponents tried to obtain did not materialize and that payments within the framework of justified German-Swiss relations can be continued. I myself have wondered several times in the course of the unfortunately long negotiations whether there was any sense to continue with the discussions. For us to break off the negotiations would have been a cheap success for our opponents. Our Legation was very much of the same opinion. The fact that also President Weber repeatedly and strongly advised me to continue in my endeavours made a forceful impression. He pointed out that under the given present day conditions an agreement between the Nationalbank and the Reichsbank would be of far reaching importance beyond the present day. I was glad to hear about the respect in which our institution and signature is held in the world.

All in all I believe that we can be satisfied that we succeeded in obtaining the above described arrangements for German-Swiss payments. Whatever form events will take, such connections will always exist between our countries, and the fact that there exists a contract agreement may be of considerable importance for the future. Anyway, the contrary, the breaking off of the innumerable connec-

tions, would have been a rubble pile which would have presented immense difficulties. But now it can be hoped that even in the future conditions between the Reichsbank and the Nationalbank will continue somewhat satisfactorily.

The circumstance that economic reasoning was on my side as I was assured by innumerable Swiss circles again and again proved to be of advantage in my negotiations. The blocking of German accounts has been nothing but a mere political action. Hardly anybody in the economy was consulted. Now it becomes evident that Switzerland is having some kind of government control of foreign currency (Devisenzwangswirtschaft) without having wanted it. And it becomes apparent that the control in this country will be much more severe than ours, since here it originates from unscrupulous political-administrative considerations, while in our case it started from purely economic facts, i. e. the impossibility of transfers. E. G., I had to protest strongly against the regulation that interest coupons which had been guaranteed by the Reich (the Funding Bonds of the Konversionskasse, e. g.) were supposed to remain unpaid, even though means for payment had been put aside. In the frame work of our control over economy we have never prevented foreign debtors from paying their coupons. How unbending the Swiss ideas are can be seen from the fact that in the course of the discussions I was told, among other things, that in the case that a free currency (like escudos) should be sold to Switzerland on the part of Germany blocked francs would result, a thing that is unthinkable in Germany. Also in our case the foreigner could sell his blocked marks, though at a loss. Here however, I was told repeatedly that from the Swiss standpoint nobody cared how the German who has been credited with a franc deposit in the blocked collective account at the Nationalbank could get to his reichsmarks. There is no doubt that this state of affairs can not be maintained for any length of time. Also here one will have to take the same path as we did, i. e., it will be found out that one regulatory statute will have to be followed by the next and that the decrees which aim to regulate state controlled economy have a fertility like rabbits. Without doubt, future Swiss regulatory statutes will be influenced by the innumerable arguments which arose in my negotiations, since this is still virgin country for the Swiss.

The figures put in the payment plan are for that reason only frame work. Their use can be regulated in detail in some items as the payments for electric power by the interested parties. However, in the case of the so-called transfer agreement, i. e., the arrangements concerning the long-term liabilities, it was necessary to come to a conclusion. This agreement was made through an exchange of notes between the Legation and the chairman of the Swiss Government Committee. I am also enclosing the draft (enclosures nos. 6 and 7), but I want to point out once more that all enclosures are in draft form only, though we do not expect that any changes will take place before Tuesday when the Bundesrat will have to give its approval. This agreement only contains considerations which we held in our discussions with Ambassador Schnurre.

I have fixed the amounts for only three months with the Swiss considering the instability of all things and the difficulties to fix any exact figures. This period starts on Feb. 1, and therefore ends May 1. After that new discussions will have to take place with the Swiss.

Since in May anyway the scheduled Holding Conference (Stillhalte-konferenz) will have to take place, this could be combined with it. The talks which will be necessary then should probably be easier, since a way has been found once. In these discussions the German departments which have to register special interests could represent their points of view. This time as I have mentioned I had to negotiate alone because of lack of communications with Berlin.

I shall give the necessary regulations about exchange of payments to our bank and the German private banks as soon as I return.

The discussions with the Nationalbank on the gold question were as I have already indicated in a certain sense more pleasing, since it had assured itself a greater freedom of action. After all a note bank has above all to take the responsibility whether it wants to create new currency means by taking in gold or not. We have chosen the form that the gold will be used for payment of the liabilities of the German diplomatic and consular services in Switzerland, for payments for prisoners of war and internees and the Red Cross at Genf. All these services are of greatest importance and will go on for a long time yet. The surrender of gold is therefore justified in any way, since it serves Reich interests in its most immediate form. Also in this large field much had already come to a standstill. Those who had claims on benefit payments were no longer paid, the money for salaries had not yet been transferred, and numerous liabilities could not be satisfied. I believe that also in this field a great service has been rendered to the esteem in which the Reich is held by opening a way to continue normal dealings. The separation of these payments from the running account is welcome to our bank in so far as these sums are not charged to this account.

In order to safeguard the technical functioning of payments under the disturbed communications, I shall empower Reichsbankrat Hinz at the Nationalbank and Mr. Thiersch in Basel to use the account in case corresponding Reichsmark values are available say, at the Reichsbank in Constance. That will especially be necessary to keep up the above mentioned settlements of accounts which are of immediate Reich interest. All other technical questions as the transfer of Reichsbank accounts from private banks to the Nationalbank, have been regulated by me from here.

The day before yesterday I received a bad surprise, when the BIZ all of a sudden told me that fundamental considerations had arisen about taking over the well-known 1.5 tons of gold. Of course, also here political considerations are in the back ground. I have told the members of the board of the BIZ that the fact that the board of directors has its actions, which are without doubt to the interest of the bank, sanctioned by political institutions, is difficult to reconcile with the responsibility which the board of directors of a bank should take. At any rate, the Reichsbank has offered to settle its liabilities, and I want to point out that this settlement has so far not been accepted. I shall try to get this in writing since it may prove important for future negotiations.

Incidentally there are rumors going around here to the effect that American circles have approached Mr. Jacobson who is presently in London with the intention to bring about a possible fusion of the BIZ Organisation with the banking plans made at Bretton Woods. The president of the BIZ is also in London at the moment.

Our poor Hechler, however, is not doing too well. I hope that his stay at Locarno will help him. I have also great worries about our Mr. von Wedel who is ill, especially after seeing the opinion of Prof. Ruppana who is treating him in Samaden.

I have thought it appropriate to invite the influential Swiss gentlemen as well as our ambassador and Consul General Ruter this evening to a supper in Bern in your name, Mr. Reichsminister, as well as the name of the Directorium. I owe the German gentlemen a great deal of thanks for their collaboration, and have in the last analysis found much understanding from the Swiss side. The personal relations are now as before of greatest cordiality and are playing a decisive role in all negotiations, so that it is well worth to cultivate them. It is pleasing to note again and again in all these events how strong the cultural ties are that connect our two countries, even if the political opinion of the broad mass is not in our favor today.

For my return trip the organisation of which is not quite simple the Swiss Government has obligingly put two seats in their own courier automobile at my disposal. I had planned to depart this coming Tuesday. If the proposals pass the Bundesrat only on that day, it is possible that the departure will have to be postponed for another day. Unfortunately, my stay here has lasted so long that I shall have to give up the idea of visiting my family on the return trip, since according to the news here they are now in enemy occupied territory. I have, however, no idea where my wife and my youngest son are at present. I shall be glad when I am back in Berlin where no doubt a lot of work and worries are waiting for me.

I hope, Mr. Reichsminister, that you have been well in the meantime considering the conditions. I do not want to conclude this report without sending you and your wife my best regards.

With Heil Hitler!

I remain, very respectfully yours,

(Sig.) PUHL.

ELIMINATION OF GERMAN RESOURCES FOR WAR

PREFACE TO I. G. FARBEN MATERIAL

To: Office of Military Government, United States (Germany).

This is a report on the investigation of I. G. Farbenindustrie Aktiengesellschaft, Frankfurt am Main, Germany. The investigation is one of a series initiated by Financial Branch, G-5 USFET and the Finance Division, United States Group Control Council, with respect to the international asset position of Germany. After certain functions of the Finance Division had been transferred to the Division of Investigation of Cartels and External Assets, the investigation was continued and this report prepared by the latter Division.

A basic purpose of this investigation was to uncover as much information as possible concerning the nature and location of the far-flung and carefully concealed external assets of I. G. Farben. The investigation was, therefore, an important phase of the program adopted by the Allied Powers at Potsdam to strip Germany of all of her external assets in the interest of future world security and to use such assets for the relief and rehabilitation of countries devastated by Germany in her attempt at world conquest.

As the investigation proceeded, it became apparent that because of the size and significance of I. G. within Germany and because of its influence in the chemical and related industries throughout the world, the company's external assets could only be properly identified and appraised within the framework of I. G.'s structure as a whole. Accordingly, as the basis for a statement and evaluation of the significance of Farben's extensive and varied foreign holdings, this report attempts to present a picture of the complex financial and industrial Farben structure. Since the primary purpose of the Allied Powers in acquiring all German holdings in other countries is to prevent their use by Germany in waging a third world war, the report also sets forth certain evidence uncovered during the course of the investigation concerning the integration of Farben's activities with the military needs of the Reich in preparing for and waging a war of aggression. The report describes the methods used by I. G. Farben in penetrating into the economic life of foreign countries as a means of achieving world domination of the chemical industry, as well as the cloaking devices designed to conceal Farben's external investments and interests. The story of the growth of the Farben empire by looting of foreign industrial enterprises and properties following military conquest is also described.

The bulk of the information was obtained from records of I. G. Farben, which were collected from its various offices and storage places throughout Germany, and those retrieved from secret caches, which had been used when the American occupation seemed imminent. The

remainder of the information was obtained through interrogations of leading I. G. personnel who have been placed in custody since the institution of the investigation. It is significant that this is the first investigation of this scope ever conducted in Germany of Farben records and Farben officials. During the period of both the Weimar Republic and the Third Reich, this proud and powerful firm was never thoroughly investigated even by its own government.

A preliminary report was issued on September 12, 1945. However, certain of the evidence disclosed in that report cannot be made public because of the possible prejudice which might result to the interest of this Government. Accordingly, it was necessary to prepare this revision which excludes the information in question. Moreover, as a result of further analysis made in connection with the revision, it has been possible to add material not contained in the original report. This report is fully documented.

The team assigned to this investigation was headed by Mr. H. B. Ritchin, and consisted of Messrs. Neil A. Devine, H. K. Dreman, Bernard Glaser, Shepard J. Hollander, Lawrence Linville, John J. Purcell, Abè Weissbrodt, First Lt. Edwin M. Cage, Master Sgt. Eberhard Gunther, Tech. Sgt. Frank M. Harvin, Staff Sgt. William Freundel, Staff Sgt. Ralph H. Goldner, Staff Sgt. Paul N. Weil, T4g Fred A. Williams, T5g Nathan H. Volkman, and Pvt. Alexander Stevenson. Miss Belle Mayer of the Treasury Department assisted in the writing of this report.

Lt. Albert I. Edelman, USCGR, Chief of the External Assets Investigations Branch, and Orvis A. Schmidt, Deputy Director of Finance Division, assisted the undersigned in the direction of the investigation.

B. BERNSTEIN,

*Colonel, GSC, Director, Division of Investigation of Cartels and
External Assets, Office of Military Government.*

NOVEMBER 1945.

SUMMARY OF I. G. FARBEN MATERIAL

In 1927 Chancellor Stresemann, then head of the "democratic" German Government, appraising Germany's economic potential stated: "What have I as a trump in my hands aside from I. G. and the coal people?" The I. G. referred to was I. G. Farbenindustrie A. G., the largest, most powerful chemical combine in the world. What the chancellor did not have to say, as this report conclusively demonstrates, is that without the trumps of I. G. Farben and the rest of German heavy industry Germany could not have prepared for and launched a destructive war against the peace-loving nations of the world. And I. G. Farben, its size more than doubled in 12 years of tremendous expansion after 1927, was a trump which, together with the remainder of Germany's industrial potential, almost enabled Hitler and Goering to extinguish the flame of freedom and human decency everywhere.

I. G. Farben, nominally a private business enterprise, has been and is, in fact, a colossal empire serving the German State as one of the principal industrial cores around which successive German drives for world conquest have been organized. With a net worth of RM. 6,000,000,000 at the very minimum, its domestic participations comprised over 380 other German firms. Its factories, power installations, and mines are scattered all over Germany. It owns its own lignite and bituminous coal mines, electric power plants, coke ovens, magnite, gypsum, and salt mines. Its foreign participations, both admitted and concealed, number over 500 firms valued at a minimum of RM. 1,000,000,000. Its holding companies and plants blanket Europe; and its house banks, research firms, and patent offices are clustered around every important commercial and industrial center in both hemispheres. In addition to its numerous foreign subsidiaries, I. G.'s world-wide affiliations included hundreds of separate non-German concerns and ranged over a score of industries. Its cartel agreements numbered over 2,000 and included such major industrial concerns as Standard Oil (New Jersey), the Aluminum Co. of America, E. I. du Pont de Nemours, Ethyl Export Corp., Imperial Chemical Industries (Great Britain), the Dow Chemical Co., Röhm & Haas, Etablissements Kuhlmann (France), and the Mitsui interests of Japan.

Not only did Farben furnish Germany with the sinews of war, but it constituted one of Germany's most effective weapons of economic and political warfare against the other nations of the world. So tremendous and complex were its operations, however, that their full significance and scope may never be known. This report does not pretend to tell the complete story. In anticipation of Allied victory, thousands of Farben's secrets went underground along with other German resources to lay the foundation for World War III; and thousands of its important files were, according to the testimony of its responsible officials, destroyed just prior to the advent of the

Allied troops. The investigation reported herein, however, has confirmed what heretofore have been mere speculations; and has uncovered a wealth of evidence proving conclusively (1) that without I. G.'s immense productive facilities, its intensive research, and vast international affiliations, Germany's prosecution of the war would have been unthinkable and impossible; (2) that Farben not only directed its energies toward arming Germany, but concentrated on weakening her intended victims, and (3) that this double-barreled attempt to expand the German industrial potential for war and to restrict that of the rest of the world was not conceived and executed "in the normal course of business." The proof is overwhelming that I. G. Farben officials had full prior knowledge of Germany's plan for world conquest and of each specific aggressive act later undertaken pursuant thereto, that they planned their operations accordingly and anticipated expanding their empire on the plunder acquired.

There follows an outline of some of the more significant specific disclosures contained in the report:

1. Farben made Germany self-sufficient in materials which she previously lacked

It was Farben's task to make Germany self-sufficient in certain critical war materials which Germany lacked and which are indispensable to modern warfare—rubber, gasoline and lubricating oils, magnesium, fibers, tanning agents, fats, explosives, and so forth. The nature and purpose of I. G.'s assignment were clearly stated by Dr. Struss, chief of I. G.'s technical bureau and one of the principal technicians responsible for carrying out this assignment, in a speech exhorting increased production of synthetic gasoline. Dr. Struss explained:

Italy won the Abyssinian war by modern weapons. In modern wars the consumption of gasoline for motorized troops, tanks, airplanes, is immense. * * * Although provisions had been made beforehand, it was impossible to store these enormous amounts of gasoline needed in the Italian territories on the coast before the war. As Italy has no petroleum of her own, she was relying on the continual import from abroad.

Nearly all the petroleum in the world is controlled by the United States of America and the countries that are members of the League of Nations. If, therefore, gasoline had also been included in the sanctions, as proposed by England and France, the war would have come to an end very soon. Italy could win the Abyssinian war and build her empire only because England and France could not carry into effect their intentions.

This example will make it clear to you that it is quite out of question that Germany will run the risk of a similar situation and for this reason also the German demand of fuel has to be covered by Germany herself before long.

Between 1933 and 1943 vast sums were devoted to an extraordinary intensification of I. G.'s research activities designed to develop substitutes for products not available to Germany and processes for the expansion of production from indigenous raw materials. These are a few examples of what was done. To compensate for Germany's deficiency in bauxite, the raw material necessary in the manufacture of aluminum, I. G. concentrated on the development of magnesium. To make Germany independent of rubber imports, I. G.'s experts developed the famous buna process for the manufacture of synthetic rubber. Whereas, prior to 1936, Germany had obtained all pyrites from abroad, I. G. built a new plant at Wolfen for the production of sulfuric acid from German gypsum. Lacking America's wealth of

natural oil, I. G. with its famous hydrogenation process, manufactured motor fuels and lubricating oils from coal.

Certain processes and materials which I. G. could not present to the Nazis directly from its own laboratories and stock piles, it procured for them from its cartel cohorts in foreign countries. From America I. G. obtained the newly discovered method for the production of iso-octane and its utilization for motor fuels. This process, according to one of I. G.'s leading scientists, originated—

in fact entirely with the Americans and has become known to us in detail in its separate stages through our agreements with them (Standard Oil, New Jersey) and is being used very extensively by us.

The process for producing tetraethyl lead, essential for the manufacture of aviation gasoline, was obtained for the Nazis by I. G. Farben in exactly the same way. Of this important acquisition, an I. G. official stated:

It need not be especially mentioned that, without lead-tetraethyl the present method of warfare would be unthinkable. The fact that since the beginning of the war we could produce lead-tetraethyl is entirely due to the circumstances that shortly before, the Americans had presented us with the production plants complete with experimental knowledge; thus the difficult work of development (one need only recall the poisonous property of lead-tetraethyl which caused many deaths in the United States of America) was spared us, since we could take up the manufacture of this product together with all the experience that the Americans had gathered over long years.

It was, moreover, the first time that the Americans decided to give a license on this process in a foreign country (besides communication of unprotected secret experimental knowledge) and this only on our urgent requests to Standard Oil to fulfill our wish. Contractually we could not demand it, and we found out later that the War Department, in Washington gave its permission only after long deliberation.

I. G. exploited its cartel connections with American firms not only to obtain these important processes, but also to obtain certain critical materials themselves. Because of its relations with Standard Oil of New Jersey, I. G. acted as agent of the German Government in contracting for \$20,000,000 worth of high-grade aviation gasoline and lubricants. (Actually, \$14,000,000 worth was delivered.) This fuel was transported to Germany and stored there; and the foreign exchange necessary for payment was supplied by the German Government. And, in 1938, when Germany had not yet begun to produce tetraethyl lead, essential to aviation gasoline, Farben, at the request of the Air Ministry and in conjunction with one of its Swiss subsidiaries, arranged to borrow 500 tons of the lead from the Ethyl Export Corp. of the United States. Farben, of course, did not return the borrowed lead to the American company and willingly forfeited the \$1,000,000 which it had put up to secure the return of the lead.

Farben not only procured critical raw materials for the German war effort, but also acted as custodian of such materials. As early as 1935 I. G. began stock-piling materials for the various branches of the Wehrmacht. For example, by order of the Luftwaffe, I. G. had projected plans for a huge magnesium plant at Aken in 1933 and another at Stassfurt shortly thereafter. By 1935 production began in the Aken plant. The stocks of magnesium were stored in the form of incendiary-bomb casings by order of the Ministry of Economics and the Ministry of War. Not only did I. G. stock-pile its own production but at the same time it purchased large stocks of magnesium from the Dow Chemical Co. of America to build up its reserves for the Luft-

waFFE. From 1936 on, I. G. began accumulating stabilizers for explosives from all parts of the world; and so far as the stock-piling of chemicals was concerned, the Wehrmacht actually ordered I. G. Farben to accumulate as large stocks of phosphorus and cyanides as they could possibly obtain.

2. Farben production was indispensable to the German war effort

The German war machine could not have functioned without the wide range of products manufactured for it by Farben. Of 43 major products manufactured by Farben, 28 were of primary concern to the German armed forces. I. G. manufactured all of the synthetic rubber produced in Germany, all of the methanol, the serums, and lubricating oils. I. G. provided 95 percent of the poisonous gases and well over 90 percent of the nickel and plastics. Eighty-eight percent of the magnesium used by the Luftwaffe in its aircraft and incendiary bombs came from Farben, as did most of the nitrogen and explosives for the buzz bombs and V-2's.

Not only did Farben produce practically the entire German supply of these and other essential war materials, but all other German chemical companies and numerous strategic German industries were almost totally dependent upon Farben for raw materials, for intermediate products, and for technical assistance. Above all, these other German war industries could not have functioned effectively without the I. G. Farben know-how which was supplied to them.

In order to enable I. G. to execute this tremendous war-production job there was, of course, a great expansion of its manufacturing facilities. In the years preceding the war, more than RM. 4,250,000,000, supplied principally by the German Government itself, were invested in new plants, mines, and power installations. Just as the expansion of I. G.'s research activities was backed by the German Government, so too was the expansion of its productive facilities. Thus, for example, as early as 1936 the Wehrmacht which had requested the construction of numerous types of plants guaranteed the purchase of all production therefrom.

A compelling example of the special services performed by I. G. for the German armed forces in the production of weapons of war is the case of poison gases. In 1938 the German Government, dissatisfied with the progress made in the development and production of poison gases, called upon Farben to handle the problem. New I. G. plants for the production of these gases swung into operation and eventually, as indicated above, I. G. achieved 95 percent of the total production of poison gases. By order of the German Government many of these plants were completely destroyed before the occupation by the Russians; and all existing stocks of poison gas were destroyed. But at least one of these terrible secrets which the Germans hoped to save for the next war has been uncovered. This investigation has disclosed that an I. G. Farben official at Wuppertal-Elberfeld developed the deadliest poison gas in the world. This gas, unknown to the military authorities of the Allied Nations, could have penetrated any gas mask in existence. I. G. originally carried out its poison-gas experiments on monkeys; later on human beings. For the latter purpose, inmates of concentration camps were selected, and I. G. Farben officials, concerned only with creating weapons capable of assuring German world conquest, were unmoved by this use of

human guinea pigs. Dr. ter Meer, one of I. G.'s leading scientists, who will be described in detail at a later point, justified the experiment not only on the grounds that the inmates of concentration camps would have been killed anyway by the Nazis but also on the grounds that the experiments had a humanitarian aspect in that the lives of countless Aryan workers were saved thereby. Needless to say, these gases were not only used on helpless people during the stage of experimentation, but were later used to exterminate whole groups in concentration camps such as Auschwitz.

The facts disclosed by this investigation concerning I. G. Farben's part in supplying the German armed forces with weapons of destruction make it clear that Dr. von Schnitzler, member of I. G. Farben's managing board of directors and chairman of its all-powerful commercial committee, was not boasting when he stated in an address of welcome to the Spanish Ambassador on February 10, 1943:

But only during the war could German chemistry prove itself worthy of the task. It is no exaggeration to say that without the services of German chemistry performed under the Four-Year Plan the prosecution of modern war would have been unthinkable.

3. *Farben was a Nazi agency for world-wide military and economic espionage*

I. G. Farben's organization, both domestic and international, served the Nazi government as a principal agency for military and economic espionage throughout the world.

I. G.'s N. W. 7 office in Berlin, originally organized in the 1920's as I. G.'s liaison office with the various governmental agencies in Berlin, was transformed by Dr. Max Ilgner into the economic intelligence arm of the Wehrmacht. Ilgner was the nephew of Hermann Schmitz, I. G.'s president, and was also a member of I. G.'s managing board of directors. This organization is described in detail below, but some indication of its tremendous expansion in preparation for and during the war may be gathered from the fact that its expenditures in 1943 were RM. 7,000,000 as compared with RM. 997,000 in 1932.

The largest and most sinister department of N. W. 7 was the so-called statistical department (VOWI) which was formed by Dr. Ilgner in 1929. This department, which became in fact the economic intelligence arm of the Wehrmacht, was obviously unjustified from a business point of view, and the purpose and nature of its research and market inquiries were evidently mystifying to some of the commercial employees of I. G. who were not in on the secret. Dr. Ilgner received the strong support of top I. G. officials and the government, and soon his brain child was flourishing under the expert direction of one Dr. Reithinger. Reithinger was particularly well qualified for this job of superespionage. In addition to his outstanding ability as a statistician, economist, and analyst, he had traveled extensively in many foreign countries, including the United States, England, France, and Russia. During his travels Reithinger had carefully cultivated the friendship of persons and institutions influential and important in the fields of economics and statistics, and "had arranged an intense exchange of statistical work with the various statistical organizations in Germany and abroad."

Reithinger's department was staffed with men of recognized ability. They began immediately to compile comprehensive statistics dealing with the economic, financial, and social life of many foreign countries.

This department's tremendous compilation of data on foreign populations, unemployment, production, consumption, agricultural and industrial capacities, currency circulation, taxes and duties, deposits and capital of banks, capitalization of important private companies, etc., most of which obviously had no value to I. G. as a chemical and dyestuffs manufacturer, was indispensable to the government of a country preparing for world conquest.

This statistical agency reached its prewar peak of activity when in 1937-38 it became the central agency for collecting and correlating economic intelligence gathered throughout Germany. Through the boundless energy of Dr. Max Ilgner social gatherings of prominent economists of the world were arranged, and from them priceless opinions and information were obtained on such topics as international foreign trade developments, the international raw material situation, and methods of international trade. Moreover, as a result of these meetings, the already close relationship between N. W. 7 and many German Government agencies became even closer. N. W. 7 became in fact a recognized collaborator of the Statistische Reichsamt, the Reichsbank, the Ministry of Economics, the Foreign Office, the Ministry of Agriculture, and the Ministry of Finance.

With the outbreak of war, N. W. 7 became the focal point of requests for economic intelligence from many Nazi agencies. It began to look like what it actually was—an adjunct of the German Government. Many of the VOWI employees were ordered to military service with the Wehrwirtschafts- und Rüstungsamt (Office of War Economics and Armament), but actually performed the same duties with Dr. Ilgner's office. The vast fund of information gathered by Dr. Reithinger and his staff proved invaluable to the OKW (Army Supreme Command). In fact, VOWI was so highly regarded by the high command that at the outbreak of war it considered taking over the entire agency. However, this was resisted so strongly by other government agencies which were also dependent on it for assistance and VOWI was able to service the requests of the OKW with such rapidity and so completely, that it remained part of the N. W. 7 office.

From 1937 on Dr. Reithinger and his entire staff concentrated on the preparation of surveys of factories in foreign countries. These surveys were prepared under direct orders from the Wehrmacht and were used by the Luftwaffe in selecting bombing targets. The VOWI also carried on extremely important investigations with respect to all European countries, and particularly England, concerning the capacity and location of facilities for the production and transport of aircraft, munitions, and other armament, the raw-material situation in these industries, and oil imports, exports, and refineries. This information was also used by the Nazi high command for bombing and other purposes. Said Dr. von Schnitzler, "For all European countries they made up plans"—plans of death, destruction, complete annihilation, which almost achieved complete success.

In order to carry out its many tasks, VOWI needed a well-organized international intelligence network. This it possessed in Farben's vast empire of foreign holdings and connections. With German ownership carefully concealed in most cases, it furnished an ideal organization for the superspy job assigned to it. In some cases, Farben's foreign subsidiaries were owned outright. More often, however, I. G. strived to maintain a semblance of legal independence though, in fact,

it exercised complete control over the firm. The company cloaked its direct and indirect ownership and control of hundreds of its foreign subsidiaries by utilizing every conceivable device known to the legal and "extra legal" mind, including the use of nominees, option agreements, fictitious or intervening transfers, dividend and loan agreements, pool agreements, endorsements in blank, escrow deposits, pledges, collateral loans, rights of first refusal, management contracts, service contracts, patent agreements, cartels, and withholding know-how. Geheimrat Hermann Schmitz, I. G.'s president, was known throughout the industrial world as "the master of financial camouflage." He more than justified this designation. In 1940, I. G. Farben was able proudly to inform the German Government that—our measures for camouflage have proved to be very good during the war, and have even surpassed our expectation in numerous cases.

After the outbreak of war in September 1939, the Anglo-French navicert control system threatened to cut off German exports to South America and other parts of the world, thereby depriving Germany of foreign exchange, and also of imports vitally needed for the prosecution of the war. The manner in which I. G.'s hundreds of ostensibly independent national concerns having no apparent ties with the Axis were used to combat this blockade is by now fairly well known. What is not so well known is the role these I. G. cloaked companies played in supplying VOWI, and thereby the Nazi High Command, with economic and political intelligence.

Chemnyco, Inc., the American economic intelligence arm of I. G., is an excellent example of these effective espionage methods. In the guise of an American company Chemnyco was able to supply the Wehrmacht with facts and figures concerning the American economy. Utilizing normal business contacts Chemnyco was able to transmit to Germany tremendous amounts of material ranging from photographs and blueprints to detailed descriptions of whole industrial developments. In 1939 in the midst of a United States Government investigation, Chemnyco's vice president, Rudolf Ilgner, a naturalized American citizen and brother of Max Ilgner, ordered the destruction of a considerable part of the company's files. How invaluable the information received from Chemnyco was is indicated in a letter dated August 3, 1940, from N. W. 7 to the Minister of Economy, which stated:

Extensive information which we receive continuously from the Chemnyco about the American company is indispensable for our observations of the American conditions, especially with a view to the technical development, the possibilities for export, and the competition of foreign countries and companies, especially England. Moreover, this material is, since the beginning of the war, an important source of information for governmental, economical, and military offices.

The N. W. 7 office had contact men all over the world called the I. G. Verbindungsmänner. The Verbindungsmänner, in the main, were officials of the leading I. G. firm in the particular country. One of the principal duties of these Verbindungsmänner was to submit monthly reports pertaining to economic, political, and military matters. With respect to politics, the reports included such subjects as internal political developments, the composition of new governments, the effects of the Proclaimed List and the British Black List, inter-American security, labor, immigration, political reactions within the

respective countries to current events, pro-Axis and anti-Axis propaganda, and the purposes of special diplomatic missions. Matters of vital military interest contained in these reports included a discussion of additions to the merchant navies in various Latin-American countries, a reporting of ship movements (including convoys), statistics concerning tonnage in ports, port facilities, construction of new highways and bridges, the condition of rail transportation between the Latin-American countries, the operations of Pan American Grace Air Lines, shipments of war materials to the United States and Great Britain, the Argentine military mission to the United States, rearmament in Chile, and the acquisition of air and naval bases by the United States.

4. *Farben was a spearhead of the Nazi psychological and economic warfare programs*

I. G. Farben performed tremendous services for the Nazis in financing and disseminating propaganda designed to create disunity among various foreign nations and among various political, religious, and racial groups within such countries. I. G. Farben performed equally great services for the Nazis in undermining the war potential of foreign countries by means of its cartel agreements, monopoly position, and its penetration of the chemical and related industries throughout the world.

(a) *Dissemination of propaganda.*—I. G. organized for its large-scale part in the Nazi propaganda program in the same careful, efficient way it had in the case of other war operations. It first acted to assure that all I. G. Farben agents abroad were thoroughgoing Nazis. On September 10, 1937, the all-important commercial committee of the board of directors of I. G. Farben passed a resolution which stated in part as follows:

It is hereby understood that in no case will men be sent to our foreign companies who do not belong to the German Labor Front and who do not possess a positive attitude toward the New Order. The men who are to be sent should make it their special duty to represent National Socialistic Germanhood. Especially are they to be instructed that upon entering our companies they are to make contact with the Ortsgruppe of the respective Landesgruppen (organizations of the Nazi Party within the various countries) and regularly participate in their meetings as well as in the Labor Front. The sales departments should also see to it that an appropriate amount of national socialistic literature is given to them. The cooperation with the A. O. must become more organic. It appears practical, together with the A. O., to work out a uniform plan, for the purpose of detecting defects still existing in our foreign companies to the end that they can be eliminated.

Needless to say, this policy was faithfully executed. Moreover, as was pointed out above, the Verbindungsmänner were, in all cases, highly trusted agents carefully selected by N. W. 7 and approved by the Auslands organization (the foreign organization of the Nazi Party).

A few examples of I. G.'s propaganda operations will suffice to indicate the nature and importance of its services to Nazi psychological warfare.

I. G. worked directly with the "Aufklärungs Ausschuss," the overseas propaganda department of the German Government, in disseminating anti-American propaganda in Argentina. Thus, in 1939, Farben reviewed for this German propaganda organization a series of 381 articles against the United States for publication in Argentine newspapers, suggesting the names of newspapers in Buenos Aires

which could be used effectively for the dissemination of such articles. For this purpose, Farben made available to the German propaganda department the services of Heinrich Homann, I. G. Verbindungsmann for Argentina.

Farben, which had for years been engaged in the dissemination of pro-German propaganda in Latin America through the schools, the press, and libraries, was particularly effective in securing wide distribution of Nazi propaganda. One of its customary devices for obtaining publication of propaganda was the club of its advertising. Thus, for example, in February 1938, the pharmaceutical department of I. G. agreed on the following advertising policy:

Advertising in journals hostile to Germany shall on all terms be avoided. Commercial and advertising considerations have to be put in the background as compared with the more important political point of view.

(b) *Furnishing other propaganda agencies with foreign exchange.*—Not only did I. G. engage directly in the dissemination of propaganda, but it was also a principal agent for furnishing foreign exchange to German governmental agencies engaged in this and related psychological and economic warfare operations abroad. In Brazil, alone, during 1940 and through January 1942, the agencies of the Bayer division furnished the equivalent of RM. 3,639,343 to the German Embassy and to representatives of the NSDAP. In Spain when the German Embassy wanted Spanish pesetas, the company raised credits from the Spanish banks and paid back these credits with subsequent peseta receipts. A telegram dated September 2, 1939, to I. G. from the Cia. General de Anilinas, S. A., Mexico City, stated:

In case of war Legation asks firms Mexico to let them have moneys on a loan basis amounts shall be refunded by German Government. Please authorize monthly payments pesos 10,000 on behalf of all I. G. agencies. Mexico press must be influenced.

A notation on the bottom of this telegram states: "Board agreeable Dr. Overhoff informed." These payments abroad were of tremendous importance to the German Government in the acquisition of critical raw materials and in the financing of sabotage, espionage, and propaganda.

All of the I. G. Latin-American firms maintained, unrecorded in their books, secret cash accounts in banks in the names of their leading officials. These accounts were used to receive and to disburse payments of a confidential nature as, for example, the proceeds of sales to firms who did not want to be discovered dealing with the proclaimed list I. G. companies. These are the famous S accounts and S finance offices, of which little has been known in the past. The assets thereby secreted, ostensibly unaffected with an Axis taint, were free to finance espionage and propaganda, to bribe, to pay the salaries of Nazi foreign agents, and to give them the wherewithal to carry out their work.

In assessing the importance of those services performed by I. G. Farben for the Nazis abroad, it is important not to overlook the tremendous financial aid given by I. G. in bringing the Nazis to power and maintaining them in power in Germany. Not only did I. G., together with the other German industrialists, make possible Hitler's rise to power by financial and political support, but they maintained the Nazis in power for 12 long years. Each year, Farben made vast annual contributions to the various activities of the Nazi

government and party, including a special annual grant to enable Heinrich Himmler to finance some of his "special" projects.

(c) *Economic warfare through cartel connections and other means.*—Germany's foreign economic policy was aimed at undermining the economic strength of countries with which Germany "anticipated" conflict. In direct testimony, high Farben officials not only admitted to that policy, but also stated that they had played an important part in its formulation and execution. As succinctly stated by one of these officials:

The foremost purpose of the Nazi government and I. G. and all other industrialists was to keep the Wehrmacht all-powerful vis-à-vis all other countries including the United States of America.

The successful execution of this policy was entrusted to a special agency of the German Government, the Reichswirtschaftsministerium, which controlled all foreign economic relations of German industry and finance. Represented in this organization, together with other German industrial concerns, was I. G. Farben.

An outstanding example of the manner in which Farben executed this German policy was its successful effort, by means of cartel agreements with Standard Oil, to delay the development and use of buna rubber in the United States until at least 1940 while at the same time producing sufficient buna in Germany to make the German Army and German industry independent of rubber imports. This investigation has confirmed certain data heretofore presented to the Truman, Bone, and Kilgore committees by the Department of Justice with respect to this transaction which so seriously imperiled the war preparations of the United States. The story in short is that because of Standard Oil's determination to maintain an absolute monopoly of synthetic-rubber developments in the United States it fully accomplished I. G.'s purpose of preventing United States production by dissuading American rubber companies from undertaking independent research in developing synthetic-rubber processes. This Standard accomplished by falsely creating the impression that it had already received the buna process from Farben and was attempting to work out a scheme for licensing the process to the American rubber companies. In fact, Farben had told Standard that it could not then make such process available to Standard. But Standard knew that if the rubber companies realized the situation they would proceed with independent research thus preventing Standard from ever having a monopoly in the field. The diabolical manner in which Farben was able to use the monopoly desires of Standard Oil to accomplish its purpose is clearly revealed by the fact that Farben was able to keep Standard satisfied until 1939 merely by telling Standard that Farben could not yet turn over the buna process to Standard as required by the terms of their cartel agreement because the German Government would not permit it. The investigation has brought to light one new and amazing indication of the manner in which Standard allowed itself to be used by Farben. As indicated above, Standard for some time successfully stalled off the American rubber companies by giving them the false impression that Standard had already received the buna process from Farben and was about to license it to the rubber companies. But as time dragged on and the licenses were not forthcoming, the clamor of the rubber companies became so intense that Standard,

not wanting to reveal the true situation, turned to Farben for an excuse to give the rubber companies. An official of Standard, in October 1939, at a meeting of I. G. representatives in Basle, stated that he had to be provided with an excuse for not getting the know-how. I. G. obligingly cabled Standard Oil to the effect that the authorities would not permit the information to be given to the American firm.

5. Farben was Germany's greatest single source of foreign exchange

I. G. was the dominant factor in the important German chemical export trade. It accounted for approximately 10 percent of the country's total exports of all products and approximately 50 percent of Germany's total exports of chemicals and allied products. In the different sectors of that trade its position varied considerably, being strongest in pharmaceuticals, dyestuffs, and photographic materials in the order named. In 1937, 70 percent of I. G.'s total production of pharmaceuticals, 65 percent of its dyestuffs, and 40 percent of its photographic materials were exported. Its exports greatly exceeded its imports, and its net income from royalty payments and sales of patent rights also was considerable.

These transactions made I. G. Germany's largest single earner of free foreign exchange. Without this foreign exchange (a) Germany could not have purchased the strategic raw materials, equipment, and technical processes unavailable in Germany and essential to Germany's rearmament, and (b) the German Government could not have financed its espionage, propaganda, and other military and political activities abroad in the preparation for and prosecution of the war.

Government pressure on German industry, and in particular on I. G., to increase their procurements of foreign exchange was always strong. With the beginning of the 4-year plan this pressure became acute; but I. G. cooperated fully with the Government in making available all possible foreign exchange for Government purposes. The numerous examples of this have been set forth in detail previously. I. G. also evaded the United States dumping statutes to secure foreign exchange. Finally, when the foreign exchange situation became absolutely desperate, I. G. even sold some of its investments abroad.

6. Farben's dream of world conquest

There is and can be no doubt that from the day of its accession to power the Nazi government planned and prepared for a war of world conquest. This investigation has demonstrated beyond all doubt that the policy of the Nazis was not only known to I. G. Farben and its officials but that it was always a policy with which I. G. fully agreed and which it supported to the full extent of its power and resources. In the words of Dr. von Schnitzler "the development of I. G. during the last 12 years can't be separated from the Government's foreign policy." It is equally clear that I. G. expected that the new order which this policy was to achieve would bestow upon I. G. the title and power of absolute ruler of the world chemical industry.

After the advent of the Nazi regime in Germany the close relationship of I. G. to the Wehrmacht was visibly strengthened. One of the first steps taken by Farben to solidify this union, which is described in glowing terms by Dr. von Schnitzler, *infra*, was the establishment of an office which concerned itself entirely with military liaison.

This was the so-called Vermittlungsstelle W. In a report on the functions of this organization dated December 31, 1935, it was clearly stated that—

The aim of this work is the building up of a tight organization for armament in the I. G. which could be inserted without difficulty in the existing organization of the I. G. and the individual plants. In the case of war, I. G. will be treated by the authorities concerned with armament questions as one big plant which in its task for the armament, as far as it is possible to do so from the technical point of view will regulate itself without any organizational influence from outside (the work in this direction was in principle agreed upon with the Ministry of War (Wehrwirtschaftsamt) and from this office with the Ministry of Economy) * * *. To the field of the work of the Vermittlungsstelle W belongs besides the organizational set-up and long-range planning, the continuous collaboration with regard to the armament and technical questions with the authorities of the Reich and with the plants of the I. G.

By the admission of I. G. officials, this office was established because, by 1934, transactions between I. G. and the Wehrmacht had become so numerous and the I. G.-Wehrmacht relationship had grown so intimate that coordinated liaison was required. It also was established at the suggestion of the German military authorities and "occupied itself principally with problems in connection with a possible war."

Prior to the Allied occupation, I. G. officials destroyed the files dealing with Vermittlungsstelle W matters according to Dr. Struss, who as head of the Secretariat of I. G.'s Technical Committee (Tea Büro) and top assistant to Dr. ter Meer, who directed the affairs of division II, discussed below, was the responsible official.

At approximately the same time that the Vermittlungsstelle W was established, I. G. received orders from the government to prepare production plans in the event of war. "I know," said Dr. Struss, "that a representative of the Ministry of Economics, Dr. Lenz, and a representative of the Ministry of War, Dr. Mureck, assisted in the making of these plans. I remember that Dr. Mureck often told us that the Ministry of War wants the plans drawn up in such and such a way."

Pursuant to these instructions I. G. Farben in 1934 began to mobilize for war. Every I. G. plant prepared its production plans for war and turned them over to the Vermittlungsstelle W which submitted them to the Ministries of War and Economics. By early 1939, these plans, the so-called "MOB" plans for the production of essential military goods, were approved by the Ministry of War and ready to be executed. According to Dr. Engelbertz, manager of I. G.'s plant in Griesheim which produced many vital war chemicals such as intermediates for explosives, carbon electrodes for aluminum, and chlorine electrolyses, his plant received the approved "MOB" plans for its products in March or April 1939 with the understanding that they were to be put into operation at the outbreak of war.

By the middle thirties, I. G. had become so preoccupied with war that the facilities of all its plants were devoted to war games (Kriegsspiele) and to maneuvers in the technical problems which may come up in the event of war. According to Dr. Struss, the war games or Kriegsspiele began in 1934 or 1935 under the supervision of Wehrmacht officials. These games were described in detail by Dr. Struss as follows:

It is true that since 1934 or 1935, soon after the establishment of the Vermittlungsstelle W in the different works, theoretical war plant games had been

arranged to examine how the effect of bombing on certain factories would materialize. It was particularly taken into consideration what would happen if 100- or 500-kilogram bombs would fall on a certain factory and what would be the result of it. It is also right that the word "Kriegsspiele" was used for it. The Kriegsspiele were prepared by Mr. Ritter and Dr. Eckell, later on partly by Dr. von Brunning by personal order on Dr. Krauch's own initiative or by order of the Air Force, it is not known to me. The tasks were partly given by the Vermittlungsstelle W and partly by officers of the Air Force. A number of officers of all groups of the Wehrmacht (Navy, Air Force, and Army) participated in these Kriegsspiele. The places which were hit by bombs were marked in a map of the plant so that it could be ascertained which parts of the plant were damaged, for example a gas meter or an important pipe line. As soon as the raid finished, the management of the plant ascertained the damages and reported which part of the plant had to stop working; they further reported what time would be required in order to repair the damages. In a following meeting the consequences of the Kriegsspiele were described and it was ascertained that in the case of Leuna [plant] the damages involved were considerably high; especially it was found out that alterations of the pipe lines were to be made at considerable cost.

It is significant to note that in all these preparations for war I. G. Farben did more than merely comply with orders and requests of the Wehrmacht and Nazi government agencies. It functioned, in fact, as though it were a research organization of the German Government itself charged with the responsibility of discovering all possible means of increasing the military might of Germany. Farben voluntarily initiated many projects for the Wehrmacht and then proceeded to convince the Wehrmacht of the importance of such projects. This aspect of I. G. Farben's operations is clearly disclosed in a report of Farben's development and experimental work. The report states that—

A whole range of problems had been worked at by the I. G. for its own account and only later, after certain results of experiments could already be seen, the offices of the army were interested in these problems * * *. The cases were respectively rare where the army for its part approached the I. G.

The report estimates that about 40 to 50 percent of the military projects worked on by I. G. "were submitted to the army by the I. G. on its own initiative" and that only a few of them "would have come in directly from the army."

Thus, before the Nazi army attacked Poland, I. G. and the rest of German heavy industry was mobilized and ready after long years of preparation. In describing how perfectly the "MOB" plans worked when put into operation, Dr. von Schnitzler stated, in part, as follows:

All the German industries were mobilized in summer 1939 and in the summer 1939 the Wirtschaftsgruppe Chemie issued an order that the plans for war were in action. In June or July 1939 I. G. and all heavy industries as well knew that Hitler had decided to invade Poland if Poland would not accept his demands. Of this we were absolutely certain and in June or July 1939 German industry was completely mobilized for the invasion of Poland.

These activities of I. G. standing alone would leave no room for doubt that Farben knew for many years that the German Government intended to wage war. Furthermore, as will be shown in detail in the report, I. G.'s leading officials assisted in the formulation and execution of the internal and external policies of the Nazi regime. Its president was a member of the Reichstag. Its leading scientist was one of Goering's chief assistants under the 4-year plan. Its statisticians and economists prepared intelligence for the Nazi high command. Scores of its technicians were constantly on loan to the Air and War Ministries. According to Dr. von Schnitzler, the war was "only the last step of a long prepared evolution" of the Nazi policies.

Not only did I. G. have knowledge of Germany's intention to wage aggressive warfare but it was officially informed almost with exactitude of the timetable of the attack on Poland. Months before that attack Goering's office had informed I. G. that the Nazi war machine would invade Poland in September 1939. Before Hitler's moves against Czechoslovakia, I. G. took steps to take over its leading competitor in that country.

Farben not only planned and prepared for war, but it also planned and prepared for the future when Germany would have conquered the world. In particular, it planned for Farben's part in the new order and for the use of the spoils which Farben was to receive.

In June 1940, with half of Europe already under the Nazi heel and with the downfall of France imminent, Hitler's plans to conquer the world seemed capable of early fruition. I. G., too, had dreams of world empire, dreams which it translated with painstaking clarity into a document appropriately entitled "Neuordnung" (New Order). The document was submitted to the Ministry of Economics. The letter of transmittal which accompanied the document stated that I. G. anticipated the German conquest of Europe, felt that a "new order" for the chemical industry of the world was required to supplement Hitler's new order, and further stated that it was fitting its plans within that framework. The immediate objective of the document was to insure the full cooperation of the chemical companies of the conquered countries in producing for the Wehrmacht. The second objective envisaged the complete incorporation of the chemical industries of Europe, including the British Empire, within the framework of Hitler's new order. The third objective was to eliminate United States competition in the world market. Finally, Farben was preparing to utilize again its vaunted economic warfare weapons, cartels, capital investments, and know-how, in anticipation of a possible conflict between Germany and the United States of America. Although the new order was never finally achieved, much of Farben's plan was put into operation after the Nazi conquest of Austria, Czechoslovakia, Poland, and France. Said Dr. von Schnitzler:

It must be remembered that in preparing the "Neuordnung" we were following the lines of the so-called Gross-Raum-Politik laid down by the Government. We were looking to the overwhelming downfall of France and eventual capitulation of England when we prepared the document. It must be remembered that we knew well the aims and policies of the Government and we knew that it was the intention of the Government to improve its strength in relation to the countries outside of the European sphere. This meant, of course, the United States because outside of Europe the United States was the only strong country with which Germany had to reckon. Therefore, we wrote in the "Neuordnung" that we intended to keep Germany as strong as possible militaristically in relation to the United States. We could accomplish this only by limiting the production of armaments in Latin America. We did not want in the event of an eventual conflict with the United States to permit Latin America to supply the United States of America with war materials. It should be remembered that I. G. had to follow the lines of the Nazi government.

Having made a major contribution to the Nazi war potential, I. G. reaped the profits of aggression.

The signed confession of the head of I. G.'s legal department recites:

To my knowledge, I. G. Farben, its directors and officers, fully approved the Nazi aggression against Poland, Czechoslovakia, and France. I. G. profited considerably from these conquests.

Even prior to the Nazi conquests, I. G. was the major chemical firm on the Continent. Yet I. G.'s acquisitions as a result of conquest were tremendous. Its acquisitions of chemical and dyestuffs firms in the conquered countries totaled approximately RM. 350,000,000. One after the other, it absorbed or eliminated its competitors in the dyestuffs field in the conquered countries until not a single independent dyestuffs company remained. It also absorbed major chemical firms. And by building new war plants in the conquered countries, I. G. increased its capital investments by approximately RM. 700,000,000. Every plant of I. G. in the conquered countries devoted itself to war production. Furthermore, I. G. so increased the technical dependence of industry in the conquered countries on I. G. that it is confident that despite German defeat it can regain its position of control. As stated by von Schnitzler, I. G.'s leading commercial director, on September 7, 1945:

* * * they will need the constant technical help of I. G.'s scientific laboratories as they do not own appropriate installations within themselves.

In conclusion, in the words of Dr. von Schnitzler:

Thus, in acting as it had done, I. G. contracted a great responsibility and constituted a substantial aid in the chemical domain and decisive help to Hitler's foreign policy, which led to war and to the ruin of Germany.

Thus, I must conclude that I. G. is largely responsible for Hitler's policy.

ELIMINATION OF GERMAN RESOURCES FOR WAR

CHAPTER I. WHAT I. G. FARBEN IS

I. SIZE AND CAPACITY

I. G. Farbenindustrie, A. G., was the largest, most powerful chemical trust in the world. As such, it represented the most vital segment of Germany's industrial potential. With a net worth amounting to RM. 6,000,000,000 at the very minimum,¹ its domestic participations comprised over 380 other German firms.² Its factories, power installations, and mines were scattered all over Germany.³ There was hardly a raw material or an auxiliary product required in its manufacturing operations that I. G. did not produce in significant quantities within its own organization.⁴ It owned its own lignite and bituminous coal mines, coke ovens, magnesite, gypsum, and salt mines. I. G.'s world organization included over 500 firms, both acknowledged and camouflaged, valued at a minimum of RM. 1,000,000,000.⁵ Its holding companies and plants blanketed Europe, and its house banks, research firms, and patent firms clustered around every important commercial and industrial center in both hemispheres.

The origin of this industrial giant can be traced to the beginning of the present century. In 1904 Badische Anilin und Soda Fabrik, Ludwigshafen, Farbenfabriken vorm. Friedrich Bayer und Co., Leverkusen, two of the most powerful chemical firms in Germany, together with the Aktiengesellschaft für Anilinfabrikation, Berlin, entered into an agreement to pool their profits and share them according to a prearranged formula.⁶ In the same year Farbwerke vorm. Meister, Lucius und Brüning, Höchst, and Leopold Cassella und Co. also concluded an agreement to pool and share their respective profits. Soon thereafter Badische (Ludwigshafen) and Höchst came to an agreement on the marketing of synthetic indigo, which had recently gone into large-scale production, and over which a competitive

¹ An accurate appraisal of I. G.'s net worth can be made only after an exhaustive audit of the books of its companies and the books of its participations both acknowledged and camouflaged. The booked net worth of the company was RM. 4,025,000,000 but it has been customary for German companies, and particularly I. G. Farben, to undervalue their assets. Mr. Paul Dencker, I. G.'s chief accountant, has estimated that an additional RM. 1,337,000,000 were in hidden reserves not shown on the books. (For an explanation of how the estimates of these hidden reserves were arrived at, see exhibit No. 1.) Even his estimate of RM5,402,000,000 for the net worth of I. G. cannot be accepted as a reasonably accurate figure. It includes only participations which are shown on the books and does not include the company's many camouflaged participations. Mr. Dencker evaluates the company's patents and licenses at approximately RM. 200,000,000. Standard Oil Co. (New Jersey) paid \$30,000,000 for only the United States rights to I. G. hydrogenation patents. Both Dr. von Schnitzler and Mr. Frank-Fahle of the Central Finance Administration of I. G. thought Mr. Dencker's estimate for hidden reserves "conservative."

² For a detailed list of known direct and indirect participations of I. G., see exhibit No. 2. These participations are shown graphically on chart No. 1.

³ Chart No. 2 is a map showing I. G.'s plants keyed to normal labor requirements and to classes of products produced in each plant. I. G.-controlled mines in eastern, central, and western Germany are shown on chart No. 3.

⁴ For details on interplant dependency within I. G. for raw materials and intermediate products, see exhibit No. 3. See also chart No. 4 for a graphic representation of the interdependency in raw materials and intermediate products within Division 2 of I. G. (dyestuffs, chemicals, plastics, light metals, pharmaceuticals, etc.).

⁵ This estimate is based on a survey of the available material relating to I. G.'s external assets set forth as exhibits to ch. II.

⁶ For an historical discussion of this development by a member of I. G.'s managing board of directors, see exhibit No. 4, statement by Paul Haefliger, dated August 6, 1945.

struggle was developing. In 1916 the two groups came together, along with two other firms, comparatively smaller but important in their own special fields, Chemische Fabrik Griesheim-Elektron, Frankfurt a. M., and Chemische Werke vorm. Weiler-ter-Meer, Ürdingen, in the "Interessengemeinschaft der deutschen Teerfarben-industrie" (community of interests of the German coal-tar dye industry). The firms remained independent corporate entities, agreeing to pool and share their profits according to specified quotas. By special agreements, Kalle und Co., Biebrich, and Farbwerk Mühlheim, Mühlheim, were induced to make special agreements with Höchst and Cassella, respectively. In 1925 these nine firms were joined in a thoroughgoing financial merger and the present I. G. was born. This merger marked the beginning of the final phase of a process of concentration which had been going on since the beginning of the century. Thereafter, that process took the form of a "rationalization" of production and sales organizations, and expansion pursuant to one over-all plan. By an important series of agreements in 1926, I. G. secured control over the greater part of the German explosives industry, especially Dynamit Actien-Gesellschaft, Troisdorf (DAG), and Rheinisch-Westfälische Sprengstoff, A. G., major producers of explosives and munitions. Thus, "I. G. represented the combined forces of firms which even before the merger in 1925 were the strongest and the most active ones in the chemistry field in all of Europe, if not the world. They constituted the cells from which the whole technical expansion of I. G. originated."⁷

Even at the time of its formation, however, the Interessengemeinschaft Farbenindustrie A. G. was more than a "community of interests of dye industries," as its name would indicate. It was also the largest producer of heavy chemicals such as acids and caustic soda. It enjoyed a virtual world monopoly of both the young and rapidly growing pharmaceutical industry and the high-pressure industry, typified by the great synthetic-nitrogen capacity which had been built up in Germany during the First World War.

In subsequent years, I. G.'s industrial domain expanded still further into many related and unrelated fields such as plastics and synthetic resins, light metals, rayon and other cellulose productions, detergents, synthetic tanning materials, synthetic rubber, synthetic gasoline and lubricating oils, rare gases,⁸ coal,⁹ and even iron and steel. It had acquired this domain partly through the expansion of existing plants, partly through the construction of new facilities,¹⁰ and partly through its network of participations.¹¹

All in all, I. G. produced between 50 and 55 percent of Germany's total production of chemicals and allied products.¹² It was responsible for approximately 40 percent of Germany's total turn-over in these fields. In 1943 it accounted for 100 percent of German synthetic rubber production; 100 percent of methanol production—indispensable in the manufacture of plastics, synthetic resins and rubber; 100 percent lubricating oils; 100 percent serums; 92 percent of the plasticizers; 90 percent of the organic intermediates; 90 percent of the plastics;

⁷ See exhibit No. 5, statement of von Schnitzler dated August 20, 1945.

⁸ For I. G.'s output of chemical products by plant from 1937 to 1943 see exhibit No. 6.

⁹ For production figures of I. G. coal mines see exhibit No. 7.

¹⁰ Considerable detail on the investment and production program in recent years is given in the statistical compilations offered as exhibit No. 8.

¹¹ Exhibits 9, 10, 11, and charts 5, 6, and 7.

¹² For data on I. G.'s expansion and on its industrial significance, see exhibits No. 12 and 5, statements by Dr. von Schnitzler dated August 21 and August 20, 1945.

88 percent of the magnesium; 84 percent of the explosives; and 75 percent of the nitrogen.¹³ A more detailed description of I. G.'s extraordinary productive achievements is set forth below in chapter III.

Not only did I. G. have a monopoly or a near monopoly in Germany in a great number of finished products, but other German chemical companies and numerous strategic industries were either totally or largely dependent upon I. G. for many raw materials, intermediate products, and for technical assistance. The German soap industry was entirely dependent on I. G. for its supplies of detergent raw materials. The tanning industry obtained approximately 50 percent of its synthetic tanning agents from I. G. The paint and varnish industry looked to I. G. for 65 percent of its raw materials (synthetic resins, solvents, plasticizers). In the plastics field Röhm und Haas, Darmstadt, the only other independent producer, was totally dependent on I. G. for certain important types of intermediates. Similarly dependent was the only other producer of dyestuffs in Germany, Geigy, Grenzach.¹⁴

The German chemical and related industries were particularly dependent on I. G. for patents and know-how. For instance, in the synthetic gasoline field, I. G. actually produced only 33 percent of Germany's total production. Yet if we include the synthetic gasoline plants in Germany which were operated under I. G.'s licenses and managed by I. G.'s technical personnel, the company would have been responsible for approximately 90 percent of Germany's total output of synthetic gasoline. I. G.'s domination of the German chemical and related fields became even more pronounced during the period of preparation for and the prosecution of the Nazi war of aggression.

During the rearmament and war periods I. G.'s sales increased tremendously year by year. In 1936 its total sales amounted to RM. 786,006,000; in 1943 the all-time peak of RM. 3,115,667,000 was reached. During that year I. G.'s German subsidiaries accounted for sales valued at an additional RM. 1,000,000,000 and of these at least 50 percent were made by Dynamit A. G. alone.¹⁵ Among approximately 4,000 chemical firms spread all over Germany, the closest competitor to I. G. in terms of sales was Henckel et Cie., Dusseldorf, manufacturers of soap and allied products, with a turn-over of approximately RM. 200,000,000. The only other chemical companies in Germany with a yearly turn-over of RM. 100,000,000 were Deutsche Solvay Werke (of which I. G. owned 25 percent), and Schering A. G., manufacturers of pharmaceuticals. These firms and the remainder of the German chemical industry could compete with I. G. in only narrow segments of the latter's production activities.¹⁶

Foreign sales were particularly significant. I. G. was the dominant factor in the German chemical export trade. It accounted for approximately 10 percent of the country's total exports of all products and approximately 50 percent of Germany's total exports of chemicals and allied products. In the different sectors of that trade its position varied considerably, being strongest in pharmaceuticals, dyestuffs, and photographic materials in the order named. In 1937, 70 percent

¹³ For figures on I. G.'s production of 43 main products and product groups and its relation to total German production see exhibit No. 13.

¹⁴ For these and other examples see exhibit No. 14, statements by Dr. Oskar Loehr, dated September 8 and August 31, 1945.

¹⁵ For a graphic presentation of I. G.'s sales and sales of certain of its participations from 1926 through 1942, broken down by major products, see chart No. 8.

¹⁶ For a description of the principal chemical firms in Germany, see exhibit No. 15.

of I. G.'s total production of pharmaceuticals, 65 percent of its dyestuffs and 40 percent of its photographic materials were exported.¹⁷ Its exports greatly exceeded its imports. It received important returns from foreign investments.¹⁸ Its net income from royalty payments and sales of patent rights was also considerable.¹⁹ These transactions made I. G. Germany's largest single source of free foreign exchange, providing an average of at least 10 percent of the country's total supply.²⁰

I. G. has been an extremely profitable concern. Even during the "great depression" it did not lose money. As its sales increased in the rearmament and war period, so did its profits.²¹ Gross profits on total operations rose from RM. 47,958,997 in 1932 to RM. 231,007,044 in 1937, RM. 363,038,997 in 1939, and RM. 821,626,559 in 1943. Net profits publicly announced for the same years were RM. 47,013,427, RM. 48,053,329, RM. 56,071,000, and RM. 81,700,000. Net profits announced in the balance sheets are not, however, an adequate indication of the financial condition of the company, especially in a country where a legal limitation had been placed upon dividend rates. They certainly understate the company's earning power. To determine the actual profitability of the company an exhaustive analysis of the books would be required, which cannot be undertaken here. Suffice it to point out that in the later years very large sums were transferred to reserves, and that it cannot be determined to what extent profits announced in the balance sheet include part or all of the income from participations in subsidiary and affiliated companies since it was customary for these also to reinvest their profits in their own operations.²² Dyestuffs were the biggest consistent source of profits to I. G., producing returns ranging from approximately 30 to nearly 40 percent on sales yearly. In recent years chemicals and pharmaceuticals have accounted for a rising share in total "raw profit"²³ and in the latter category the rates of return were over 30 percent.²⁴

"The industrial position of I. G. in Germany had no parallel with any other enterprise."²⁵ It has been estimated that it alone accounted for approximately 5 percent of Germany's total industrial activity.²⁶ In 1943 it employed approximately a quarter of a million people.²⁷ Vereinigte Stahlwerke, the great German steel producer, employed more people, and the state-owned Hermann Goering Werke had absorbed so many companies that its capital and turn-over might have been higher than I. G.'s but "their domains of activity and earning capacity and scientific performance were incomparably smaller."²⁸

¹⁷ See exhibit No. 16, statement by Dr. Struss dated July 4, 1945, showing a break-down of sales in home and foreign markets by major product groups for the years 1937, 1939 and 1943.

¹⁸ See exhibit No. 17.

¹⁹ Some details on income from patents and licenses are given in exhibit No. 18.

²⁰ See exhibit No. 19, statement by Gierlichs dated August 21, 1945. The estimate was based on the relative position of I. G. in Germany's export trade. It does not include foreign exchange derived from direct or indirect, domestic or foreign participations, or from royalty payments, sales of patents, etc.

²¹ For an analysis of I. G.'s profits by years from 1930 to 1945 see exhibit No. 20; statements by Paul Dencker dated August 27 and 30, 1945.

²² Details on I. G.'s income from participations are set forth in exhibit No. 17.

²³ Gross profits prior to payment of taxes.

²⁴ For further details on gross profits in relation to turn-over by major product classification from 1936 to the first half of 1944, see exhibit No. 21. A break-down of sales proceeds by major product classifications for the years 1934 through 1939 is shown in chart No. 9.

²⁵ Exhibit No. 5.

²⁶ Dr. von Schnitzler estimated total German industrial activity in 1943 at between RM. 80,000,000,000 and RM. 100,000,000,000. The chemical and allied industries accounted for approximately 10 percent of the total.

²⁷ For various statistical compilations of I. G.'s labor force see exhibit No. 22.

²⁸ Exhibit No. 5.

Du Pont de Nemours in the United States is the only other chemical company in the world of even comparable size. While Imperial Chemical Industries, England, numbers third to du Pont's second and I. G.'s first, it cannot even be classed with the first two companies. On the Continent of Europe there were only three other fairly large chemical companies—Montecatini in Italy, Kuhlmann in France, and the Aussiger Verein in Czechoslovakia—named in the order of size. I. G.'s field of activity was far wider than any of these. To summarize, in the words of Dr. Georg von Schnitzler, member of the managing board and chairman of the powerful commercial committee:

No single individual company had so large a field of progressive scientific enterprise as I. G. * * * Du Pont was highly progressive * * * the same applies to Union Carbide, the American Celanese, as well as Eastman Kodak Co., but all those enterprises were much more specialized than I. G. and did not cover so large a field of research work as I. G. did.²⁹

The industrial strength of I. G. originated in its laboratories, and has always been based on its research and technical knowledge, protected by aggressive patent tactics. The company was built by technical men, like Duisberg and Bosch, who always—at least until Bosch's death in 1940—formulated major policy for the company. I. G. rarely entered fields already widely exploited by other firms in the industry, but developed their lines of production in new fields. New developments of outstanding importance in the chemical and related fields in Germany were made primarily by I. G. and "research work on a large scale in the chemical field was exclusively done by I. G."³⁰

Vast sums were devoted to research.³¹ In the period between 1932 and 1943 I. G. spent slightly less than RM. 1,000,000,000, averaging an expenditure of rather more than 4.1 percent of average annual gross sales. A significant percentage of these expenditures went into research on products not yet in commercial production, and constant attention was also paid to novel applications of products. Well over 1,000 highly qualified men and women were regularly engaged in research work. In addition, the firm financed research work in many universities and scientific institutes.³²

II. ORGANIZATION AND MANAGEMENT³³

The company was divided into three technical divisions or groups (Sparten). Division 1 concerned itself with high-pressure chemistry, including the production of nitrogen, synthetic gasoline, oils, and also coal. Division 2, the largest, comprised the old inorganic or "heavy" chemical industry, the main branches of the organic chemical industry, dyestuffs, pharmaceuticals and plastics, and the electrochemical industry, mainly typified by the production of the light metals. Division 3 dealt with cellulose chemistry, covering the fields of photographic materials and artificial fibers.³⁴ Technical planning and control was in the hands of the three division chiefs, Dr. Christian Schneider, successor to Dr. Carl Krauch who became chairman of the supervisory board. Dr. Fritz ter Meer and Dr. Fritz

³² These are included under the subhead "Cooperators" in exhibits Nos. 26 and 28.

³³ An analysis of the over-all organization of I. G. is presented as exhibit No. 30.

³⁴ For a graphic presentation of the organization of technical control see charts Nos. 10 and 11.

Gajewski, respectively. If problems arose on which the division chiefs could not make independent decisions these problems were referred to the technical committee.³⁵ This body, of which Dr. ter Meer was chairman, consisted of the three division chiefs, a number of plant managers, and leading technicians. It reported directly to I. G.'s managing board of directors.

The various managers of the main plants were responsible for actual control of production in their own plants and in various subordinate factories. These subordinate plants were usually either situated close to the larger works or constituted their "colonies" which had developed in the "Drang nach Osten" which characterized the expansion of the rearmament and war periods.³⁶ In order to assure uniformity of management in an organization of such size and complexity as division 2, its plants were divided into four "works combines"—upper Rhine, Main Valley, lower Rhine, and middle Germany—under the supervision of Drs. Wurster (Ludwigshafen-Oppau), Lautenschläger (Höchst), Kühne (Leverkusen), and Bürgin (Bitterfeld/Wolfen), respectively.³⁷

The complicated structure of the chemical industry in general, and of I. G. in particular, is reflected in the intricate technical control developed in I. G.³⁸ Many of the plants manufactured products of more than one division, so that an individual plant manager was often subordinate to more than one division chief. Dr. Wurster, for example, was plant manager of Ludwigshafen-Oppau, and head of its inorganic department. Under him were Dr. Ambros, head of the organic department, in charge of Ludwigshafen, which manufactured mainly inorganic chemicals, organic intermediates, antioxidants, dyeing auxiliaries, plasticizers, synthetic resins, synthetic tanning agents, formaldehyde, solvents, plastics, synthetic rubber, and dye-stuffs; and Dr. Müller-Cunradi, head of the high pressure department and in charge of Oppau, which manufactured mainly nitrogen products, but which also did extremely important research work in the field of synthetic oil products. Thus Dr. Wurster was subordinate to Dr. Schneider of division 1 in matters concerning high-pressure chemistry, but to Dr. ter Meer in matters concerning division 2. Again Dr. Kühne at Leverkusen, which produced inorganic chemicals, organic intermediates, dyestuffs, pharmaceuticals, and photographic papers reported mainly to Dr. ter Meer, but also to Dr. Gajewski of division 3.

The sales organization of I. G. was no less complicated.³⁹ Questions of sales policy which concerned the company as a whole were handled by the important commercial committee (Kaufmännischer Ausschuss),

³⁵ The Tea Büro acted as secretariat to this committee. For a statement of its functions, prepared by its chief, Dr. Struss, see exhibit No. 31.

³⁶ The Oppau plant, for example, the earliest producer of synthetic nitrogen by the Haber-Bosch process and the home of much important research work on synthetic gasoline production, was the scientific brain center of the new gasoline plants at Heydebreck and Auschwitz, and also still to some extent of Leuna. The buna plants at Schkopau and Auschwitz had a similar relation to Ludwigshafen, where much pioneer work had been done in the field of synthetic rubber.

³⁷ Ludwigshafen-Oppau was the plant of Badische Anilin- und Soda-Fabrik; Höchst, of Farbwerke vorm. Meister, Lucius, and Brüning; Leverkusen of Farbenfabriken vorm. Friedrich Bayer & Co.; while Bitterfeld/Wolfen is the center of the newer chemical industry built on the lignite fields of central Germany.

³⁸ In considering this control, three things should be borne in mind. First, I. G. was formed from several independent firms each manufacturing a wide range of products. Second, after the merger of 1925-26 comprehensive measures of rationalization were effected which resulted in a greater degree of plant specialization, and, by the same token, interplant dependency. Third, when new plants were built after the merger, their location and production plans were decided upon largely on grounds of technical and economic efficiency.

³⁹ See chart No. 12.

of which Dr. von Schnitzler was chairman, and of which the main sales executives were members.⁴⁰ This committee was responsible to the managing board. I. G. products were disposed of through five main sales combines—the dyestuffs combine; the chemicals combine; the pharmaceuticals combine; the photographic supplies, aromatic chemicals, and synthetic fibers combine; and a special combine through which the products of division 1 were sold. Dr. von Schnitzler was chairman of the first and second groups, General Konsul Mann of the third, which included the products bearing the famous “Bayer” trade-mark, Dr. Otto of the fourth, which included products marketed under the trade name “Agfa,” and Dr. Oster, of the last. The huge chemical sales combine was subdivided into metals under Dr. Haefliger, inorganic products under Herr von Heider, and organic chemicals under Herr Borgwardt. Just as in the case of technical matters, individual plant managers would often have to deal with more than one division chief, so in commercial matters they frequently had to deal with the heads of several sales combines. The leading idea behind this sales organization, a product of the “rationalization” following the 1925 merger, was that products of broadly similar chemical character and similar lines of application⁴¹ should be grouped together.

The huge task of controlling the financial affairs of the company fell to the central bookkeeping department and the central finance administration (“Zefi”).

The latter was part of the office known as I. G. Berlin, N. W. 7, an organization which, with Dr. Max Ilgner, a nephew of the president, as its chief, came to exercise in recent years an increasing measure of financial and economic control over the company.⁴² Besides the central finance administration it contained an economic department under Dr. Reithinger (“Vowi”) and a political economic department (“Wipo”) under Dr. Terhaar. These two departments and the office of the commercial committee (Büro des Kaufmännischen Ausschusses) assisted the company by providing excellent economic and statistical information and by acting as liaison with Government departments. N. W. 7 expanded greatly under the Nazi regime, and its activities took on an increasingly sinister character. These activities will be described in detail below.

Patent departments were maintained at Höchst, Leverkusen, Bitterfeld-Wolfen, and Wolfen (Film), while the central patent office, headed by Dr. August von Knieriem, chief legal counsel for I. G. and chairman of the important legal committee, was located at Ludwigshafen.

These in brief are the bare outlines of the technical and commercial organization of I. G. There remains for consideration the question of how over-all company policy was determined. The management of the company rested entirely with the managing board of directors (Vorstand) and the central committee (Zentral-Ausschuss).⁴³ Since the middle thirties the supervisory board of directors (Aufsichtsrat)

⁴⁰ In addition there were in recent years 2 other regional committees: the East Asia Committee and the South East Europe Committee set up to handle special problems of these areas.

⁴¹ Giving expert advice to consumers on the applicability of products was an important aspect of I. G. sales organization.

⁴² Three studies prepared by I. G. officials on the organization and functions of I. G. Berlin, N. W. 7, are appended as exhibit No. 32. Chart No. 13 is graphic representation of that organization.

⁴³ For a chart indicating the positions and duties of the various members see chart No. 14.

has exercised no actual authority, although according to the bylaws, it was responsible for supervising personnel matters and finances.⁴⁴

The managing board was presided over by the president, Dr. Hermann Schmitz, and was composed of 21 members; 11 of these were chemists who were either division chiefs or plant managers,⁴⁵ 2 were legal advisers,⁴⁶ 1 was the chief engineer of the company,⁴⁷ and 5 were sales executives.⁴⁸ Seven senior members of the managing board—Schmitz, Von Knieriem, Schneider, ter Meer, Gajewski, Hörlein, and von Schnitzler made up the central committee, that is, the inner circle of top executives.

III. OWNERSHIP AND CONTROL

At the present time, the capital stock of I. G. Farben consists of 40,000 preferred shares having a par value of RM. 40,000,000 and 3,928,838 common shares in bearer form having a par value of RM1,360,000,000.⁴⁹

Of the 40,000 preferred shares outstanding, 38,000 are registered in the name of Ammoniakwerk Merseburg G. m. b. H., a wholly owned subsidiary of I. G., and the remaining 2,000 shares, represented by one certificate in bearer form, are in the possession of I. G.'s camouflaged house bank, the Deutsche Landerbank.⁵⁰

The common stock is widely scattered among a minimum of 140,000 stockholders.⁵¹ An investigation made in 1934 by I. G.'s central financial department found that 87 percent of the common stock was owned by corporations and individuals within Germany, while the remaining 13 percent was owned abroad.⁵²

	I. G. original stock shares (in million reichsmarks) (nominal value)	Percentage of total capital stock		I. G. original stock shares (in million reichsmarks) (nominal value)	Percentage of total capital stock
Switzerland.....	24.3	3.57	Spain.....	3.1	.46
Great Britain.....	19.9	2.93	Czechoslovakia.....	3.0	.44
Holland.....	7.4	1.09	Belgium-Luxemburg.....	1.0	.15
United States of America.....	4.8	.71			

Dr. Max Ilgner, Director of I. G.'s central finance department, estimated that slightly over 6 percent of I. G.'s common stock is owned by the following firms:⁵³

Francolor of Paris (51 percent of whose stock is owned by I. G.).

⁴⁴ For a description of the duties of the managing board of directors and the supervisory board of directors, see exhibit No. 33. A list of all the directors who were not members of the managing board, with relevant biographical details, is included as exhibit No. 34.

⁴⁵ Schneider, ter Meer, Gajewski, Hörlein, Bütefisch, Müller-Cunradi, Wurster, Ambros, Lautenschläger, Kühne, and Bärnin.

⁴⁶ Von Knieriem, chief legal adviser, and Brüggemann.

⁴⁷ Jähne.

⁴⁸ Von Schnitzler, Oster, Haefliger, Mann, and Otto.

⁴⁹ For an analysis of the development of I. G.'s capitalization, see exhibit No. 35, statement prepared by Mr. Paul Dencker, chief accountant of the firm, dated August 20, 1945.

⁵⁰ See exhibit No. 36, letter from Dr. Frank-Fähle to Schmitz, dated February 8, 1945.

⁵¹ A rather large percentage is held by the Deutsche Bank and the Dresdner Bank, mainly for the accounts of others. Investigation at their head offices, however, revealed that these holdings contained few large parcels of shares. The president, Dr. Hermann Schmitz, declared in his 1943 tax return to the German Government that he owned approximately RM. 750,000 of I. G. common stock. After investigation, however, he admitted owning RM. 1,250,000 worth of common stock (nominal value).

⁵² See exhibit No. 37, memorandum from Dr. Bannert to Dr. Kersten, dated February 18, 1938.

⁵³ Exhibit No. 38, statement by Max Ilgner dated August 16, 1945. Note, however, that Ilgner's statement is not consistent with the attached statements made by Schmitz and by an official of the Deutsche Landerbank.

Solvay et Cie. of Brussels.

Du Pont de Nemours of Wilmington, Del.^{53a}

Imperial Chemical Industries of London.

Because of the extreme difficulty involved in tracing the ownership of bearer shares, it has not yet been possible to check the accuracy of this estimate. It is also possible that some foreign interests were disposed of during the war.

Although the capital stock of I. G. is widely distributed, control of a decisive percentage of voting power is in the hands of I. G.'s managing board of directors (Vorstand). Since the central executive committee of this managing board nominated the members of the supervisory board of directors (Aufsichtsrat) who, in turn, appointed members of the managing board, the latter is, in effect, a self-perpetuating group which exercises complete control over the policies of the company.⁵⁴ The annual general meetings were, accordingly, mere formalities. A very large percentage of the stockholders were represented by proxy holders who voted the stock. For example, in 1943, shares of a total par value of RM. 865,128,300 were voted, of which RM. 830,155,900, or approximately 96 percent, were voted by proxy. German banks voted shares to the value of RM. 805,839,400.⁵⁵ Executives of the company and the Deutsche Länderbank voted shares having a total value of RM. 316,773,200, or approximately 37 percent of the common stock voted at the meeting. The Länderbank, for example, voted shares to the value of RM. 10,500,000 for its own account and RM. 107,568,200 worth for others. Mr. Max Bangert in charge of I. G.'s banking department in Frankfurt voted RM. 100,-019,500 worth of shares held by the Dresdner Bank in Berlin for others. He also voted shares with a nominal value of RM. 58,320,900 for various individuals and banks.

Dr. von Schnitzler described the meetings as follows:

In the last 12 years, the general assembly (stockholders' meetings) of I. G. had become a pure formality; all the decisions were agreed upon unanimously on the proposal of the chairman and no discussion has ever taken place. I think, in all those years, perhaps a total of half a dozen questions have been asked, mostly on sidelines of no decisive importance. The chairman, formerly Mr. Bosch and later on Mr. Schmitz, gave a short report about the general situation of the firm and then the legal formalities were fulfilled. With all the formalities, the counting of the votes, all lasted about one-half to three-quarters of an hour.⁵⁶

It is worth noting that compared to the common stock, the preferred shares have multiple voting rights of 12½ to 1, so that I. G.'s preferred stock, all directly or indirectly controlled by I. G. represents, potentially, 36.8 percent of the total voting power. The word "potentially" is used because a German law prohibiting companies from voting their own stock or that of their subsidiaries, prevented the 38,000 shares held by Ammoniakwerk Merseburg from being voted. Had it ever become necessary, however, for the I. G. management group to utilize the voting power of these 38,000 shares, the company, according to Hermann Schmitz, would not have hesitated to transfer them to one of its camouflaged companies.⁵⁷

^{53a} A du Pont representative stated that du Pont's total investment in the old Dynamit A. G. and Köln-Fortwell amounted to \$2,395,316 and that when these companies were merged into the Farben set-up at the time of its creation in 1925, du Pont became entitled to receive the shares of I. G. Farben. It was further stated that in 1940 du Pont sold its holdings of I. G. Farben shares.

⁵⁴ See exhibit No. 33.

⁵⁵ For the list of shareholders and their representatives at the 1943 annual general meeting see exhibit No. 39.

⁵⁶ Exhibit No. 40, statement by Dr. von Schnitzler dated August 16, 1945.

⁵⁷ Admitted orally in interrogation.

Since the outbreak of the war the management group was in fact very largely Hermann Schmitz, who had been president of the company since 1935. At that time he succeeded Carl Bosch, who became chairman of the supervisory board of directors. Although legally Schmitz had the highest authority in the company since 1935, Bosch continued to dominate the management until the outbreak of the war when he became seriously ill. At that time Schmitz took over and became, in von Schnitzler's words, "the weak dictator" of the company.

CHAPTER II. I. G. FARBEN'S WORLD EMPIRE

I. G. Farben's economic empire extended throughout the world. Its non-German plants ranged from large works producing a wide variety of chemical products to small installations where I. G. Farben products, imported from Germany, were merely finished and packaged. It also maintained sales agencies, often elaborate organizations giving expert technical service and advice to customers in practically every country of the world. Sometimes these were wholly or partially owned by the parent concern. More often I. G. strove to maintain a semblance of legal independence though, in fact, it exercised complete control over the subsidiary firm. In addition, I. G. Farben owned participations in administrative companies and research organizations domiciled outside Germany which controlled important patents and technical knowledge in various sectors of the chemical industry.

I. G. Farben continued to hold, even in wartime, valuable inventories of high-value products, notably dyestuffs, and pharmaceuticals in the warehouses of subsidiaries and dealers in all quarters of the globe. And one of the company's most valuable foreign assets was intangible, resting in long-established trading connections and in the reputation of products bearing the trade name "Bayer," "Agfa" or "Indanthren."

The problem of determining the amount and location of I. G.'s external assets is complicated by the firm's long-standing habit of camouflaging or cloaking its foreign subsidiaries as independent national companies having no apparent legal tie to the parent concern. I. G. publicly admitted to ownership in only relatively few companies. To discover the rest requires painstaking investigation of the records relating to hundreds of companies situated in every corner of the globe.

The wealth of material now accumulated tells a fascinating story of the company's efforts to conceal ownership. Sometimes these efforts failed; sometimes they succeeded, either wholly or in part. At the request of certain agencies of this Government, however, most of the particulars of that story cannot be made public at the present time and the discussion must be confined to a description of the purposes, history, and techniques of camouflage and to a general statement with respect to the estimated size, type, and distribution of I. G.'s foreign assets.

The schedules of participations and assets of I. G. Farben contained in the appendix of this report represent the combined foreign assets as revealed in the central accounting records of the firm, in its Foreign Participations Report under Military Government Law 53, in the records of the former German Government tax and foreign exchange control offices, and from many additional documentary sources.

In a paper read in Berlin before Farben's legal committee on October 2, 1940, Dr. Gustav Küpper, chief lawyer for the dyestuffs

department and one of the principal camouflage artists, stated some of the main reasons for I. G.'s cloaking activities.¹ Some of these reasons were of long standing, others of comparatively recent appearance. At first the policy was adopted mainly for reasons of commercial or fiscal policy. In the years following the First World War, for example, the weakness of the Reich made it advisable, according to Küpper, to give to the foreign organizations of I. G. "the national character" of the respective countries. Customers sometimes preferred, especially after the world economic crisis of 1931, to buy from national firms so that camouflaging protected the subsidiaries from commercial discrimination. Again, camouflage of foreign branches was often resorted to for the purpose of avoiding the heavier taxes and imposts which various countries came to levy on foreign enterprises as the tide of economic nationalism rose. By this means I. G. saved large sums of money. For example, under a Spanish law designed to protect home industry, heavy taxes and duties were levied on Spanish companies of which more than 25 percent of the capital was owned abroad. This would have meant that I. G. would have had to pay out large sums as a result of its 50 percent participation in Fabricacion Nacional de Colorantes Y Explosivos, S. A. (FNCE). Consequently, half of this holding was transferred to Unicolor, S. A., Colorantes Y Productos, itself a camouflaged subsidiary, and by this subterfuge large sums were saved. Also, an uncamouflaged branch office or subsidiary might be forced to disclose details of I. G.'s balance sheet and profit and loss account; this was a risk I. G. did not wish to run. Furthermore, in the period when national restrictions on the transfer of foreign currency were spreading, I. G. officials thought that foreign branches or subsidiaries would be more closely controlled than national enterprises. Lastly, I. G.'s attempts to dodge the United States Antidumping Act of 1921 resulted in the creation of camouflaged subsidiaries in Canada and Australia.²

As early as 1937, when leading officials of I. G. saw the signs of impending war, really thoroughgoing measures of camouflage began to be taken to prevent the possible seizure or confiscation of I. G. assets in endangered countries.³ In the spring of 1939 I. G.'s legal committee discussed in considerable detail the measures which might be required to protect their foreign properties. Citing the experience in the First World War, the committee concluded that:

The risk of seizure of the sales organization in the event of war is minimized if the holders or similar interests are neutrals residing in neutral countries. Such a distribution of holdings of shares or other interests has the further advantage of forestalling any conflicts which may trouble the conscience of an enemy national who will inevitably be caught between his patriotic feelings and his loyalty to I. G. A further advantage is that the neutral, in case of war, generally retains

¹ See exhibit 1, memorandum titled "Tarnung" of German agencies abroad.

² As defined in the act, dumping exists when the purchase price or the exporter's sales price is less than the foreign market value or, in the absence of this, the "cost of production." "Foreign market value" is defined as "the price at the time of exportation of such merchandise to the United States, at which such or similar merchandise is sold or freely offered for sale to all purchasers in the principal markets of the country from which exported, in the usual wholesale quantities and in the ordinary course of trade for home consumption (or, if not so sold or freely offered for sale for home consumption, then for exportation to countries other than the United States)." . . . "In the ascertainment of foreign market value" . . . "no pretended sale or offer for sale, and no sale or offer for sale intended to establish a fictitious market shall be taken into account." What I. G. did was to establish pseudo-independent companies in Canada and Australia, The Consolidated Dyestuff Corp., Ltd., Montreal and Dychem Trading Co. (Pty.), Melbourne and Sydney, and then quote "foreign market values" to these companies at levels which would give I. G. access to the large United States market. See exhibit No. 2, correspondence during 1936 relating to Consolidated Dyestuff Corp., Ltd., Montreal and Dychem Trading Co. (Pty.), Melbourne and Sydney.

³ See exhibit No. 3, excerpt from minutes of meeting of I. G.'s legal committee held in Berlin, June 8, 1939.

his freedom of movement, while enemy nationals are frequently called into the service of their country, in various capacities, and, therefore, can no longer take care of business matters.⁴

It was, therefore, recommended that neutral influence in I. G.'s foreign agencies be strengthened by the transfer of shares or similar interests to neutral holders.

This scheme was put into practice by I. G. officials all over the world. The specific legal devices used to place ownership apparently in the hands of independent persons and yet at the same time to retain effective control for I. G. were many and varied. For instance, sometimes they required the buyer of the shares to sign an option agreement giving I. G. an irrevocable right to repurchase his shares without notice. Often the prospective buyer chosen by I. G. would not have sufficient funds to acquire the shares. In such cases I. G. would lend the money to him and require him to sign, in addition to the option agreement:

(a) An acknowledgment that the funds used had been loaned to him by I. G., and that I. G. was authorized to acquire his shares in cancellation of the loan; and

(b) A dividend agreement whereby the shareholder (who usually paid I. G. an interest of 6 percent on his loan) agreed to pay to I. G. any dividends received on his shares in excess of 6 percent, while I. G. agreed that the shareholder would receive a dividend rate of not less than 6 percent.

It should be noted that by camouflaging companies in which I. G. had a direct interest, any subsidiaries of these companies were by the same token also camouflaged.

Many other examples could be cited in which the most varied legal artifices were used: Nominees, fictitious or intervening transfers, pool agreements, endorsements in blank, escrow deposits, pledges, collateral loans, right of first refusal, management contracts, service contracts, creditor's rights, withheld know-how, and other devices. One reason advanced by officials of I. G. for the extreme lengths to which the technique of camouflage was carried was that Hermann Schmitz made every effort to live up to the sobriquet ascribed to him by some of his leading associates, "the master of financial camouflage."

At least in the early years of the war, the architects were satisfied with their handiwork, for in 1940 they were able to inform the German Government that their measures for camouflage "have proved to be very good during the war, and have even surpassed our expectations in numerous cases."⁵

It is interesting to note that the German tax authorities themselves were not informed of the details of these protective measures and from time to time attempted to assess the extent of I. G.'s foreign holdings. On one occasion they were urged by the company's lawyers, however, that injury to German interests could easily result from prosecuting such inquiries, and in the end the authorities did refrain from further investigation.

The reasons for the refusal given at the time [to the tax authorities by I. G. officials] were that they feared most severe economic damage would result which must also have a detrimental effect on the German economy and on the German

⁴ See exhibit No. 3.

⁵ Exhibit No. 3a, report to the Ministry of Economics dated September 26, 1940, p. 12.

supply of foreign currency if such information were divulged. * * * we therefore abstain from investigating further how far the location of the management of these * * * firms could be assumed to be in Germany.

Although I. G. officials used great ingenuity in camouflaging the ownership of the company's many foreign branches and participations, they were well aware both of the limitations of the techniques used and of the risks of discovery which they ran during the war. They realized that if their camouflaged ownership of a firm were detected, the entire assets of that company would probably be vested or even confiscated. They therefore prepared a second line of defense and sought to conceal sizable portions of the surpluses earned by the cloaked firms—surpluses which they often could no longer transfer to Germany even if they so wished—thus spreading the risk of discovery of the firms, and at the same time providing a fund which could later be used to rebuild I. G. organizations.⁶ Various methods were used, ranging from the use of false invoices, fake bonus payments to employees, to the camouflaged investment of company funds in cattle ranches, houses, and various other types of real estate.

In addition to the foregoing, all of the I. G. Latin-American firms maintained, unrecorded in their books, secret cash accounts in banks in the names of their leading officials. As early as 1935 Farben recognized that such devices were essential to the operations of their camouflaged agencies in Latin America. Thus, according to Herr Collischonn, one of its agents in Latin America, Farben ordered its Latin-American agencies to establish accounts known as the S cash accounts in order to transact confidential payments which if carried through foreign representations would have impaired the independence of the firm.⁷ Accordingly these accounts were maintained apart from the bookkeeping systems of the I. G. firms and constituted a means by which confidential payments could be made without incurring the risk of detection.

Although I. G. did possess many manufacturing plants abroad, a very large part of its camouflaged assets was, as has already been noted, in the form of companies which were mainly sales agencies for dye-stuffs, chemicals, pharmaceuticals, photographic and other materials produced and exported by I. G. and sold by the camouflaged firms. Without a continuing supply of imports, these firms could not continue to exist. In other words, an important part of I. G.'s foreign assets was "good will," the value of which was to a considerable extent dependent upon the continuance of I. G. exports.

After the outbreak of war in September 1939, the Anglo-French navicert control system, designed to prevent the export of German goods to enemy (German) firms in overseas countries and thus to shut off German foreign exchange supplies, threatened to cut that life line and by the same token to destroy these valuable assets. The German company took two main courses of action to combat these

⁶ This policy was adopted even before the United States entered the war. For example, in a report prepared for the commercial committee on September 18, 1941, Julius Overhoff stated:

"... It must furthermore under all circumstances also be arranged that our agencies remain alive for as long a time as possible. This end cannot be attained by simply leaving the money standing on the other side, because then it may possibly be confiscated. Now some of our agencies, i. e. in Mexico and Peru, have arranged to hold a small extra reserve which does not appear in the books.

"In Mexico the Quimica as well as the AGFA R.M. 100,000 each. In Lima-Cornejo S 20,000 R.M. 7,800. "This is, of course, comparatively little. The possibility should be considered of requesting the remaining agencies also to keep in reserve in the same manner money which could be withheld from possible seizure ... Exhibit No. 4.

⁷ Exhibit No. 5, statement of Hermann Collischonn with respect to 8 finance offices in South and Central America dated June 19, 1945.

measures and thus retain control over its assets. First it attempted indirectly to nourish its offspring, especially in Latin America, by arranging for deliveries to them by firms in neutral countries, notably the United States, the only neutral able to supply such goods in any quantity. Second, I. G. attempted to maintain its exports to foreign agencies by running the blockade.

The story of I. G.'s attempts to support its Latin-American agencies by arranging for imports from neutrals is largely the story of the activities of Alfredo E. Moll, one of the managers of Anilinas Alemanas, Buenos Aires. Moll at first acted as an under-cover purchasing agent in New York. Later after the proclaimed list and export licensing system went into effect, he transferred his activities to Buenos Aires. The story of Moll's operations can best be told from excerpts of correspondence and from statements of I. G. officials.

The plan to have Moll act as intermediary in the United States was discussed in detail at important conferences on cloaking policy held in Italy and Switzerland early in 1940. The manner in which Moll was to operate is revealed in the minutes of the conferences:

A detailed discussion has proved that a delivery of goods of neutral firms to dummy addresses of whatever kind cannot be upheld for any length of time. Therefore in future purchase of neutral goods only through reliable customers directly, who will retain part of the goods, purchased in this manner for themselves, the larger part will, however, be resold to the agency. There were also no objections raised against this arrangement for the delivery from the States by Mr. Schmitz and Dr. Duisberg. In this manner there exists for the neutral suppliers the least risk imaginable. According to the opinion of Mr. M. customers will be found in practically all the Latin-American States for carrying through these transactions. * * *

The correspondence with the neutral suppliers would therefore have to be done by their customers * * * and should be started by saying for instance that German goods are no longer available on the market and that therefore an offer in counter products at the ruling market prices would be required, etc.

The individual suppliers who would be available have been discussed with Mr. M.

The most important source of delivery in the very near future will undoubtedly be the United States of America. As the matter stands, Fezandie & Sperrle may appear as suitable suppliers which receive the goods from GAW (General Aniline Works) and GDC (General Dyestuffs Corp.), and also in accord with Messrs. Halbach and Mill shall buy from the dealers and remaining producers. By Fezandie & Sperrle the whole shipments are sent to Latin America under neutral domination, i. e., also not under I. G. registered trade-marks, such as Indanthren, Rapidogen, Igepon, etc. The agencies sell all the foreign goods under their own denomination. By this way an endangering of our trade-marks is not to be feared.

* * * In any case Herr M. will endeavor that the suppliers agree to c. i. f. terms and effect the insurance in the States as transportation of goods of United States property, is thus safer. * * *

Should expectations of supplying customers from the States by a firm like Fezandie & Sperrle not be possible, it might be necessary to establish our own companies for resale. In such cases small undertakings, or if necessary, one man companies would serve the purpose. They need not be established in all countries. For the time being, the following groups would do:

1 for Brazil.

1 for the Argentine (supplying at the same time Uruguay and Paraguay and eventually even Chile; our previous Paraguay agent Scavone.)

1 for Peru, Bolivia, and Ecuador.

1 for Colombia and Venezuela.

1 for Mexico, Central America, and the West Indies.

Proprietors of these companies may be neither Germans nor shareholders nor leading employees of our agencies. It might be possible, however, to engage a salesman or technician to look after the customers. * * *

¹ Exhibit No. 6, memorandum of discussions with Mr. Moll at Florence, Milan, and Basle, dated March 11, 1940.

Moll traveled from Italy to New York on March 9, 1940, where he undertook the task of obtaining merchandise for the I. G. firms in Latin America. By October 1940, I. G. had heard that "deliveries were progressing smoothly" but had received no general report. Richard Metz, an American citizen who in 1940 was connected with I. G.'s Central Finance Administration in Berlin, was traveling to the United States in October of that year, and was asked to deliver a message requesting that Moll forward a report of his activities. (Metz is the son of Hermann A. Metz, deceased, formerly a principal I. G. figure in the United States). I. G. in its request to Metz stated:

* * * It would be very suitable if this report was sent off from Mexico or even made out in Mexico for reforwarding in neutral form via Peru or Brazil. It would be advisable for Mr. Moll to make use of a short leave to travel by auto to Mexico * * *

Pursuant to instructions, Moll journeyed to Mexico, in December 1940, and from there he sent I. G. two reports. In the first he wrote:

I believe I can assure you that it was possible by means of patient and persistent work to arrive at a normal and lasting relationship between New York and all important centers in Latin America by suggesting to New York at first to modify its originally fixed price policy * * *. Of course it is very difficult for the gentlemen in New York to make up their minds about conditions in Latin America, especially considering that they are used to a stable market as in the United States of America. But I may especially express here the friendly attitude and fair cooperation noticeable with Mr. Halbach and Mr. Neisser (both of General Dyestuffs Corp.) who try to help as much as they can * * *.

According to the official figures of New York, United States \$1,218,345 was exported from the beginning (of Moll's activity) till November * * *. I assure you that it was possible despite many obstacles to supply all the countries which you formerly supplied, and that no one is missing from the list * * *. These figures show us that Chile and Colombia received practically their whole sales volume, but Mexico, Brazil, and Argentina lost a part of their sales, even respecting their great stocks, when relations to you were interrupted partly by the activity of competitors and partly by the refusal of customers (to cooperate in the scheme).⁹

And in the second:

* * * We have observed with great satisfaction that the sales of the Advance [Advance Solvents & Chemical Corp., New York] to our Latin-American houses constantly increase, which proves that our connections are more secure. This I very much welcome, because I consider it necessary that our gentlemen in Latin America pass on their orders mainly to friendly firms, which, when the situation becomes complicated, will do everything possible with a view to continuing the deliveries under all circumstances.¹¹

By June 1941, however, economic controls, the Proclaimed List and the system of export licenses then being put into force by the United States had seriously curtailed Moll's activities, and he returned to Argentina.

After Moll returned to Argentina on June 17, 1941, he ostensibly became separated from Anilinas and thus was able to resume merchandise purchases from the United States. His method of operating was to place orders in the United States for firms not on the Proclaimed List, including with those orders goods which were upon arrival in Buenos Aires to be transferred to Anilinas Alemanas.

⁹ Exhibit No. 7, memorandum from Julius Overhoff to Metz dated October 10, 1940.

¹⁰ Exhibit No. 8, report dated December 13, 1940.

¹¹ Exhibit No. 9, report dated December 14, 1940.

According to Overhoff, the advisability of Moll's separation from I. G. had been previously discussed in the 1940 conferences in Italy and Switzerland:

* * * We discussed also the possibility that Moll should leave Anilinas Alemanas if necessary, and act separately, perhaps as a dealer. Of course, even in that case, it was the idea, that his work should be the interest of I. G.¹²

Moll proceeded to set himself up as an independent importer. There is evidence to indicate, however, that the separation was more apparent than real.

On October 15, 1941, for example, Flinsch, comanager with Moll of Anilinas Alemanas, wrote from Buenos Aires:

* * * After Mr. Moll had left my firm in last June, in pursuance of this exchange of cables, and accordingly severed all his connections with it, insofar as was necessary with regard to outside appearances, the old close and friendly contact with Moll and the management of my firm continued. * * *

Consequently, the management of my firm was always informed in advance of all activities and plans of Moll with respect to the establishment of business relations with the United States of America which was contemplated. This also envisaged the inherent possibility of supplying my firm with goods. In other words, everything was discussed and executed by joint determination.¹³

After the war closed regular shipping channels, I. G. also used other and more direct means of keeping its foreign agencies supplied with its products, especially in Latin America and the Far East. Until January 1940, before the blockade was tightened, it was possible for I. G. to ship goods in neutral vessels from Dutch and Italian ports. Then, from January 1940 until Italy entered the war, some pharmaceutical and Agfa products, camouflaged as Italian goods, were shipped from Italy. During this period small amounts of dyestuffs were also sent from Italy to Latin America via parcel post. From October 1940 until September 1941, the company took advantage of German Government blockade runners to transport its products. Then in 1943 and 1944 until I. G.'s communications with Spain were cut by the Allied invasion of Europe, some dyestuffs were sent to Argentina via an agent in Spain. In all, RM. 93,704,164 worth of dyestuffs and chemicals were exported by these routes, RM. 31,747,424 to Latin America, RM. 57,950,815 to the Far East, and RM. 4,005,925 to the United States.¹⁴ Figures of shipments of Bayer products are not available. How successful I. G.'s efforts were in circumventing the blockade is indicated by a comparison of its sales of dyestuffs and chemicals to Latin America for the years 1938 through 1941.

[In reichsmarks]

	1938	1939	1940	1941
Dyestuffs.....	19,876,000	24,282,000	18,611,000	28,083,000
Chemicals.....	9,436,000	11,017,000	8,495,000	11,736,000
Total.....	29,312,000	35,299,000	27,106,000	39,819,000

¹² 9 months.

¹³ Exhibit No. 10, statement by Julius Overhoff on Alfredo Moll dated July 18, 1945.

¹⁴ Exhibit No. 11.

¹⁵ See exhibit No. 12, statement of Julius Overhoff dated August 23, 1945, on overseas exports of I. G. during wartime, especially to Latin America.

It will be observed that even with incomplete figures for 1941, I. G. sales in Latin America were substantially higher than they had been in 1940, and were the highest of any year in the 4-year period.¹⁵

Any attempt to estimate the size of I. G.'s foreign holdings must be subject to considerable risk of error. Very often the beneficial ownership of I. G. is still open to question and may yet be contested in the courts. Again, a substantial percentage of the assets are in the form of good will, and are thus substantially dependent upon the maintenance of a trading connection with the parent firm. Problems of exchange rates and currency fluctuations are another major obstacle. And, in a world of such political and economic uncertainty as exists today, the ordinary problems involved in assessing the value of a concern are magnified many times.

In 1943, I. G. listed 173 direct foreign participations and 75 indirect participations on its books. Sixty-seven of the former were manufacturing and administrative companies, 33 sales companies for dyestuffs and chemicals, 50 sales companies for Bayer products, and 23 sales companies for Agfa products, fertilizers, and coal. One hundred and twenty-seven of the direct participations admitted were located in Europe, and among these were 58 of the manufacturing and administrative companies, 25 sales companies for dyestuffs and chemicals, 27 sales companies for Bayer products, and 17 sales companies for Agfa products, fertilizers, and coal. Overseas participations listed included but 9 overseas manufacturing and administrative companies, 8 dyestuffs and chemicals sales agencies, 23 Bayer agencies, and 6 firms dealing in Agfa products, fertilizers, or coal. The bulk of I. G.'s direct participations, and especially its subsidiary manufacturing and administrative companies were located in Europe; half of the overseas firms were agencies for Bayer pharmaceuticals.

Evidence reveals, however, that at least 200 firms should be added to the total of I. G.'s direct and indirect participations. An interim tabulation of foreign firms considered to belong either wholly or in part to the parent company or its subsidiaries—which should not be regarded as by any means complete—gives the following interesting totals:

Location:	Number of firms
Africa.....	21
Asia.....	54
Australasia.....	4
Europe.....	238
Latin America.....	117
North America.....	14
Total.....	448

It should be noted that this total was compiled from the listings in the appendix to the report. The actual total of companies discovered to be Farben-owned is slightly larger. However, at the request of interested agencies of this Government certain omissions have been made. The great bulk of these additions are therefore located outside Europe. The company was especially strongly represented in Europe and Latin America. As has already been pointed out, the difficulties involved in assessing the monetary value of I. G.'s foreign assets are extremely formidable. However, it is probably correct to say that

¹⁵ Of course the rise in prices is a contributing factor.

the total, including capital assets, inventories, accounts receivable, amounts due I. G. from its foreign subsidiaries, patent and licensing rights, is somewhere in the region of R.M. 1,000,000,000, or about 15 to 20 percent of I. G.'s estimated net worth. It should be noted that this estimate is not a precise statistical calculation.

Besides having an economic value, these foreign holdings of Farben had a political and military significance. As will be developed at length in subsequent sections of this report, I. G.'s camouflaged agencies were used to aid the German Reich in its preparations for and prosecution of an aggressive war. Some acted as listening posts and collectors of economic intelligence both for the parent firm and for the German Government. Sometimes they were centers of Nazi propaganda and even espionage activities against potential and actual enemies of the Third Reich. If left untouched, they might become important cells for future penetration by a war-minded Germany.

Latin America has been chiefly used in this chapter to illustrate the Farben techniques of camouflage. The same operations were carried on to no less extent throughout the rest of the world. The best known illustration of course is Farben's use of I. G. Chemie, a Swiss subsidiary, to cloak its ownership of General Aniline & Film Corp. in this country. The evidence of Farben's ownership of I. G. Chemie disclosed by the investigation cannot be revealed in this report because of the possible prejudice which might thereby result to the interest of this Government.

The Nazi Party did not always understand Farben's cloaking policy, considering it somewhat unpatriotic not to flaunt German proprietorship. Only after I. G. proved to the Government's satisfaction that decloaking would result in "most severe economic damage" and "have a detrimental effect on the German economy," did the German Government abstain from its protests.¹⁶ In 1940, however, when an early German victory was anticipated, I. G. began to reexamine the entire question of camouflage in the light of a German conquest of Europe and Great Britain.

The necessity for cloaking would disappear in countries occupied by the Reich, especially if I. G.'s proposals in regard to corporation tax policy were adopted in these conquered countries.¹⁷ A policy of decloaking I. G. holdings in certain countries was therefore envisaged for the period following the peace treaties. It was clearly indicated however, that in many countries, such as the United States, camouflage of company interest would have to be retained.¹⁸

¹⁶ *Infra*.

¹⁷ These proposals were set out clearly in various memoranda. See for example exhibit No. 1.

¹⁸ *Ibid*.

CHAPTER III. I. G. FARBEN'S ROLE IN ARMING GERMANY FOR WAR

I. INTRODUCTION

Without I. G.'s immense production facilities, its far-reaching research and world-wide economic power, the German war could never have been waged. The purpose of this chapter is to show (1) the increasingly close relationship which developed between I. G. and the German military authorities; (2) the manner in which I. G. mobilized its resources for war; (3) the extent to which I. G. made Germany self-sufficient in those critical war materials and strategic products without which the Wehrmacht could not have functioned; and (4) I. G.'s prior knowledge and approval of Nazi plans for world domination and of specific acts of aggression later committed pursuant thereto.

To understand fully the I. G.-Nazi coalition, a few introductory remarks are in order. Leading officials of I. G. had important contacts with the Nazis even before Hitler came to power. If we go back to autumn 1932, we find two I. G. directors, Bütefisch and Gattineau, approaching Hitler to discuss the place of synthetic oil in the German economy. The experiments at Leuna and Oppau on high pressure hydrogenation of coal were costing the firm millions of reichsmarks and bringing no returns. Accordingly, I. G.'s managing board was considering abandoning the whole project. But Bütefisch, and Gattineau, both ardent Nazis, ascertained from Hitler that he would, when in power, continue the protection then being given to domestic oils.¹ Hitler further informed them that the experiments fitted into his program.

Several months later, in February 1933, a meeting of leading German industrialists called by the president of the Reichstag, was addressed by Hitler and solicited by Dr. Schacht for a fund of RM. 3,000,000 to be used on behalf of Nazi candidates in the coming elections. At this meeting I. G. was represented by Dr. von Schnitzler, and their contribution was made by Dr. Hermann Schmitz, later to become president of the company. Very shortly after Hitler came into power, he appointed Schmitz a member of the Reichstag.

I. G. continued its financial, political, and moral support of the Nazis. Indicative of the basic nature of I. G.'s contribution and the quid pro quo character of the I. G.-Nazi partnership was the telegram transmitted by Geheimrat Schmitz to Hitler on September 30, 1938, the day of the Nazi occupation of Sudetenland. I. G. had been promised at least 7 days before the German troops marched into Czechoslovakia that one of its experts would be installed as commissar of the chemical and dyestuffs factories of the Sudetenland, factories which I. G. subsequently acquired. The message of President Schmitz stated:

Profoundly impressed by the return of Sudeten-Germany to the Reich which you, my Fuehrer, have achieved, the I. G. Farbenindustrie puts an amount of one-half million reichsmarks at your disposal for use in the Sudeten-German territory.²

¹ Actually, he greatly increased it.

² See exhibit No. 1, correspondence relating to this transaction.

II. UNION WITH THE WEHRMACHT

After the advent of the Nazi regime in Germany, the close relationship of I. G. to the Wehrmacht was visibly strengthened. According to Dr. von Schnitzler, member of the central committee of I. G.'s managing board of directors and chairman of I. G.'s commercial committee—

In 1934 the Wehrmacht became important and with increased tempo after 1936 the Wehrmacht became the prominent factor in the whole picture. Since 1934 a strong movement for investments in our plants for commodities of decisive military importance became more and more pronounced with the main objective of increasing the military potential of Germany. At first autarchic principles to make Germany independent of importation from abroad was one of the leading objectives. Since 1936, the movement took an entirely military character and military reasons stood in the foreground. Hand in hand with this, the relations between I. G. and the Wehrmacht became more and more intimate and a continuous union between I. G. officials on the one side and the Wehrmacht representatives on the other side was the consequence of it.³

Such intimate cooperation necessary to the joint planning of the German rearmament could not exist without adequate organization. As is pointed out elsewhere in this report, I. G. was divided into three technical divisions (Sparten).⁴ Each division had a central office responsible for handling matters pertaining to production control, investment for new plants, costs, and other similar problems. At first these central offices each dealt directly with the military authorities in matters concerning their respective divisions. By 1935, however, such discussions had become so frequent, and transactions with the Wehrmacht had become so numerous, that I. G. established within the firm a permanent military liaison agency. This was the so-called Vermittlungsstelle W which was to "take charge of and maintain the current relations between the three divisions and the military authorities"⁵ and which "occupied itself principally with problems in connection with a possible war."⁶ Prof. Carl Krauch, a member of I. G.'s managing board since 1926, whose career typifies better than anything else the close union between I. G. and the military authorities, was placed in charge of the new organization.

The functions of the Vermittlungsstelle W were clearly described in a report dated December 31, 1935:

The aim of this work is the building up of a tight organization for armament in the I. G. which could be inserted without difficulty in the existing organization of the I. G. and the individual plants. In the case of war, I. G. will be treated by the authorities concerned with armament questions as one big plant which in its task for the armament, as far as it is possible to do so from the technical point of view, will regulate itself without any organizational influence from outside [the work in this direction was in principle agreed upon with the Office of Strategic Economy (Wehrwirtschaftsamt) and from this office with the Ministry of Economy] * * *. To the field of the work of the Vermittlungsstelle W belongs besides the organizational set-up and long-range planning, the continuous collaboration with regard to the armament and technical questions with the authorities of the Reich and with the plants of the I. G.⁷

³ Exhibit No. 2, interrogation of Georg von Schnitzler and Max Igner, dated August 4, 1945.

⁴ *Infra*.

⁵ Exhibit No. 3, History of the Vermittlungsstelle W "Discussions with the various military offices and authorities which since about 1934 have become more and more frequent and urgent resulted in the resolutions passed in the meeting of the Zentrallausschuss (central committee of the board) in Ludwigshafen on September 2, 1935, to establish, beginning October 1, 1935, a Vermittlungsstelle W (W-Wehrmacht) which was to take over and maintain the current relations between the three divisions (Sparten) and the military authorities." According to Geheimrat Schmitz, president of I. G., it was Dr. von Knieriem, chief legal officer of the company, who, at the instance of the German military authorities, suggested the establishment of the Vermittlungsstelle W. (See exhibit No. 4, statement of Hermann Schmitz, dated September 18, 1945.)

⁶ Exhibit No. 5, statement of Dr. Struss dated August 7, 1945.

⁷ Exhibit No. 6, Development of the Work of the Vermittlungsstelle W, dated December 31, 1935.

In fact, however, the Vermittlungsstelle W never attained the significance expected of it in this regard. This was not because the tasks of cooperation with the military authorities diminished—in fact they greatly increased in significance—but because relationships became more and more direct after the appointment of Dr. Krauch to the office of the Four Year Plan. Thereafter, most collaboration in scientific and technical matters were either channeled through Krauch's office or were carried on directly between military representatives and individual plant managers.

According to Dr. Struss, who as head of I. G.'s technical bureau (Tea Büro) and top assistant to Dr. ter Meer, was responsible for "serving gentlemen of group II of the Vermittlungsstelle W," I. G. officials destroyed the files dealing with Vermittlungsstelle W matters.⁸

The military liaison office did, however, retain considerable importance.

One of its early tasks was to act as intermediary between I. G. and the Ministries of War and Economics in regard to the preparation of mobilization plans for I. G.'s plants. These so-called MOB plans were to set out in detail the production programs which each factory would undertake in case of war. The order to prepare them came from Wirtschaftsgruppe Chemie, a quasi-governmental instrumentality which was responsible for all chemical production and distribution in Germany and in which body I. G. officials held important positions. Dr. Georg von Schnitzler was its deputy chairman. Moreover, according to Dr. Struss, the preparation of these MOB plans were personally supervised by representatives of the Ministries of War and Economics.

"I know," said Dr. Struss, "that a representative of the Ministry of Economics, Dr. Lenz, and a representative of the Ministry of War, Dr. Mureck, assisted in the making of these plans. I remember that Dr. Mureck often told us that the Ministry of War wants the plans drawn up in such and such a way."⁹

Pursuant to these instructions, every I. G. plant began to prepare its production plans and turned them over to the Vermittlungsstelle W which submitted them to the Ministry of War and Economics. In the following years the plans were no doubt repeatedly revised in consultation with the authorities, and early in 1939, the factories re-

⁸ Exhibit No. 7, interrogation of Dr. Struss, dated July 21, 1945:

"Question. Did you destroy them (Vermittlungsstelle W files)?

"Answer. My office did on Dr. ter Meer's orders."

⁹ Exhibit No. 9, statement of Dr. Struss, dated August 13, 1945. Dr. von Schnitzler described these plans as follows:

"The Wirtschaftsgruppe or its different affiliations had the function to control the entire production in the chemical field and to prepare the distribution of the available and the needed commodities. This was done for every important product of the chemical industry. I remember that the most important commodities figured on a special list which was particularly supervised by Dr. Ungewitter personally. The production plan of the different branches of the chemical industries could only be made up in accordance with the prescription of Dr. Ungewitter. Dr. Ungewitter in his person united different functions. . . . From the very beginning of the Nazi regime, the Wirtschaftsgruppe was charged with semiofficial functions in order to prepare an eventual German mobilization for war. In this connection they made an analysis of every chemical firm in Germany, what their producing capacity was and what they had in stock, etc. For the so-called great commodities a production plan has been made up and the distribution of the needs for an eventual war was prepared. Representatives of the Wirtschaftsgruppe, that means officials, acted in close collaboration with the Ministry of Economics and Ministry of War and got from the different firms those plans which he did approve or disapprove. With the beginning of the war, the long prepared system was put into action and functioned with the greatest accuracy. No firm was allowed to go beyond the production plans fixed before and the commodities used for their manufacturing were strictly controlled. The Wirtschaftsgruppe and the other affiliations were from the very beginning an instrument which served as an intermediary between the Ministry of Economics and War and the individual firms" (exhibit No. 10, interrogation of von Schnitzler, dated August 18, 1945).

ceived their plans back as approved by the Wirtschaftsgruppe Chemie, ready for immediate execution in case of war.¹⁰

Thus before the Nazi Army attacked Poland I. G. was mobilized and ready after long years of preparation.

All the German industries were mobilized in summer 1939 and in the summer 1939 the Wirtschaftsgruppe Chemie issued an order that the plans for war were in action. In June or July 1939 I. G. and all heavy industries as well knew that Hitler had decided to invade Poland if Poland would not accept his demands. Of this we were absolutely certain and in June or July 1939 German industry was completely mobilized for the invasion of Poland.¹¹

As early as 1934 I. G. had become preoccupied with war and all of its plants engaged in war games and "maneuvers (in) the technical problems which may come up" in the event of war.¹² According to Dr. Struss these plans or "Kriegsspiele" were undertaken under the supervision of Wehrmacht officials. Dr. Struss has described these activities in detail.

It is true that since 1934 or 1935, soon after the establishment of the Vermittlungsstelle W in the different works, theoretical "war plant games" had been arranged to examine how the effect of bombing on certain factories would materialize. It was particularly taken into consideration what would happen if 100 or 500 kgs. bombs would fall on a certain factory and what would be the result of it. It is also right that the word "Kriegsspiele" was used for it. The "Kriegsspiele" were prepared by Mr. Ritter and Dr. Eckell later on partly by Dr. von Brunning by personal order of Dr. Krauch's own initiative or by order of the Air Force, it is not known to me. The tasks were partly given by the Vermittlungsstelle W and partly by officers of the Air Force. A number of officers of all groups of the Wehrmacht (Navy, Air Force, and Army) participated in these "Kriegsspiele." The places which were hit by bombs were marked in a map of the plant so that it could be ascertained which parts of the plant were damaged, for example a gas meter or an important pipe line. As soon as the raid finished, the management of the plant ascertained the damages and reported which part of the plant had to stop working; they further reported what time would be required in order to repair the damages. In a following meeting the consequences of the "Kriegsspiele" were described and it was ascertained that in the case of Leuna [plant] the damages involved were considerably high; especially it was found out that alterations of the pipe lines were to be made at considerable cost.¹³

In 1936 Hitler announced the Four Year Plan. In 4 years Germany was to be made independent of imported raw materials. The role of I. G. and the chemical industry in this tremendous task was all important. I. G. was to provide magnesium and thus give Germany abundant supplies of a light metal of which she had domestic

¹⁰ Exhibit No. 11, interrogation of Dr. Engelbertz, dated August 18, 1945. According to Dr. Engelbertz, manager of I. G.'s plant in Griesheim which produced many vital war chemicals such as intermediates for explosives, carbon electrodes for aluminum, chlorine, and alkalies, his plant received the approved MOB plan for its products in March or April 1939 with the understanding that it was to be put into operation on the outbreak of war. The following is an extract from an interrogation of Dr. Engelbertz:

"Question. When was the next step in regard to the 'MOB' plans?

"Answer. I remember that the 'MOB' plan which was approved by the signature of Dr. Ungewitter was returned in the beginning of 1939.

"Question. Whom did you submit those 'MOB' plans to?

"Answer. They were all submitted to Vermittlungsstelle W and I assume they submitted them to the Ministry of Economics and the Ministry of War.

"Question. What significance did it have to you that the plans came back in the beginning of 1939 approved by Dr. Ungewitter?

"Answer. The significance that in case of war the productions contained in the 'MOB' plans were compulsory.

"Question. Can you fix the date you received the 'MOB' plan back approved by Dr. Ungewitter?

"Answer. I think it was March or April 1939 but I don't know for certain."

(These plans were destroyed before the American occupation. See exhibits Nos. 7 and 12.)

¹¹ Exhibit No. 10, interrogation of Dr. von Schnitzler, dated August 18, 1945. (See also exhibit No. 8, telegram of September 3, 1939, ordering immediate execution of "MOB" plans.)

¹² See exhibit No. 6.

¹³ Exhibit No. 13, interrogation of Dr. Struss, dated August 1, 1945.

ore supplies. I. G. was to supply the synthetic gasoline, lubricating oils, and rubber which were to make it possible for the Nazi war machine to attack. I. G. was to take a prominent part in developing the synthetic fibers which took the place of imported wool and cotton. I. G. was to manufacture the plastics which replaced imported metals in many uses. These were some of its major achievements. There were many others. For example, I. G. was to build a sulfuric acid plant which used German gypsum instead of imported pyrites. The synthetic tanning agents which took the place of Argentinian quebracho, and the synthetic fats which replaced imported vegetable oils were developed in I. G. laboratories.

Great numbers of I. G. scientists and technicians aided in increasing German economic self-sufficiency. But one name stands out above all the rest, Prof. Carl Krauch, member of the managing board of directors, chief of division 1 and head of the Vermittlungsstelle W. The circumstances of Krauch's appointment as director of chemical research in the Office of the Four Year Plan are rather significant.

According to Dr. Max Ilgner, member of the board and chief of the Berlin office of I. G., it was Dr. Bosch, former president of the I. G., who took the initiative in placing Professor Krauch, of I. G.'s supervisory board of directors, at the disposal of Hermann Goering and his Four Year Plan. In this statement Dr. Ilgner emphasized the leadership of I. G. in the chemical industry and asserted that I. G. wanted to direct the armament program for the chemical industries. He continued:

Bosch consequently introduced Krauch to the Four Year Plan, where he became chief of "Reichsamt für Wirtschaftsausbau" and the Generalbevollmächtigte für Sonderfragen der Chemischen Erzeugung; this concerned nitrogen, gasoline, buna, and magnesium, all these being fields where I. G. was both in respect to scientific work (patents and know-how) as well as from the industrial point of view, the real deciding enterprise and in which field I. G. would have got in every case the order to enlarge her capacities. For this same reason, in my opinion, it was the idea of Bosch to present just a man like Krauch when he was asked to nominate someone because he wanted to have a leading and energetic chemical expert who was able to direct and watch the whole planning in these special chemical fields so [that] it was done in an intelligent way from the economic point of view and that no measures were taken which were directed against I. G.¹⁴

During this period of governmental employment, Krauch retained his position in I. G., first as chief of division I, and after 1940 chairman of the supervisory board, remained on the Farben pay roll and continued to exercise his supervision over the technical work of his division as before. His actions in this dual capacity were completely understood and appreciated by Goering.

Question. So that you can say that Goering recognized that you had a dual responsibility, one to him in the Four Year Plan, and one to I. G. Farben, as a private businessman?

Answer. He always recognized that fact.¹⁵

The placing of the leading technical man of I. G. in the Four Year Plan, to have a hand in the direction of the expansion of the chemical industry was considered good insurance by the I. G. board to guarantee

¹⁴ Exhibit No. 14, statement of Dr. Ilgner, dated August 4, 1945. Cf. exhibit No. 15. Statement of Dr. von Schnitzler dated August 8, 1945: "It was Bosch himself who put Krauch at Goering's disposal . . . he saw in Krauch the possibility of making great developments in the chemical field."

¹⁵ Exhibit No. 16, interrogation of Dr. Carl Krauch, dated September 28, 1945.

its share of the government business and subsidies. The dual role played by Krauch is indicated by the following:

Question. Did Goering consider you as essentially an employee of the government or did he consider you in terms of your I. G. relationship?

Answer. In terms of my I. G. Farben relationship. That is quite an interesting question. After I had been in the Four Year Plan for a few months, they were asking me to leave I. G. Farbenindustrie. * * * And they asked Goering to put some pressure on me and Goering declined to do this. He said: "Let this man do what he likes. He is a man of the laboratory, and he is not an administrative man."¹⁶

Krauch continued his duties in the Four Year Plan until 1938, always keeping his colleagues in I. G. informed of his activities, while still performing his Farben duties as chief of division I. As the result of an unusual incident in June 1938, Goering appointed Krauch chief of all chemical expansion and construction under the Four Year Plan. A report on certain technical processes was submitted to Krauch's office for examination and approval. Contained therein, and not intended for Krauch's approval, was a list of production quotas which the German chemical industry would meet in the years 1938-39. Krauch realized that these were "wrong figures" and could not possibly be realized by the chemical industry. He immediately went to Goering and informed him thereof.¹⁷

Goering, although impressed with Krauch's knowledge, consulted with Lieutenant General Keitel, Chief of the German General Staff. Keitel insisted that his figures on explosives were correct and with this information, Goering confronted Krauch once again. This time Krauch, on the basis of his knowledge of the I. G. production of nitrogen and intermediates necessary to the production of explosives, convinced Goering that Keitel was wrong. At that point, Goering appointed Krauch chief for the chemical industry.¹⁸

In this manner, Professor Krauch took charge of the chemical industry's expansion program, a position which he held during the armament period and throughout the war. In reward for his services, Adolf Hitler bestowed upon him the Knight of the Iron Cross (Kriegsverdienst-Kreuz) "which designates him as one of the men who won marvelous victories on the battlefield of the German work."¹⁹

Under Professor Krauch, assisted by I. G.'s leading technicians and chemists, all of whom were paid by the I. G., the German chemical industry concentrated on military supply, on building and enlarging plants for production of oil, magnesium, and synthetic rubber. Dr. von Schnitzler and Ilgner freely admitted that I. G. officials planned Germany's armament program for the chemical industry. They stated:

Since 1936, I. G. officials paid by I. G. and assisted by a large staff of technicians all paid by I. G. planned for the Nazi Government the rearmament phase in the chemical section with concentration on the building up of such war industries as magnesium, synthetic rubber, oils, etc. This was handled by the Reichsamt Fur Wirtschaftsausbau and the Generalbevollmachtigte fur Sonderfragen der Chemischen Erzeugung under Dr. Krauch.²⁰

¹⁹ Exhibit No. 18. Cf. Exhibit No. 4, Statement of Dr. Schmitz dated September 18, 1945: "And I remember that a few years ago when I attended Goering's birthday party, Goering said to me 'I thank you very much that you have given me Krauch.' And I am certain that Goering had complete trust in Krauch."

²⁰ Exhibit No. 19, statement of Dr. von Schnitzler and Ilgner dated August 15, 1945.

According to von Schnitzler, I. G. was a "loyal and compliant partner of the Wehrmacht" and engaged in the aforementioned activities²¹ for its own profit and "without regard for the consequences."²² I. G. did more than comply with orders and requests of the Wehrmacht and other Nazi agencies. It initiated projects for and stimulated the interests of the Wehrmacht in its war productions.²³ I. G. also developed many projects on its own for the Wehrmacht:

A whole range of problems had been worked at by the I. G. for its own account and only later, after certain results of the experiments could already be seen, the officers of the Army were interested in these problems.²⁴

Then I. G. "sold" the projects to the Wehrmacht.

The I. G. offices have taken up primarily these problems often out of their own initiative and then approached the Army. * * * The cases were respectively rare where the Army for its part approached the I. G. * * *

III. EXPANSION FOR WAR

With the advent to power of the Nazi regime, I. G. entered upon a period of enormous plant expansion. Between 1933 and 1943 the company, exclusive of its subsidiaries, invested over RM. 4.25 billion or \$1.7 billion (at the exchange rate of RM. 1 : 40 cents) in new plants, and in extensions to existing installations.²⁵ This was, however, no normal economic growth. As the years passed, it took on the character of intensive economic preparation for total war. Dr. von Schnitzler himself has described it as—

the close teamwork with Government and Wehrmacht in the joint endeavor to make Germany to a large extent autarchic and to rearm her * * *

While it has often been maintained that the policy of increasing economic self-sufficiency was brought about by Germany's acute shortage of foreign exchange and assumed military significance only much later, documents found in Farben files show quite clearly that the firm recognized the strategic significance of economic self-sufficiency at least as early as the spring of 1935, even before the inauguration of the Four Year Plan.²⁶

The history of I. G.'s investments in the light-metal field affords one of the earliest and therefore most striking examples of the company's tremendous expansion for war purposes. I. G. was by far the most important German producer of magnesium metal and alloys, which were used chiefly in aircraft construction and in the manufacture

²¹ See Exhibit No. 15.

²² Ibid.

²³ "It never became quite clear if our technical men themselves had not deliberately induced the Wehrmacht."

²⁴ Exhibit No. 20, Developing and Experimental Work of I. G. dated June 2, 1939.

²⁵ Ibid. "If we wanted to give a survey on the present state of developing work which was made by the I. G. officials for the Army we can say that about 80 to 100 chemists and engineers are occupied with scientific and chemical experiments on about 50 to 60 problems of the Army (partly as side work). About half of all the problems may have arisen in connection with delivery of I. G. products, about 30 to 40 percent of the problems may have come out of ideas which were submitted to the Army by the I. G. on its initiative and only 10 to 20 percent of the questions may have been submitted by the Army to the I. G. in a more or less detailed form. In the planning and construction offices as well as the building department of the I. G. at least the equal amount of academic educated gentlemen with by far bigger number of collaborators is working for the experimental and production plants of the Army; whereas, the amount of the I. G. employees active for the 4-year plan and the execution of the M.O.B. preparations is not included."

²⁶ This figure includes investments of approximately RM. 200,000,000 in plants owned by the German Government which I. G. had an option to purchase within 5 years. For the period from 1925 to 1942, I. G. invested RM. 980,000,000 in plants and equipment.

²⁷ Exhibit No. 15, statement of Dr. von Schnitzler dated August 8, 1945.

²⁸ E. g., the early documents relating to the work of Vermittlungsstelle W.

of incendiary bombs. On January 1, 1933, the firm's capital investment in light-metal plants was RM. 8.6 million (\$3.44 million). Nine years later it had risen by 1,600 percent to RM. 136.4 million (\$54.56 million).²⁹ Between 1934 and 1935 alone total investment in the field almost tripled from RM. 15.105 million (\$6.042 million) to RM. 42.575 million (\$17.03 million).³⁰ It was no secret to I. G. officials that large quantities of magnesium metal were being made into incendiary bomb casings and stored in I. G. plants. Dr. Ernst A. Struss, Chief of the Office of the Technical Committee, admitted in interrogation:

In Bitterfeld and in Aken, a large part of the production, probably the largest part, was fabricated into tubes. * * * These tubes were packed in boxes and designated "Textilhülsen." There was no doubt that these tubes were parts of incendiary bombs.³¹

In certain other cases, such as stabilizers, phosphorus and cyanides, I. G. also accumulated stocks for the Wehrmacht. (See exhibit No. 23, statement of Dr. Struss dated September 3, 1945, and exhibit No. 24, interrogation of Herr von Heider dated August 13, 1945.)

The expansion described above is not immediately apparent from the company's books. Between 1933 and 1943 when \$1.7 billions had been spent on new plants and on plant extensions, the listed value of plant and equipment rose from RM. 425 million (\$170 million) only to RM. 625 million (\$250 million).³² The explanation is to be found in the lavish credits and contributions given by agencies of the Government, and in the generous depreciation charges allowed on the investment. This was an important aspect of the part played by the Nazi Government and the Wehrmacht in the "close teamwork" described by Dr. von Schnitzler. To illustrate the point, we may again take the example of light metals. In an analysis of the financial requirements and earnings of the light-metals sector for the six years from the beginning of 1935, Director Ziegler stated:

On January 1, 1935, we owned plants for the production of aluminum and magnesium and for the fabrication of alloys, which had an investment cost of RM. 15 million [\$6 million] and a book value of RM. 5 million [\$2 million]. The development of the following years—already clearly influenced by the armament program especially as regards the air force—necessitated enlargements of the plants on which RM. 72 million [\$28.8 million] were spent. The investment cost as of January 1, 1941, was therefore RM. 87 million [\$34.8 million] while the book value was RM. 20 million [\$8 million]. This favorable result obviously could not be achieved through normal depreciation but was influenced significantly by investment contributions from the Reich Air Ministry for the plants at Aken, Teutschenthal, and Stassfurt. The normal depreciation in this period amounts to RM. 21 million [\$8.4 million], the contribution of the Reich Air Ministry to RM. 46 million [\$18.4 million]. The preferential treatment has been granted mainly for those parts of the plants which produce magnesium.³³

²⁹ Without taking into account auxiliary plants in Bitterfeld, power stations, etc.

³⁰ For the amounts invested and book values of the investments by years from 1927 through 1941, see exhibit No. 21.

³¹ Exhibit No. 22, interrogation of Dr. Struss dated August 13, 1945.

³² Exhibit No. 25, statement by Paul Dencker on value of plants and equipment of I. G. Farben, dated August 29, 1945.

³³ Exhibit No. 26, a statement for a meeting of the Chema (a commercial chemical committee) written by Director W. Ziegler of Bitterfeld, on December 15, 1941. Also, see exhibit No. 27, statement dated July 24, 1945, by G. Frank-Fable, regarding government credits to I. G. for plants and plant extensions during the war.

Concurrently with the large increases in plant capacity. I. G. light-metal sales and profits rose correspondingly: ³⁴

	Sales	Profit in thousands of reichsmarks	Profit, percent on sales
1935.....	49,321	9,015	18.3
1936.....	55,381	8,457	15.3
1937.....	65,769	8,725	13.3
1938.....	77,099	9,410	12.2
1939.....	109,008	17,127	15.7
1940.....	126,248	21,943	17.4
1941 (first half).....	71,430	13,603	19.0

This was the immediate reward which I. G. received for its inventiveness and resourcefulness. Its sales increased from a little over 1 billion marks to 3 billions in 1943 as "a 100 percent result of the rearmament and war policy of the German Government." ³⁵

Many of its sales were from the beginning guaranteed by the Wehrmacht. As a result of its agreements with the Wehrmacht, I. G.'s great new factories became I. G.'s unburdened property. In the case of light metals, the Reich guaranteed the amortization; for oils and buna, protective duties were imposed; and in the case of I. G.'s tremendous investments for the Wehrmacht in the conquered eastern countries, the equipment was amortized within a year of the investment. ³⁶

IV. PRODUCTION FOR WAR

As is graphically demonstrated by the chart attached hereto, I. G. was responsible for a very large percentage of the production of many of the critical war materials without which the Wehrmacht could not have functioned. Twenty-eight of forty-three main products or product groups produced by I. G. in 1943 were of primary concern to the Wehrmacht. This is proved convincingly by the following percentages of Germany's total production of highest priority materials for 1943 which Farben accounted for:

Synthetic rubber, 100; methanol, 100; sera, 100; lubricating oil, 100; poisonous gases, 95; nickel, 95; plasticizers, 92; organic intermediates, 90; plastics, 90; magnesium, 88; explosives, 84; nitrogen, 75; solvents, 75; gunpowder, 70; calcium carbide, 61; X-ray film, 50-60; pharmaceuticals, 55; insecticides and fungicides, 55; synthetic resins, 53; chlorine, 46; high-octane gasoline, 46; compressed gases, 45; sulphuric acid, 35; synthetic gasoline, 33.

These figures do not pretend, however, to tell the entire story. For example, the importance of I. G.'s contribution so far as rubber is

³⁴ See Exhibit No. 21.

³⁵ See Exhibit No. 15, statement of Dr. von Schnitzler dated August 8, 1945.

³⁶ See Exhibit No. 28, interrogation of Dr. von Schnitzler dated August 4, 1945:

"Q. Is it a fair statement that I. G. benefited tremendously insofar as its capital investments were concerned from the armament program of the Nazi Government?—A. I would say that is right and even more. Many of our chemists believed that this new investment was of continuous use even for peacetime because they thought that the enlargement of buna, oil, and nitrogen would also serve for peace purposes in filling out the market. We distinguished the purely war plants mostly financed by the Reich and which were under Montana and Anorgana, etc. from those developments which we considered as being of a perpetual and peacetime use. Our technical people wanted them built by I. G. because they thought they would be more independent in ruling those factories. Of course after a certain time even the war potential became unburdened property because the amortization rates were very favorable. We spoke of Aken yesterday which was started about 1935 and also of the beginning of 1944 when Haefliger, von Heider, and I paid our first visit to Bitterfeld, we saw that the investment in Aken was almost completely written off. And I might also say that side by side with the development of the rearmament program, Germany became more and more autarchic, more corporate, more fascist."

concerned is better seen by reference to chart No. 15, which shows the consumption of natural rubber, regenerated rubber, and synthetic rubber in Germany, by years, from 1938 to 1943. Although I. G. had carried on research in synthetic rubber at various times since 1910, commercial production did not begin until 1937. In 1938, only 5,000 tons of synthetic rubber and 97,000 tons of imported natural rubber were consumed in Germany. In 1943, the position was completely reversed and only 4,000 tons of natural rubber and 144,000 tons of synthetic rubber were consumed. In that year I. G.'s production of synthetic rubber had reached such proportions that 25,000 tons were exported.³⁷

Not only did I. G. achieve the production of this vast percentage of finished products, but all other German chemical companies and numerous strategic German industries were almost totally dependent upon I. G. for raw materials, intermediate products, and technical assistance; and particularly were they dependent on I. G. for the know-how. By far the majority of new inventions in the chemical field were made in the laboratories of I. G. To illustrate, although I. G. itself produced only 33 percent of Germany's synthetic gasoline, its processes were responsible for approximately 90 percent.

I. G. also operated for the Wehrmacht many plants leased from Montan-gesellschaft, the German Defense Plants Corporation. Most of these produced explosives.

A compelling example of the special services performed by I. G. for the German armed forces in the production of weapons of war is the case of poison gases.³⁸ In 1938 the German Government, dissatisfied with the progress made in the development and production of poison gases, called upon Farben to handle the problem. New I. G. plants for the production of these gases swung into operation and eventually, as indicated above, I. G. achieved 95 percent of the total production of poison gases.³⁹ By order of the German Government many of these plants were completely destroyed before the occupation by the Russians; and all "fore and end products" were destroyed. But at least one of these terrible secrets which the Germans hoped to save for the next war has been uncovered.

The instant investigation has disclosed that an I. G. Farben official at Wuppertal-Elberfeld developed the deadliest poison gas in the world. This gas, unknown to the military authorities of the Allied Nations, could have penetrated any gas mask in existence. In its connection, Dr. von Schnitzler said:

This fabrication, of course, was kept so secret, that only in the beginning of the year 1945 (January to February) I heard for the first time of it, when Dr. Ambros in strictest confidence told me what I have given as my personal knowledge to Major Tilley (Edmund Tilley, major, E. P. E. S., F. I. A. T.) at the end of April and what consisted of the fact that such gases based upon an intermediate of Ludwigshafen "Metaphenyldiamine" had been made in a special equipment (all in glass) but that the whole production owing to the Russian advance had been shipped to the interior of Germany. Dr. Ambros at the time spoke of the great danger if ever smallest quantities of this product evaded.⁴⁰

³⁷ German consumption of rubber for the year 1943 broken down according to use is shown on exhibit No. 29. A very small percentage of the total was used for civilian purposes.

³⁸ With the exception of Dr. von Schnitzler's statements, all of the source material relating to Farben's production of poison gases, its experimentation on human beings and its knowledge of their use on inmates of concentration camps is contained in the following documents numbered exhibit 30: Report by Major E. Tilley on examination of Dr. Fritz ter Meer, dated August 2, 1945; statement by Dr. C. Krauch, dated September 25, 1945; statements by Dr. Struss dated April 26 and 27, 1945, respectively; minutes of meeting held February 23, 1939 with Army officials.

³⁹ See exhibit No. 13 to ch. I, tables dated August 13 and 19, 1945, titled "I. G. Production 1943 Compared With Total German Production."

⁴⁰ Exhibit No. 15, Statement of Dr. von Schnitzler dated August 8, 1945.

I. G. originally carried out its poison gas experiments on monkeys; later on human beings. For the latter purpose, inmates of concentration camps were selected, and I. G. Farben officials, concerned only with creating weapons capable of assuring German world conquest, were unmoved by this use of human guinea pigs. Dr. ter Meer justified the experiment not only on the grounds that the inmates of concentration camps would have been killed anyway by the Nazis but also on the ground that the experiments had a humanitarian aspect in that the lives of countless workers were saved thereby. Needless to say, these gases were not only used on helpless people during the stage of experimentation, but were later used to exterminate whole groups in concentration camps such as Auschwitz. Dr. von Schnitzler said:

At that time (April 1945) I was still under the impression that I. G. as a firm was only indirectly connected with the fabrication of that gas insofar as we had put chemists at the disposition of the Reich and supplied the intermediates. Later on by Major Tilley I heard that Anorgana, which ran the plant, was 100 percent I. G. and that the whole fabrication practically was an affair of I. G. He told me furthermore that these gases had been used by the Nazi authorities as a tentative in Auschwitz concentration camp.

In the last quarter of 1944 I should say, it was at the end of November or in the beginning of December, an allusion was made to me confidentially by Dr. Müller-Cunradi that terrible things had happened in the concentration camps of Auschwitz, that gases had been used there to kill people and that I. G. products were of something in it—of course, it was only an allusion. Not knowing anything of Dyhrenfurt at the time, I could not bring this allusion in connection with the new gas, but I was so horrified by it that I only reacted "but do other people know that too," which he confirmed, "Yes; Ambros and the other men in Auschwitz know of these things." To Schmitz I made a remark about terrible things being connected with Auschwitz and Dyhrenfurt but without going into details. How far he was informed about it I can't say, for my opinion he should have heard about the general happenings regarding Anorgana a. s. o. as financial interests of great importance were connected therewith and Ambros and Müller-Cunradi must have reported to him about the situation under all its aspects. But that, of course, can only be heard from the three men themselves.

I myself had never seen the agreement regarding Anorgana which was concluded before I took over my activity with the Chemikalien business. I was of the opinion that the Reich owned plant and equipment of the so-called Reichsbetriebe at 100 percent and that Anorgana was a 50-50 position of Reich and I. G. for the handling of these products which were sold to manufacturers.

How secret all these matters had to be held by the men immediately concerned with them might become evident by the fact that Dr. ter Meer, notwithstanding that we always worked together in the dyestuff domain in the closest cooperation, never mentioned them to me, and I was greatly surprised when I heard by Dr. Loehr only a few days before I was taken in custody (May 7) that under ter Meer's papers confidential material of this kind had been found.⁴¹

More specifically, Dr. von Schnitzler testified as follows:

Question. During the last quarter, 1944, you said yesterday that a Mr. Müller-Cunradi alluded to you that the poisonous gases and the chemicals manufactured by I. G. were being used for the murder of human beings held in concentration camps?

Answer. So I understood him.

Question. Didn't you question those employees of yours further in regard to the use of these gases?

Answer. They said they knew it was being used for this purpose.

Question. What did you do when he told you that I. G. chemicals were being used to kill, to murder people held in concentration camps?

Answer. I was horrified.

Question. Did you do anything about it?

⁴¹ Ibid.

Answer. I kept it for me because it was too terrible. I was always under the impression that these gases were not manufactured by us. I asked Müller-Cunradi, "Is it known to you and Ambros and other directors in Auschwitz that the gases and chemicals are being used to murder people?"

Question. What did he say?

Answer. Yes; it is known to all I. G. directors in Auschwitz.⁴³

V. I. G.'S KNOWLEDGE OF GERMANY'S INTENT TO WAGE AGGRESSIVE WAR

The fact that leading officials of I. G. Farben assisted in the formulation and execution of the internal and external policies of the Nazi regime, and the facts disclosed above concerning the activities of the company, would, standing alone, prove that Farben knew for many years of the German Government's intention to wage aggressive war. There follow specific statements and admissions of I. G. officials to that effect.

According to Dr. von Schnitzler the war was "only the last step of a long-prepared evolution" of the Nazi policies. Said Dr. Schnitzler:

Even without being directly informed that the Government intended to wage war, it was impossible for officials of I. G. or any other industrialists to believe that the enormous production of armaments and preparation for war starting from the coming into power of Hitler accelerated in 1936 and reaching unbelievable proportions in 1938 could have any other meaning but that Hitler and the Nazi government intended to wage war come what may. In view of the enormous concentration on military production and of the intensive military preparation, no person of I. G. or any other industrial leader could believe that this was being done for defensive purposes. We of I. G. were well aware of this fact as were all German industrialists, and on a commercial side, shortly after the Anschluss in 1938, I. G. took measures to protect its foreign assets in France and the British Empire.⁴⁴

A striking illustration of Farben state of mind is revealed in the report of its development of fuels and lubricants. Explaining the absolute necessity to Germany of these products, the I. G. report emphasized the political significance of petroleum. The report continued to relate an example of that political significance and selected the experience of Italy in its rape of Ethiopia as its warning precedent. The report stated:

Italy won the Abyssinian war by modern weapons and by building special highways. In modern wars the consumption of gasoline for motorized troops, tanks airplanes, is immense. As the troops advanced into the country the military roads became immensely long, as was the case in Abyssinia—all reinforcements, provisions for the fighting troop, etc., had to be transported by car—and the consumption of gasoline increased still further. In addition an extensive motor park had to be kept in order to supply the motorized units of the fighting forces and the air bases built in Inner-Abyssinia. Although provisions had been made before hand, it was impossible to store these enormous amounts of gasoline needed in the Italian territories on the coast before the war, they had to be filled up continually the same as men, weapons, and ammunition. As Italy has no petroleum of her own she was relying on the continual import from abroad. Nearly all the petroleum in the world is controlled by the United States of America and the countries that are members of the League of Nations, if therefore gasoline had also been included in the sanctions, as proposed by England and France, the war would have come to an end very soon. Italy could win the Abyssinian war and build her empire only because England and France could not carry into effect their intentions.⁴⁵

⁴³ Exhibit No. 15a, Interrogation of Dr. von Schnitzler dated July 17, 1945.

⁴⁴ Exhibit No. 31, statements of Dr. von Schnitzler, dated August 22, 1945.

⁴⁵ Exhibit No. 32.

I. G. officials served notice that Germany would avoid the experience of Italy in its invasion of Ethiopia. They said:

This example will make it clear to you, that it is quite out of question, that Germany will run the risk of a similar situation and for this reason also the German demand of fuel has to be covered by Germany herself before long.⁴⁵

A rather dramatic incident occurring in 1938 and related by Dr. Carl Krauch reveals not only I. G.'s knowledge of the impending aggression but that Dr. Krauch with his great ability made a great contribution to the war effort. In 1938 Dr. Krauch, then an assistant to General Loeb, was shown certain documents which contained production estimates in explosives for the years 1938-40. Immediately, Dr. Krauch who said he had been informed of German plans to wage war by Farben's former president, Dr. Bosch, realized that if Germany went to war on the basis of those overoptimistic figures, defeat was inevitable. Accordingly, he informed Goering of the falsity of the figures. In the words of Krauch:

I had the feeling that they were going to war, as Dr. Bosch told me in June 1938, and that was when I went with the wrong figures of Loeb to Goering and said to him "we can't go to war because the figures are all wrong. We will lose the war on this basis."⁴⁶

Krauch convinced Goering that the figures were wrong despite Field Marshal Keitel's insistence that they were correct. Goering immediately took steps to rectify the errors. He appointed Krauch as his adviser in the place of General Loeb. Krauch's new job was to assure that German production in explosives would meet the false estimates and make it possible for Germany to go through with its plan for waging aggressive war. How closely Krauch's achievements came to making a German victory possible is now, of course, past history.

This awareness of impending aggression is admitted in a report by I. G. to the German Ministry of Economics in 1940 in which I. G. describes its attempt to cloak completely its holdings in preparation for war. The report states in part as follows:

* * * Only in the last years, about 1937, as the danger of a new conflict was appearing more and more, we endeavored to improve the measures of camouflage made by us, especially in the endangered countries, so that at least an immediate confiscation could be avoided. Even the delay of the confiscation for some months means for us, particulars about this matter will be made, an extraordinary advantage. According to our experiences hitherto, our measures for camouflage have proved to be very good during the war, and have even surpassed our expectation in numerous cases * * *⁴⁷

Not only did I. G. have knowledge of Germany's intention to wage aggressive warfare but it was officially informed almost with exactitude of the time table of the attack on Poland.

Months before the attack, I. G. was officially informed by Goering's office that the Nazi war machine would invade Poland in September 1939. Before Hitler's moves against Czechoslovakia, I. G. took steps to take over its leading competitor in that country. At its instigation, I. G. officials acted as Commissars of firms in the conquered countries. I. G. officials assisted in the formulation of Nazi policy for the conquered countries.

⁴⁵ Ibid.

⁴⁶ Exhibit No. 33, Interrogation of Dr. Krauch dated September 27, 1945.

⁴⁷ Exhibit No. 3, ch. II.

That I. G. knew the timing of Hitler's impending aggressions against Poland, etc., is borne out by a statement of Dr. von Schnitzler, who said:

I would say that in my capacity as deputy chairman of the Wirtschaftgruppe Chemie, I had occasion to meet with Mr. Ungewitter at least once a month in Berlin. There we discussed official business regarding the different matters concerning the chemical industry. It was in July 1939 at one of these meetings in the presence of Mr. Ehrmann, Deputy to Ungewitter that Mr. Ungewitter told me that Hitler was determined to invade Poland and that in view of the assurance given by England and France to Poland, we must be prepared for an attack on our western front. There could be no doubt in my mind from the manner in which Mr. Ungewitter spoke that the attack would take place as soon as the harvest was collected which meant some time in September. Ungewitter told me also that the Ministry of War and the Ministry of Economics had informed him that our "Kriegswichtigen," that is the Ludwigshaven and Oppau works must be moved from the western frontier because they were too close. We feared also that they might have guns which could shoot over the 80 kilometers distance between our factory and the French frontier. I said at once to Mr. Ungewitter that this idea of moving the works seemed quite impossible to me. When I spoke to Dr. ter Meer one of the next days he told me that he was well aware of the plan and he confirmed that it was impossible to move the works and I am certain that Mr. Ungewitter has talked over those questions much more strongly with Dr. Wurster and Dr. Ambros than he did it with me who was not responsible for the Ludwigshaven-Oppau works. It is incontestable that Mr. Ungewitter acted on behalf of the government that means the "Vier Jahres" (four-year) plan when he informed me in the before-mentioned way.⁴⁸

That I. G. fully approved these aggressions is indicated, among other things by the following confession signed by the head of I. G.'s legal department:

To my knowledge I. G. Farben, its directors and officers fully approved the Nazi aggression against Poland, Czechoslovakia and France. I. G. profited considerably from these conquests.

* * * * *

I. G. Farben, its directors and officers are therefore responsible and it is my belief that the Allied Powers must take adequate measures to so control Germany that these acts cannot be repeated again.⁴⁹

CHAPTER IV. I. G. FARBEN'S ROLE IN ECONOMIC AND POLITICAL WARFARE

1. INTRODUCTION

I. G.'s external activities dovetailed completely with the foreign policy of the Nazi government. In the words of Dr. von Schnitzler "the development of I. G. during the last 12 years can't be separated from the government's foreign policy."¹ It was the foreign economic policy of the German Government to build up the Wehrmacht and to weaken the military strength of all other countries including the United States of America. Leading German industrialists including I. G. officials assisted in the formulation and execution of that policy. This is succinctly expressed in the interrogation of Dr. Kugler, chief assistant to Dr. von Schnitzler, whose testimony follows:

Question. What was the Nazi government's foreign trade policy in its control of the relations of German industry with the rest of the world?

Answer. The German Government aimed to weaken the military strength of the other countries and to keep the Wehrmacht supreme.

Question. How did this work out?

Answer. Every time the Germany industry and finance entered into economic relations with other countries the German Government exercised rigid control and at all times wanted to keep the Wehrmacht supreme vis-à-vis all other countries. German industry was used by the Nazi government as an instrument to accomplish this purpose.

Question. Did this apply to the United States of America?

Answer. To all countries.

Question. What was the agency of the Government which handled these matters?

Answer. The agency was the Reichswirtschaftsministerium.

• • • • •

Question. Were there any I. G. representatives in this body?

Answer. This organization was subdivided into Fachgruppen. Dr. von Schnitzler represented I. G. in the dyestuffs field and I was his assistant. The I. G. representative for sulphuric acid was Dr. Wurster. For buna, it was Dr. Ambros of I. G.'s Ludwigshafen branch.

Question. And was the purpose of the chemical industry the same as that for the other industrialists and financiers?

Answer. Yes. The foremost purpose of the Nazi government and I. G. and all other industrialists was to keep the Wehrmacht all powerful vis-à-vis all other countries including the U. S. A.²

2. ECONOMIC WARFARE THROUGH CARTEL CONNECTIONS

An outstanding example of the manner in which Farben executed this policy of keeping "the Wehrmacht all powerful vis-à-vis all other countries including the U. S. A." was its successful effort, by means of cartel agreements with Standard Oil, to delay the development and use of buna rubber in the United States until at least 1940 while at the same time producing sufficient buna in Germany to make the German Army and German industry independent of rubber imports.

¹ Exhibit No. 15, ch. III, Statement of Dr. von Schnitzler, dated August 8, 1945.

² Exhibit No. 1, undated interrogation of Dr. Kugler. Cf. exhibit No. 2, interrogation of Dr. Kugler of July 23, 1945, concerning I. G.'s exploitation of the southeastern European countries.

This investigation has confirmed certain data heretofore presented to the Truman, Bone, and Kilgore committees by the Department of Justice with respect to this transaction which so seriously imperiled the war preparations of the United States. The story in short is that under the so-called Jasco agreement, synthetic rubber was to come under Farben's "sphere of influence."³ Standard was determined, however, to have an absolute monopoly of synthetic-rubber developments in the United States, if and when Farben released the American rights to the process to Standard in accordance with the Jasco agreement. Accordingly, Standard fully accomplished I. G.'s purpose of preventing United States production by dissuading American rubber companies from undertaking independent research in developing synthetic-rubber processes. This Standard accomplished by falsely creating the impression that it had already received the buna process from Farben and was attempting to work out a scheme for licensing the process to the American rubber companies. As a matter of fact Farben had no intention of divulging the process. Dr. Loehr testified as follows:

Question. The Goodyear was under the impression that it was not technically feasible and therefore I. G. refused to give them licenses and the know-how?

Answer. I would say so.

Question. But, in fact, I. G. according to you would not have given them the know-how even if it were technically feasible?

Answer. Irrespective of whether or not it was feasible and profitable for us to license the Goodyear and give them the know-how, we would not have done it because the Wehrmacht forbade us to and we did not tell Goodyear of that.⁴

Standard Oil, however, according to Dr. Loehr, was completely informed of the situation.⁵ One conclusion which can be drawn from its "stringing along" of other companies is that it did not want them to proceed with independent research thus preventing Standard from ever having a monopoly in the field. Thus, Dr. Loehr indicated that, pursuant to conversations between Mr. Howard of Standard and I. G., Standard had agreed to keep American firms out of the synthetic rubber field and would let them enter it only if compelled to do so by forces beyond its control. By 1939, however, synthetic-rubber development had reached a stage where Mr. Howard of Standard stated that it would no longer be possible for him to keep the information in regard to the buna processes from the American companies.⁶ Nevertheless, he assured I. G. that Standard would manage to stay "on top of the whole scheme."⁷ As time dragged on and the licenses were not forthcoming, the clamor of the American rubber companies became so intense that Standard, not wanting to reveal the true situation, turned to Farben for an excuse to give the rubber companies. An official of Standard, in October 1939, at a meeting with I. G. representatives in Basle, stated that he had to be provided with an excuse for not getting the know-how. I. G. obligingly cabled Standard Oil to the effect that the authorities would not permit the information to be given to the American firm.⁸ "These are the conclusions," said Dr. Loehr, "which seem to disclose that I. G. impaired the military strength of the United States."⁹

⁸ Exhibit No. 4.

⁹ Exhibit No. 6, Interrogation of Dr. Loehr dated July 26, 1945.

While I. G. gave little, it managed to procure a great deal from its cartel cohorts abroad. From America, I. G. obtained the newly discovered method for the production of Iso-octane and its utilization for motor fuels. This process, according to one of I. G.'s leading scientists, originated—

in fact entirely with the Americans and has become known to us in detail in its separate stages through our agreements with them [Standard Oil, New Jersey] and is being used very extensively by us.

The process for producing tetraethyl lead, essential for the manufacture of aviation gasoline, was obtained for the Nazis by I. G. Farben in exactly the same way. Of this important acquisition, an I. G. official stated:

It need not be especially mentioned that, without lead-tetraethyl, the present method of warfare would be unthinkable. The fact that since the beginning of the war we could produce lead-tetraethyl is entirely due to the circumstances that, shortly before, the Americans had presented us with the production plants complete with experimental knowledge, thus the difficult work of development (one need only recall the poisonous property of lead-tetraethyl which caused many deaths in the United States of America) was spared us, since we could take up the manufacture of this product together with all the experience that the Americans had gathered over long years.

It was, moreover, the first time that the Americans decided to give a license on this process in a foreign country (besides communication of unprotected secret experimental knowledge) and this only on our urgent requests to Standard Oil to fulfill our wish. Contractually we could not demand it, and we found out later that the War Department in Washington gave its permission only after long deliberation.¹⁰

I. G. exploited its cartel connections with American firms not only to obtain these important processes but also to obtain certain critical materials themselves. Because of its relations with Standard Oil of New Jersey, I. G. acted as agent of the German Government in contracting for \$20,000,000 worth of high-grade aviation gasoline and lubricants. (Actually, \$14,000,000 worth was delivered.) This fuel was transported to Germany and stored there; and the foreign exchange necessary for payment was supplied by the German Government.¹¹ And in 1938, when Germany had not yet begun to produce tetraethyl lead, essential to aviation gasoline, Farben, at the request of the Air Ministry, arranged to borrow 500 tons of the lead from the Ethyl Export Corp. of the United States. The loan was guaranteed by Greutert & Cie., one of Farben's Swiss subsidiaries, with the deposit in America of \$1,000,000. Farben, of course, did not return the borrowed lead to the American company and willingly forfeited the security.¹² Farben also purchased large stocks of magnesium from the Dow Chemical Co. of America to build up the Luftwaffe's reserves, large amounts of nickel from the International Nickel Co. (Canada),¹³ and so far as the stock piling of chemicals was concerned, the Wehrmacht actually ordered Farben to accumulate as large stocks of phosphorous and cyanide as they could possibly obtain.¹⁴

3. INTELLIGENCE SERVICES AND ESPIONAGE

N. W. 7 Berlin, under the direction of Dr. Max Ilgner, was the liaison office of I. G. with the various governmental agencies in Berlin.

¹⁰ Exhibit No. 7, memorandum from Dr. Goldberg to Dr. von Knieriem dated May 30, 1944.

¹¹ Exhibit No. 8, interrogation of Dr. von Knieriem dated August 25, 1945.

¹² Exhibit No. 9, correspondence in 1938 and 1939 among Farben, Greutert, and Ethyl Export Corp.

¹³ Exhibit No. 10.

¹⁴ Exhibit 24, ch. III, interrogation of von Helder dated August 13, 1945.

A brief analysis of the expansion of this office between 1932 and 1943 will throw considerable light on the relative importance of its various functions.¹⁵ The total expenses of N. W. 7 in 1943 were RM. 7,000,000 (\$2,800,000) as against only RM. 997,000 (\$398,000) in 1932. This figure becomes increasingly significant when it is realized that the greater part of these expenditures went into channels which, from a purely business viewpoint, were wholly nonproductive. The expenses of N. W. 7's statistical department (VOWI) and the political economics department (WIPO) were approximately 5 and 7 times greater, respectively, in 1943 than in 1932. In 1943 the expenses of the Bureau of the Commercial Committee (B. d. K. A.), formed only in 1939, accounted for almost one-sixth of the total expenses of N. W. 7.

Dr. Ilgner maintained the position of a dictator in this office and delegated responsibility and authority in such a manner that his subordinates never gained any appreciable knowledge into the over-all picture of N. W. 7 and consequently were never in a position to threaten his status. His three deputies were Dr. Frank-Fahle, Dr. Gattineau,¹⁶ and Dr. Reithinger.¹⁷

Dr. Frank-Fahle was one of the younger directors in I. G. Farben. He received his training and acquired his expert knowledge of foreign currency regulations in the United States with Hallgarten Co. in New York and also the American I. G. Chemical Corp. Dr. Frank-Fahle was in charge of the Central Finance Administration (ZEFI) which dealt with many over-all financial matters and with problems of foreign currency, foreign exchange, and foreign exchange credits. Dr. Frank-Fahle also had under his supervision the Bureau of the Commercial Committee (B. d. K. A.),¹⁸ which, by title, might be an integral part of any aggressive business organization but which, in the case of I. G. Farben, was little more than a collecting, analysis, and distribution point for the reports of the I. G. Verbindungsmänner, which will be described in detail below.

The largest and most sinister department of N. W. 7 was the so-called statistical department (VOWI), which was formed by Dr. Ilgner in 1929. The purpose and nature of its research and market inquiries were evidently mystifying to some of the commercial employees of I. G. who were not in on the secret, since the work was obviously unjustified from a business point of view.¹⁹ Dr. Ilgner received the strong support of top I. G. officials and the Government, particularly Prof. Ernst Wagemann, president of the Statistisches Reichsamt (Statistical Office of the Reich), and soon his brain child was flourishing under the expert direction of one Dr. Reithinger. Reithinger was particularly well qualified for his job.

Prior to his employment by Farben, he had been an important figure in the Statistisches Reichsamt. In addition to his outstanding ability as a statistician, economist, and analyst, he traveled extensively in many foreign countries, including the United States, England, France, and Russia. During his travels Reithinger had carefully cultivated the friendship of persons and institutions influential and important in the fields of economics and statistics and "had arranged

¹⁵ See exhibit No. 32, ch. I, Dencker's statement on the expenses of Berlin N. W. 7.

¹⁶ Dr. Terhaar replaced Dr. Gattineau in 1940.

¹⁷ See chart No. 13, organization chart of Berlin N. W. 7.

¹⁸ For details see exhibit No. 32, ch. I.

¹⁹ Ibid.

an intense exchange of statistical work with the various statistical organizations in Germany and abroad."²⁰

Reithinger's department was staffed with men of recognized ability. They immediately began to compile statistics on population, unemployment, production, and consumption of agricultural and industrial capacities, monetary circulation, taxes and duties, deposits and capital of banks, increase of capital of important companies, and other information, most of which could not conceivably have any value to I. G. as a manufacturer of chemicals and dyestuffs. However, little imagination is necessary in weighing the potential value of such information to a country preparing for an aggressive war on the world.

Through the boundless energy of Dr. Ilgner, in 1937-38, meetings of prominent economists were arranged to discuss various international economic problems. As a result of these meetings valuable information was obtained. Moreover, the already close relationship between N. W. 7 and the Statistisches Reichsamt, the Reichsbank, the Ministry of Economics, the Foreign Office, and the Ministry of Agriculture and the Ministry of Finance became ever closer.

With the outbreak of war, N. W. 7 became the focal point of requests for economic intelligence from many Nazi agencies and became, formally, a quasi-governmental agency. Many of the VOWI employees were called to military service with the Wirtschaftsstab (economic staff) of the Wehrwirtschafts- und Rüstungsamt (office of war economics and armament) but actually performed their duties within Dr. Ilgner's office.²¹ The vast fund of information gathered by Dr. Reithinger and his staff proved invaluable to the OKW (army supreme command). In fact, so highly was VOWI regarded by the OKW that at the outbreak of war it considered taking over both the records and the employees and making the agency a part of the army. Other Government agencies, the Economic Department of the Foreign Office, the Ministry of Economics (Foreign Department), and the Ministry of Agriculture, were also desirous of absorbing VOWI. That office, however, was able to service the requests of the OKW and other agencies with such rapidity and so completely that it remained part of the N. W. 7 office.²² It must be remembered, however, that even before 1933, Reithinger's agency had been closely associated with the economics department of the OKW under General Thomas.

VOWI's specific assignments are pretty well summarized by Dr. Kurt Krüger who at the outbreak of war became an officer on the economic staff of the Wehrmacht with headquarters at N. W. 7.

Such tasks and work were to prepare out of the archives of Berlin N. W. 7 all records, files, reports, maps, and figures, that were appointed by the officers of the OKW, to be of interest and use for the OKW; to complete them out of other archives at the disposal of the OKW by news and reports entering I. G. Berlin N. W. 7; to assist in digesting this material; to prepare reports and maps about industries and agricultural production abroad, considering specially the "engpasse" (bottlenecks) in capacities and raw materials. To make inquiries about production, stocks, consumption, prices of special raw materials, agricultural and industrial goods, to prepare reports about the economical situation of foreign countries specially considering their dependence on other countries, their stocks, production, capacities in agriculture and industries of various products needed by Germany.²³

²⁰ Ibid.

²¹ Ibid.

²² See exhibit No. 11, statement by Max Ilgner dated June 18, 1945.

²³ Exhibit No. 32, ch. I.

Even though the personnel of Dr. Ilgner's espionage agency were working full time for the Wehrmacht, they were paid by I. G.

From 1937 on, according to Dr. Struss, Dr. Reithinger and his entire staff concentrated on the preparation of surveys of factories in foreign countries. These surveys were prepared under direct supervision of the Wehrmacht and were used by the Luftwaffe in selecting bombing targets. Dr. von Schnitzler testified that:

For all European countries they made up plans. Every plant of chemical interest was indicated in a complete map.²⁴

According to Dr. von Schnitzler, the VOWI took the initiative in preparing the bombing surveys and stimulated the interest of the Wehrmacht in them. He further stated that Dr. Reithinger was sworn in by the Wehrmacht because of the importance of the work, and that "the VOWI after the war had begun, was practically working more for the general staff of the Wehrmacht than for I. G."²⁵

Another department of N. W. 7 was the WIPO (political economics department).²⁶ The first chief of the WIPO was Dr. Gattineau who was one of the early and active Nazis in I. G. Farben. However, after the advent of Hitler, Gattineau joined with Ernst Röhm and when Röhm was purged in 1934, Gattineau was imprisoned. Through the intercession of Ilgner with Goebbels, he was released and resumed his position as chief of the WIPO.

Little is known of the activities of the WIPO but it is known that Dr. Gattineau's main function was to keep informed on the latest political developments. He imparted his knowledge of these developments to the commercial committee but never kept any record of his activities. Dr. Gattineau was not available for questioning during the course of the investigation. In 1934, Dr. Terhaar, who subsequently became the chief of WIPO, was added to its staff. Terhaar had excellent connections through his activities as a journalist and later as a member of the German staff with the League of Nations.

N. W. 7 had contact men all over the world, the so-called I. G. Verbindungsmänner, who also were a brain child of Dr. Ilgner. The Verbindungsmänner were usually leading officials of the principal I. G. firms in a particular country. One of the principal duties of these Verbindungsmänner was to submit monthly reports pertaining to economic, political, and military matters. With respect to politics, the reports included such subjects as internal political developments, the composition of new governments, the effects of the Proclaimed List and the British Black List, inter-American security, labor, immigration, political reactions within the respective countries to current events, pro-Axis and anti-Axis propaganda and the purposes of special diplomatic missions. Matters of vital military interest contained in the Latin-American reports, for example, included a discussion of additions to the merchant navies in various countries, a reporting of ship movements (including convoys), statistics concerning tonnage in ports, port facilities, construction of new highways and bridges, the condition of rail transportation between the Latin-American countries, the operations of Pan American-Grace Airways, shipments of war materials to the United States and Great Britain, the

²⁶ Exhibit No. 14, Kruger's statement Re History, Organization, and Activities of the WIPO.

Argentine military mission to the United States, rearmament in Chile, and the acquisition of air and naval bases by the United States.

These reports were submitted to the office of the commercial committee (B. d. K. A.) which in turn furnished the information contained therein to the interested departments of the German Government. I. G. was, therefore, operating a world-wide intelligence service both for its own use and as a supplement to the intelligence facilities open to the German Government through diplomatic and other channels.

Ilgner stated upon his return from Latin America in 1936:

* * * It is quite natural that a concern like the I. G. with such a comprehensive and extensive world organization * * * has gained experience and knowledge which can never be secured by governmental agencies * * * just as it is the duty of our leading men outside of Germany to convey their general knowledge to all governmental establishments, which concern themselves with economic matters (commercial attachés, economic experts of the Nazi Party and officials of the chambers of commerce), so it is also the duty of the I. G. organization at Berlin to keep the Government and party organizations in Germany as well as the economic unions well posted on the basis of all information received from foreign countries. In the past we have repeatedly had the opportunity to observe that such cooperation is of mutual advantage.²⁷

The close working relationship that existed between the representatives of N. W. 7 and the Auslands-Organization (foreign organization of the Nazi Party) is clearly defined in a report made by Max Ilgner upon his return from Latin America in 1936.

* * * it is pleasing to know that the cooperation with the German authorities during the last years (I have continuously been able to make these observations during all my travels) has improved and been intensified, and also in particular the cooperation with the foreign organization of the Nazi Party is continually developing in a more and more positive direction. It is known that in this respect the attitudes on both sides were not always the same during the first few years, and it is for this reason all the more gratifying, as I could ascertain during my travels through Latin America that this state of affairs is a thing of the past.²⁸

In order to render even greater assistance, I. G. Farben also arranged for the financing of a dummy corporation, Gesellschaft für Verkaufsförderung whose principal purpose was to act as a commercial cloak for services performed for the OKW, with which I. G. did not wish to be openly identified. Its first president, Georg von Schnitzler, member of the central committee of I. G., described its activities in the following manner:

I recently had occasion in Berlin to discuss with Major Block of the OKW another matter pertaining to this subject, i. e. whether and to what extent the OKW wants to use the services of the Gesellschaft für Verkaufsförderung (Association for Sales Promotion) which is under the management of Messrs. Künzler and von Puttkamer. This company is particularly well suited for the intended camouflaging maneuvers, since the failure of one of its emissaries will never lead to a catastrophe; if worst comes to worst this company might have to confine its activities to the other neutral countries.²⁹

For economic espionage in the United States I. G. Farben used a different but no less effective approach. Chemnyco Inc., an ostensibly American owned and controlled company, was set up in 1931 by Dr. Max Ilgner, as an economic intelligence agency. When Dr.

²⁷ See exhibit No. 15, an account of Dr. Max Ilgner's trip to South America in August to December 1936.

²⁸ For examples of intelligence passed on to German Government see exhibit No. 16, letter from A. Langensienren of the Latin-American division to the political economic division of I. G. Farben dated July 21, 1943.

²⁹ See exhibit No. 17, letter from Dr. von Schnitzler to Dr. von der Heyde, dated April 3, 1940.

Ilgner returned to Germany, his brother Rudolf acted as deputy. Chemnyco was in a perfect position to carry out its mission, since all the officials except two were American citizens, and the stock registered in the names of American cloaks. The primary function of Chemnyco was to transmit to Germany all scientific periodicals, photographs, blueprints, and even detailed descriptions of industrial developments. In short, vital American industrial statistics were available to the German military machine. Originally this material was sent to I. G. Farben directly. After the outbreak of war, it was routed through I. G. offices and associates in Italy and Portugal.

How invaluable the information received from Chemnyco was is indicated in a letter dated August 3, 1940, from N. W. 7 to the Minister of Economy, which stated:

Extensive information which we receive continuously from the Chemnyco about the American company is indispensable for our observations, of the American conditions, especially with a view to the technical development, the possibilities for export, and the competition of foreign countries and companies, especially England. Moreover, this material is, since the beginning of the war, an important source of information for governmental, economical, and military offices.^{20a}

So far as the principals of Chemnyco are concerned, Rudolf Ilgner, in addition to being the brother of Dr. Max Ilgner, was the nephew of Geheimrat Schmitz, chairman of the I. G. managing board. Dietrich A. Schmitz, the nominal owner of a majority of Chemnyco's stock from 1935 to 1939, was the brother of Hermann Schmitz, uncle of both Max and Rudolf Ilgner, and brother-in-law of Albert Gadow, I. G. Farben's representative in Switzerland and chief figure in I. G. Chemie. Walther Duisberg, a director and officer of Chemnyco and its guiding personalty after Wilfred Greif stepped down in 1934, was the son of Carl Duisberg, the organizer and first chairman of the board of directors of I. G. Farben. Wilhelm vom Rath, a stockholder and a powerful figure in many of I. G. Farben's American enterprises, was the son of Walther vom Rath, vice chairman of I. G. Farben's board of directors from 1925 until his death in 1940.

In the course of an antitrust investigation it was discovered that Rudolf Ilgner, the company's vice president, had ordered the destruction of a considerable part of the files, as a result of which action he was indicted for obstruction of justice, pleaded guilty and was convicted. There is no evidence of the type of information Chemnyco was seeking to withhold when it destroyed its papers. When questioned on this point by investigators, Dr. Max Ilgner stated that the only explanation he could offer for the destruction of the files was that Chemnyco officials were afraid that the information which they had transmitted to I. G. "might" violate the United States security statutes.

4. PROPAGANDA

I. G. worked directly with the Aufklärungs Ausschuss, the overseas propaganda department of the German Government, in disseminating anti-American propaganda in Argentina and pro-Nazi propaganda throughout the world. As has been shown, the I. G. confidential agents (Verbindungsmänner) were an important source of economic intelligence for the German Reich. In every case they worked hand

^{20a} Exhibit No. 17A, correspondence re Chemnyco dated August 3, 1940.

in glove with the Auslands-Organization of the party. It was a clear-cut I. G. policy that men going to foreign countries be imbued with the Nazi philosophy. This policy was formulated as follows at a meeting of the commercial committee held on September 10, 1937:

It is hereby understood that in no case will men be sent to our foreign companies who do not belong to the German Labor Front and who do not possess a positive attitude toward the New Order. The men who are to be sent should make it their special duty to represent National Socialistic Germanhood. Especially are they to be instructed that upon entering our companies they are to make contact with the Ortsgruppe of the respective Landesgruppen (organizations of the Nazi Party within the various countries) and regularly participate in their meetings as well as in the Labor Front. The sales departments should also see to it that an appropriate amount of national socialistic literature is given to them. The cooperation with the Auslands-Organization must become more organic. It appears practical, together with the Auslands-Organization, to work out a uniform plan for the purpose of detecting defects still existing in our foreign companies to the end that they can be eliminated.³⁰

For years I. G. had been interested in the dissemination of pro-German propaganda in Latin America through the schools, the press, and libraries.³¹ One of the most effective devices for obtaining publication of propaganda was the club of its advertising. Thus, for example, in February 1938, the pharmaceutical department of I. G. agreed on the following advertising policy:

Advertising in journals hostile to Germany * * * shall on all terms be avoided. Commercial and advertising considerations have to be put in the background as compared with the more important political point of view.³²

Upon Germany's entrance into the war I. G. contributions for press propaganda in Latin America became far greater. For example, a telegram dated September 2, 1939, to I. G. from the Cia General de Anilinas, S. A., Mexico City, stated:

In case of war Legation asks firms Mexico to let them have moneys on a loan basis. Amounts shall be refunded by German Government. Please authorize monthly payments P 10,000 on behalf of all I. G. agencies. Propose monthly amount all I. G. agencies P 200. Please wire.

This telegram bears the handwritten notation: "Board agreeable—Dr. Overhoff informed."³³

An indication of the use made of the funds contributed to the "press committees" by I. G. and other German firms in Latin America is provided by the Aufklärungs-Ausschuss, the overseas propaganda department maintained by the German Government referred to above. The function of this department was to obtain coverage for propaganda articles in newspapers throughout Latin America. A series of articles placed in the Argentine press during the period from February 1, 1938, to March 31, 1939, had as their theme "Struggle against the United States in Latin America." Three hundred eighty-one of these articles, together with the papers in which they appeared and the dates of their publication, were sent by the Aufklärungs-Ausschuss to I. G. in August 1939:

³⁰ Exhibit No. 18, minutes of meeting of commercial committee held September 10, 1937.

³¹ Exhibit No. 19, a series of letters relating to I. G. Farben's contributions to the propaganda campaign in South America. 19 (a) refers to a subsidy for remodeling a German school at Santiago, Chile; 19 (b), a letter thanking Agfa-Photo, Rio de Janeiro for a projector and camera donated to the Nazi Party in Rio de Janeiro by Dr. Max Ilgner; 19 (c), a letter from the regional group leader of Santiago, Chile, thanking I. G. Farben for contributions of Nazi books and literature to the German schools in Chile; 19 (d), a letter from Dr. Ilgner to the regional group of the Nazi Party in Sao Paulo concerning a collection of books and literature to be supplied by I. G. Farben.

³² Exhibit No. 20, extract from Minutes of Bayer, "Directions Besprechung" dated February 16, 1938.

³³ Exhibit No. 20a.

In the covering letter to this list I. G. was informed:

The large list presents in the first part a glance of the published articles against the United States in the newspapers of Buenos Aires, while the second part includes similar articles in the Argentine provinces.³⁴

Farben reviewed this entire series of articles and suggested additional newspapers in Buenos Aires which could be used effectively for the dissemination of articles, and suggested that Heinrich Homann, I. G. Verbindungsmann for Argentina, might be of assistance in spreading the propaganda.³⁵

These are but a few examples of I. G.'s propaganda activities. Their significance is perfectly clear. The activities described here are not those of a national passively submitting to the wishes of a government preparing for war but rather the efforts of a free agent actively engaging in a movement to subjugate the world.

The world-wide sales agencies maintained by Bayer were used as a source of foreign funds for establishments of the German Government and the foreign organization of the NSDAP in neutral countries. A compilation of such payments since 1940 shows that the equivalent of RM. 9,600,000 in local currencies was paid into the coffers of German Embassies and the A. O., principally in Brazil and Spain. The local agencies received credits for these payments in the Bayer books of account, and the counter amount in RM was paid to I. G.'s central finance administration, Berlin, by the German Foreign Office and NSDAP. These payments abroad, whether voluntary or compulsory, were of tremendous importance to the German Government, in the acquisition of critical war materials and the furtherance of Nazi propaganda. They will be discussed in more detail in the section following.

5. FOREIGN EXCHANGE

As was indicated in chapter I, I. G. accounted for approximately 50 percent of Germany's total exports of chemicals and allied products; and was generally a dominant factor in Germany's export trade. These transactions made I. G. Germany's largest single earner of free foreign exchange, providing on an average a minimum of 10 percent of the country's total supply.³⁶ Without this foreign exchange, Germany could not have purchased the strategic materials, still unavailable in Germany, and essential to Germany's rearmament. Nor could the German Government have financed its espionage, propaganda, and other military and political activities abroad in the preparation for and prosecution of the war.

As the years passed, the need for foreign exchange increased and the shortage became more and more serious. Government pressure on German industry to increase its procurements of foreign exchange was always strong. With the beginning of the 4-year plan this pressure became acute.³⁷

³⁴ Exhibit No. 21, letter to I. G. Farben from Aufklärungs-Ausschuss dated August 24, 1939.

³⁵ Exhibit No. 22, letter from I. G. Farben to Aufklärungs-Ausschuss dated September 22, 1939.

³⁶ Exhibit No. 19, ch. I, statement by Gierlichs dated August 21, 1945. The percentage was based on the relative position of I. G. in Germany's foreign trade. It does not include foreign exchange received by I. G.'s subsidiaries or their income from sources other than exports, such as dividends, royalty payments, sales of patents, etc.

³⁷ As of July 1, 1935, the Government put into operation its subsidy export plan (ZAV) whereby sales below cost were subsidized. For sales below cost subsidies were paid to I. G. ranging up to 60 percent of the cost value and varying according to the product and country.

I. G. Farben cooperated fully with the Government in making available all possible foreign exchange for Government purposes. For example, in order to secure foreign exchange in Central and South America, I. G. "had to reduce * * * prices by a total of RM. 1,000,000 a year."³⁸ In Mexico "in case of war," I. G. gave pesos to the German Embassy because "the German press must be influenced."³⁹ In Brazil during 1940 and through January 1942, the I. G. Bayer agencies paid a total of 22,200 centavos, the equivalent of RM. 3,639,343, to the German Embassy and to representatives of the NSDAP for reasons unknown.⁴⁰ In Spain, when the German Embassy wanted Spanish pesetas, the company raised credits from the Spanish banks so as to comply with the demands of the German Government, and paid back these credits by later peseta receipts.⁴¹ Finally when the foreign exchange situation became absolutely desperate, I. G. even sold some of its investments abroad.⁴²

CHAPTER V. ACQUISITION BY CONQUEST

1. INTRODUCTION

In arming the Wehrmacht for the coming war, I. G. Farben amassed great profits and extended its domain in Germany considerably. As the Nazi territorial expansion proceeded first by peaceful means and then by actual war, I. G., as a co-conspirator in this war of aggression, reaped the fruits of conquest. Despite its already overexpanded state, despite the monopoly position it already held, I. G. proceeded to annex an industrial empire, eliminate its competitors and secure control over virtually the whole chemical industry in the conquered countries.

Throughout the period of Nazi aggression, I. G.'s activity in the conquered countries of Europe paralleled the policy of the Nazi government.¹ That policy was war and plunder. Each conquest was the stepping stone to further conquest as each country was in turn converted into an armed camp for the Nazi war machine. And concurrently, the German war machine was used to achieve an industrial empire for the Nazi chiefs and industrialists who marched into the conquered countries in the wake of the Wehrmacht. To quote Dr. von Schnitzler:

Side by side with Germany's tremendous utilization of the industries of the conquered countries for the German war machine, there came to be a great German penetration of the economy of the conquered countries.²

The extent to which the Nazi industrialists penetrated the economy of Czechoslovakia, for example, looting properties, seizing valuable patents and techniques is well known. As Dr. von Schnitzler himself has said:

The way by which the different Nazi governmental instrumentalities like the Goering Werke and the S. S. entered Czechoslovakia's industrial economy was highly to be blamed, as it was practically a looting of private interests.

I. G. did not participate in this whole domain and remained solely on its 50 percent participations in Chemische Werke Aussig-Falkenau. Goering took everything over for himself so that there was no opportunity of the I. G. technicians to develop anything in Czechoslovakia.³

I. G. played an outstanding role in exploiting the conquered countries for the Nazi war machine. Dr. Max Ilgner, who played a vital part in the subversion of the economy of southeastern Europe to the purposes of I. G. and Germany, has stated:

In regard to the chemical and related industries of the conquered countries, I. G. played an important role in adapting the industries of those countries to the purposes of the Nazi war machine. Of all German chemical firms, I. G.'s part in adapting the chemical industries to the purposes of the Nazi war machine was by far the most important.⁴

¹ Exhibit No. 1, statement of von Schnitzler, member of the board, dated August 15, 1945:

"Beginning with the 'peaceful' conquest of Austria and Czechoslovakia and continuing with the military conquest of Poland, Norway, Holland, Belgium, and France (with the 'peaceful' conquest of Denmark falling in between), and also in regard to the southeastern countries, it was the primary purpose of the German Government to incorporate the economies of those countries to the purposes of Germany. This undoubtedly meant that these countries must work for the German war machine." See also Exhibit No. 2A, speech by Dr. von Schnitzler in "Von Werk Zu Werk."

² *Ibid.*

³ Exhibit No. 1. See also exhibit No. 2.

⁴ Exhibit No. 2, statement of Ilgner dated August 15, 1945.

The I. G. methods of acquisition by conquest were varied. Sometimes the acquisitions were cloaked with legality, and, in general, it may be said that I. G. preferred "legal" forms of accumulation. For example, in the case of Francolor, the newly founded German-French dyestuffs corporation, I. G. exchanged shares with the French firms. As a result, it received a 51 percent or a controlling interest in Francolor while the French firms received in exchange a totally insignificant percentage of the I. G. shares.

In the case of Norsk Hydro Elektrisk Kvaestofaktieselskab, Norway's largest enterprise and only nitrogen producer, a somewhat similar method was used. French shareholders, through the Banque de Paris et des Pays-Bas, controlled 60 percent of the shares of Norsk Hydro before the war. After the Nazi occupation of Norway and France, I. G. and the Luftfahrt Bank acquired the controlling interest, and the French shareholders were reduced to a minority.⁵

Following the lead of the Nazi authorities, I. G. did not hesitate to participate in "outstanding examples of loot." For example, it took the initiative in acquiring "Boruta," the largest dyestuffs plant in Poland, from the Nazi government with the full knowledge that the Polish owners would receive nothing for their property. Again, in the case of Austria, I. G. took over the strategically situated Skoda Wetzler Works from the Creditanstalt, knowing well that the transaction was made possible by the Nazi government's confiscation of the Rothschild group's controlling interest in the bank.

These acquisitions formed the foundations of vast new industrial developments, all contributing to the strength of the Nazi war machine. For example, through Donau-Chemie, a company organized in Austria, new works for the German war machine adding up to an investment of RM. 192 million were projected. A new gasoline plant was erected which processed the crude Austrian and Rumanian oil into gasoline for the Luftwaffe. A new sulphuric acid plant was built alongside the Danube River, and an enlargement of the plant was begun. Another gasoline plant was enlarged. A huge magnesium plant was built and a chlorine plant was erected to supply the chlorine for the magnesium plant. In addition, numerous smaller works were absorbed by Donau-Chemie.⁶

⁵ Exhibit No. 3. Igner stated in interrogation:

"Question. What consideration did the Bank of Paris receive for giving up the rights of the French shareholders in the corporation (Norsk Hydro)?"

"Answer. Of course the Bank of Paris did not deal fairly with the French shareholders, but you must understand that the Bank of Paris acted under pressure from the Nazi government and that it was compelled to enter into this arrangement whereby the French shareholders it represented who formerly exercised a 60 percent interest in the corporation, were reduced to about 35 percent. In this arrangement I. G. had to participate with the Nazi government."

⁶ Exhibit No. 1, statement of Dr. von Schnitzler dated August 15, 1945:

"The rapid accommodation of the Austrian industry to Goering's 4-year plan was amazing. Based on the water power of Austria, a substantial industry of manufacturing products in the metallurgical fields was at once started. There were at least three big enterprises between Vienna and the Czechoslovakian frontier erected for the manufacture of processed goods in the metallurgical field and I. G. itself was planning in the summer, in connection with the Moosbierbaum plant of magnesium, to become interested in one of them. 12,000 tons of magnesium being projected for Moosbierbaum that should mostly be converted in finished goods in Austria itself."

"Furthermore, the oil production in Austria was developed and at a certain time one had hopes that the oil fields in the north of Vienna could become a second Pennsylvania with the yield of 6 to 7 million tons of oil. I. G. took certain interest in that field too in the form of participations on which Dr. Bütenschä at once reported in the Vorstand. He can give every detail about it. Later on, the excessive hopes did not materialize, and I think the Austrian production remained somewhat below 1,000,000 tons. I. G. in Moosbierbaum did erect a hydrogenation plant which was destined to transform this Austrian oil and eventual oil coming from the southeast up the Danube into high octane gas for aviation purposes."

"In the nitrogen field, a plant of 50,000 tons of nitrogen was built up in Linz which was financed in the form of an 'Umlage,' taken from the producers in accordance with their participations in the turn-over of nitrogen."

"The contribution of Austria to the war machine was very substantial."

See also exhibit No. 4, statement of Von Schnitzler dated August 21, 1945.

The extent of I. G.'s profits from aggression can be measured by the fact that the value of its acquisitions and new investments in the conquered countries is estimated at more than RM. 1,000,000,000.⁷ I. G. increased its holdings in almost every field, including high-octane gasoline, light metals, lubricating oil, chemicals, pharmaceuticals, sera and vaccines, rayon, plastics, mines, nitrogen, synthetic rubber, oxygen, and dyestuffs. Furthermore, it systematically increased the technical dependence of the occupied countries on I. G. by installing new techniques or processes, but maintaining the research headquarters in Germany.

It must be emphasized that this intensive industrialization of Austria and Czechoslovakia as well as the other conquered countries did not result in a better standard of living in the occupied areas. On the contrary, the Nazi occupation was disastrous for the well-being of the conquered peoples who suffered in proportion to the mounting Nazi military and economic gains and who were given into bondage to the men who supplied the tools for the German war machine.⁸

I. G. Farben's participation in the looting of Europe was commented upon by a Farben director as follows:

To my knowledge, I. G. Farben, its directors and officers fully approved the Nazi aggression against Poland, Czechoslovakia, and France. I. G. profited considerably from these conquests.⁹

2. AUSTRIA

For years prior to the Anschluss, I. G. had tried to acquire the Pulverfabrik Skoda Werke Wetzler, a large chemical factory in Austria, from the Creditanstalt, one of the leading banks in Vienna, which was controlled by the Rothschild group. As soon as the Nazi troops moved in, the interests of the Rothschilds were confiscated, and the Deutsche Bank, Berlin, secured control of the Creditanstalt.¹⁰ By virtue of this Nazi plundering and in the full knowledge of what had happened, I. G. was able to obtain the long sought-after Skoda Werke Wetzler.

On March 13, 1938, with the Nazi troops in Vienna, Max Ilgner, a leading figure in the negotiations for the acquisition of Skoda Werke Wetzler from the Creditanstalt,¹¹ reported to the I. G. Board:

The management of the Creditanstalt and the Skoda Wetzler Werke with whom we have negotiated on the acquisition of the shares has changed.
* * * We are facing a new situation.¹²

⁷ Exhibit No. 5 (list of new works erected by I. G. and manufacturing firms in foreign countries in which participation was acquired or increased after 1937) and exhibit No. 6 (participations of I. G. in occupied territories).

⁸ Exhibit No. 7, statement of von Schnitzler dated August 21, 1945; also ch. I, exhibit No. 22, where details are given on the slave labor employed by I. G.

⁹ Exhibit No. 8, statement of Küpper, chief of the dyestuff legal department, dated June 12, 1945.

¹⁰ Exhibit No. 9, interrogation of Mr. Puhl, vice president of the Reichsbank, dated August 6, 1945:

"Question. Prior to the Anschluss, who owned the Creditanstalt Bank?

"Answer. Prior to the Anschluss the Rothschild group exercised the predominant influence.

"Question. After the Anschluss who owned the Creditanstalt?

"Answer. The Deutsche Bank, without any doubt. That could be seen from Berlin.

"Question. How were the Rothschilds divested of their interest in the Creditanstalt?

"Answer. The German Government confiscated the property of the Rothschilds, including their shareholdings.

"Question. And how did the Deutsche Bank get it from the German Government?

"Answer. I suppose that the Deutsche Bank bought it from the German Government.

"Question. Was it published or public knowledge prior to the Anschluss that the Rothschild group exercised the predominant influence in the Creditanstalt?

"Answer. Yes.

"Question. Was it public knowledge that the Rothschild holdings and properties were confiscated by the Nazi government?

"Answer. Yes; I'm sure it appeared in the newspapers."

The above was confirmed by von Schnitzler. See exhibit No. 11.

¹¹ In a letter to Ilgner, von Schnitzler wrote: " * * * It was you who formerly took the first step with regard to the acquisition of Donau-Chemie."

¹² Exhibit No. 10, report of Max Ilgner dated October 21, 1938.

So radically had the situation changed that Ilgner himself became a member of the new board of directors of the Creditanstalt. He has stated that he did so on the approval of Hermann Schmitz, president of I. G.¹³

In the minutes of the meeting of I. G.'s commercial committee on March 23, 1938, the following appears:

No obstacle now stands in the way of the first step of the fusion planned before. Thus, I. G. can go ahead and acquire the majority of the Skoda Wetzler Works shares at once. Decide to contact the German authorities in Austria.

And a few weeks later:

Reports from Haeffiger, Haajer, and Schiller say that neither the party and the administration in the old Reich and German Austria have anything against the plan which I. G. has had for a long time for unifying the Austrian chemical industry, i. e., Dynamit A. G., Deutsch-Matrei, and Skoda Wetzler Works, and recognize that it is a logical development for us to take over the management. * * *¹⁴

On June 2, 1938, the Nazi State Commissioner for Private Economy in Vienna approved the acquisition by I. G. of the Skoda Werke Wetzler shares.¹⁵

Besides Skoda Werke Wetzler, there was another large chemical firm in Austria, Dynamit Nobel A. G., Pressburg, 51.1 percent of the stock of which was owned by Dynamit A. G., Troisdorf, in which I. G. held a controlling interest.¹⁶ To build a completely integrated firm, I. G. wished to combine at least one important plant of Dynamit (Pressburg), the Carbidwerke Deutsch-Matrei A. G. manufacturing chlorine products and alkalies, and its subsidiary, the Österreichische Kunstdünger-, Schwefelsäure und Chemische Fabrik A. G. producing mainly sulfuric acid and superphosphates.

On April 9, 1938, when I. G. submitted an application to Nazi Secretary of State Keppler for the acquisition of the Skoda Werke Wetzler, it also asked for permission to merge the latter with the Carbidwerke Deutsch-Matrei.¹⁷ The application pointed out that as a result of the reorganization, a valuable contribution could be made to the 4-year plan. Naturally, such permission was granted. Then in a series of transactions, I. G. acquired the shares of the Creditanstalt and other small shareholders in the Pulverfabrik Skoda Werke Wetzler A. G., merged the Wagenmann Seybel Co., a subsidiary of Skoda Werke Wetzler with the latter; purchased the Carbidwerke Deutsch-Matrei A. G. and the Österreichische Dynamit Nobel, an explosives plant, from the Dynamit Nobel, Pressburg; fused the Gesellschaft für Angewandte Elektrizität and the Österreichische Kunstdünger-, Schwefelsäure- und Chemische Fabrik A. G. with the Carbidwerke Deutsch-Matrei, and finally amalgamated the Skoda Werke Wetzler A. G. and the Carbidwerke Deutsch-Matrei into the 100-percent I. G. owned Donau-Chemie A. G.¹⁸

The nature of the merger was quite clear to those who carried it through. Of the acquisition of Skoda Werke Wetzler on which the

¹³ Exhibit No. 11, interrogation of Max Ilgner dated July 30, 1945: "I think I was asked to enter the board of the Creditanstalt and I think I said then that they must ask the permission of Dr. Schmitz as nobody was allowed to enter the board of another company without the consent of the president, Mr. Schmitz, and I got the information that Mr. Schmitz had agreed."

¹⁴ Minutes of the commercial committee, April 1938.

¹⁵ Exhibit No. 11A: "I hereby authorize you to acquire the shares of Skoda Werke Wetzler A. G. deposited with Creditanstalt Wiener Bankverein of Vienna. Furthermore I grant permission to transfer Carbidwerke Deutsch-Matrei A. G., Skoda-Wetzler Werke A. G., and Dynamit Nobel A. G. into the newly established Donau-Chemie A. G. Finally I grant you permission to establish the Donau-Chemikalien-Handels-gesellschaft. I also approve of the liquidation of the Anilin Chemie A. G. Heil Hitler."

¹⁶ The subsidiaries of Skoda Werke Wetzler and Dynamit (Pressburg) are set forth in exhibit No. 12.

¹⁷ Exhibit No. 13.

¹⁸ Exhibit No. 14.

whole composite structure of Donau-Chemie was based, Dr. von Schnitzler himself has said:

* * * I. G. acquired the Skoda Wetzler Works from the Deutsche Bank which had acquired the Skoda Wetzler Works by participating with the Nazi Government in a theft of the property.¹⁹

The acquisition of the Skoda Werke Wetzler and the foundation of Donau-Chemie gave I. G. virtual control of the entire Austrian chemical industry, and paved the way for further penetration into the industry of southeastern Europe. This, however, was but a fraction of the benefit which I. G. gained from the occupation of Austria. Not only was the company able to produce large quantities of materials for the German war machine in the existing plants of the new company; I. G. also expanded the production facilities of the latter tremendously. In the words of Dr. von Schnitzler:

I. G. took the newly founded Donau-Chemie A. G. as an "overcoat" to buy huge land property in the so-called Tullin field, which was a small city about 20/30 km up the Donau from Vienna and was excellently situated for industrial development.

In general one always wanted in Austria to have Austrian companies on the spot, and that was the reason too that I. G. took Donau-Chemie as an overcoat, but under that overcoat the big manufacturing plants in Moosbierbaum should be run directly and were run directly by I. G., so for instance, the hydrogenation plant and the projected plant for Moosbierbaum.²⁰

With the assistance of the Wehrmacht, I. G. projected a program of new investments in Austria totaling RM. 192,000,000. Of this sum, the Luftwaffe agreed to lend RM. 65,000,000 to I. G. and also granted it a subsidy of RM. 30,000,000. New works were built by I. G. at Moosbierbaum for the production of high-octane gasoline I and II, lubricating oil, sulfuric acid I and II, "nebel" acid, magnesium, and chlorine. In addition, two power stations with six boilers, quay, railways, etc., were erected.²¹ Had the huge Moosbierbaum plant ever reached full production it would have been one of the Wehrmacht's most important suppliers.

3. CZECHOSLOVAKIA

Having absorbed virtually the entire chemical industry of Austria, I. G. looked with anticipation of further gains to the Nazi occupation of the Sudetenland. Its objective was the Verein für Chemische und Metallurgische Produktion (Aussiger Verein) of Prague, the fourth largest chemical company in Europe and the only major chemical company in Czechoslovakia.

The increasing Nazi agitation in the Sudetenland in the spring of 1938²² and the growing possibility of a conflict between Germany and Czechoslovakia was of particular interest to I. G. The company in anticipation of the annexation of the Sudetenland, became very much concerned over the future Nazi disposition of the Aussig and Falkenau plants of Aussiger Verein, the only important dyestuffs plants in Czechoslovakia.²³ I. G. was determined to see to it that the

¹⁹ Exhibit No. 15, interrogation of Dr. von Schnitzler, dated August 8, 1945.

²⁰ Exhibit No. 16, statement of Dr. von Schnitzler, dated August 15, 1945.

²¹ Exhibit No. 17, a diagram of the new Moosbierbaum works.

²² I. G. may have contributed at least indirectly to that agitation. In the minutes of the Commercial Committee meeting of April 22, 1938, there is the note: "Dr. Ilgner suggests that use be made of the Sudeten German press for publicity."

²³ Exhibit No. 18, statement by Kugler dated August 18, 1945.

dyestuffs industry of Czechoslovakia would not fall into the hands of some third party, thereby impairing the position of Farben.

In the summer of 1938, over 3 months before the annexation of the Sudetenland, I. G. Farben prepared to take action. A meeting called for this purpose was held between I. G.'s Berlin personnel and managers of I. G.'s Czech agencies. A monograph dated July 28, 1938, on the structure of Aussiger Verein was prepared.²⁴

By September 23, 1938, I. G. officials had concluded successful negotiations with the Nazi government for the appointment of its directors, Dr. Wurster and Dr. Kugler, as commissars of the Aussig and Falkenau factories.²⁵ On September 29 von Schnitzler reported to his fellow directors that he had laid claim to the acquisition of the Aussig-Falkenau by I. G. He was forced to compromise on the question of commissars, however, and agreed that along with Dr. Kugler, Mr. Brunner, manager of the works in Falkenau should be appointed.²⁶

Before the Wehrmacht marched in, the Nazi Ministry of Economics approved the appointment of Kugler and Brunner as commissars of the Aussig and Falkenau factories. An I. G. report describes subsequent events as follows:

On 1st October the marching in of the German troops began, on 3d October Falkenau was occupied, and on 9th October Aussig [was occupied]. All Sudeten works of the Prager Verein were entrusted to a commissarial manager, Director Dr. Kugler (I. G.).²⁷

Dr. Schmitz was quick to congratulate Hitler on this coup d'état and donated to him RM. 500,000 (\$200,000) for use in the Sudeten territory.²⁸

The management of the Aussiger Verein objected strongly to the installation of the I. G. commissars in the factories. The company also strenuously objected to any negotiations for the purchase of the Aussig and Falkenau plants with the management of those plants.²⁹ The controlling interest of the Aussiger Verein was held by the Zivnostenska Bank and the Solvay group of Belgium, which together held about 55 percent of the shares of the company.

In November 1938 I. G. and another German firm, Chemische Fabrik von Heyden, A. G.³⁰ began negotiations for the purchase of Aussig-Falkenau from the Aussiger Verein. Commenting on the speed of the negotiations, von Schnitzler stated:

Seldom has a great international economic agreement containing so many clauses and covering so many domains been concluded so speedily as this. In 1 day the agreement in principle was reached and the lump sum was fixed. In the 30 days following all clauses were prepared and in another 2 days negotiations in Berlin about December 7, the agreement and all its bylaws were signed.³¹

The following interrogation of von Schnitzler casts further light on the nature of the acquisition:

Question. How were negotiations for the purchase of the Aussig-Falkenau factories from the Prague Verein begun?

²⁴ Exhibit No. 18.

²⁵ Exhibit No. 19, letter dated September 23, 1938, from Dr. Fühne, member of the I. G. Board, to von Schnitzler and ter Meer, the latter, one of I. G.'s leading technical men.

²⁶ Exhibit No. 20, letter of Dr. von Schnitzler dated September 29, 1938.

²⁷ Exhibit No. 21, Survey of Prager Verein.

²⁸ Exhibit No. 1, ch. III.

²⁹ Exhibit No. 22, letter of Aussiger Verein.

³⁰ In accordance with a decision of the Nazi Ministry of Economics, I. G. had to share the acquisition of the Aussig-Falkenau Works with this firm.

³¹ Exhibit No. 23, statement of von Schnitzler, dated July 5, 1945.

Answer. The negotiations were made through the Dresdner Bank represented by Rasche and Zinser.

Question. Was the Prague Verein informed that it would have to sell the property?

Answer. Yes; the Dresdner Bank insisted that the Zivnostenska Bank exercise its controlling influence in the Prague Verein to get the Prague Verein to sell the Aussig-Falkenau.

Question. If Zivnostenska Bank had refused to do what the Dresdner Bank ordered, what measures would have been taken?

Answer. It would be difficult for me to say, but no doubt the German Government would have sequestered the property and installed commissars to manage it on a permanent basis.²²

The final agreement of sale was signed on December 7, 1938. I. G. and the Chemische Werke von Heyden organized a new company, the Chemische Werke Aussig-Falkenau G. m. b. H., in which each had an equal participation of 50 percent. The purchase price was fixed at a sum equal to the annual sales of Aussig and Falkenau. The new I. G.-von Heyden company was founded with a capital of RM. 10,000,000 of which 5,000,000 were fully paid in. Later the capital was increased to RM. 14,000,000 and finally to 16,000,000.

The Chemische Werke Aussig-Falkenau, G. m. b. H. absorbed the two plants situated at Aussig and Falkenau and their lignite mines, the "Albert" and "Maria Antonia" (situated near Aussig) and the "Georg-Schacht" (near Falkenau)²³ together with all stocks, patent rights, and good will.

Subsequently I. G. purchased the dyestuffs and intermediates plants of Aussig including stocks, patents, and trade-marks, from Chemische Werke von Heyden for RM6,000,000 and organized the Teerfarbenwerke Aussig G. m. b. H., a new wholly owned subsidiary, with a capital of RM. 500,000, to manage it. Thus, I. G. absorbed the entire dyestuffs industry of Czechoslovakia.

4. POLAND

When Poland was invaded I. G. Farben moved quickly to acquire the three largest dyestuffs companies in that country. They were the Przemyel Chemiczny "Boruta", S. A., Chem. Fabrik Wola-Krzysztoporska (Wola), Zaklady Chemiczne w Winnicy (Winnica). The reasons for this action were quite clear.

First and most important, unless forced by circumstances, I. G. would brook no competition in the dyestuffs market, its oldest domain. On no account, therefore, would it allow the Polish factories to fall into the hands of third parties. Second, I. G.'s western plants were relatively vulnerable to an attack, and it was, therefore, interested in acquiring the Polish plants as insurance against the effects of any such misfortune.²⁴

On September 7, 1939, one week after the invasion started, von Schnitzler, chief of dyestuffs commercial matters, wired Dr. Krüger

²² Exhibit No. 24, interrogation of von Schnitzler, dated August 8, 1945.

²³ Exhibit No. 25, statement of Dr. Loehr dated September 1, 1945, gives fairly complete data on the nature and importance of Aussig and Falkenau. It also includes information on the Teerfarbenwerke Aussig G. m. b. H., the company organized by I. G. to manage the dyestuffs and intermediates plants of Aussig subsequently purchased from von Heyden.

²⁴ Exhibit No. 26, statement of Dr. von Schnitzler dated July 4, 1945:

"It was only too natural that I. G. had a strong interest to acquire the works of Boruta (the largest dyestuffs producer in Poland). On the one hand they wanted to make use of the installations of Boruta which altogether not being very important in volume still represented an interesting addition mostly in the domain of intermediates which Boruta in the last years had considerably developed and as the main plant of I. G. for these products, Leverkusen [sic. Ludwigshafen] was considered as highly endangered by air attacks. Secondly, so long as the question of property was not solved, practically nothing could be done in the technical improvement of Boruta because I. G. could not foster an eventual new competitor inside their own territory in the dyestuffs field which was I. G.'s oldest and strongest domain."

of I. G.'s Berlin office to begin negotiations with the Nazi Economic Ministry with a view to gaining control of the Polish dyestuffs plants:

The plants (Boruta, Wola, Winnica, Pabjanice) have considerable and valuable stocks of raw materials, intermediates, and finished products nearly all destined for the manufacture of dyestuffs and affiliated auxiliary products. Leaving open for the instant the questions of carrying on the plants, in our opinion and on any condition the said stocks should be utilized by experts in the interest of the German economy. I. G. only is in a position to provide such experts. We would be prepared to delegate for this business Mr. Schwab, the leading director of our east European dyestuff sales department. Assistants, also on the technical side, are, of course, available if required. We intend to present ourselves in the middle of next week to the competent authorities in Berlin for further deliberation and beg to arrange a meeting for that purpose. Our (Polish) representatives, * * * are in the meantime, of course, at the disposal of the military and governmental authorities for information and advice.³⁵

Following this communication a meeting was held between I. G. and Government officials at the Reich Economic Ministry. The Government declared that for the time being they saw no need for the appointment either of commercial controllers or technical experts. Undaunted and obviously dissatisfied, the I. G. representatives, Haefliger and Prentzel, informed the Government officials that Dr. von Schnitzler himself would reopen discussions with the Reich Economic Ministry within the next few days.³⁶

Almost at once von Schnitzler petitioned the Nazi Ministry of Economics for the appointment of I. G. as trustee of the Reich for the administration of the three dyestuff factories, Boruta, Wola, and Winnica, asking for authority either "to continue the works or close them and make use of the stocks of raw materials, intermediates, and finished products." In his letter, von Schnitzler also emphasized the importance of Boruta's production to the Nazi war machine:

The importance of Boruta to the German strategic economy must be valued at present higher, as 85 percent of the production of coal-tar dyes and intermediates by I. G. are located in works in western Germany, and of this production, a very important part is at Ludwigshafen, where the production of dyestuffs must be reduced to a minimum.³⁷

On September 29, 1939, the Ministry of Economics appointed Schwab and Schoner, both I. G. officials, as commissars of the three dyestuff companies.³⁸

When the Ministry of Economics and the Haupt-Treuhandstelle Ost (HTO), trustee of the property, continued unwilling to sell Boruta, the largest of the three dyestuff companies, I. G., asked permission to lease it, and on November 30, 1939, the HTO agreed. While negotiations for the lease were pending, however, the HTO on June 20, 1940, informed I. G. that it would consider the sale of Boruta to I. G. On July 10, 1940, I. G. replied:

With best thanks we acknowledge receipt of your letter with enclosed information of HTO of 20.6 from which we were glad to learn that instead of the originally provided lease now the purchase of Boruta by I. G. may be considered. As you know, we much appreciate this settlement, as it eliminates especially the various technical difficulties which would have cropped up with a mere lease of the enterprise during wartime. We therefore ask you to inform the HTO that we are quite prepared to enter into purchase negotiations at once.³⁹

³⁵ Exhibit No. 27, telegram from von Schnitzler dated September 7, 1939.

³⁶ Exhibit No. 28, letter from I. G.'s Berlin office to Dr. von Schnitzler dated September 10, 1939.

³⁷ Exhibit No. 29, letter dated 14 September 1939, signed by von Schnitzler and Krüger.

³⁸ Exhibit No. 30, interrogation of Dr. Kugler dated July 18, 1945. According to Kugler, chief assistant to von Schnitzler, Boruta manufactured approximately 40 to 50 percent of the dyestuffs in Poland.

³⁹ Exhibit No. 31.

On February 10, 1942, the contract of sale of the Boruta by the Haupt-Treuhandstelle Ost to the I. G. was ratified. It must be emphasized that I. G. purchased Boruta from the HTO with full knowledge that the Polish owners of Boruta were being despoiled of their property.⁴⁰

The channels which I. G. used in pressing its suit for the acquisition of Boruta are revealed by the following extract of a letter from von Schnitzler:

Enclosed are copies of my exchange of letters with Dr. J. C. Eichenauer, one of the leading officials of the nitrogen syndicate. As you know, Dr. Eichenauer was considerably instrumental in SS Gruppenführer Greifelt agreeing to the acquisition of "Boruta" for the I. G., and I therefore request that a very cordial invitation be sent to Dr. Eichenauer.⁴¹

I. G. formed the Teerfarbenwerke Litzmannstadt G. m. b. H., capitalized at RM. 500,000 to manage the Boruta works.

Winnica

The second dyestuffs factory which I. G. Farben acquired in Poland was Winnica. On the surface this company was wholly owned by the French firm Etablissements Kuhlmann. Secretly I. G. Farben had a 50-percent interest in the company. The circumstances surrounding this cloaked participation are rather interesting. In Poland German firms had no right of settlement (Niedereassungsrecht), while French companies did. Both Kuhlmann and I. G. were anxious to build a dyestuffs plant in Poland. Accordingly, after negotiations between I. G. and Kuhlmann,⁴² the French company bought a soap factory in Poland, and on that site a dyestuffs plant was built. By arrangement with the French, I. G., through one of its camouflaged subsidiaries, secretly acquired 50 percent of the stock of the new company, paying partly in money and partly in goods, mainly intermediates. Actual control of the shares remained with I. G.⁴³

With the Nazi invasion of Poland the cloak was thrown off, and I. G. appeared as the real owner. Two years later, when the Francolor agreement was signed, the remaining 50 percent of Winnica stock also came under I. G. control. Then on May 20, 1942, when insufficient fuel supplies had made it impossible to continue the oper-

⁴⁰ Exhibit No. 30, Interrogation of Dr. Kugler dated July 18, 1945. The following is a record of the Interrogation of Kugler:

"Question. Did I. G. negotiate with the Nazi government for purchase of Boruta between 1939 and 1941?"

"Answer. Yes."

"Question. And the Polish owners of this property were never considered in these negotiations?"

"Answer. No; the whole Polish property was under sequester, also the property of the bank, the main owner of the shares."

"Question. Did the Nazis or I. G. have a claim of leadership in regard to the Polish dyestuff industry?"

"Answer. No."

"Question. What legal right did the I. G. have to the Polish property?"

"Answer. No legal right, only the question of the practical working."

"Question. Then I. G. made proposals to the Nazi government that I. G. buy the Polish dyestuff industry from the Nazi government?"

"Answer. Yes."

"Question. And I. G. had full knowledge that the Polish owner would receive nothing for it?"

"Answer. Yes."

"Question. And with that knowledge I. G. voluntarily proposed to buy the property and eventually did buy the property from the Nazi government?"

"Answer. Yes; forced by the circumstances."

"Question. This was in regard to Boruta?"

"Answer. Yes."

⁴¹ Exhibit No. 32, letter of Dr. von Schnitzler dated April 22, 1942.

⁴² Frossard, the leading actor in the Francolor transaction, was also the principal French representative in these negotiations.

⁴³ In interrogation Dr. von Schnitzler said, "We controlled practically the other half of Winnica from the business standpoint."

ation of Winnica, I. G. liquidated it, selling the machinery and equipment to Boruta, by that time, of course, also a 100 percent I. G. subsidiary.

Wola

Wola was a somewhat smaller dyestuffs company than Boruta.⁴⁴ In its case a simple and more ruthless method of settlement was available. In his letter of September 14, 1939, to the Ministry of Economics, Von Schnitzler pointed out that Wola was a non-Aryan family property and recommended that it be closed down. When this was done, and the machinery, equipment, and stocks of the Wola were sold, I. G. itself purchased the battery acid installation. The Polish owners of the property received nothing.

Other firms

Four small independent Polish dyestuffs firms which together handled about 5 percent of the Polish business were also eliminated at the demand of I. G.

There was only one other dyestuffs producer in Poland, Pabjanice, a subsidiary of the neutral Swiss-Ciba, Geigy, and Sandoz. A few days before his letter of September 14, 1939, to the Ministry of Economics, Von Schnitzler sent the following wire to the Swiss owners:

In the middle of the next week shall have an opportunity to contact the German authorities about safeguarding of Polish dyestuff factories, utilization of the stocks. Suggest you inform us by telegram if possible wishes regarding Pabjanice.

VON SCHNITZLER.⁴⁵

The Swiss replied that Pabjanice was Swiss property and that they expected that it would be respected as such.⁴⁶ It was the only independent dyestuffs plant to survive.

Insofar as these plants remained in operation, the production almost all went to the German Army.⁴⁷ But this was not the most important assistance that I. G. gave to the Army as a result of the Polish conquest. Like others before it, a process of forced industrialization for German war needs took place in the Polish economy. I. G. undertook the huge projects at Auschwitz and Heydebreck for the production of synthetic gasoline, buna, and methanol.⁴⁸

5. FRANCE

Early in June 1940, looking to the imminent defeat of France, I. G. began discussions with the Nazi Ministry of Economics regarding terms to be imposed upon the French chemical industry. Etablissements Kuhlmann, the only large chemical company in France, was second only to I. G. Farben on the Continent.

According to von Schnitzler, chief of I. G.'s dyestuffs department and leading I. G. representative in the negotiations with the French industrialists, the original plan was to force French industry to work

⁴⁴ In 1938 it produced 290,000 kilograms of dyestuffs.

⁴⁵ Exhibit No. 33.

⁴⁶ *Ibid.* The reply from Switzerland was:

"Thank you for information regarding Polish dyestuff factories. As to Pabjanice I beg you to take notice also for information of your Government that Pabjanice already on account of its share capital is to be considered as a Swiss undertaking. Expect therefore that compulsory measures of any kind will not be taken against our enterprise. Have approached our Federal Government."

"SCHMID-RESPINGER."

⁴⁷ Cf. exhibit No. 34, statement of Dr. von Schnitzler, dated August 21, 1945.

⁴⁸ The same applies to the 'Boruta' in Poland, where, of course, during the whole war the production remained restricted but the dyestuffs produced there did practically all go to the Wehrmacht.

⁴⁹ Some details on the Auschwitz and Heydebreck developments are included in exhibit No. 35.

for the Nazi war machine.⁴⁹ It soon became apparent to the Nazis, however, that this was unnecessary, and that the French industrialists were willing to join forces with the Germans against the Allies. Indeed, French chemical leaders, notably Joseph Frossard, the head of Etablissements Kuhlmann, whom von Schnitzler has described as "the man who is still the spirit of the French dyestuff industry as well as its creator," were extremely anxious to open negotiations with the Germans. Von Schnitzler, kept well informed by I. G. agents in Paris of the state of mind of leaders in the French chemical industry, preferred, however, to "let the French simmer in their own juice." In a statement regarding the attitude of the French dyestuff group after the defeat of France, he has written:

Frossard consequently started nearly at once—I think it was in August—with his endeavors to come on speaking terms with us; he not only addressed Dr. Kramer in Paris, but he let me know through Mr. Koechlin of I. R. Geigy in Basle that he was desirous of a conversation with us. We saw Mr. Koechlin in October 1940, in Zurich. Notwithstanding the applications made by I. G. to the German Government I was not in a hurry to react on their suggestions. As we were not prepared to renew our relations with the French group on the basis of the old cartel agreement but aspired to a much deeper rooted agreement. I thought it advisable to let them simmer in their own juice and to wait till they asked for such private negotiations through the official channel of the armistice commission.⁵⁰

Thus, months before the meetings of Hitler with Petain and Laval placed German-French collaboration on an official basis, the French chemical industry was pressing for an understanding with I. G. Farben. The nature of the understanding desired by Frossard is crystallized in a report from the I. G. agent in Paris.⁵¹

This states in part:

One sees absolutely clearly at Kuhlmann's that Germany will win the war and that the organization of the European economy will be made under the leadership of Germany. Frossard offers to put his whole industry into the services of Germany to strengthen the chemical potential for the continuance of the war against England.

Kuhlmann would be prepared to produce all preliminary and auxiliary products for the I. G. which would be desired from the German side. He, Frossard, wants a confidential collaboration—closer connection by marriage in the dyestuff and chemical field, enclosure of the French industry in the European economy under German leadership.

Not only was Frossard himself anxious to work for the Nazis; he also offered to secure the collaboration of other French industrialists.⁵²

Armistice negotiations

On November 21, 1940, the first armistice meeting between I. G. officials and representatives of the French chemical industry was held in Wiesbaden. Ambassador Hemmen, head of the German delegation charged with settling the economic terms of the armistice, was in the chair. Von Schnitzler, ter Meer, Waibel, Kugler, and Terhaar represented I. G.; and Duchemin, Thesmar, and Castès, the French.

⁴⁹ See exhibit No. 15 of ch. III, statement of von Schnitzler dated August 8, 1945: "In the first phase after the armistice, we thought it necessary that the Government should sequester the whole (French) chemical industry in order to make it work for the German war potential."

⁵⁰ Exhibit No. 36, statement of von Schnitzler dated August 30, 1945. Cf. also the attached letter from Carl Koechlin to von Schnitzler dated October 24, 1940.

⁵¹ Exhibit No. 37, report of Dr. Kramer dated October 12, 1940, concerning his conference with Mr. Frossard at the Hotel Claridge on October 10, 1940.

⁵² See exhibit No. 37 supra:

"If other leading men of the Kuhlmann concern should not be agreeable to the I. G., for negotiations," the report continues, "he, Frossard, would be prepared to see to it that the eventually named persons would be dismissed by Kuhlmann."

Dr. von Schnitzler has testified that very important French industrialists in the chemical field collaborated with the Nazis. See exhibit No. 37A, statement of von Schnitzler dated August 30, 1945.

At the meeting a memorandum prepared by von Schnitzler and determining the basis for Franco-German relations in the dyestuffs industry was read and handed over to the French delegation. The memorandum stated that before the war I. G. controlled more than half the world's export market and fixed the world's prices in dyestuffs.⁵³ But even this far-reaching control was not enough. Citing the damages done to the German dyestuffs industry by the Treaty of Versailles, I. G. demanded rectification in the form of complete domination of the French dyestuffs industry.⁵⁴

The contents of the memorandum were in line with the official policy of the Nazi government; and the I. G. and French representatives were authorized to negotiate on a private basis on condition that they reported results to their respective government representatives. Under von Schnitzler's leadership, the I. G. delegation never deviated from its stand that the German company must obtain a controlling interest, at least 51 percent, in the entire French dyestuffs industry.⁵⁵

On behalf of the French, Duchemin pointed out that the 1927 cartel agreement between I. G. and the French had been beneficial to both parties. He cited von Schnitzler's praise of that agreement in 1937, when its tenth anniversary was observed.⁵⁶ Now, however, von Schnitzler and Ambassador Hemmen refused to consider the French proposals on the ground that they were not "in consonance with either the legal position or with the political and economic facts." "After all that has happened," said von Schnitzler, "the French standpoint regarding the validity of the cartel must be considered an imputation and insult."⁵⁷

The negotiations between I. G. and the French companies were, therefore, restricted to a discussion of I. G.'s "claim to leadership" (Führungsanspruch) in the industry. The French representative, notably Duchemin, continued to protest that I. G.'s demand for a 51 percent participation was unfair, but the I. G. representatives were adamant.⁵⁸ The Vichy French Government also feared the

⁵³ Exhibit No. 38.

⁵⁴ Ibid. "There will be a complete accommodation of the French dyestuffs industries to the German dyestuffs industries."

⁵⁵ Interrogation of von Schnitzler dated July 17, 1945:

Exhibit No. 39.

"Question. Did you ask for a percentage of the French dyestuffs industry?

"Answer. I asked for the Führungsanspruch. I can't tell you whether in this first memorandum we asked for the percentage.

"Question. What was the theory on which the memorandum was based?

"Answer. I have never asked the French any other figure than 51 percent.

"Question. You asked for 51 percent of the French dyestuffs industry and never asked for less?

"Answer. Never less than 51 percent. 'Führungsanspruch' means 'claim for leadership.'"

⁵⁶ Exhibit No. 40, speech by von Schnitzler on occasion of tenth anniversary, German-French dyestuffs cartel:

"In this month of November 1937, it is 10 years since an agreement was signed between the French and German chemical industry, aiming at reciprocally delimiting the interests of both parties in the field of coal-tar dyestuffs. This date is especially noteworthy because it refers to the jubilee of an industrial understanding arisen in connection with the Franco-German economic negotiations from 1925 to 1927 and in a sense was comprehended as an extract of the treaty of commerce of August 1927. This understanding could exist independently, survive all vicissitudes of the Franco-German trade policy, and become, moreover, the germ for a number of other important agreements with third parties which span today the largest part of the world. . . . the dyestuffs agreement for good reasons was regarded as one of the nuclei of fundamental questions of Franco-German understanding in the field of economy. . . . both parties are of the opinion that they have proved in these past 10 years how successfully Germans and Frenchmen understand cooperating for their mutual benefit, and both are convinced to have done, apart from furthering the direct interests of chemical industry, useful work for their home countries in joining themselves together after long years of keen competition and thus equalizing the economic contrasts, at least in the chemical field."

⁵⁷ Exhibit No. 41, conference between I. G. and French delegates on November 22, 1940, at Wiesbaden.

⁵⁸ Exhibit No. 42, report concerning a conference attended by Dr. Kramer, an I. G. agent, Dr. Kolb and Duchemin on December 14, 1940: Duchemin said that the French Government, and that the I. G. was asking much and granting little. The demand of the I. G. went too far and he "would rather have his hand cut off than sign a similar arrangement. . . ." Duchemin mentioned here again that a participation of 51 percent in the production could on no conditions be considered by the French on a private commercial basis, and that if the majority should be obtained by force by the Germans, this would only be possible by a respective demand in the peace treaty. . . . It was mentioned that "it could not be in the interest of the French that the negotiations would be broken off."

effects on French public opinion of granting I. G. a 51 percent participation in the French dyestuffs industry.⁵⁹ Frossard, of the French delegation; however, urged acceptance of the I. G. terms and promised to exert pressure on Duchemin and the others.⁶⁰

Apparently his efforts met with some success, for reporting on Frossard's conversations with his French colleagues, the I. G. agent wrote:

Mr. Frossard mentioned at this occasion that Mr. Duchemin already regrets very much to have made the remark "that he would rather have his hand cut off" than grant I. G. a 51 percent participation.⁶¹

Finally, on March 14, 1941, the French Ministry for Production consented to a 51 percent participation by I. G. in the French dyestuffs industry. After protracted negotiations the French industrialists accepted I. G.'s demands, and on November 18, 1941, the constitution of the new German-French dyestuffs company, Société Anonyme de Matières Colorantes et Produits Chimiques, Francolor, was approved and signed in Paris.⁶²

The organization of Francolor

The parties to the agreement were, on the German side, I. G. Farbenindustrie Aktiengesellschaft; and on the French side, Compagnie Nationale de Matières Colorantes et Manufactures de Produits Chimiques du Nord réunies Etablissements Kuhlmann, Société Anonyme des Matières Colorantes et Manufactures de Produits Chimiques de St. Denis, and Compagnie Française de Produits Chimiques et Matières Colorantes de St. Clair-du-Rhône. Von Schnitzler and ter Meer signed on behalf of I. G., Duchemin for Kuhlmann, Thesmar for St. Denis, and Frossard for St. Clair-du-Rhône.

By the Francolor agreement, I. G. obtained control of virtually the entire French dyestuffs industry.⁶³ The French companies surrendered their dyestuffs and intermediate plants, including land and other real property, patents, licenses, foreign participations, manufacturing processes and know-how, stocks, etc., to the I. G.-controlled Francolor S. A. No additional capital was paid in, so that this represented the entire assets of the new company. Its capital value

⁵⁹ Exhibit No. 43, report concerning a conference in the French Ministry of Production attended by Pucheu, Bichelonne, Barnaud, and Duchemin on March 6, 1941:

"... Mr. Pucheu, as the responsible leader of the Ministry of Production, could not make the proposal to Marshal Petain to give permission for a 51 percent participation by a foreign group in such an important key industry as dyestuffs, although he personally is in favor of an intensive Franco-German collaboration. The French Government therefore cannot consent to a participation of 51 percent without having to fear that great reproaches and difficulties will be made by public opinion to the Ministry of Production."

⁶⁰ Exhibit No. 44, report of Dr. Kramer, dated January 31, 1941:

"Mr. Frossard visited me today and told me that he is traveling tonight into the unoccupied zone to have a personal interview with Mr. Duchemin at Vichy. Mr. Frossard declared that he will use all his power at the conference at Vichy to obtain acceptance of the 51 percent and that at these negotiations he will also tender his resignation if an agreement cannot be reached."

⁶¹ See exhibit No. 42.

⁶² Exhibit No. 45, constitution of Francolor.

⁶³ See exhibit No. 39, interrogation of von Schnitzler dated July 17, 1945:

"Question. Was the entire French dyestuff industry absorbed by the newly organized German-French company, S. A. Francolor?"

"Answer. Yes; except 2 small factories. They did us no harm.

"Question. Did you have them closed?"

"Answer. Partly having them closed and partly giving the products of Francolor to sell.

"Question. Did you control them?"

"Answer. Indirectly we controlled them.

"Question. What happened to all the stocks, properties, etc.?"

"Answer. All was absorbed.

"Question. What happened to the foreign properties of the company? What happened to the stocks in South America? Were they absorbed by the new Francolor?"

"Answer. In principle, the Francolor took over everything concerning the dyestuff domain including the foreign holdings but only if they could be reached."

was set at 800,000,000 francs, consisting of 80,000 shares, each having a par value of 10,000 francs.

In return for the surrender of their assets, Kuhlmann, St. Denis, and St. Clair-du-Rhône received the entire 80,000 shares, of which they then transferred 40,800, or 51 percent, to I. G. In payment for the Francolor shares, I. G. gave the French companies 12,750 I. G. shares having a nominal value of RM. 1,000 each. Of these, Kuhlmann received 7,700 shares, St. Denis, 3,442; and St. Clair-du-Rhône, 1,530. Thus, in return for giving I. G. a 51-percent interest in Francolor, the French companies received less than 1 percent of the I. G. shares. In addition, they agreed not to dispose of the I. G. shares in any form whatsoever except among themselves.

The council of administration of Francolor was composed of eight members, four of whom represented I. G. and four the French companies. The I. G. representatives were von Schnitzler, ter Meer, Waibel, and Ambros, while the French members were Frossard, Duchemin, Thesmar, and Despret. On the recommendations of the Germans, Mr. Frossard, the most ardent collaborator among the French, was named president of the council of administration.⁶⁴

Four plants were surrendered by the French companies. Kuhlmann gave up its factories at Oissel and Villers-St. Paul; St. Denis gave up its plant at St. Denis; and St. Clair-du-Rhône gave up its St. Clair factory. Emphasizing the importance of the factories surrendered by the French companies, Dr. Loehr stated:

By taking over the four large factories Francolor obtained almost all plants producing dyestuffs and a very large proportion of the productive capacity for organic intermediates in France. Excepting intermediate plants owned and operated by Rhône-Poulenc (salicylic acid, phenyl methyl pyrazolene, resorcinol, etc.), only two intermediate plants of importance remained with Kuhlmann, one beta-naphthol plant at La Madeleine (Nord) and a benzidine plant at Brignoud (Grenoble district). Both plants were connected with large inorganic production of Kuhlmann. Kuhlmann was obligated to continue these productions for the requirements of Francolor, but had to close them down if Francolor gave one year's notice (art. 24 of the agreement).⁶⁵

Francolor S. A. also took over from the French companies all raw materials, auxiliaries, fuel, materials, intermediates, packing materials, and final products,⁶⁶ whether in France, her colonies and protectorates, or in non-French territories, or in transit. Such real property as the French companies owned in France and Belgium in addition to the plants, factories, etc., was also absorbed by Francolor.⁶⁷ All foreign participations and sales agencies belonging to the French companies were likewise to be surrendered to Francolor. The two foreign subsidiaries of the French firms, Francolor Belge S. A., in Brussels, and S. A. Nacuma in Barcelona were absorbed, and action was imme-

⁶⁴ See exhibit No. 39, Interrogation of von Schnitzler dealing with the Frossard appointment.

"Question. Who was the first president of the Francolor?

"Answer. Frossard. I know him for 20 years.

"Question. Was Mr. Frossard an exponent of Vichy-Nazi collaboration?

"Answer. Yes. He might be a Vichy man; had the picture of General Petain over his desk.

"Question. You recommended that Mr. Frossard be president of the Francolor because he was an exponent of I. G.-Vichy-Nazi collaboration?

"Answer. We, of course.

"Question. You?

"Answer. Yes; I."

⁶⁵ Exhibit No. 46, statement by Loehr, technical staff of I. G., and maps of various plants.

⁶⁶ Exhibit No. 46 (a), By-Laws of Francolor.

⁶⁷ See exhibit No. 46. The property taken over consisted of apartment houses in or near the communities where factories are located; office buildings and warehouses in Toulouse, Pessac (Gironde), Floirac (Gironde), Tonneins (Nord), and Brussels-Schaarbeck; a laboratory building at Suresnes (Seine), mainly used for pharmaceutical research; and an industrial property at Nogent (Oise), leased to a subsidiary company manufacturing barrels.

diately taken by the French companies to transfer or to close their sales agencies in foreign countries in accordance with the demands of I. G. Agency agreements of the French companies in China, Iraq, Egypt, Turkey, Palestine, Bulgaria, and Greece were abrogated. In regard to Latin America, it was agreed that the French companies would instruct the company Mario Costa, Porto, not to make new contracts with agencies or employees in Latin America. It was further agreed that the employees would not be informed that stocks in Latin America belonging to the French companies would be taken over by Francolor on December 31, 1941. Terms for the dissolution of existing agency contracts were to be agreed upon by I. G. and Francolor at a later date.

I. G. obtained control not only of the physical properties of the French dyestuffs industry but also of its intangible assets. Under article 17 of the constitution of Francolor, I. G. could demand and use free of charge all dyestuff inventions, processes, experiences, installation plans, etc., of Francolor not protected by patents. Where patent protection did exist, I. G. could demand exclusive licenses to use the patents in Germany at reduced fees. If Francolor owned patents in the dyestuffs field outside France and Germany, I. G. could demand an exclusive license under these in return for adequate fees. Pursuant to this article of the agreement, I. G. received exclusive licenses on 276 foreign patents and 82 patent applications.⁶⁸ On patents and patent applications outside the dyestuffs field, I. G. received an option on an exclusive license to the German rights against payment of an adequate royalty. According to Loehr, however, "I. G. did not make use of any license or option." In fact I. G. was far superior to the French companies in technical knowledge. In the words of Loehr:

As regards the relative importance of the know-how possessed by the Francolor works, it is to be recalled that part of the know-how of Villers-St. Paul and Oissel in the dyestuff field originated from former I. G. firms. In the years 1921-23 the Compagnie Nationale de Matières Colorantes (predecessor of the dyestuff plants of Kuhlmann) received a great number of detailed processes for dyestuffs and intermediates from the Farbenfabriken vorm. Friedrich Bayer & Co., Leverkusen, and other I. G. firms. Since then, an appreciable number of new dyestuffs had been taken up by the Francolor works—partly under licenses granted by I. G.—but, on the whole, the state of technique in the dyestuff field was in 1941 rather far behind that of I. G.⁶⁹

Only a few small dyestuffs plants remained, those of Mabboux et Camell at Lyons and of the Société des Matières Colorantes de Croix Wasquehal (Burel) Roubaix and Rième-Ertvelde belonging to the French group, and the independent producer Steiner at Vernon. Even before the signing of the Francolor agreement, the fate of these

⁶⁸ Ibid. These were distributed as follows:

Country	Patents	Applications	Total
France.....	141	12	153
Germany.....	17	29	46
U. S. A.....	47	12	59
Other countries.....	71	29	100
Total.....	276	82	358

⁶⁹ See exhibit No. 46.

was being settled.⁷⁰ In article 22 of the constitution of Francolor, it was provided that:

The factories of Mabboux and Camell at Lyons and of the Sté. des Matières Colorantes de Croix-Wasquehal (Burel) Roubaix and Rième-Ertvelde, belonging to the companies of the French group, will be purely and simply closed, so far as the production of the dyestuff field is concerned. The factories Steiner at Vernon will have to stop the manufacture of products of the dyestuff field, all charges of these arrangements will be supported, after previous agreement, by Francolor.

This was subsequently carried out.

Restrictions were also placed upon exports by Francolor. The new company was allowed to export dyestuffs and auxiliary products for dyeing and processing to Belgium, Spain, and Portugal only. Exports to other countries could not take place without the prior consent of the parties to the Francolor agreement or, in other words, without the permission of I. G. Export of intermediates by Francolor was prohibited.

In addition, there were, among others, provisions as to the value of production allowed to Francolor and as to the regulation of its sales and restrictive covenants against competition. And finally, at the insistence of I. G. officials, the Francolor S. A. was to be completely "aryanized."

War years

The complete story of the Nazi exploitation of France during the period of occupation cannot, of course, be gathered from an examination of the files of I. G. However, sufficient material does exist there and in the testimony of key I. G. officials to illustrate the part played by I. G. in assisting the Nazi government, and in subverting the economy of France to the Nazi program.

* * * Francolor—

Von Schnitzler has stated—

preferably [sic] had to supply the French consuming industry with dyestuffs and auxiliary products, but a substantial part of the articles for which they were used did go to the Wehrmacht, the intermediates which were made, to a large extent, did go directly to the Wehrmacht as they were sent to I. G. in order to complete I. G.'s deliveries for Wehrmacht purposes. The most important ones among the latter were phenol and stabilizers for powder.⁷¹

Production of Francolor, especially in Villers and St. Denis, shifted to products outside the dyestuffs field which were more useful to the German war economy.⁷² To an increasing extent these were shipped to Germany.⁷³

In the field of pharmaceutical products, I. G. received assurances from Lieutenant Colonel Neef, Chief of the Germany Economy and Armament Board in Paris, as early as the beginning of September 1940, that its interests vis-à-vis the leading French pharmaceutical

⁷⁰ Exhibit No. 47, report of Dr. Kramer, the I. G. agent in France, dated May 29, 1941: "Croix Wasquehal is going to be absorbed by Kuhlmann: the preliminary negotiations have already started. During his last journey, Mr. Frossard came to an agreement with Mabboux and Camell to put the works out of action. Mr. Kap Herr will be in Lyons in the next days to transact the formalities necessary to absorb the plant by St. Denis." In regard to Etabs. Steiner, Vernon, it was agreed: "Mr. Frossard will take up negotiations with Steiner, Vernon with the aim to induce Steiner to give up their manufacture of dyestuffs, intermediates, and auxiliary products against a compensation still to be fixed. The respective contract should be made for 100 years, thus being valid not only for the present proprietors but also for their legal successors. Steiner, Vernon would therefore remain outside the German-French dyestuff convention, and its action would be confined in future to the production of sweets, such as apple jam, etc."

⁷¹ Exhibit No. 48, statement by Von Schnitzler dated August 21, 1945.

⁷² The development of production by Francolor up to June 30, 1944, is shown on exhibit No. 46.

⁷³ A break-down as to products, quantities, and proceeds of sales to Germany appears in exhibit No. 46.

firm, Rhône-Poulenc, would be protected.⁷⁴ In subsequent discussions with Dr. Michel, Chief of the German War Administration, I. G. received complete consent to its suggestions in regard to the French industry.⁷⁵

I. G. also participated in the transfer of French labor to Germany. In this action, they were actively assisted by the French collaborator, Frossard, who offered to transport French labor to German factories even before this was officially agreed to by the Vichy Government.⁷⁶

On August 21, 1942, Krauch, head of the chemical industry under Germany's Four Year Plan and chairman of the supervisory board of I. G., wrote to von Schnitzler requesting French labor for German armament factories, indicating that the manpower of French factories which had been closed down should be sent to Germany and that Frossard was in agreement with this proposal.⁷⁷

Von Schnitzler replied, on August 26, 1942, that Frossard was doing his utmost to send French workers to Germany but that the size of such transfers would be limited, as Francolor was producing in France for the Wehrmacht.

You can be convinced—
he wrote—

that General-Director Frossard handles the question of sending workmen in closed units to works of the I. G. with just as much understanding as good will and one cannot doubt that there would be another company in France which is in the same way willing to solve the problem of sending workmen as the Francolor. In this sense, Mr. Frossard expressed his readiness for collaboration opposite myself, Dr. ter Meer, and Dr. Ambros. * * * Dr. Ambros will handle this question directly. * * * Those labour units are limited, which already arises from the fact that the Francolor plants—as far as they are situated in the occupied zone—are working to a large extent directly for the armament on the field of organic intermediates and that the production of dyestuffs, which exists today to a limited extent, serves more or less also for the armament.⁷⁸

⁷⁴ Exhibit No. 49, Report of conferences at German Military Command in Paris:

"Neef was informed by Consul-General Mann with regard to the pharmaceutical interests, and the projects of Leverkusen were approved of by Neef. However, he expressly mentioned the fact that the influence on the production of Rhône-Poulenc in the unoccupied zone might meet with some difficulties. Neef hopes, however, to be able to overcome these difficulties for our I. G. interests by introducing the obligation to procure a permit for resuming the production."

⁷⁵ Ibid. "He (Michel) himself was ready, when deliberating continually with the state secretary of the French production ministry in Paris, to point out particularly that the German pharmaceutical industry had been treated wrongly as regards patents and that the French industry will be changed accordingly, in future, in order to assist us in this way to influence the production of Rhône-Poulenc which lies in the unoccupied territory."

⁷⁶ Exhibit No. 50, letter from Ambros to Krauch dated September 1, 1942:

"Already before the official agreement between Germany and France was made, General Director J. Frossard made a proposal to send a certain number of his workmen as volunteer workers to Ludwigshafen. Of the 100 workmen that were provided for this job, 45 specialists have arrived meanwhile, who are led by a chemist and work as a closed unit. Another 50 to 60 men will arrive in the near future. Those 100 men are specialists which we have employed in the respective fabrication, thus forming an assistance in executing the PSV and Buna project."

⁷⁷ Exhibit No. 51, letter from Krauch's office to von Schnitzler dated August 21, 1942:

"With reference to the contract closed between I. G. plant Ludwigshafen and Francolor, by which the Francolor took over the obligation to send 100 workmen in a closed unit to Ludwigshafen, I would like to ask you to use your influence on Francolor that the French company decides to send a larger number of laborers for employment in one group (Gruppeneinsatz) to Germany."

"* * * One has tried to raise the figure of French workmen, who should work in Germany, to 350,000, but up to now only 36,000 were sent to Germany. For this reason the proposal was made by German offices to form closed units of workmen which should be taken over by the different German works. The workmen would remain employees of the French mother company and return to France after their work is completed. * * * Out of the negotiations which took place up to now I have learned that Mr. Frossard is entirely of the opinion of the German offices concerned that the use of closed units is the right way to bring the employment of French workmen in the German works on a broad basis. Mr. Frossard has, therefore, used his own initiative for the conclusion of the first unit work contract with the I. G. Ludwigshafen. I hope therefore that further workmen of Francolor will be sent to Germany. * * * The German Military Government Paris is of the opinion that out of the workmen of Francolor companies, about 700-1,000 workmen could be sent as units to Germany."

⁷⁸ Ibid., letter of von Schnitzler to Krauch's office, dated August 26, 1942.

France has been liberated. The danger remains, however, that the French chemical industry will again become dependent upon I. G. for technical assistance. "I am certain," wrote von Schnitzler, "that the French industry would be only too glad to resume cartel relations with I. G."⁷⁹

Thus he expressed his confidence in the ability of I. G. to restore in the postwar period its powerful hold over the French chemical industry. His assertion was not predicated upon the "collaboration" of French chemical leaders—although this would help materially; it was based principally upon his knowledge of the history of international relations in the dyestuffs field and of the technical superiority of I. G. For after Germany's defeat in the First World War, the French were very soon forced to come to the Germans for assistance, and the weapon of German technical superiority was powerful enough even to change the terms of the Versailles Treaty.⁸⁰ Today the French dyestuffs industry is much larger in terms of productive capacity than it was after World War I. Technically, however, it is still dependent on I. G. whose activities in the years of occupation have further increased that dependence. In that technical superiority; I. G. still has the wherewithal to restore its dominant position.⁸¹

⁷⁹ Exhibit No. 52, statement of von Schnitzler, dated September 5, 1945.

⁸⁰ Exhibit No. 53, statement of von Schnitzler, dated August 31, 1945.

⁸¹ Of the French industry, von Schnitzler said, "This technical inferiority in comparison with I. G. can up to now be considered as a motive for the French industry to renew commitments with I. G." (See exhibit No. 53.)

CHAPTER VI. I. G. FARBEN'S NEW ORDER

In June 1940 with half of Europe already under the Nazi heel, with the fall of France imminent, and with seemingly limitless horizons ahead, Hitler's new order seemed capable of early fruition. On June 24, 1940, the Farben commercial committee received an important confidential message:

The Reich Government has given definite orders to prepare in the shortest time possible a program containing our suggestions as to a new order comprising all European interests in the field of chemical products, which is to be incorporated into future peace treaties.

This message went on to emphasize that—

The problem should be considered not only in regard to those countries with which Germany is at war, but also in regard to those countries which are allied with Germany or which have been neutral up to now.¹

These orders did not find I. G. unprepared. For Farben too had dreams of world empire, dreams which it translated with painstaking clarity into a document which was also significantly titled "Neuordnung" (New Order). This document was submitted on August 3, 1940, to the Reich Ministry of Economics. It was accompanied by a letter of transmittal which recited, "We have to start with the idea that in the course of carrying through the formation of a great European economic sphere, a plan will also become necessary for the chemical field."²

The short-range objective of these plans was immediate and substantial production for the Wehrmacht. The second more important objective envisaged the ultimate incorporation of the chemical industry of Europe, including the British Empire, within the framework of Hitler's New Order, and the resulting exclusion of the United States of America from European trade. The third objective of the plan was to utilize the power of the resulting combination to combat and conquer the competition which might be expected from the United States of America elsewhere. Finally, Farben was preparing to utilize again its vaunted economic warfare weapons, cartels, capital investments, and know-how, in anticipation of a possible conflict between Germany and the United States of America.

Just as the Nazis used the Versailles Treaty as a justification for their aggressions, so Farben rationalized its activities on the grounds that its position of supremacy in the world's chemical and dyestuff industry had been deliberately undermined by the Allies, and that a conspiracy was directed against I. G. which could only be eliminated through aggression. Thus the Ministry of Economics was informed that—

* * * The German chemical industry ranked readily first with respect to both the volume of absolute quantities and values of production and its position in the chemical foreign trade of the world. * * * The end of the World War with all its economic consequences suddenly interrupted this clear-cut

¹ Exhibit No. 1, letter of von Schnitzler, dated June 24, 1940.

² Exhibit No. 2, letter from I. G. Farben to Reich Economic Ministry, dated August 3, 1940.

development. * * * measures which were intentionally taken by the enemy countries against the German chemical industry entailed shiftings of unusually great scope to the detriment of Germany. * * *

Today's extent of non-German production, however, is distinctly the result of the political and politico-economic forces which have been directed against Germany for the last 20 years.³

The Neuordnung document is a truly amazing production, and represents for Farben not a program prepared at the behest of the Government, but a complete exposition of the plans which Farben and other German agencies of concentrated economic power had developed since World War I, plans which they had hoped to accomplish through the vehicle of Nazi expansion. The Neuordnung runs to several hundred pages which are introduced by a general section outlining the justice of the Farben claim rationalized in the manner described above. Then follow, in the greatest detail, specific plans for each country including France, Holland, Belgium, Norway, and Denmark. Plans for Poland, the rest of Europe, and Great Britain were only partially completed. These plans describe the chemical industries of the countries as they existed before World War II, and the manner in which they will be organized after World War II pursuant to Farben's dictates through specific clauses in the peace treaties. As the charts set forth in exhibit No. 8 reveal, each important chemical is listed indicating its prewar production in the country, and indicating to what its postwar production, if any, will be limited. Thus Farben planned in many instances to wipe out completely chemical production in some countries, making them wholly dependent upon the Reich and thereby assuring the Reich's military superiority.

I. G. concerned itself with every subject which could affect its control of the chemical industry of Europe including "duties, quotas, licenses, export regulations, certificates of origin," "foreign exchanges and currencies," "tax policy," "patents and trade-marks," "directing of industrialization: (a) enlargement of factories, (b) erection of new industries," and "supplies of raw materials."

Throughout its Neuordnung, I. G. expounded the "Führer" principle. Thus the document runs:

It will, however, appear all the more justifiable in planning a major European spherical economy, again to reserve a leading position for German chemical industry with its technical, economic, and scientific commensurate rank.⁴

I. G. proposed to accomplish the subversion of the European chemical industry by absorbing companies, eliminating plants, and controlling production through the medium of German-dominated cartels.

For Holland, Farben's Neuordnung envisioned the complete elimination of the photographic industry since—

In our future business with Holland in photographic materials, it would be desirable if * * * the requirements of the Dutch market can entirely be satisfied by the German photographic industry.⁵

With regard to the French pharmaceutical industry, I. G. proposed:

On the French side, this New Order established in our mutual relations would have to be supplemented by a decree forbidding the construction of plants producing pharmaceutical products. In addition, a number of small and unimportant laboratories most of which are of local importance only should be closed.⁶

³ Exhibit No. 3, Neuordnung, general part, pp. 1, 6.

⁴ Id. at 5, 6.

⁵ Exhibit No. 5, Neuordnung for Holland, p. 111.

⁶ Exhibit No. 4, Neuordnung for France, p. 45. (See also exhibit No. 6, Neuordnung for Norway.)

In regard to cartels, I. G. proposed the formation of a large chemical syndicate in France, integrated with I. G., the leadership of which "should lie in German hands and should have its seat in Germany."⁷

Furthermore, according to von Heider, head of I. G.'s chemical department, I. G. proposed to control completely the French chemical industry:

Question. Germany would have a complete control over the French chemical industry?

Answer. Yes. I. G. and the German chemical industry.

In regard to trade relations between Europe and other countries, I. G.'s plan would have excluded the free nations of the world from the European markets. Furthermore, imports by the conquered countries in the chemical field would have to be completely reserved to I. G. and Germany. I. G. planned to accomplish this by use of quotas, import restrictions, duties, etc.⁸

For example in regard to the exclusion of all other countries from the French domestic market, I. G. proposed:

Enforcement of a French quota and licensing system in favor of Germany which will have as its purpose that French demands for imports will be supplied by Germany only.⁹

In regard to England, I. G. proposed that Great Britain must guarantee Germany at least a 30-percent participation in the British dyestuffs turn-over and that products not produced by the British industry should be imported from Germany only. Furthermore, I. G. proposed that British dyestuffs companies be prohibited from exporting directly or indirectly to Europe (including Asiatic Russia), the American continent (except Canada), China, Japan, Dutch East Indies.

Farben's economic blitzkrieg of the United States was specially planned. Farben urged, and the Economic Ministry agreed that—

it is necessary to remove the Americans from French production scene with every means at our disposal.¹⁰

Commenting upon the Economic Ministry's views, I. G. stated:

The determination with which he, Schlotterer, expounded this thesis leaves no doubt that we ought not be too much concerned as to the means we are to be allowed to use.¹¹

Farben linked the entire success of its Neuordnung to the outcome of its struggle with the United States.

The principal weight of the discussion bearing on a new arrangement of the world market will rest on the relationship with the North American concerns.

With covetous eyes, Farben emphasized that Pan-Americanism had been strengthened by the war and that this would hamper the Neuordnung program.

⁷ Exhibit No. 7, interrogation of von Heider, dated July 17, 1945. The interrogation continued:

"Question. Did you propose to use the cartels to control the French chemical industry?

"Answer. Yes, we intended to make cartels with the French producers.

"Question. And you intended to join the French cartels to the German?

"Answer. Yes.

"Question. Was the head office of these cartels to be located in Germany?

"Answer. Yes.

"Question. Under German leadership?

"Answer. Yes.

"Question. All exports from France would go through this cartel?

"Answer. Yes."

⁸ Charts of the proposals for the conquered countries are attached as exhibit No. 8.

⁹ Exhibit No. 4, Neuordnung for France, p. 27.

¹⁰ Exhibit No. 9, memorandum re Planning of the Peace, dated August 7, 1940.

¹¹ Ibid.

The strengthening of Pan-Americanism will coincide with the effects of the fact that England will now completely lose her role as financier of the Latin-American countries * * * and that the United States of America will take her place * * *. It will, therefore, depend on the degree of order or disorder of the European economic sphere and on the creation of a determined commercial policy, in how far and at what pace Europe, and more particularly Germany, will be able to rebuild, maintain, and develop its position as a regular "trade partner" in the Latin-American Continent.¹²

To achieve this, Farben relied upon the cloaked companies it had established throughout Latin America which have been described elsewhere in this report as well as upon those United States firms which were prepared to do business with a Hitlerite concern parading under some other name.

I. G. also laid special emphasis on driving the United States from the European market. For example in regard to nitrogen products it proposed:

For the future, it is desired that—in a manner similar to that proposed for other markets—Germany be given priority for [the supplying of] all additional requirements of nitrogen of any kind. This step shall be designed, in particular to exclude or control North American imports * * *.¹³

With respect to dental products a large part of which Franco had received from the United States of America, German supplies were to be substituted.¹⁴ Not only did I. G. intend to drive the United States of America and other free countries from the European markets, it also expected and prepared to compete strongly with the American industry for the remaining free markets of the world.

Forced away from European business for reasons which were effective already prior to the war and which will become increasingly effective after the war, the Americans will do everything within their power to maintain and promote the development of their exports of chemicals. * * *.¹⁵

Farben saw in its Neuordnung the opportunity to maintain a strong Germany, thereby protecting the I. G. economic empire. According to von Schnitzler, I. G. aimed at—

A strict control over the whole chemical industry of Europe that no new plants for military chemicals should be created and that the production of such chemicals in the existing factories should be supervised.¹⁶

In anticipation of further Nazi aggressions, I. G. intended to keep the Wehrmacht supreme in chemical warfare weapons. Therefore in its proposals for reorganization of the chemical facilities of Greater Europe and for its dealings with other countries I. G.'s foremost consideration was to satisfy the military requirements of the Nazi war machine. To achieve these purposes, I. G. would employ among other devices its well-developed techniques of "cartels, capital participations, and exchange of experience." It is expressed in the New Order plan as follows:

This great economic sphere (Grossraumwirtschaft) has to consider at the same time the military requirements of Greater Germany. These requirements are to be considered not only with a view to supplying important goods for the armed forces but also to shaping existing and future combinations of interest between German-dominated Europe and non-European countries which might affect the military potential of such countries in the chemical field in such a manner that the needs of Greater Germany are duly taken into consideration at all times:

It is intended to use cartels, capital participations, and exchange of experience.

¹² Exhibit No. 3, Neuordnung, general part, pp. 6, 7.

¹³ Exhibit No. 4, Neuordnung for France, p. 50.

¹⁴ Id., at 44.

¹⁵ Exhibit No. 3, general part, p. 6.

¹⁶ Exhibit No. 10, statement of von Schnitzler, dated September 8, 1945. (See also exhibit No. 11, interrogation of von Schnitzler, dated July 17, 1945.)

Von Schnitzler pointed out the complete awareness of I. G. of the policies of the Nazi government and I. G. activities in accordance therewith. These policies were primarily aimed at the United States. He states:

It must be remembered that in preparing the Neuordnung we were following the lines of the so-called Gross-Raum-Politik laid down by the Government. We were looking to the overwhelming downfall of France and eventual capitulation of England when we prepared the document. It must be remembered that we knew well the aims and policies of the Government and we know that it was the intention of the Government to improve its strength in relation to the countries outside of the European sphere. This meant, of course, the United States, because outside of Europe the United States was the only strong country with which Germany had to reckon. Therefore, we wrote in the Neuordnung that we intended to keep Germany as strong as possible militaristically in relation to the United States. We could accomplish this only by limiting the production of armaments in Latin America. We did not want in the event of an eventual conflict with the United States to permit Latin America to supply the United States with war materials. It should be remembered that I. G. had to follow the lines of the Nazi government.¹⁷

Partially explaining the methods I. G. would use, von Schnitzler wrote:

It is obvious that the Government's first interest was a militaristic one. Therefore the main points in the Neue Plan will have been: no licenses or know-how for such chemicals should be given to the chemical industry outside of Europe without before having asked I. G. of their opinion. This measure of course can be understood as being directed against the United States because the United States remained apart from Russia, the only country with a great economic potential in the outside world.¹⁸

¹⁷ Exhibit No. 12, statement of Dr. von Schnitzler, dated September 5, 1945.

¹⁸ Exhibit No. 10, statement of Dr. von Schnitzler dated September 8, 1945. See also exhibit No. 13, Interrogation of Dr. Krüger dated July 19, 1945.

CHAPTER VII. I. G.'S MILITARY POTENTIAL AT THE CLOSE OF HOSTILITIES

At least until the last months of fighting, material war damage to I. G. plants taken as a whole was comparatively light. The Tea-Büro, which had more information on the status of all I. G. installations than any other single office, calculated that as of the end of January 1945, damage to I. G. plants, altogether, was about 15 percent of their construction cost.¹ After 3 months of repair work the I. G. technicians estimated that production could reach 90 percent of capacity if adequate supplies of labor, fuel, power, and raw materials were available. For plants in which I. G. had a substantial financial interest, and those with which close technical cooperation existed, percentage of destruction was calculated at 25 percent and the possible production at 75 percent of capacity. Works of the second category represented a considerably smaller capital value than those of the first, so that the over-all percentage of plant destruction was 17 percent. It was estimated that production capacity after 3 months' repair work would reach 87 percent.

I. G. officials also attempted to assess the damage to productive capacity by product, and the results of this calculation are interesting. Of the 28 products of primary importance to German military power, only the greatly expanded wartime capacity of nitrogen, synthetic gasoline, lubricating oil, methanol, and synthetic resins had been reduced to any appreciable extent.² Productive capacity of magnesium, aluminum, nickel, poisonous gases, and other commodities were unaffected, while that of synthetic rubber was reduced by only 16 percent and explosives between 5 and 10 percent. There was no shortage either of research chemists or of chemical engineers, who have always been the foundation of I. G.'s strength.

At the end of the war, therefore, I. G.'s facilities and its resources were substantially intact, and I. G. was in a position to produce at practically wartime capacity.

¹ See exhibit No. 1.

² See exhibit No. 2, Decrease of Productive Capacity by Air Damage for Various Large Productions of I. G., dated September 10 and 12, 1945. In chart 16 these figures have been superimposed on the earlier chart in Chapter III; The Wehrmacht's Dependence on I. G.

APPENDIXES

APPENDIX A

This appendix contains a primary, but not all-inclusive working list of external assets owned or controlled directly or indirectly by I. G. Farben.

While the term "assets" must be given a reasonably broad interpretation, since otherwise Farben would calculatedly escape adequate scrutiny, the term has not been so liberally construed as to cause confusion. It should also be noted that assets have been limited to interests in companies. What Farben considered the most important of its external assets—e. g., its international agreements with respect to patents, know-how, and exclusive markets—have not, for obvious reasons, been included. It should also be noted that Farben's participations register, which is in the possession of this Government, contains numerous additional companies. These were not included in this appendix because the companies concerned have not been investigated.

In connection with its declarations of foreign participations under military law, Farben's central bookkeeping officials, Frankfurt, stated that interests in foreign companies were also booked in the securities ledgers of the Central Finance Administration, Berlin; and further stated that several of the hundreds of Farben's internal (German) companies, or participations, held external participations of which no permanent records were kept. The statement continued: "Since these companies are under the obligation to make their own declarations and since they have their own administration, it is impossible to declare their foreign participations for them, especially as there is no possibility to get in touch with them or examine their records, if they exist." It will be seen that the comprehensive ascertainment of Farben's external assets is not the investigation of one company in Frankfurt, Germany, but the investigation of hundreds of companies throughout Germany—and the world.

The list set forth below is geographically alphabetized into the major subdivisions of Africa, Asia, Australia, Europe, Latin America, and the Pacific islands. Some 93 countries are listed. Under the individual countries are listed the names and locations of the firms in question.

The sources employed in compilation are (1) the Central Accounting Records of I. G. Farben in Frankfurt; (2) Farben's Foreign Participations Report under Military Government Law No. 53 as of July 1945; (3) records of the former German Government Tax and Foreign Exchange Control Offices; (4) records in the possession of this Government; and (5) all of the documentary intelligence discovered during the investigation reported on herein.

 1. N. V. Handelsmaatschappij v./h., J. F. Sick & Co. pharm. Prep. "Bayer," Lagos
11. Nyassaland:
 1. J. Abegg Pharm. Prep. "Bayer," Blantyre
12. Rhodesia:
 1. Taeuber & Corssen Ltd., Salisbury
 2. Taeuber & Corssen Ltd., Bulawayo
13. Sierra Leone:
 1. Woermann & Co., Pharm. Prod. "Bayer," Freetown
14. Tanganyika:
 1. Usagara Co., Ltd., Pharm. Prod. "Bayer," Dar es Salaam
15. Tunisia:
 1. Etablissement J. Bessis, Prod. Pharm. "Bayer," Tunis
16. Union of South Africa:
 1. Bayer Pharma Pty, Ltd., Johannesburg and Cape Town
 2. Taeuber & Corssen Pty, Ltd., Johannesburg and Cape Town

II. ASIA

17. Arabia:
 1. A. Besse Ltd., Pharm. Prod. "Bayer," Aden
18. Ceylon:
 1. Hanseatic Trading Co., Ltd., Colombo
19. China:
 1. Deutsche Farbenhandels-ges Waibel & Co., Shanghai
 2. Bayer Pharma Co., Shanghai
 3. Agfa China Co., Otto & Co., Shanghai
 4. Deutsche Stickstoff Handels-ges Krauch & Co., Shanghai
 5. Jebsen & Co., Shanghai
 6. Siemssen & Co., Shanghai
 7. China Export, Import und Bank Co. A. G., Canton and Hongkong
20. French Indochina:
 1. Pharmacie Principale Solirene Prod. Pharm. "Bayer," Saigon
21. India:
 1. Indanthren Co., Ltd., Bombay
 2. Agfa-Photo Co., Bombay and Calcutta
 3. Haverro Trading Co. Ltd., Rangoon, Bombay, Calcutta, and Madras
 4. Finley, Fleming & Co., Ltd., Rangoon
 5. Chemdyes Ltd., Bombay
22. Iran (Persia):
 1. Ed. Schluter, Bazar Prod. Pharm. "Bayer," Teheran
23. Iraq (Mesopotamia):
 1. Fritz Puttmann, Pharm. Prod. "Bayer," Bagdad

24. Japan:

1. Asahi Bemberg Kenshi Kabushiki Kaisha, Osaka
2. Nippon Tokushu Seizo k. k., Tokyo
3. Bayer Yakuhin Gomei Kaisha, Sakaemachi Dori, Kobe and Brandes
4. Doitsu Senryo Gomei Kaisha, Kobe and Tokyo
5. H. Ahrens & Co., NACHF, Tokyo
6. Agfa Gomei Kaisha, Tokyo and Asaka
7. Titan Tokio Kabushiki Kaisha, Tokyo
8. Cassella Gomei Kaisha, Kobe
9. Delacamp, Piper & Co., Kobe
10. Titan Kogyo Kabushiki Kaisha
11. Edogawa Kogyosho Kabushiki Kaisha, Tokyo

25. Korea:

1. Carl Wolter & Co. Gomei Kaisha, Chemulpo-Korea

26. Manchukuo:

1. China Export-Import-und Bank Co. A. G., Harbin-Pristan
2. A. van Ess & Co., Jingkou (Newchwang)

27. Palestine:

1. Paul Aberle, Jaffa
2. Green Bros. Pharm. Prod. "Bayer," Haifa and Tel-Aviv.

28. Siam (Thailand):

1. Bayer Distributors Mentvel & Co., Bangkok
2. B. Grimm & Co. Pharm, Prag. "Bayer," Bangkok
3. Hamburg Siam Co., Bangkok
4. Windsor & Co., Bangkok

29. Straits Settlements:

1. N. V. Straits Java Trading Co., Singapore

30. Syria:

1. Cheik Jamil el-Khazen Prod. Pharm. "Bayer," Beyrouth
2. Yordan Obegi, Damascus

31. Turkey:

1. Hochstrasser & Co., Samsoun and Trabzon
2. Bayer Leverkusen Widmann ve Seriki, Istanbul & Izmir
3. Turkamil, Sabri Atayolu ve Sirketi, Galata, Istanbul
4. Max Unz, Gala'a, Istanbul

III. AUSTRALIA

32. Australia:

1. Bayer Pharma Ltd., Sydney
2. Dychem Trading Co. (Pty), Ltd., Melbourne, Sydney

33. New Guinea:

1. G. Furter Pharm. Prod. "Bayer," Rabaul

34. New Zealand:

1. Dyes & Chemicals, Ltd., New Zealand

IV. EUROPE

APPENDIX B

This appendix presents certain material which may be of interest concerning Latin-American firms in which I. G. Farben held participations.

Cia. Electro Quimica Fluminense, Rio de Janeiro

The minutes of the meeting of I. G.'s commercial committee (Kaufmännischer Ausschuss) of September 23, 1941, contain the following reference to this firm:

In spite of the danger of an eventual discontinuance of operations, the business of the Fluminense should be continued for as long as possible, and instructions should be given that all measures should be taken in order to prevent the transfer of Fluminense into English or North American hands.

According to Farben records, the total capitalization of Fluminense is contos 3,500, of which contos 3,003, or 85.8 percent, were in the possession of the Allianca Commercial de Anilinas, Ltda. Farben records further state that—

According to a telegram from Buenos Aires of June 19, 1942, which, however had to pass several stations and therefore must be taken up with caution, the debts on the account current of the Fluminense to the agency (Allianca) for deliveries, loans, commissions, and interest amount to a total of contos 3,907. In this telegram it was further mentioned that the shareholdings of the agency were sold in the meantime, partly to the former proprietors Motta, etc., and to the solicitor Soboya Lima (attorney for Allianca), the net proceeds amounting to contos 3,485.4. * * *

The above-mentioned telegram of June 19, 1942, states, however, with respect to Saboya Lima's acquisition of the shares of Fluminense:

Because present proprietor pays in intervals of half year each, Saboya Lima pays monthly to Allianca on a basis of 96 contos, two installments already paid back from the profit of his partnership in Allianca, neither as first payment nor as buyer but only in order to continue the camouflage.

Cia. de Productos Chimicos Industriales, M. Hamers, S. A.

With respect to this firm Farben records reveal that on July 1, 1940, I. G. acquired by purchase from Max Hamers (I. G.'s agent in Brazil since 1913) 49 percent of the Rs. 1,000,000,000 capitalization of the firm, but that I. G. had agreed to " * * * the sale of the shares first to Allianca and later to a transfer to the I. G. * * * ." The records further state that—

The I. G. furthermore binds itself according to agreement irrevocably to buy at any time the capital remaining with Mr. Hamers, amounting to nom. Rs. 510:000\$000 from him at the price stipulated in section 6 of the agreement * * *. If it should happen, however, that Mr. Hamers should die, the I. G. binds itself irrevocably to buy the capital remaining with Mr. Hamers before January 1, 1943, at the price mentioned in section 6.

In a report dated September 18, 1941, prepared for the commercial committee (Kaufmännischer Ausschuss), Overhoff stated:

The second most important undertaking to us is the participation in Hamers. Although Hamers has, as is well known, signed the agreement, according to which 49 percent of the shares belong to us, the situation is very delicate, because, as regards control and espionage, we cannot carry on further correspondence in order not to endanger Hamers.

A copy of the above-mentioned agreement and a detailed report concerning the M. Hamers firm are in the possession of the United States Government.

Quebracho Brasil, S. A. (Quebrasa), Matto Grosso

According to Farben records, this firm has a capitalization of contos 6,000 of which contos 4,000 are:

* * * issued in the name of Mr. Hamers as trustee for I. G. Consequently Mr. Hamers is interested in the Quebrasa, judging from the outside, in the amount of contos 4,000. These shares are lying in the safe of the agency. The means for the participation have been placed at the disposal of Mr. Hamers as a loan by the Allianca. A settlement with Frankfurt did not take place * * *. In order to avoid difficulties for Mr. Hamers it must be taken care that the participation booked with the I. G. be not officially reported as such by us.

Concerning Quebrasa, Hermann Collischonn, I. G.'s auditor for Latin America, stated:

The share of Herr Hamers is in reality an I. G. investment. Funds were put at his disposition by the I. G.

Quebrasa has never been placed on the proclaimed list. A detailed report concerning this firm is also in the possession of the United States Government.

Industria Quimica Colombiana, S. A. (Inquico), Medellin

According to Farben records, this firm has a capitalization of Col. \$600,000, of which Col. \$120,000, or 20 percent, are in the possession of Anilinas Alemanas (I. G.'s firm in Bogota, which subsequently became known as Cia. Colombiana de Colorantes y Productos Quimicos). According to Farben records, Anilinas Alemanas is holding the 20 percent for I. G., with an option to purchase 50 percent of the share capital. The records contain a discussion of this option and reveal that Anilinas—

has given money to a small extent for the maintenance of Inquico by payment in cash or by the supplying of raw materials. Further amounts which are to be used for the continuance of the manufacturing of goods may be placed at the disposal of Inquico by the agency only against legalized bonds or other securities as per telegram of the department of chemical management dated January 22, 1942.

Union Nacional de Quimica Industrial, Ltda., "Induquimica" Medellin

A report dated January 27, 1940, from the Cía. Colombiana Colorantes y Productos Químicos, S. A., Bogota (formerly Anilinas Alemanas Cía., Ltda.), stated:

Cloaked firm.—For different reasons it has appeared practical to have an effectively cloaked firm, which is a clean Colombian firm, and which should help us to conduct the business in various ways. Since, for example, the war insurance on North American deliveries is at the present time covered through reinsurance by English companies, it has now already proven necessary to have a clean Colombian firm with a Colombian name. This Colombian firm will, it is hoped, also be able to deliver North American goods even to customers of French nationality, since those as mentioned elsewhere may no longer buy indicated German goods from Germans. We have thus considered it correct to found a clean Colombian firm under the name Union Nacional de Quimica Industrial Limitada "Induquimica." Of course, we have complete control and are considering chiefly the handling of purchases in North America through the Induquimica, in whose name already all arrangements with United States of America were made.

Hilbek Seminario, Lima, Peru

Concerning this firm, Farben records state:

According to the report dated August 7, 1942, of Mr. Janssen, who has returned to Germany, our agency has a share in the above firm in the name of Mr. G. R. Cornejo (I. G.'s agent in Peru since 1922) through the S. cash account amounting to soles 100,000.

This participation was intended in the first place for the purchase of chemicals under cover of a person, but later on also the sale had to be left to this firm.

As agreed upon, the profits will be divided by halves. In the year 1941 the net profit amounted to about soles 35,000, of which 50 percent are still to be paid to the agency respective to Cornejo.

Considering the unstable conditions in Peru and that in respect to this participation possibly changes may have occurred or may yet occur, the amount of soles 100,000 was not booked by I. G. through the participation account, but for the present by the special bookkeeping department to the debit of an account-current "Com. General de Anilinas, Lima * * *."

The above report of Mr. Janssen is in the possession of the United States Government.

Jorge Labrousse—Tanning Enterprise, Lima, Peru

Farben records reveal that—

This undertaking has been organized primarily by Messrs. Cornejo, Bank, and Mehrkens out of private means with soles 3,333 each. Later on, according to the report of Mr. Janssen, the shares of Messrs. Cornejo and Mehrkens, amounting to a total of soles 6,666, are said to have likewise been taken out of the S. cash account. Seen from the outside, these gentlemen have, therefore, a claim for a loan against this firm.

Idunal S. A. (Industrias Nacionales), Lima, Peru

Farben records state that—

This firm has been established by Messrs. Cornejo and Kreitz (German technician, emigrated from Chile) [sic] by making use of four middlemen with a starting capital of S/70,000 (of which 50 percent G. R. Cornejo) and which is situated in its own grounds on the Avenida Argentina. * * *

This undertaking commenced business May 1, 1942.

From the report it is not to be seen whether Mr. Cornejo has taken the money out of the S. cash account, but this may be presumed; we have, however, no record of any such transactions. It must, therefore, be duly taken not that in the case of eventually entering the proportionate share amount to S/35,000 (50 percent of S/70,000) into the books through the S. cash account as a participation, a motion for the official approval required will have to be put forward.

Cía. Peruana de Importaciones, Ltda., Lima

A report in I. G.'s files dated May 26, 1942, states:

On February 1, 1942, the Cía. Peruana de Importaciones, Ltd., has been founded with a share capital of S/30,000 which are entirely in the possession of

Mr. Cornejo. The president of the firm is Dr. Ramirez Otarola. Moreover, Mr. Broggi, who was advised by Mr. Roedenbeck, is employed there. The company has been charged with purchases of chemical products in the United States of America (Chem. Dow, Gerhard o Hooper, San Francisco, and various smaller firms.)

Cia. Ind. Verrando, S. A. Sullana

Overhoff in his report to the Kaufmannischen Ausschusses stated:

The other small enterprises which we own over there, e. g. Taucher in Chile and Cia. Ind. Verrando S. A., Sullana, as well as the small factories in connection with out warehouses in Argentina and Mexico are well getting on through the conjuncture of the war, assist the supply of goods, and wield considerable profits.

The minutes of the 1940 conferences in Italy and Switzerland reveal that:

The supplying of the sales organizations with leather with leather oil and different other auxiliaries by the Cia. Ind. Verrando, S. A., Sullana, is going on without any difficulties. Interesting was the information of Mr. Moll that the Copesa Cia. Peruana de Representaciones S. A. has participated in the Cia. Ind. Verrando in Trujillo. Partner of the Copesa is a brother of Mr. Cornejo.

Other Facilities in Peru

Farben records reveal the establishment of an I. G. factory in the name of one of its representatives:

Warehouse.

As it has not been possible to rent in the Edificio Minería, or in the vicinity, centrally situated storage rooms possessing the requisite dimensions, we have decided to buy, in the Avenida Argentina, too (in the name of Mr. G. R. Cornejo and from means taken from the S. cash) a tract of land with well * * *. On it has been erected an open storage shed of about 15 by 30 meters for heavy chemicals and a closed storage room of same dimensions for dyestuffs; furthermore installation for office and accommodation for a guard.

On the remaining ground, the boiler for the mixing plant and for the manufacture of Baykanol colors has been established, as well as small plants for other occasional manufactures.

The storage facilities occupied so far at the Agencias Unidas de Aduana, S. A., Calle Manova, where there also took place the manufacture of Baykanol colors and the mixing plant, have thereby been dissolved.

The capital invested so far amounts to about S/30,000.

W. Justus & Co., Peru

Farben records state:

The connection with Fezandie & Sperrle taken up at the beginning of 1940 has, by using the firm of W. Justus & Co. as purchasers—sham address—has performed for us a good service in the replenishment of our stocks, especially as far as the marketable dyestuffs for wool are concerned. By this means, our assortment was not diminished for a moment. The sales in 1940-41 amounted to about U. S. \$100,000 c. i. f. Justus obtained 2½ percent commission on the f. o. b. value and 1 percent on the local value of the goods sold by themselves to a small extent * * *.

Venezuela

Several wartime enterprises were established by I. G. in Venezuela for the purpose of maintaining its business in this country. An I. G. report concerning Venezuela dated July 28, 1942, states:

Business will be carried on, even under hard conditions. Mr. Becker is working in his own name, not being on the black list. Paying cash he bought for the I. G. a building (warehouse room) (sic) in which Mr. Muller as sublessee got an office, laboratory, fabrication and storeroom. Mr. Muller is working absolutely independently for himself, with respect to manufacturing and mixing, payment going to Mr. Becker. By a special price calculation Mr. Becker is able to transfer the salaries to Mr. Muller. They are manufacturing just now: Textile auxiliary products, Turkey red oil, sodium sulphate, bio-calcium, insecticide based on tobacco and Turkey red oil.

A report concerning Venezuela dated May 27, 1942, states:

Already a few months after the war broke out the Quimica Bayer were inserted in the English black list, and later also in the American black list which was very unfavorable for continuing the business because American producers were not allowed to deliver to firms named in the black lists. For this reason the firm Alfredo Becker Productos Industriales y Agricolas was established. By means of this solution of need it was still possible to buy from Brazil larger quantities of chemicals and quebracho for the stock of that place. Because the American firms delivering to Mr. Becker were, before each shipment, looking for the correct information about him through the American Embassy, we resolved at that time to establish another firm name Antonio Lehrmann y Franceschi in order to apporportion the deliveries and not to interrupt the business between Fezandie & Sperle and Mr. Becker. * * *

Soc. an. Ind. & Com. Electroclor, Buenos Aires

In Farben records it is revealed that I. G.'s participation in Electroclor was to have been obtained from Duperial (owned by DuPont and Imperial Chemical Industries), that the National City Bank, Buenos Aires Branch, advanced I. G. M\$N555,000 with which to make the participation, but that pursuant to an agreement between I. G. and Duperial the participation was canceled on January 19, 1940. The records continue as follows:

The Anilinas Alemanas S. A., Buenos Aires, made on January 19, 1940, an agreement with the Electroclor S. A. which insures Anilinas a participation in the sale of chemical products of Electroclor to the amount of Argentine P. 840,000, and which guarantees the commission thereon in the amount of at least Argentine P. 84,000 per annum. We have at first accepted this compromise, but have pointed out to Duperial that in doing so we did not abandon our rights contained in the concluded association agreement.

With respect to the above-mentioned agreement between Duperial and I. G. made on January 19, 1940, Farben records state:

It was interesting to see from Mr. Moll's statement that the written agreement was officially recognized and legalized by the British Embassy, Buenos Aires.

I. G.'s future intentions concerning Electroclor were revealed by Farben records which state:

With the outbreak of the war this participation was canceled; it is understood, however, that after the war it will be renewed.

Monopol Sociedad Responsabilidad Ltda., Buenos Aires

The firm Monopol S. R. L., an Argentine chemical factory, had been purchased by Indunidas Sociedad Anonima Mercantil de Industrias Unidas of Buenos Aires in 1938. Indunidas is owned by the banking firm of Carl Hinrich Donner of Hamburg, and has for years handled the sale of certain I. G. chemical products in Argentina. In October 1939 Anilinas Alemanas, S. A., Buenos Aires, and Indunidas came to an agreement containing a guaranty of the profits to be earned by Indunidas from Monopol, and giving to I. G. an option to purchase 51 percent of the shares of Monopol. I. G. was also given the right to purchase the remaining shares in the event of a dispute with Indunidas. A copy of this agreement is in the possession of the United States Government.

On June 27, 1942, Anilinas Alemanas, S. A., Buenos Aires, cabled I. G.:

* * * In order to compensate for the national foundation, market and customers positions which Anilinas lost because of Electroclor, we have made use of the option for the 51 percent participation in Monopol, and have purchased this for approximately P. 370,000. We hope to enlarge the position of Monopol on the market by our assured influence in Monopol and by further friendly

collaboration and participation of Indunidas, in spite of the well-known difficulties of getting raw materials * * *

A statement by Fritz H. Walloth, the chemical division's agency sales controller, concerning the background of the Monopol and Indunidas transactions is in the possession of the United States Government.

Max Taucher, Santiago

In Farben records the following statement is made concerning this firm:

On strength of a decision of the color committee on September 2, 1938, an application has been filed with the R. W. M. (German Ministry of Economics) to acquire the works in the possession of Herr Max Taucher, Santiago de Chile, through the medium of our agency, the firm of Anilinas Alemanas Cia., Ltda.

The price for the works of Taucher was P250,000, and had to be paid at once. * * *

These sums are shown in the books of the agency, being the purchaser of the plant. They have not been booked in Frankfurt.

Explosives Factory Erected for the Argentine Government

In 1938 I. G.'s subsidiary, Köln-Rottweil, A. G., a gun-powder firm was successful in obtaining a contract from the Argentine Government for the erection of a powder plant, known as Villa Maria. Provided for in the contract was a saltpeter factory to be erected by I. G. at Rio Tecero, in Argentina.

Negotiations pertaining to the contract for the gun-powder plant were revealed by Ilgner in December 1936 upon his return from an extensive tour in Latin America:

Already shortly after the World War, in Argentina the construction of an explosives plant was considered in order that Argentina could become independent of American, Swedish, and former German deliveries of powder. The project was brought to a definite conclusion by Köln-Rottweil A. G. and their Argentine representative respectively, but the agreement was declared void by the revolutionary government in 1933, and was canceled. Also in that case I took up anew that project during my presence in Buenos Aires, at the request of the explosives and chemical divisions, and had extensive discussions with the Argentine Minister of War in order to determine the ways in which it would be possible for us eventually to participate in the new public bids to be expected. In the meanwhile Dr. Frank-Fahle had the possibility of working in close collaboration with the Argentine administration of the arsenal on the elaboration of the new public bid for their explosives plant. The publication was made in the meantime and the bids have to be submitted by the end of September 1937. * * *

Although Köln-Rottweil, as may be inferred from Ilgner's remarks was the successful bidder, the outbreak of the war interfered with the completion of the Villa-Maria plant, and I. G. was unable to deliver any of the machinery for the factory at Rio Tecero. Reports found in I. G.'s files describing the condition of Köln-Rottweil's contract with the Argentine Government as of August 1940 as well as a detailed statement concerning this contract which was prepared by Fritz Walloth, the chemical division's agency sales controller, are in the possession of the United States Government. According to Walloth, I. G. has claims against the Argentine Government in connection with the Köln-Rottweil contract in the amount of RM1,082,454.43.

ELIMINATION OF GERMAN RESOURCES FOR WAR

TUESDAY, DECEMBER 11, 1945

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
SUBCOMMITTEE ON WAR MOBILIZATION,
Washington, D. C.

The subcommittee met at 10:40 a. m., pursuant to call of the chairman, in room 104-B, Senate Office Building, Senator Harley M. Kilgore, of West Virginia (chairman) presiding.

Present: Senator Harley M. Kilgore (chairman), West Virginia.

Also present: Dr. Herbert Schimmel, chief investigator.

The CHAIRMAN. The committee will come to order. The first witness today is Maj. Gen. John H. Hilldring, Director, Civil Affairs Division, War Department.

All right, General Hilldring, if you will go ahead. I will ask you questions occasionally.

TESTIMONY OF MAJ. GEN. JOHN H. HILLDRING, DIRECTOR, CIVIL AFFAIRS DIVISION, WAR DEPARTMENT

General HILLDRING. The Allied Nations have pledged themselves to destroy the war-making potential of the Germany which so lately menaced our way of life. Long before the beginning of World War II, while democratic nations were devoting their thought and talents to the welfare of their people and the pursuits of peace, Nazi Germany was evolving elaborate plans to subordinate to and integrate with her war planning every productive function, discovery, and activity against the day when the Nazis would launch the attack they had already decided upon against their first victim.

We are, therefore, committed and determined to seek out and destroy the sources of Germany's once powerful aggressive industrial might. The investigation of cartels and cartel-like organizations is one aspect of our demilitarization policy in respect to Germany.

The investigation of I. G. Farbenindustrie was undertaken because that organization constituted a highly significant factor in the German war machine. This investigation is making available to us information relating to Germany's technology, war production, patents, external assets, and industrial organization. I. G. Farbenindustrie was known to be the largest corporation in Germany and the largest chemical corporation in the world. Already our investigations conclusively prove that this organization planned and schemed as a tool of the Nazi regime. Farben was so useful to the war lords of Germany that the German General Staff considered it important to integrate certain of its offices into the army high command itself.

The CHAIRMAN. General, let me interrupt you at this point. This investigation into Farbenindustrie and into cartels, I believe—and I just want to get your reaction—is valuable not only as an exploration of their war-making potential, but also for us as an industrial nation, it is extremely valuable that our businessmen should know the schemes and plans used by these people in the past, in order that they may guard against aggression by foreign industry in the future. Don't you think that is true?

General HILLDRING. That's right, Mr. Chairman; it is a most valuable bit of industrial intelligence.

The I. G. Farben investigation is but one of a number of investigations which are intended to lay before the world the truth concerning the organization, operation, and holdings of Farben and similar cartels. The Military Government will continue these investigations until we are satisfied that we have ferreted out every single cartel or cartel-like organization which might substantially contribute to a German war potential.

We are also presently investigating the German iron and steel, electrical, chemical, pharmaceutical, and heavy-construction industries as well as the big banks. The purpose of these investigations is to lay bare their policies, plans, and operations so that we may render them impotent as a future threat to mankind.

The CHAIRMAN. I note you didn't list the instrument industry in that. Are you having any opportunity to go into the cartel set-up of the instrument industry?

General HILLDRING. Well, Mr. Chairman, I have reported here only those that we are presently working on. I did say earlier that we would ferret out every cartel and cartel-like organization.

Throughout last summer our investigations continued to disclose the far-reaching significance of the German cartels and their external assets. In recognition of this, the Office of Military Government—United States—Germany, established the Division for Investigation of Cartels and External Assets as one of the nine major divisions of that Office.

The mission of this Division, which we refer to as "DICEA," is to initiate and continue those investigations necessary to accomplish our occupation policies in this field.

It is the purpose of Military Government to continue DICEA and to bolster it with the requisite legal, financial, accounting, and investigative personnel until we have completed and evaluated all the necessary inquiries into German internal business organizations and their external assets and entanglements.

The CHAIRMAN. Gentlemen, I am happy to hear that it is our policy in Germany to carry out these investigations, but I want to know, if you can tell us, what kind of organization has actually been set up at the present time to carry out this deindustrialization program.

General HILLDRING. As far as the functions of DICEA are concerned, Mr. Chairman—

The CHAIRMAN. What kind of an organization do we have over there? How extensive?

General HILLDRING. It is a pretty extensive organization. I don't know the exact numbers—about 140 people, who have been specially selected, largely with the assistance of our Treasury and State Departments, and under the personal direction of the next witness here, Colonel Bernstein.

I think there has never been assembled before a unit that has the capabilities, certainly that has done as great an amount of work in the short period of time, that this organization has already done.

The CHAIRMAN. I wonder if Colonel Bernstein in his statement will tell us how it functions, or would you like to tell us?

General HILLDRING. I would rather have Colonel Bernstein testify on that point, because that would be more valuable to the committee. He knows of his personal knowledge. I know of it only from observation.

The CHAIRMAN. There is an interesting fact in the background of this: In settling World War I, in the Versailles Treaty, we permitted the example of Germany in 1870 to govern that treaty in the matter of cash reparations. As you know, they bled the French dry for a generation with cash reparations, and we undertook to exact cash reparations from Germany. We then financed Germany, so she could earn enough to pay the cash reparations—that was the theory. But she took the money we financed her with and set up the gigantic organization with which they attempted to whip us.

General HILLDRING. I hope we don't make that same mistake again.

The CHAIRMAN. Anybody who says financial reparations to me is going to have a fight.

General HILLDRING. The sources for our material are many and varied. Intelligence personnel and military government teams have interrogated thousands of persons. Individuals who so indicate, or who it is believed possess information bearing upon any organization or activity in which we are interested are then interrogated by experts competent to elicit and evaluate the most technical information in whatever field involved.

Despite the elaborate precautions of the German officials to safeguard or destroy vital records, we have discovered and painstakingly perused their most secret files. Last June I described to this committee how records of the I. G. Farben Co. had been found hidden in monasteries, salt mines, beer halls, and caves.

On the 29th of March 1945 when American troops first entered Frankfurt and took control of the main offices of I. G. Farben, certain key records were taken into custody by the T-Force attached to the Army. On the 16th of April, finance division personnel of United States Group, Control Council (Germany), surveyed the condition of the records, which was found to be chaotic, many of them having been spilled on the floors, and some even apparently disposed of as trash. It was determined that the records should be removed to a safe depository. A building adjoining the Reichsbank was requisitioned and the mechanism of removal put into operation.

The books and records which were located on the six floors of the Farben Building were removed, from top to bottom, by a human conveyor chain, made up of German prisoners of war, civilians, and Farben personnel, extending from the sixth floor to the first floor and then out to the tractor-drawn van which transported the records.

Once the records had been removed, the job of creating a filing system began. Under close supervision, Farben officials were selected, on the basis of their familiarity with the files, to reconstitute the system. It was determined that many files had been destroyed, on order of department chiefs, when American occupation seemed imminent. A great number of files had been stored in beer halls and

restaurants; some had been buried in backyard gardens and others stored in cellars of trusted I. G. Farben employees, and many had been cached in religious institutions as personal property.

Special teams were dispatched throughout the Frankfurt area to secure files concealed by the home office of I. G. Farben. Later, teams were dispatched to various sections of Germany, including Jena, Wolfen, Heidelberg, Dusseldorf, Wurzberg, Munich, Kassel, Cologne, and Ludwigshafen to recover records which had been kept at various I. G. Farben plants, hidden in homes of I. G. Farben officials, or purposely stored in underground depositories against bombing attack. By following this plan methodically and vigorously it is estimated that 85 percent of the I. G. Farben files belonging to the main office in Frankfurt have been recovered from the locations in which they had been secreted throughout Germany.

The CHAIRMAN. General, I was there when you had moved them into the building and were engaged in sorting them out and it looked to me like an almost impossible task. Have you gotten them arranged now so they are accessible for study?

General HILLDRING. When I was there in August, the latest information I personally have of it, the job was not then completed, but there again Colonel Bernstein will be able to tell you.

The CHAIRMAN. At that time you had about 2,200 tons of files?

General HILLDRING. Yes, there were hundreds of tons of it, even as late as late August, when I came home. Colonel Bernstein can give you the most recent information on that subject.

Our continuing investigations confirm that the organic integration of German industrial might and technical skill into their war machine was effected on a scale to confound the imagination. The influence of the giant combines and cartels which prostituted the discoveries of modern science and the techniques of modern business organization to the aims of Nazi aggression has been traced to all corners of the world. For well over a decade these German cartels have reached out in order to establish outside of Germany footholds which were designed to serve as spearheads of German aggression. This aggression was no less important to the German designs for world conquest than the invasion by the German armies. That is why the elimination of these spearheads of industrial aggression is so essential a part of the American program for the industrial disarmament of Germany. I will describe briefly the measures we have taken and those which we contemplate in carrying out our program for German industrial disarmament.

The CHAIRMAN. I want to ask you a question at that point, General. I have been asked this question several times and I have been unable to answer it, and possibly you can.

The question is this: From the study of these records does it look like German industry actually dominated German government, or was the partnership between industry and government or was the partnership between industry and the General Staff that was operating that machine?

Industry seemed to me to be guided by the decisions of the General Staff, but also sometimes the General Staff seemed to be guided by industry and I just wondered if you have been able to determine yet which was the dominant factor.

General HILLDRING. Again I would like you to get the opinion of Colonel Bernstein, who has made the most exhaustive study of this. But it seems to me, Senator, from what I have read of our investigations into I. G. Farben, that it was subservient to the Nazi government, and to the German General Staff, in that the conduct of its business was integrated with and controlled by the Government and the General Staff. On the other hand, it is certainly true that the industrial skill of the I. G. Farben outfit, which was completely at the disposal of the Government and of the General Staff, frequently guided the decisions of the Government and the General Staff.

The CHAIRMAN. In other words, you got the impression that the geopolitical end of German policy was guided by industry, even to the plans of the staff, and then industry in turn assisted the staff in carrying out its plans, so that it was a sort of unholy alliance, as Senator Guffey sometimes says?

General HILLDRING. Yes, sir; I think that is about the situation, sir. It was a symbiotic relationship for a common infamous objective.

The CHAIRMAN. And there were two purposes: Industry had gotten top heavy in its productive powers and sought to get new markets by force, and in that it was using the army. On the other hand, the Government wanted world domination for its ideology, and it was using both army and industry.

General HILLDRING. Yes, sir.

The basic directive for the control of Germany instructs the United States commander, who is also the United States representative on the control council, to prohibit all private cartels and other similar business arrangements of a public or quasi public nature which exercised regulation over marketing arrangements, production, prices, industrial technology, and sales.

The CHAIRMAN. General, you state that the United States commander there, who is also our representative on the control council, is directed to prohibit all private cartels and other similar business arrangements in Germany. It is my understanding the major portion of German heavy industry is concentrated in the British zone and not in our zone of occupation. Can you tell us whether the British representatives on the control council have a similar directive to prohibit such cartels and break up such cartels as have already been formed?

General HILLDRING. I haven't information as to the detailed instructions which the British military governor has, Senator, but we have gotten quadripartite agreement on a wide variety of matters related to this general subject, which, in addition to the fact that the British subscribed to the Potsdam Declaration, would lead me to believe that our policies are not far apart.

The CHAIRMAN. I have been informed that to start out with the British policy, or at least the British aim, was not similar to ours, but that they have been gradually working into closer harmony with our operators there. Have you seen that—that their people on the ground are working in better harmony with us than they were at the outset?

General HILLDRING. I could wax rather eloquent on that point, Senator, without taking credit—

The CHAIRMAN. Our people on the ground have been doing a little bit of salesmanship on the British?

General HILLDRING. This much I will say, Senator, I think that today—I think we will all agree, that to work out the solution of our

problems in the international field with our partners, the British and the Russians and the French, is one of the most important activities we are carrying on.

The CHAIRMAN. I think that is right.

General HILLDRING. And I think the record which has been made in Berlin and Vienna, in bringing together in tangible accomplishment between the Soviet and the British and the French and ourselves, is a really noteworthy achievement, and it is true that in the beginning when we first sat down around the table, it took us a little time, a little longer to agree on these things than it perhaps should, but the rapidity with which we are reaching agreement on matters of transcendental importance today in Berlin and Vienna is a real achievement in cooperation with our three partners.

The CHAIRMAN. As I understand it, the Council gets out a general plan?

General HILLDRING. Yes, sir.

The CHAIRMAN. And then it is left to the commander in each district to implement that plan by appropriate localized orders; is that right?

General HILLDRING. That is the procedure today with respect to all matters on which we do reach quadripartite agreement.

The CHAIRMAN. There may be differences in the local orders that are issued, but you do find from your observation that there has been gradually a better working together than there was at the outset?

General HILLDRING. Yes, sir; there certainly is a much better working agreement.

On the matter of executing the quadripartite decisions in Berlin, Mr. Chairman, I just want to refresh your memory on the fact that it was decided at Potsdam that we would establish some central control machinery for the purpose of executing some of these decisions in certain fields, which for reasons which you know, we haven't yet been able to accomplish. But three of the four partners have already agreed on that, and it seems to me that when we are able to institute that central machinery, the differences in execution in the four zones, which you alluded to, will be very largely overcome.

The United States commander is likewise instructed to prevent production in and to take custody of all plants and equipment designed for the production of arms, munitions, and implements of war and to hold such plants for subsequent disposition.

The CHAIRMAN. When you say the United States commander is instructed to prevent production in and take custody of all plants and equipment designed for the production of arms and munitions, do you mean plants which are only necessarily related to war production or plants which have been and could be again readily devoted to such production?

You know, in all-out war about 95 percent of production can be adapted to war purposes. I know one illustration in this country in which a plant that manufactured a certain drug that was vitally necessary in hospitals was immediately converted to manufacture of an extremely valuable explosive.

General HILLDRING. That is a pretty difficult question to answer.

The CHAIRMAN. That is why I believe you have a very difficult problem in regard to the German munitions industry. A plant that makes tractors can make tanks.

General HILLDRING. If you mean that we will seize and prohibit production in any plant that can be converted to war use, that might mean any industry.

The CHAIRMAN. That is what I am getting at.

General HILLDRING. In other words, if you had a building with electrical power connected to it, regardless of what it was making, you could convert that plant to a war use.

The CHAIRMAN. By changing machinery.

General HILLDRING. By taking out the machinery that is in there and putting in other machinery.

The CHAIRMAN. Or by converting some of the machinery?

General HILLDRING. So if I were to say yes to that, it might be interpreted as meaning that we will leave no industry in Germany, and that is not our intention, Senator.

The CHAIRMAN. Then shouldn't our policy with respect to German industry just be a tough policy which will take no chances that it will again menace peace and security, and eliminate all specialized arms plants?

General HILLDRING. All of them.

The CHAIRMAN. But on the other plants, eliminate down to what is necessary for German existence, or subsistence, so that they won't have anything to convert, that what they do have will be necessary for them to get along with.

General HILLDRING. In general, you have given in that statement, Senator, our general policy.

The CHAIRMAN. We will eliminate all given war plants that are used solely for the manufacture of munitions?

General HILLDRING. That is correct.

The CHAIRMAN. And in regard to other plants, reduce them down to a potential that will just take care of Germany?

General HILLDRING. That is correct, sir.

The CHAIRMAN. So that they can't be expanded into a war potential?

General HILLDRING. Yes, sir.

The plants and equipment required for reparation will be removed; those remaining will be destroyed if they are especially adapted to the production of arms, munitions, and implements of war. The directive also prohibits the production and acquisition of facilities which produce parts or components especially designed for incorporation in arms, munitions, and implements of war, as well as airplanes and merchant ships.

United States policy is to permit technological and scientific research in Germany only after it is affirmatively established that contemplated research will not contribute to Germany's future war potential, and even then only under careful licensing and other appropriate safeguard.

The CHAIRMAN. I understand that research is being permitted in some German plants. What actual safeguards have been set up in those plants in order to make sure that Germany is not conducting war research?

General HILLDRING. In the United States zone they are all licensed and inspected. On a quadripartite basis I don't believe we have come to any German-wide arrangement on that, Senator, but as an indication that our partners contemplate with respect to research the same

general view we have, I can point to the Control Council law No. 9, which has already been approved by the four partners, which has as one of its objectives the control of research. I should again say that that unquestionably will mean a system of licensing and, more important, of scrupulous and eternal inspection.

The CHAIRMAN. Then any plant, in order to do research, must first seek a license?

General HILLDRING. That is right, sir.

The CHAIRMAN. Then having obtained a license it is subject to inspection to see that it doesn't violate the limitations of that license? It couldn't go into, shall we say, atomic research or something of that nature, because in a very short time inspectors would catch them? You have the necessary scientific personnel with the inspection departments to make sure what is going on, don't you?

General HILLDRING. We do in our zone, largely. The point I want to clarify again, Mr. Chairman, is that that is not yet on a quadripartite basis, but the fact that it is likely to be is indicated, as I say, by this incorporation of the fact that research is to be controlled across the whole of Germany.

The CHAIRMAN. That can go in the record?

General HILLDRING. Yes, sir; that can go in the record.

(Control Council law No. 9 follows:)

CONTROL COUNCIL LAW NO. 9, PROVIDING FOR THE SEIZURE OF PROPERTY OWNED BY I. G. FARBEINDUSTRIE AND THE CONTROL THEREOF

In order to insure that Germany will never again threaten her neighbors or the peace of the world, and taking into consideration that I. G. Farbenindustrie knowingly and prominently engaged in building up and maintaining the German war potential, the Control Council enacts as follows:

ARTICLE 1. All plants, properties, and assets of any nature situated in Germany which were, on or after May 8, 1945, owned or controlled by I. G. Farbenindustrie A. G. are hereby seized by and the legal title thereto is vested in the Control Council.

ARTICLE 2. In order to control the seized plants, properties, and assets which belonged to I. G. Farbenindustrie, there shall be created a committee consisting of four control officers appointed by the respective zone commanders. Policies agreed upon by the committee on behalf of the Control Council shall be implemented in each zone by the zone commander, acting through his control officer.

ARTICLE 3. The committee shall accomplish the following ultimate objectives in respect of the plants, properties, assets, and activities of I. G. Farbenindustrie A. G.:

- A. Making certain plants and assets available for reparations.
- B. Destruction of certain plants used exclusively for war-making purposes.
- C. Dispersion of ownership of remaining plants and assets.
- D. Termination of cartel relationships.
- E. Control of research.
- F. Control of production activities.

Plants reported by the committee as available for reparations or for destruction shall be processed through the normal channels.

ARTICLE 4. All acts and things heretofore done or performed by the zone commanders, and their respective control officers in connection with seizing the management, direction and control of I. G. Farbenindustrie A. G. in their respective zones are hereby ratified, approved, and confirmed.

BERLIN (continued). Following is in reference to item 6 of last conference and refers only to American zone:

- (a) No I. G.-owned plants have been destroyed.
- (b) Two Montan (Reich-owned) (I. G.-operated) explosives plants have been destroyed (DAG Ebenhausen Kaufbeuren).
- (c) No I. G. or Montan plants are earmarked for destruction.
- (d) One plant DAG Hesse Lichtenau, a Montan plant, is earmarked for reparations.

(e) Fourteen Montan-I. G.-operated plants (including (b) and (d) above) were recommended for reparations by the I. G. control officer to the Industry Branch. No action taken by the Industry Branch other than indicated in (b) and (d) above.

(f) Two of the remaining Montan plants, Ettringen and Kaufering, were never in operation.

(g) Reporting on current manufacturing operations is fragmentary and inadequate.

(h) Some information is available for 64 plants:

1. Twenty-four plants report employment as of October 31, 1945, of 11,500 persons for production or repairs. No operating information for remaining 40 plants.

2. Twenty-one of the twenty-four plants are in production including one Montan explosives plants (another is being repaired).

3. Of 20 I. G.-owned plants in production, 13 produced direct war materials. They are now employing about 10,000 persons and are producing explosives, cartridges, powder fuses, dyes, acetone, drugs, other chemicals and celluloid products. Hoechst now has 5,000 employees and Biebrich 3,156.

4. Seven I. G. plants not classified as direct war plants are producing oxygen, gasoline, buna rubber articles, and other products.

(i) Analysis of long form questionnaires submitted to the I. G. control officer indicates the following:

1. Removal of war potential is considered secondary to the requirements of the civilian economy. Only 6 of 32 manufacturing plants reported on were recommended by subcontrol officers for reparations or for destruction; 4 of these 6 plants were Montan (Reich-owned) and I. G.-operated.

2. Reparations are recommended only from direct war plants.

3. Fifteen or twenty-one war-production plants were recommended for continued operations.

4. War-production plants are reported less feasible for independent operations than plants not classified as producers of direct war material.

5. Revival of large-scale operations and monopoly practices are explicit in the recommendations for grouping Hoechst, Griesheim, Offenbach, and Mainkur plants.

6. Tabulation discloses the highly improbable conclusion that no war research was carried on in I. G. plants.

BERLIN (continued). Following is extracted from latest I. G. study which will be forwarded: "I. G. Farben subcontrol officer recommendations on war production plans needed by the civilian economy—

"1. Hoechst. This plant produced about 15-20 percent of the total German production of dinitrobenzene; approximately 4 percent of the total German production of white salt for hexogen and yellow meal (propellant). The statement is made that nitric acid and equipment is too massive to dismantle and, in addition, nitric acid is essential for the manufacture of dyestuffs, pharmaceuticals and synthetic nitrogenous fertilizers; also this plant is the only nitrate fertilizer plant in the United States zone. Regarding the production of chemicals, the following recommendation is made: Since the plant was not an essential war plant, operation might be at German peacetime requirements or for delivery of drugs and chemicals in reparations and restitution or a combination of both purposes. The plant would be of more value as an operating one than as a source of machinery and other equipment, i. e., motors, turbines. Before considering demolition, thought should be given to the fact that the products manufactured were practically peacetime needs and conveniences rather than war materials; however, sulphuric acid, nitric acid, and chlorine were of practically all types of explosives and no doubt a large portion of the acid output of the plant was used at the plants that produced military explosives.

"2. Anorgana Oendorf. This plant produced mustard gas from 1941 through 1945. The recommendation is as follows: This is a war plant and is available for reparations. It is felt, however, that the plant would aid in the over-all economy of Bavaria to such an extent that the plant should not be made available for reparations until the middle of 1946. This statement is based on the ability of the plant to produce pharmaceuticals, solvents, and detergents for both civilian and Army use. Example of recommendations are (as?) not feasible to operate as an independent unit; Griesheim chemicals plant I. G.—I do not feel that it would be practical or economically sound to operate this plant as an independent unit. It is my belief that the Griesheim chemical plant could be combined with the Hoechst plant as one plant for the following reasons: (1) Geographically the plant is near Hoechst; (2) many of the intermediates made here

are necessary for the manufacture of products at Hoechst; (3) in the past all matters for Griesheim are handled by Hoechst with the exception of wages, sales and a few minor other matters. * * * The only major changes necessary would be to combine Griesheim with the Hoechst sales organization (this having been handled in the past by Frankfurt) and put the Griesheim plant under the management of the Hoechst plant. Steedener Kalkwerke has very extensive new installations erected specifically to meet the burnt lime requirements of the synthetic rubber plant of I. G. Ludwigshafen. The plant can therefore only operate economically if these facilities are producing in their normal capacity. To justify operations it is necessary that the plant be guaranteed a continuous large scale demand for lime. Such a demand exists only with some of the larger chemical works. Thus to assure a normal and profitable production, the best arrangement would be direct combination with a big chemical work. The plants which are particularly in need of lime on this basis are all former I. G. Farbenindustrie plants—Ludwigshafen for carbide production, for insecticides and for lacquers; Hoechst for production of artificial fertilizers; A. G. fur Stickstoffdunger Knapsack (British zone) for carbide production. A similar connection with the steel industry is possible although this plant is equipped to produce a higher grade lime than is necessarily required by the steel industry."

WASHINGTON. For the Kilgore committee hearings we require from Frankfurt: (1) Copies of the Polish and Czech Dyestuffs Agreements, (2) all additional microfilm completed since we left Frankfurt, especially the microfilm exhibits to the von Heider-Kugler-Bergwardt studies on I. G.'s relations to firms in occupied countries and I. G.'s participations in these countries. These studies were contained in red folders and were being handled by Anne Friedman.

BERLIN. O. K.

WASHINGTON. The following questions re the Farben law are asked simply in order that we may understand the application of the law:

(a) Why is article 3B limited to plants used exclusively for war-making purposes?

(b) Is there any clear indication of the test or formula, etc., desired by the four participating countries in determining what plants and assets are to be available for reparations?

(c) Who are to be designated as members of Farben Control Committee?

BERLIN. (a) Destruction of plants other than those used exclusively for war-making purposes is not planned. Such nonexclusively war plants are presumably available for reparations.

(b) We know of no clear tests or formulae.

(c) In the reorganization proposal sent to Clay today by the special committee and concurred by Dodge and Fahy, it is suggested a special deputy be set up in the Economics Division to do the decartelization job. It is anticipated he would be the United States member of the Farben Control Committee.

WASHINGTON. Why did Colonel Boyd of Industry Branch consider no action respecting 14 Montan-I. G.-operated plants was necessary except as indicated in your item 3B and D (see p. 2 of this transcript)?

BERLIN. We do not know the status.

WASHINGTON. What are included in direct war plants and what is considered direct war matériel? Who approved recommendation that reparations be made only from direct war plants?

BERLIN. Direct war plants are those plants that produce arms, ammunition, and poison gas explosives, other implements of war components or parts for any of above major ingredients. In addition, plants producing chemicals, not including medicines or pharmaceuticals, synthetic rubber, synthetic petroleum, magnesium. Recommendations for reparations only from direct war plants have not been officially approved. These recommendations were made by I. G. subcontrol officers to the control officer of I. G. Farben finance division. These recommendations are indicative of future plans regarding reparations.

WASHINGTON. Whose tabulation indicates that no war research was carried on in I. G. plants? On what was tabulation based?

BERLIN: DICEA tabulation of questionnaires submitted by subcontrol officers to control officer I. G. Farben indicates that no war research was carried on in I. G. plants. The questionnaire submitted by subcontrol officers was initiated by the I. G. Farben control officer and issued by the Industry Division for completion by each subcontrol officer in charge of a plant.

WASHINGTON. What are reasons given for recommendations that Offenbach and Mainkur plants be grouped with Hoechst and Griesheim? What is status of these recommendations? Who has approved them?

BERLIN. Interplant dependency is basis for recommending grouping of Offenbach Mainkur Hoochst Griesheim. The principal purpose of the long form is to elicit information and recommendations upon which to formulate a program for the accomplishment of the objectives announced in general order No. 2 which directed the seizure of the direction and control of I. G. Farbenindustrie and the possession of all its property in the United States zone. These recommendations are now being considered in the formulation of the above-mentioned program.

WASHINGTON. We will send you in next few days copies of printed Farben report which constitutes a considerable revision of September 12 report. Also expect within 2 weeks to have printed all exhibits to revised report and copies will be forwarded to you. Additional information in report reveals in even clearer terms the iniquitous role of Farben in the conspiracy to wage aggressive war. What information or findings have come from the Quadripartite Farben Investigating Committee set up on August 10?

BERLIN. We have seen no results produced by that committee.

The CHAIRMAN. Go ahead, please.

General HILLDRING. It is also our firm policy to limit to minimum essentials the production of iron and steel, chemicals, nonferrous metals (except aluminum and magnesium) machine tools, radio and electrical equipment, automotive vehicles, and heavy machinery.

The CHAIRMAN. When you say it is our policy to limit to minimum essentials the production of these materials, what schedules have you in mind? Have schedules been prepared as to what minimum number?

General HILLDRING. They are being discussed in quadripartite committees in Berlin, Mr. Chairman, to establish the maximums—the maximum that will be permitted for this minimum economy.

The CHAIRMAN. This Hoover report has been much publicized. Is that report in conformity with the schedule, or is it the schedule, or just what has happened?

General HILLDRING. The Hoover report, widely discussed and, I think, helpfully discussed, Senator, did not represent the view of the Office of Military Government of Germany.

The CHAIRMAN. In other words, that was Mr. Hoover's own theory which he put up?

General HILLDRING. It was the opinion of his committee, of the committee of which he was chairman. It was not representative of anything more than the opinion of this committee, and as a working basis, as a point of departure for discussions, as such it has served a useful purpose. It was not approved by anybody above the level of the committee that contributed it, but as a working document, it was submitted to the quadripartite committee on the level of living in Germany.

The CHAIRMAN. General Clay did not adopt it as policy at all?

General HILLDRING. He did not adopt it.

The CHAIRMAN. It was somewhat similar, shall we say, to a bill that is introduced in the Congress, which goes into committee and the committee amends it and reports it out, and then it may be completely torn apart on the floor and an entirely new bill substituted?

General HILLDRING. That is a very good analogy, Mr. Chairman.

As an essential part of our economic security policy, the Potsdam Declaration provided that the Control Council would take steps to exercise control over German-owned external assets which were not under the control of those United Nations which took part in the war against Germany.

In urging upon the Control Council methods for effectuating this mandate, General Eisenhower stated in the Control Council that the

Four Powers had already created one new precedent in international law in bringing the Nazi war criminals before an international court for trial and that he did not object to the establishment of additional precedents. General Eisenhower then urged that in the name of justice, it was necessary to reach those foreign assets which by many devices have found haven outside Germany.

On October 30, the Control Council enacted the so-called vesting and marshaling decree. All rights and interests in any property outside Germany owned or controlled by any natural or legal person of German nationality inside or outside Germany were thereby vested in a newly constituted German External Property Commission composed of representatives of the four occupying powers and constituted as an intergovernmental agency of the Control Council. In the decree's preamble, it is stated: "* * * The Control Council is determined to assume control of all German assets abroad and to divest the said assets of their German ownership with the intention thereby of promoting international peace and collective security by the elimination of German war potentials."

The CHAIRMAN. General, what is the relationship, if any, between the External Property Commission, which has been set up to vest Germany's assets in foreign countries, and DICEA?

General HILLDRING. There will be a great deal of relationship, Mr. Chairman, between DICEA and this Commission, rather the American member of the Commission, and it is General Clay's intention, and General McNarney's, to have the Chief of DICEA serve as the American member of this Commission, in order that there may be no conflict as to United States policy.

The CHAIRMAN. Who is the Chief of DICEA now?

General HILLDRING. Colonel Bernstein.

The CHAIRMAN. The American representative then on the Commission hasn't been definitely named yet, but it has been determined that whoever is Chief of DICEA will be the American member of the Commission?

General HILLDRING. That is correct.

The CHAIRMAN. Who formulates the policy and directives which guide the American representative in carrying out his functions on the Commission?

General HILLDRING. In that regard, Mr. Chairman, we go to the same policy source that we do on all other matters. Our State Department will establish the policy, and I have had some conferences with the State Department official who has that particular responsibility.

The CHAIRMAN. Has the External Property Commission taken any specific action yet to secure cooperation of the neutral governments in ferreting out and finding out what these resources are?

General HILLDRING. I think not. This is a rather recent declaration, Mr. Chairman, and this Commission was organized as late as last week.

The CHAIRMAN. I am wondering if anybody has studied the impact of that on the Alien Property Custodian's duties in the United States?

General HILLDRING. That, again, under the directive of the President, would be a function of the State Department to see that civilian agencies of the Government, any agency of our Government that was involved in any policy in connection with this business, be consulted

and their views considered in respect to any policy formulated in the foreign field in the occupied areas. I am certain that the State Department is doing that.

The CHAIRMAN. I think this Commission has one of the toughest jobs.

General HILLDRING. There is one point there; this decree does not vest title to German properties in the United States.

The CHAIRMAN. So that would still be under the Alien Property Custodian?

General HILLDRING. That is right; but he would still have some marginal interest in this problem, it would seem to me.

The CHAIRMAN. Frankly, that appears to me an even more difficult job than you have in Germany. You can lay your hands on things there in a tangible form. In neutral and other countries it is a much more difficult job, and you can do nothing in the neutral countries without complete cooperation of DICEA. They are the source of information from which you work, and I think it is a wise choice to put the head of DICEA on as the member of the Commission.

General HILLDRING. Yes, sir; in order that they may be completely integrated.

The Control Council is now actively considering the provisions of a law which will prohibit excessive concentrations of German economic power and prohibit German participation in international cartels. The position of the United States member is greatly strengthened by the results, already known, of the investigations made by the United States military government of I. G. Farbenindustrie and similar organizations.

The CHAIRMAN. I wonder whether the question has been raised in regard to the possible future collection of royalties on German patents. If you remember, after World War I, there was paid to Krupp a little over 70,000,000 American dollars on accrued patent royalties on armor plate, or a process used by us in fighting the war. Such accrued royalties might form a tremendous source of German capital abroad.

General HILLDRING. Senator, I have to admit that is one thing my bright youngsters haven't brought to me yet. Maybe one of them could answer that question.

The CHAIRMAN. We may have companies in the United States that under their contracts accrued a certain amount for such royalties.

General HILLDRING. Can you find an answer to that question?

Lt. Col. ERNEST A. GROSS. I think it is contemplated, sir, that all German external assets in the United States, including, without doubt, royalties due, would be available for reparations payments. However, that is not within the scope of the War Department.

The CHAIRMAN. I am wondering whether you have somebody or some group watching that situation?

General HILLDRING. Write that down, Colonel.

Thank you, Senator, we'll pry into that one.

The CHAIRMAN. I remember in a hearing in 1941, covering various German patents, statements were made to us by corporate heads on the postwar royalty situation, and I have been keeping an eye on that all the way through.

General HILLDRING. We will also, hereafter.

The CHAIRMAN. I don't want that to be a part of the cost of the war. General HILLDRING. All members of the Control Council have agreed to the principle that—

* * * for the purpose of preventing Germany from endangering the safety of her neighbors or again constituting a threat to them or to international peace, and in order to destroy Germany's economic potential to wage war, and in order to facilitate Germany's reconstruction on a peaceful and democratic basis, it is essential that the German economy should be decentralized by the elimination of all excessive concentration of economic power as exemplified, in particular, by cartels, syndicates, trusts, combines, and other types of monopolistic or restrictive arrangements which could be used by Germany as instruments of political or economic aggression.

There remains only final quadripartite agreements as to the exact means of implementing this agreed principle.

This is one of the real achievements of those four negotiators that I spoke of earlier, sitting in Berlin, Mr. Chairman.

The CHAIRMAN. I discovered abroad that the coal cartel practically controlled the technical management of all coal mines. While individual corporations would own a mine, they had to get their management out of the cartel group, because they had all the experienced men on contract. It seems to me that is one reason why occupation is going to have to last a long time, to convince these men that they can break their contracts and go to work for individual plants without suffering reprisals from the old cartel group.

General HILLDRING. That is very true.

The CHAIRMAN. I remember very well in both the Ruhr and the Saar Basins, you were having to use the management from the old cartel group in order to get the mines in operation.

General HILLDRING. In the early days after the collapse.

The CHAIRMAN. That's right. After the collapse you couldn't find technical and skilled personnel who were not under contract to the cartels.

General HILLDRING. Another token of our determination to crush Germany's war-making potential is Control Council Law No. 9, passed on November 30 of this year. This law provides for the seizure and control of all property owned or controlled in Germany by I. G. Farbenindustrie. That is the law I have already submitted.

It is because I. G. Farbenindustrie deliberately and prominently contributed to and fostered Germany's war-making potential that its properties were seized and title vested in the Control Council. The enactment provides that certain plants and assets will be made available for reparations; plants used exclusively for war-making will be destroyed; cartel relationships will be terminated; ownership of remaining plants and assets will be dispersed and research and production activity will be rigorously controlled.

What are we now going to do about these cartel organizations which we discover to have contributed so mightily to German's war machine? How will we render them impotent to support another aggression. As I have pointed out, the Control Council has now agreed that the economic power of cartels, syndicates, trusts, and combines will be eliminated.

That is a quadripartite agreement, sir. That is, across the board.

In order to assure the accomplishment of this aim, excessive concentrations of corporate ownership and management will be broken up and prohibited. Ownership and management of plants and assets

which are not removed for reparations or which are not destroyed will be dispersed and the complex devices by which the Nazi government fostered central ownership and control will be outlawed. German participation in international cartel arrangements will, of course, be prohibited.

The facts which we are discovering concerning the activities of these organizations will not only enable us to accomplish our objectives intelligently and speedily, but should also serve to generate an informed public opinion which will support our efforts to insure that these measures have genuine and lasting effect.

The CHAIRMAN. General, I recently read an article, I believe in the Saturday Evening Post, on the subject of cartels, in which the writer insisted that, for instance, Netherland's industries could not exist without cartels, and indicated that European industry drew its lifeblood from cartels. Have you heard any talk of that kind abroad?

General HILLDRING. The War Department's responsibility, as you know, Senator, in Europe today is delimited entirely by the frontiers of Germany and Austria.

The CHAIRMAN. But if that sentiment exists in the liberated and so-called neutral countries, our efforts to eliminate cartels may meet with such resistance that it will be hard for us to get cooperation. I am wondering if you have heard of that?

General HILLDRING. Without saying just that as bluntly as you have, Senator, I think I tried to indicate it by pointing out that despite the fact that there may be such feeling on the part of certain of the United Nations in Europe, we did get law No. 9 through the Control Council.

The CHAIRMAN. And I think it was an accomplishment. The example used in this article was the N. V. Philips Co., in Holland. They said they simply couldn't exist without that, and they went on to cite the profits made by that branch which was seized as against the profits made by that branch which was with the Allied Forces, plants located in England, the United States, and various other places.

The cartel groups have apparently been very busy with propaganda, trying to convince the working people that they would suffer if cartels were outlawed. The cartelists have been beating the drums and carrying the torch over in Europe, and even in this country to some extent, if one may judge from this article in the Saturday Evening Post.

How did this JSC 1067 come to be drawn? Was it just a meeting?

General HILLDRING. Last March the President of the United States issued a directive to five agencies to prepare instructions to be given to the United States Military Governor in Germany, based on principles which he laid down in this directive.

The CHAIRMAN. Then it came out as a result of State, War, Navy, and other interested agencies?

General HILLDRING. State, War, Navy, Treasury, and FEA.

The CHAIRMAN. Their joint thinking?

General HILLDRING. Joint thinking on that resulted in the preparation of IPCOG-1, which later became known as the rather famous JCS 1067.

The CHAIRMAN. Is there any plan for writing any revisions to 1067 along the lines suggested by Byron Price or by the Colmer committee?

General HILLDRING. Yes; Mr. Chairman. The President has referred as you probably know, the Byron Price Report to the three secretaries, State, War, and Navy, who are presently considering the revision of 1067 in accordance with the request of the President.

The only thing that has been done so far is to ask the United States Military Governor of Germany what his recommendations are with respect to that. That is the only step that has been taken so far.

The CHAIRMAN. Could you say now that there is an intention to revise it to such an extent as to change its intent and purpose, or will it just be revised to make it a little more workable?

General HILLDRING. You really should get a policy maker of the War Department, a Secretary or Assistant Secretary, to answer that question, or a member of the State Department; but I can say this, Senator, perhaps without offending the policy makers, and perhaps without offending Mr. Price—I told him this at the time: General Clay and I like 1067.

The CHAIRMAN. That is what I wanted to hear, and it is hoped that men on the ground will, as far as possible from their information, control the revisions in that.

General HILLDRING. Maybe I shouldn't have said that. It sounds like disagreement with the President's inspector. But it is the way I feel.

The CHAIRMAN. No; I don't so consider it, but I am asking this from the viewpoint of people on the ground. Is there any current plan to amend the program for dealing with Germany as embodied in the Potsdam agreement, that you know of, that is under consideration?

General HILLDRING. You have gotten way over my head, Senator. As you know, the Potsdam agreement—

The CHAIRMAN. But you, as an individual—do you know of any such plans?

General HILLDRING. No, sir; I do not.

The CHAIRMAN. So far as you know, that really represents our policy in Germany at the present time, and you know of no idea of changing that—that has been transmitted to you.

General HILLDRING. That's right, sir; there has been no—

The CHAIRMAN. I don't want to ask you to go into another echelon at all. Is it any part of American policy to deal with the western zones of Germany as a buffer against the U. S. S. R.?

General HILLDRING. There is no such policy that I know of.

The CHAIRMAN. There is no such line of thinking among the occupational forces that we have over there?

General HILLDRING. That's absolutely right.

The CHAIRMAN. That is what I wanted to bring out.

General HILLDRING. I think, Senator, that our record of achievement with our Russian allies to date is the best proof that that is not so. There is the finest understanding between the military governor and the Russian representative, as is evidenced by the great amount of accomplishment that has occurred.

The CHAIRMAN. But, General, do you realize one thing: Those things have never really been said publicly, and the country would rather welcome such a statement because it would set their minds at rest. It has all been a matter of inference, and the people don't know, and some others don't know.

General HILLDRING. I am delighted with this opportunity to disavow it most emphatically, Mr. Chairman.

The CHAIRMAN. Thank you for coming up, General.

General HILLDRING. Thank you for the opportunity, Mr. Chairman.

The CHAIRMAN. At this time I want to introduce in the record a news item from the New York Herald Tribune of December 11, 1945, regarding 26 plants listed by the Allies for reparations. That is the first time that a list has been published so far.

(The news item referred to follows:)

[From New York Herald Tribune, December 11, 1945]

TWENTY-SIX NAZI PLANTS LISTED BY ALLIES AS REPARATIONS

RUSSIA GETS 47.8 PERCENT OF FIRST GROUP FROM ZONES HELD BY UNITED STATES, BRITAIN, FRANCE

(By Russell Hill, from the Herald Tribune Bureau)

BERLIN, December 10.—The first list of German war plants available for reparations has been approved by the four-power coordinating committee of the Allied control authority, it was announced today. The plants have been earmarked for delivery either to the Soviet Union or to western claimants.

Unanimous agreement was reached at a quadrupartite meeting held last Thursday, with Lt. Gen. Lucius D. Clay, American deputy military governor, in the chair.

There was considerable discussion before unanimous agreement was reached, but the fact that a decision was made is regarded as encouraging. Since the United States was not claiming any of the plants on this first list, Clay was able to act as mediator as well as chairman.

From 26 important plants in the American, British, and French zones of Germany, valued at 231,972,405 (1938) reichsmarks (about \$93,000,000), equipment worth 111,250,811 marks, or 47.8 percent of the total, will go to Russia.

The remaining plants have not been assigned to individual nations, and an inter-Allied reparations agency which will meet at Brussels must decide on their division among those of the western nations which have put in claims. The western nations include all except Russia and Poland, whose claims are to be satisfied from the Soviet Union's share.

The 17 so-called western nations are the United States, Britain, France, Belgium, Holland, Luxembourg, Yugoslavia, Czechoslovakia, Greece, Egypt, South Africa, Australia, New Zealand, Canada, India, Denmark, and Norway. Not all of these countries had put in claims for plants on this first list.

Included on the approved list are such important concerns as the 25,000,000-mark Fischer ball-bearing plant at Schweinfurt, whose equipment will be divided equally between the Soviet Union and western claimants; the 25,000,000-mark Blohm and Voss shipbuilding plant at Hamburg, which goes to the western powers, and the 27,000,000-mark Krupp metallurgic plant at Borbeck, which goes in its entirety to the Soviet Union.

FIVE OF LARGEST TO RUSSIA

Of the 26 plants 5 of the largest were allotted to the Soviet Union, 2 were split up, and 19 were allocated in their entirety to the western nations.

Equipment valued at 120,993,915 marks comes from plants in the British zone and at 110,699,000 marks from factories in the American zone. Only 1 plant, the smallest of the 26, valued at 279,490 marks is located in the French zone.

The giant Krupp Works at Essen were withdrawn from the list after the Russians stated that they did not want them and would prefer to see them destroyed. It is understood that claims of other interested nations will be satisfied before the remainder of the plant is demolished.

The French have withdrawn from the list the I. G. Farben Chemical plant at Ludwigshafen, which had previously been declared surplus.

The coordinating committee's decision is an implementation of that part of the Potsdam declaration which provides that advance deliveries shall be made before the final amount of reparations from western Germany has been fixed. This in turn must be done by February 2, 1946, 6 months from the signing of the Potsdam agreement.

The fact that the Russians are getting more than 47 percent of the plants on the first list does not present a deviation from the principles of Potsdam which allotted them 25 percent of the total. The Soviet Union got its claims in first and feels that it is entitled to quick action, but ultimately its share will not exceed the 25 percent laid down.

Most of the plants on this list have already been dismantled and crated and presumably the equipment allotted to Russia will be shipped without further delay. The remaining plants cannot be delivered until an allocation has been made among the various western claimants.

Among the plants allotted to the Soviet Union are the following: The underground motor parts plant at Neckarelz near Heidelberg, valued at 19,000,000 marks; the Deutsche Schiff and Maschinenbau A. G. (Deschimag), at Bremen, one of the largest shipbuilding concerns in Germany, 12,070,000 marks; the Gendorf thermoelectric plant near Munich, 9,088,000 marks, and the Bandeisenwalzwerke, a metallurgic plant at Dinslaken, 18,166,177 marks.

In addition to the Schweinfurt ball-bearing plant, the Schiess-Defries machine tool construction plant at Dusseldorf will be split up between the Soviet Union and western claimants, with Russia getting equipment worth 12,765,189 marks and the other nations getting equipment worth 3,379,110 marks.

WESTERN NATIONS' SHARE

The following plants will go entirely to the western nations: The Grosskraftwerk, a thermoelectric underground power plant at Mannheim; the Hanie & Lueg machine construction plant at Dusseldorf; the Rheinische Chamotte Dinaswerke, a fireproofing plant at Bendorf am Rhein.

Also, the Hensold optical plant at Herborn; the Mathes and Weber soda plant at Duisburg; the Waldrich lathe manufacturing plant at Siegen; the Wagner lathe-manufacturing plant at Dortmund; the Deutz Diesel engine plant at Oberursel.

Also, the Mueller machine tool plant at Esslingen; the Bohne Kohle machine-tool plant at Esslingen; the Hastedt electric power plant at Bremen; a hydroelectric plant at Teging, near Muhlendorf; the B. M. W. No. 1 and No. 2 aircraft engine plants at Munich.

Also the Kurbelwellenwerke, a crankshaft plant near Hamburg; a small-arms factory at Neuengamme, near Hamburg; the Hanseatische Kettenwerke, a plant at Hamburg manufacturing cartridge cases and small fuzes; the large Hess Luchenau explosives plant at Furstenhagen; and the Blohm und Voss ship-building plant.

The CHAIRMAN. I want to introduce also another news story from the same newspaper, of the same date, on the question of the United States breaking off talks with the Swiss on the foreign assets due to disclosures recently made as to some of their activities.

(The news item referred to follows:)

[From New York Herald-Tribune, December 11, 1945]

UNITED STATES BREAKS OFF TALKS ON SWISS' FROZEN ASSETS

WASHINGTON IS DISSATISFIED OVER ATTITUDE OF BERN ON HIDDEN GERMAN FUNDS

(By Carl Levin by wireless to the Herald-Tribune)

ZURICH, December 10.—Switzerland's hope of effecting an agreement with the United States to unfreeze between \$1,500,000,000 and \$2,000,000,000 in Swiss accounts and properties in the United States suffered a second set-back in a week today when Swiss bankers were informed that the United States has notified their Government that negotiations looking toward releasing these assets on certification may be considered broken off.

An official of a leading Swiss bank at this Swiss banking center said that the latest move in constantly deteriorating Swiss-American relations stemming from the Allied quest for cloaked German assets came in the form of a formal notification from the American Legation in Bern to the Swiss Foreign Office. The banker, who did not wish to be identified, said that he understood that the Amer-

ican representative stated that it may be some time now before any action can be taken which would permit the Swiss to use the vast capital which has been blocked in the United States since June 14, 1941.

American officials at Bern refused to comment, but from other sources it is learned that the United States action resulted from dissatisfaction with what it felt were uncooperative and dilatory tactics on the part of the Swiss regarding safe-haven legislation and the attitude of the Swiss in connection with the Allied control vesting decree on German foreign assets. Washington is said to feel that this is untenable in view of the importance of the financial disarmament of Germany.

The latest American move came as no real surprise to the Swiss Government and banking interests because of the lack of interest recently shown by the United States in the negotiations. Only last Thursday they learned indirectly of Secretary of the Treasury Fred M. Vincent's announcement of a sweeping relaxation of freezing controls for all countries except Switzerland and other neutrals.

The Swiss knew at the time of the announcement that they had not satisfied the United States and other Allies in the quest for concealed German assets. Outwardly, they took the view that there is no real hurry to unfreeze their accounts. Privately, however, the matter is one of the gravest concern here and is a growing irritant to Swiss-American relations.

The dispute is really a double-barreled affair. It involves German assets in Switzerland as well as those suspected of being cloaked under false names or in Swiss omnibus accounts with American banking and brokerage accounts.

At American request the Swiss have taken several steps recently to identify German assets here. They have taken a census of Axis holdings and on the basis of 250,000 returns filed by 25,000 persons, firms required to list German holdings have reported \$175,000,000 of German holdings in Switzerland. The clearing house reported at the same time an additional \$54,000,000 under inquiry. The Federal Council has also issued a decree ordering the opening of safe-deposit boxes stated to be German and has lifted the bank secrets act for the restricted purpose of locating German assets here, but not in the United States.

However, even the president of the State Compensation Office (comparable to the United States Foreign Funds Control Office) has said in a press conference that some Germans may not have filed returns, that others may have filed incomplete or inexact returns, that instances already have been found in which assets were greatly understated, and that the existence of some German safe deposit boxes may not have been disclosed. On the other hand, the Compensation Office pointed out that there may be some duplication of reported German assets as the result of filing returns by bankers and owners on the same accounts.

The Swiss Government has also invited the United States and other Allied ministers or other officials at Bern to visit the Swiss Compensation Office at Zurich to satisfy themselves as to Swiss sincerity in running down German assets. The American position, however, has remained unchanged since the United States officials felt that the procedure permits concealment and that implementation by the Swiss Government of decrees intended to uncloak concealed assets is so far inadequate for the purpose of digging up all the German assets in Switzerland.

The Swiss press has been vigorous in supporting the Swiss position and running down the Allied stand. One Swiss newspaper stated that the reaction of the Swiss Government to the recent Allied Control Council vote to vest all German external assets will be a "categorical no." It insisted that Switzerland also suffered losses in Germany and that these loans, which they say will exceed the German assets in Switzerland, have a prior claim on German assets which may be found here.

THE CHAIRMAN. The next witness is Col. Bernard Bernstein, GSC, Director of the Division of Investigation of Cartels and External Assets in the Office of Military Government in Germany. I believe you are the present head of this Grecian-named organization, DICEA; is that right, Colonel?

Colonel BERNSTEIN. Yes, sir.

THE CHAIRMAN. Go right ahead.

**TESTIMONY OF BERNARD BERNSTEIN, COLONEL, GSC, DIRECTOR,
DIVISION OF INVESTIGATION OF CARTELS AND EXTERNAL
ASSETS, OFFICE OF MILITARY GOVERNMENT, UNITED STATES
(GERMANY)**

Colonel BERNSTEIN. Senator, if I may, I should like to give just a little bit of background so that the whole picture is known.

I was the Director of the Finance Division of the United States Group Control Council and the Chief of the Financial Branch of G-5 in USFET.

The CHAIRMAN. You were formerly with the Treasury Department?

Colonel BERNSTEIN. Yes, sir; prior to going into the Army I was at the Treasury Department, and when General Eisenhower and the Secretary of War said in October 1942 that General Eisenhower wanted a Treasury official as his financial adviser, I got what I considered was a marvelous opportunity to go along, and I have been on General Eisenhower's staff since, as his financial adviser.

In connection with my work in the Control Council as the Director of the Finance Division, I undertook these investigations of Germany's external assets, and as part of that investigation, we undertook a series of investigations of Germany's big businesses, giant industries, and what are referred to as the Big Six banks.

In the course of these investigations, we found that it was necessary to look at more than external assets, and the investigation was broadened. In the midst of those investigations, a reorganization took place in the military government organization and my old Finance Division was broken into two parts, and part of the staff, the majority of the staff, remained in what was called the Finance Division and continued what are more generally regarded as the finance functions in military government. The remainder was transferred to the new Division of Investigation of Cartels and External Assets. Into this new Division was transferred the functions of locating Germany's external assets and investigating the existence and scope of Germany's cartel arrangements and other practices that restrict international trade.

That new Division of DICEA was created in the middle of September. I myself returned to the United States shortly thereafter and have since then been working with my staff through the usual communication channels.

I appreciate very much what General Hilldring said about the work we have done. I, myself, as he knows and General Clay knows, do not propose to return to carry on this work. The staff which I had totals about 140, about half of whom were doing professional work. These were men and women whom we had gathered together both from the services and with the help of the Treasury Department and the Justice Department from civilian life. Many of the men who were in the services were able to be converted into civilians which greatly helped them and helped me in the discharge of the work. Unfortunately, in that Division, as in many other parts of the military government organization, there is a great desire on the part of the men to return to this country, for a wide variety of reasons, and I think the organization faces now the need of getting a considerable amount of personnel sympathetic to the program if a job of that importance is to be carried out effectively.

The CHAIRMAN. Let me ask you a question at that point, Colonel. Isn't it generally recognized that this is a rather long job; that it isn't a job that is going to be finished up in 60 or 90 days, or 3 or 4 months; it is a very painstaking job in which a great deal of time will be used by the men who go over; isn't that right?

Colonel BERNSTEIN. I think that is inevitable, Senator.

The CHAIRMAN. Isn't that one of the reasons that the men want to get back? I have been informed if arrangements could be made to get their families to Europe, a lot of very good men would go, but they hate to take on a job where they will be so far away that every time they come back they will have to waste a month's time getting back to the States, and they feel they may be over there for a considerable period of time in order to accomplish the job.

Colonel BERNSTEIN. I have no doubt, sir, that that is one of the reasons, and that is a reason common, of course, to all of the military government organizations.

The CHAIRMAN. I have talked to some who have been asked to go.

Another question is this: I was informed by some newspapermen, one of them of Swiss nationality, however not with a Swiss paper, that the banking laws of Switzerland and certain other neutral countries in Europe were changed after '33 due to German influence, in an endeavor to carry on their cartel operations and their, shall we say, subterranean economic operations. Have you run into any changes in these laws?

Colonel BERNSTEIN. Senator, I am not familiar with that change in the law.

The CHAIRMAN. I raised a question about certain Swiss banking laws and the banking laws of other nations, and was told that, well, they were ancient laws that had been on the books for years; and some of the people who heard that statement then came to me and told me that that is not true, that that was done due to German influence getting into some of these smaller countries in Europe and persuading them it would be economically advantageous to them if they would change their banking laws, for instance, to permit these undisclosed deposits by numbers and things of that kind, so they could carry on these operations. I wonder if your Division has made a study of that?

Colonel BERNSTEIN. We haven't made a study of that particular law. We are, however, familiar with the effect of what is said to be the practice with regard to the secrecy of the banks. We felt that in connection with the work which we have done in Germany, and in particular in the work which we have done in the I. G. Farben. In our efforts to carry on certain investigations in Switzerland which we considered essential to locating definitely certain of Farben's assets which were held in Switzerland, and through Swiss accounts held elsewhere in the world, we have thus far been unsuccessful in persuading the Swiss authorities to allow us to have access to those records.

If I may, Senator, I would like to submit for the record the order of September 12, 1945, of the United States Group, Control Council in Germany, establishing the Division of Investigation of Cartels and External Assets as being perhaps the best statement of what the Division is supposed to do.

The CHAIRMAN. That may be put in the record.

(The order referred to follows:)

HEADQUARTERS,
UNITED STATES GROUP, CONTROL COUNCIL (GERMANY),
September 12, 1945.

General Orders
No. 52

ESTABLISHMENT OF A DIVISION OF INVESTIGATION
OF CARTELS AND EXTERNAL ASSETS

1. There is hereby established within the United States Group, Control Council (Germany), a Division of Investigation of Cartels and External Assets, which shall operate under the immediate direction of a Director and under the general direction and supervision of the Legal Advisor.

2. The Division of Investigation of Cartels and External Assets shall have the following functions and responsibilities:

a. To make investigations in Germany of the existence and scope of German cartels, syndicates, trusts and other concentrations of economic power, and to report the results of such investigations to the Legal Advisor together with recommendations to effect the elimination of such instrumentalities.

b. To make investigations in Germany of the existence and location of German external assets, and to communicate the results of such investigations to the Legal Advisor together with recommendations for appropriate action thereon.

3. The Finance Division shall retain the functions now performed by it except as herein provided.

4. The Finance Division shall transfer to the Division of Investigation of Cartels and External Assets such facilities and personnel as may be agreed to be appropriate for the accomplishment of the purposes of this order.

5. Colonel Bernard Bernstein, O918917, GSC, is announced as Director, Division of Investigation of Cartels and External Assets.

6. Mr. Joseph M. Dodge, in addition to his duties as Assistant Deputy for Trade and Commerce, is announced as Acting Director, Finance Division, vice Colonel Bernard Bernstein, relieved.

7. All orders in conflict herewith are rescinded.

By command of Lieutenant General Clay:

BRYAN L. MILBURN,
Brigadier General, GSC,
Chief of Staff.

Official:

[s] BRUCE EASLEY, Jr.,
Colonel, AGD,
Adjutant General.

Colonel BERNSTEIN. If I may make one other preliminary remark before going to my statement, you asked the question as to whether Farben was subservient to the Nazi government or the German General Staff, or who was on top. I myself feel it is pretty difficult to say which one of the group was on top; that, basically, you had a conspiracy of certain forces in Germany. The Nazi Party was one, and perhaps a more recent member of that conspiracy. The Wehrmacht and the German General Staff was an older member of that conspiracy, dating back to some of its Junker and Prussian traditions. The German heavy industry and German finance has also been a member of that conspiracy for some time. As a matter of fact, big German interests, business interests, and financial interests, including Farben, were part of a group that helped to a considerable extent in financing the Nazi Party before it came into power, perhaps the most dramatic meeting being the meeting in February, 1933, when Hitler addressed a rather large group of industrialists, including a representative of Farben, and at which time a substantial collection for the Nazi Party was taken up.

Those collections have continued from year to year, and one of the things we discovered in our investigations was a charming little organization called the Circle of Friends of Himmler, and that included

some of the leading industrialists and banking figures in Germany, headed by a gentleman called Kurt von Schroeder, who was a lieutenant general, I believe, in the SS, and each year Schroeder sent his charming little notes out to all the members of the circle and collected the usual donations, which were turned over to Himmler for the work of his organization.

The CHAIRMAN. They needed a Hatch Act over there; didn't they? You would say that that was a partnership in which the Nazi Party was really a front and an operating agency in governmental circles, and the backbone of it was a combination of industry, the General Staff, and the Wehrmacht; isn't that about what it was?

Colonel BERNSTEIN. Yes, sir; it is a partnership that goes a long way back, that is able, apparently, to produce a front from time to time.

The CHAIRMAN. And the Nazi Party with which it was dealing was a very fine thing to operate such a business organization in a country like Germany?

Colonel BERNSTEIN. Yes, sir.

In April 1945, shortly after the American Army captured Frankfurt-am-Main, an investigation of I. G. Farbenindustrie Aktiengesellschaft was begun by the Financial Branch of G-5, USFET, and the Finance Division of U. S. Group Control Council, with the help of personnel made available by the Treasury Department and the Department of Justice. Upon the creation in the Office of Military Government, U. S., in September of the Division of Investigations of Cartels and External Assets—sometimes called DICEA—that Division continued the investigation of Farben.

The investigation began as an effort to uncover the nature and location of the far-flung and carefully concealed external assets of Farben. This was a part of the U. S. program, later adopted by the U. S. S. R. and Britain at Potsdam, of stripping Germany of all of her external assets in the interest of future world security and using such assets for the relief and rehabilitation of countries devastated by Germany in her attempt at world conquest.

As the investigation proceeded and the true role of Farben was revealed, it became desirable to expand the purposes of the investigation to determine the part Farben played as an instrument of the German war machine in preparing for and waging a war of aggression.

The bulk of the information obtained during the course of the investigation was found in records of Farben, which were collected from its various offices and storage places throughout Germany and in secret caches which had been used by Farben when American occupation seemed imminent.

In anticipation of Allied victory thousands of Farben's important files were, according to the testimony of its responsible officials, destroyed just prior to the advent of the Allied troops and with such files were burned many Farben secrets.

The CHAIRMAN. Let me ask you a question right there. I gained the impression in Germany that the cartel group realized the fight was lost a considerable time before we landed on Normandy Beach-head. They felt that they couldn't win and started making their plans for the future. Did you find that that was the case from the way these records were handled?

Colonel BERNSTEIN. We felt that there must have been some plan to attempt to disperse records over a wide area; to hide records in the hope that when we finally came in we wouldn't be able to find everything.

The CHAIRMAN. And also a plan to disperse capital and assets, too—did you find that?

Colonel BERNSTEIN. We had a good deal of feeling that that has been done. Part of our job was taking a census of Germany's external assets in the hope of being able to locate the places to which they sent their assets through Switzerland and other available avenues.

Some records were undoubtedly lost because of the disarray created by the battle and by the rather large numbers of displaced persons who used the Farben headquarters in Frankfurt as billets. Considerable information was also obtained through interrogations of the leading I. G. personnel who had to be searched for throughout Germany. It is significant that this is the first extensive investigation ever conducted in Germany of Farben records and Farben officials. During the period of both the Weimar Republic and the Nazi Reich this proud and powerful firm was never thoroughly investigated even by its Government.

The situation, of course, changed a little bit after we got in and we began picking up some of these Farben officials. All the key I. G. personnel were incarcerated as soon as found, although not necessarily on the SHAEF mandatory arrest list. In all, 22 of such Farben officials were being held in prisons in or around Frankfurt. However, we realized that we had not been able to apprehend all of I. G.'s key personnel, such as Ambros, who played an important role in the development by Farben of poison gas, Wurster, Gajewski, Reithinger, Gattineau, Terhaar, and Mann. The I. G. officials who were arrested were scattered throughout the western zones and it took some time and digging to locate them.

Much has been said and written in this country about Farben. In many such instances it was necessary to guess at the real intentions and programs because of the lack of original source material in this country or any other places to which we had access. I feel, therefore, that it is important to emphasize that every statement which I propose to make, and the report which I have filed, is supported by exhibits in the report of the Farben Investigation which has been submitted to this committee.

This report represents the history of an industrial and economic empire which, as a leading force in German industry, participated twice within one generation in waging war aimed at the destruction and enslavement of the entire civilized world. Now that Farben has been investigated, it is to be hoped that the criminal role played by Farben's leading officials will result in their indictment and conviction as war criminals; and that the action taken by the Control Council in Germany in vesting the assets of Farben will be followed very soon by concrete action that will effectively destroy the menace it represents to the peace and security of the world.

II. SIZE AND CONTROL OF FARBEN

In 1927 Chancellor Stresemann, then head of the so-called "democratic" German Government, appraising Germany's economic potential, stated: "What have I as a trump in my hands aside from I. G.

and the coal people?" The I. G. referred to was I. G. Farbenindustrie, A. G., the largest, most powerful chemical combine in the world.

What the Chancellor did not have to say, as the I. G. Farben report conclusively demonstrates, is that without the trumps of I. G. Farben and the rest of German heavy industry, Germany could not have prepared for and launched a destructive war against the peace-loving nations of the world. And I. G. Farben, its size more than doubled in 12 years of tremendous expansion after 1927, was a trump, which, together with the remainder of Germany's industrial potential, almost enabled Hitler and Goering to extinguish the flame of freedom and human decency everywhere.

The CHAIRMAN. Colonel, did you ever run into any figures that showed how much of the moneys that were furnished under the Dawes and Young plans might have gone to the expansion of Farbenindustrie?

Colonel BERNSTEIN. No, sir; we did not run into any direct evidence in that respect, but we did run into a great deal of evidence to indicate that the German Government financed directly a considerable part of the expansion of Farben. It was the German Government, of course, that was able to benefit by the successive financial arrangements entered into in the twenties to relieve them from the reparations obligations of the last war.

I. G. Farben, nominally a private business enterprise, has been and is, in fact, a colossal empire serving the German State as one of the principal industrial cores around which successive German drives for world conquest have been organized. It was because of its size and the range of the materials it produced that the giant trust Farben was able to wield great influence on the German economy and the war machine in preparation for world aggression.

With a net worth of RM. 6 billions at the very minimum, Farben's domestic participations at the close of hostilities in this war comprised over 380 other German firms, in which it had some participation. Its factories, power installations, and mines are scattered all over Germany. The extent of these participations and plants are indicated on these two charts which were attached to the Farben report as charts Nos. 1 and 2. There was hardly a raw material or auxiliary product required in its manufacturing operations which I. G. did not produce within its own organization. It owned its own lignite and bituminous coal mines, electric-power plants, coke ovens, magnesite, gypsum, and salt mines.

The mines in Germany owned by Farben are shown on one of our charts, which is No. 3.

I think it is rather interesting, in looking at these charts, to see the way Farben's power is spread all over Germany. The figures that appear on the books of Farben, based on what they call their book value, indicate that the physical plants and properties owned outright by Farben, including 100-percent owned subsidiaries, are located in the respective four zones as follows: In the United States zone, 9.75 percent of the total; in the British zone, 11.5 percent of the total; in the French zone, 20.2 percent of the total; and in the Russian zone, 58.55 percent of the total.

The CHAIRMAN. I remember one particular bond issue sold in this country for building power dams in the eastern part of Germany, I believe it was. Do they have any connection with those?

Colonel BERNSTEIN. I don't know, but they did have some facilities, as you can see, in the eastern part of Germany. It went all the way

over into this area [indicating on map], including a plant at a place called Dyhernfurth, where they made their poison gas, and when the Russians were coming through that area, the Germans and Farben were particularly nervous at the prospect of the Russians getting that poison gas and they left no stone unturned to get it out.

The CHAIRMAN. Isn't it a fact that a large number of securities were sold in this country that went into the construction of some of these, particularly water-power plants and things of that kind, and Farben got a great deal of benefit from it?

Colonel BERNSTEIN. Yes, sir; and I might say a lot of the other securities helped some of the other giant industries of Germany which played such a big role in the war conspiracy.

I. G.'s foreign participations, both admitted and concealed, numbered over 500 firms valued at a minimum of RM. 1 billion. Its holding companies and plants blanketed Europe; and its research firms, patent offices, and other agencies are clustered around every important commercial and industrial center in both hemispheres.

Even at the time of its formation in 1925, the Interessengemeinschaft Farbenindustrie A. G. was more than a "community of interests of dye industries," as its name would indicate. It was also the largest producer in the world of chemicals, such as acids and caustic soda. It enjoyed a virtual world monopoly of both the young and rapidly growing pharmaceutical industry and the high-pressure chemical industry, typified by the great synthetic-nitrogen capacity, which had been built up in Germany during the First World War.

In subsequent years, I. G.'s industrial domain expanded still further into many related and unrelated fields, such as plastics and synthetic resins, light metals, rayon and other cellulose productions, detergents, synthetic tanning materials, synthetic rubber, synthetic gasoline and lubricating oils, rare gases, coal, and even iron and steel. It had acquired this domain partly through the expansion of existing plants, partly through the construction of new facilities, and partly through its network of participations.

The industrial position of I. G. in Germany had no parallel with any other enterprise. It has been estimated by leading Farben officials that Farben alone accounted for approximately 5 percent of Germany's total industrial activity.

In 1943, Farben's total sales amounted to more than RM. 3 billion. This, of course, does not include the sales of firms in which Farben had a participation. There were no other chemical firms in Germany which came close to this figure in annual sales. Of the 4,000 chemical firms spread over Germany, only 3 had sales over RM. 100,000,000: (1) Henckel et Cie., which made sales of slightly over RM. 200,000,000; (2) Deutsche Solvay Werke, of which I. G. owned 25 percent; and (3) Schering A. G., each of which sold between RM. one hundred and two hundred million a year. These three together produced only a small fraction of Farben's production and these firms and the remainder of the German chemical industry could compete with I. G. in only narrow segments of the latter's production activities.

Farben had 40,000 shares of preferred stock, 38,000 of which were held by a wholly owned subsidiary, and 2,000 of which were held by the Deutsche Länderbank, which was Farben's bank. Although the common stock of the company was widely scattered among a minimum of 140,000 stockholders, the control of a decisive percentage

of the voting power of the company was in the hands of I. G.'s managing board of directors. Since the central executive committee of this managing board nominated the members of the supervisory board of directors, who, in turn, appointed members of the managing board, the latter was, in effect, a self-perpetuating group which exercised complete control over the policies of the company. The annual general meetings were, accordingly, mere formalities.

Approximately 13 percent of Farben's common stock was owned abroad. Four large chemical companies outside of Germany, namely, Francolor in France, Solvay et Cie. of Belgium, I. C. I. in Great Britain, and du Pont in the United States, are reported by I. G. officials to have held approximately 6 percent of the total common stock of I. G. Verification of these figures has not yet been possible because of the fact that all shares of I. G.'s common stock were bearer shares, making it extremely difficult to trace ownership.

With regard to the du Pont people in this country, they have told us that they sold their interests in Farben in 1940. Although we have asked them to advise us as to the terms and conditions of the sale, to whom the shares were sold, and for what reasons the shares were sold, we have not as yet been furnished with any information by du Pont.

In addition to its numerous foreign subsidiaries, I. G.'s world-wide affiliations included hundreds of separate non-German concerns and ranged over a score of industries. Its cartel agreements numbered over 2,000 and included agreements with such major industrial concerns as Standard Oil (New Jersey), the Aluminum Co. of America, E. I. du Pont de Nemours, Ethyl Export Corp., Imperial Chemical Industries (Great Britain), the Dow Chemical Co., Röhm & Haas, Etablissements Kuhlmann (France) and the Mitsui interests of Japan. It was through the operation of these numerous international cartels, conventions, agreements relating to the exchange of information, and other similar arrangements that I. G. exercised its tremendous economic influence throughout the world.

At the outbreak of the war, for example, at least 90 percent of world exports of dyestuffs were subject to the great international dyestuffs cartels and other ancillary agreements. I. G., accounting for well over half of this total of exports, exercised by far the strongest influence on the business policies of the group. Again, international agreements to which I. G. was a leading party set the conditions of international trade in many other organic chemical products such as acetic, formic, and oxalic acids, chlorinated hydrocarbons, rubber accelerators and antioxidants. In the inorganic field, I. G. participated in far-reaching regulatory arrangements covering chlorine-alkali electrolysis, caustic soda, caustic potash, carbonate of potash, chlorate of soda, salt cake, sodium sulphide, phosphorus, permanganate of potash, bichromates, titanium white, and rare gases.

In agreements relating to the production and sale of light metals and "poundage" metals essential to the manufacture of high-speed steels, I. G. also occupied a prominent position. The sale of nitrogen products was regulated internationally by a convention of which I. G. was an important principal. There were broad agreements on fatty acids. There were similar agreements covering whole fields of industrial activity such as the field of high pressure chemistry, which included vital processes for the manufacture of methanol, synthetic

gasoline and rubber. I will discuss the general effect of these agreements, and, particularly, the manner in which they impeded our mobilization for war, at a later point.

III. FARBEN MADE GERMANY SELF-SUFFICIENT IN WAR MATERIALS WHICH SHE PREVIOUSLY LACKED, FOR THE EXPRESS PURPOSE OF PREPARING FOR AGGRESSIVE WARS

It was Farben's task to make Germany self-sufficient in certain critical war materials which Germany lacked and which are indispensable to modern warfare—rubber, gasoline and lubricating oils, magnesium, fibers, tanning agents, fats, explosives, and so forth. The nature and purpose of I. G.'s assignment were clearly stated by Dr. Struss, chief of I. G.'s technical bureau and one of the principal technicians responsible for carrying out this assignment. In a speech delivered in 1938, exhorting increased production of synthetic gasoline, Dr. Struss explained:

Italy won the Abyssinian war by modern weapons. In modern wars the consumption of gasoline for motorized troops, tanks, airplanes, is immense. * * * Although provisions had been made beforehand, it was impossible to store these enormous amounts of gasoline needed in the Italian territories on the coast before the war. As Italy has no petroleum of her own, she was relying on the continual import from abroad.

Nearly all the petroleum in the world is controlled by U. S. A. and the countries that are members of the League of Nations. If, therefore, gasoline had also been included in the sanctions, as proposed by England and France, the war would have come to an end very soon. Italy could win the Abyssinian war and build her empire only because England and France could not carry into effect their intentions.

This example will make it clear to you, that it is quite out of question that Germany will run the risk of a similar situation and for this reason also the German demand of fuel has to be covered by Germany herself before long.

Between 1933 and 1943, vast sums were devoted to an extraordinary intensification of I. G.'s research activities designed to develop substitutes for war products not available to Germany and processes for the expansion of production from indigenous raw materials. For example, to compensate for Germany's deficiency in bauxite, the raw material necessary in the manufacture of aluminum, I. G. concentrated on the development of magnesium. To make Germany independent of rubber imports, I. G.'s experts developed the famous buna process for the manufacture of synthetic rubber. When Hitler came into power Germany produced no synthetic rubber. I. G. Farben perfected its buna process and attained an output of 144,000 tons by 1943. Prior to 1936 Germany produced its sulphuric acid from imported pyrites. In that year I. G. built a new plant at Wolfen for the production of sulphuric acid from German gypsum. When Hitler started to organize for war, Germany had no oil. I. G. organized a whole industry to produce it. Germany needed serums for its army at home and in the field. I. G. produced them 100 percent.

Certain processes and materials which I. G. laboratories and stock could not supply to the Nazis directly were procured for Germany from Farben cartel cohorts in foreign countries. In an article entitled "American Business and Standard Oil's Blueprint for World Trade," which appeared in the Petroleum Times for December 25, 1943, Mr. R. T. Haslam of Standard Oil Co. of New Jersey defended Standard Oil's relationships with I. G. Farben. He stated that the "secrets

brought to America from Germany 15 years ago by American scientists have been turned into mighty weapons against Germany."

The CHAIRMAN. However, in 1941-42 it took a congressional investigation to release some of these secrets for the rubber industry—do you remember that?

Colonel BERNSTEIN. I remember that very well. I also remember during that period of time Germany was producing far more in the way of synthetic rubber than we were in the United States, and I think these congressional investigations helped the production of those items in the United States.

Among the I. G. Farben files searched in Germany, records have been discovered indicating that this article was the subject of considerable study by I. G. Farben scientists. In a studied and technical answer to the Haslam article directed to Dr. von Knieriem, Farben's chief legal counselor and member of I. G.'s all-powerful central committee, three of Farben's leading scientists, Dr. Pier, Dr. Zorn, and Dr. Goldberg, stated on May 30, 1944, that I. G. Farben gained technical information from America far more important to Germany's war effort than Standard Oil was able to obtain for the American war effort from Germany.

The I. G. answer describes the "many valuable contributions" which were received "as a consequence of our contracts with the Americans * * * above, and beyond the agreement * * * which just now during the war are useful to us"; namely: Iso-octane; toluol; oppanol; buna; tetraethyl lead; polymerization; dewaxing and de-asphaltization of lubricating oils, and parafflow; and finally assistance in purchasing a large reserve stock of aviation gasoline and aviation lubricating oil, which I. G. obtained "on the basis of its friendly relations with Standard Oil," but acting in fact as "trustee to the German Government."

The Farben answer describes particularly vividly Farben's receipt of the newly discovered method for the production of iso-octane and its utilization for motor fuels. This process, according to the German scientists, originated "in fact entirely with the Americans and has become known to us in detail in its separate stage through our agreements with them (Standard Oil, New Jersey) and is being used very extensively by us."

The process for producing tetraethyl lead, essential for the manufacture of aviation gasoline, was obtained for the Nazis by I. G. Farben in exactly the same way. Of this important acquisition, the Farben scientists stated:

It need not be especially mentioned that, without lead-tetraethyl the present method of warfare would be unthinkable. The fact that since the beginning of the war we could produce lead-tetraethyl is entirely due to the circumstances that shortly before, the Americans had presented us with the production plants complete with experimental knowledge, thus the difficult work of development (one need only recall the poisonous property of lead-tetraethyl which caused many deaths in the United States of America) was spared us, since we could take up the manufacture of this product together with all the experience that the Americans had gathered over long years.

It was, moreover, the first time that the Americans decided to give a license on this process in a foreign country (besides communication of unprotected secret experimental knowledge) and this only on our urgent requests to Standard Oil to fulfill our wish. Contractually we could not demand it, and we found out later that the War Department in Washington gave its permission only after long deliberation.

I. G. exploited its cartel connections with American firms not only to obtain these important processes, but also to obtain certain critical materials themselves. Because of its relations with Standard Oil of New Jersey, I. G. in 1936, acting as agent of the German Government at the request of Dr. Schacht, Minister of Economics, and General von Blomberg, Minister of War, was able to contract for the purchase of \$20,000,000 worth of high-grade aviation gasoline and lubricants. (Actually \$14,000,000 worth was delivered.) This fuel was transported to Germany and stored there; and the foreign exchange necessary for payment was supplied by the German Government. In 1938, when Germany had not yet begun to produce tetraethyl-lead essential to aviation gasoline, Farben, at the request of the Air Ministry and in conjunction with one of its Swiss subsidiaries, arranged to borrow 500 tons of the lead from the Ethyl Export Corp. of the United States. Farben did not return the borrowed lead to the American company and willingly forfeited the \$1,000,000 which it had put up to secure the return of the lead.

Farben not only procured critical raw materials for the German war effort, but also acted as custodian of such materials. As early as 1935 I. G. began stock piling materials for the various branches of the Wehrmacht. For example, by order of the Luftwaffe, I. G. had projected plans for a huge magnesium plant at Aken in 1933 and another at Stassfurt shortly thereafter. By 1935 production began in the Aken plant. The stocks of magnesium were stored in the form of pipe pieces placed in cases by order of the Ministry of Economics and the Ministry of War. Commenting on this matter, Dr. Struss stated:

In Bitterfeld and in Aken a large part of the production, probably the largest part, was fabricated into tubes. * * * These tubes were packed in boxes and designated "Textilhülsen." There was no doubt that these tubes were parts of incendiary bombs.

Not only did I. G. stock pile its own production, but at the same time it purchased large stocks of magnesium from the Dow Chemical Co. of America to build up its reserves for the Luftwaffe. From 1936 on, I. G. began accumulating stabilizers for explosives from all parts of the world; and so far as the stock piling of chemicals was concerned, the Wehrmacht actually ordered I. G. Farben to accumulate as large stocks of phosphorus and cyanides as they could possibly obtain.

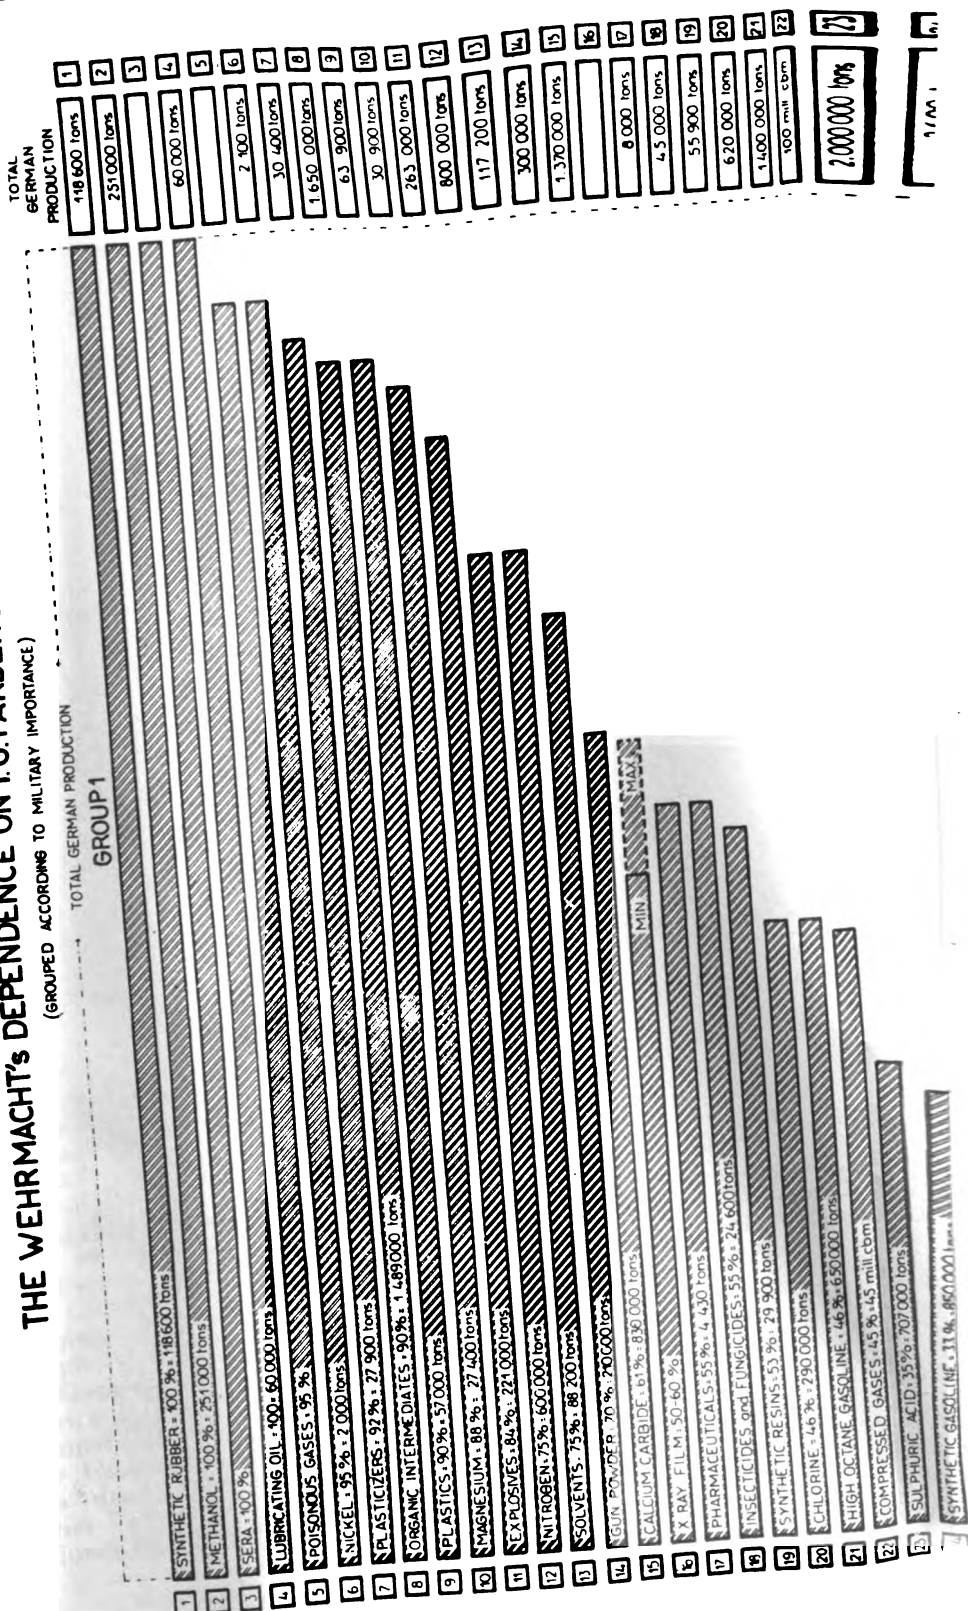

IV. FARBEN PRODUCTION WAS INDISPENSABLE TO THE GERMAN WAR EFFORT

The German war machine could not have functioned without the wide range of products manufactured for it by Farben. As the chart which I will submit here shows, Farben in 1943 manufactured 43 major products needed in the German war effort, of which 28 were of primary concern to the German armed forces, I. G. manufactured all of the synthetic rubber produced in Germany, all of the methanol, the serums, and lubricating oils. I. G. provided 95 percent of the poisonous gases and well over 90 percent of the nickel and plastics. Eighty-eight percent of the magnesium used by the Luftwaffe in its aircraft and incendiary bombs came from Farben, as did most of the nitrogen and explosives for the buzz bombs and V-2's.

It seems to me, Senator, that that chart is a very graphic portrayal of the incredibly vital role that Farben played in all of Germany's

THE WEHRMACHT's DEPENDENCE ON I.G. FARBEN's PRODUCTION (1943)

(GROUPED ACCORDING TO MILITARY IMPORTANCE)

war effort. The German Army simply couldn't have moved, or even threatened to move, unless it had an organization that produced that range in materials, and it seems to me the American public should be aware of that.

The CHAIRMAN. That chart is taken from their report?

Colonel BERNSTEIN. Yes, sir; prepared for us, as a matter of fact, by the Germans from Farben who were working under our direction.

I think that it is as vivid as any single thing we could produce for people to look at, to appreciate the role of Farben in the aggressive war program of Germany.

Not only did Farben produce practically the entire German supply of these and other essential war materials, but all other German chemical companies and numerous strategic German industries were almost totally dependent upon Farben for raw materials, for intermediate products, and for technical assistance.

The German soap industry was entirely dependent on I. G. for its supplies of detergent raw materials. The tanning industry obtained approximately 50 percent of its synthetic agents from I. G. The paint-and-varnish industry looked to I. G. for 65 percent of its raw materials. In the plastics field Röhm und Haas, Darmstadt, the only other independent producer, was totally dependent on I. G. for certain important types of intermediates. Similarly dependent was the only other producer of dyestuffs in Germany, Geigy, Grenzach.

In addition to all this, other German war industries could not have functioned effectively without the I. G. Farben know-how which was supplied to them. For instance, in the synthetic gasoline field I. G. actually produced only 33 percent of Germany's total production. Yet if we include the synthetic gasoline plants in Germany which were operated under I. G.'s license and managed by I. G.'s technical personnel, the company would have been responsible for approximately 90 percent of Germany's total output of synthetic gasoline.

The CHAIRMAN. If I remember correctly the hearings in 1942 it was testified that I. G. and Standard of Jersey formed Standard-I. G. in this country and another corporation to operate jointly, and that as their part of the contribution, Standard put in 30 million to be used in the construction of synthetic gasoline plants in Germany, which went into the German corporation, thereby gaining \$30,000,000 worth of plant facilities over there through that operation. Did you run into that?

Colonel BERNSTEIN. Farben was extremely astute in using its international contract and cartel arrangements to help get, as it were, free of charge, or with foreign financing, facilities, know-how, skills, and technology that enabled it to produce for the Wehrmacht.

The CHAIRMAN. That is the point I am bringing up. They were constantly making deals which would bring American capital in to build plants in Germany. At the same time, they were investing some German capital abroad to get control of industries in foreign countries; isn't that right?

Colonel BERNSTEIN. That is correct.

The CHAIRMAN. The dams I was thinking about were the Westphalia dams. Do you know whether that had any connection, whether Farben owned or used them?

Colonel BERNSTEIN. I do not.

The CHAIRMAN. There were rather heavy losses in the United States over the failure of that bond issue, which was executed entirely in the United States.

Colonel BERNSTEIN. In order to enable I. G. to execute this tremendous war production job, there was, of course a great expansion of its manufacturing facilities.

In the years preceding the war, more than RM. 4¼ billion, supplied principally by the German Government itself, was invested in new plants, mines, and power installations. An example of the military character of this expansion is the history of I. G.'s investments in the light-metals field. Between January 1, 1933, and January 1, 1942, I. G.'s capital investment in this field increased 1,600 percent. Between 1934 and 1935 alone it almost tripled. Just as the expansion of I. G.'s research activities was backed by the German Government because those research activities were directed toward war-connected objectives, so the German Government financed the expansion of I. G.'s productive facilities. Thus, for example, as early as 1936, the Wehrmacht, which had requested the construction of numerous types of plants, guaranteed the purchase of all production therefrom.

A compelling example of the special services performed by I. G. for the German armed forces in the production of weapons of war is the case of poison gases. In 1938 the German Government, dissatisfied with the progress made in the development and production of poison gases, called upon Farben to handle the problem. New I. G. plants for the production of these gases swung into operation and eventually, as indicated above, I. G. achieved 95 percent of the total production of poison gases. By order of the German Government many of these plants and all existing stocks of poison gas were completely destroyed before the occupation by the Russians. But at least one of the terrible secrets which the Germans hoped to save for the next war was uncovered. Our investigation has disclosed that an I. G. Farben official at Wuppertal-Elberfeld developed what the German scientists described as the deadliest poison gas in the world. This gas, unknown to the military authorities of the Allied Nations, could have penetrated any gas mask in existence.

I might say that in the interrogations of the Farben officials that occurred on this problem of the poison gas, the Germans indicated a great fear about the Russians getting the poison gas, but didn't seem to be as concerned at the possibility of either the United States or the United Kingdom getting the poison gas.

I. G. originally carried out its poison-gas experiments on monkeys; later, on human beings. For the latter purpose, inmates of concentration camps were used. I. G. Farben officials, concerned only with producing weapons of destruction, were unmoved by this use of human guinea pigs. Dr. ter Meer, one of I. G.'s leading scientists, justified the experiment not only on the grounds that the inmates of concentration camps would have been killed anyway, but also on the grounds that the experiments had a humanitarian aspect in that the lives of countless workers were saved thereby. These gases were not only used on helpless people during the stage of experimentation but were later used with full knowledge and acquiescence on the part of Farben to exterminate whole groups in concentration camps such as Auschwitz.

The CHAIRMAN. And the same thing at Dachau, in that so-called bathroom. That was one of the poison gases they used there; wasn't it?

Colonel BERNSTEIN. I believe so.

The CHAIRMAN. This information about poison gas, Colonel Bernstein, is extremely significant. Heretofore we have been told that the Nazis were the only ones who were guilty of crimes against humanity. Now in this testimony we learn that a German corporation was also guilty of crimes against humanity. I. G. Farben officials should be treated, then, no differently from the other Nazi war criminals; isn't that your impression?

Colonel BERNSTEIN. I think that must be done, sir, if one were to eliminate the entire group in Germany that is responsible for the war.

The CHAIRMAN. When I was in Frankfurt, they were questioning Schmitz, the head of I. G. Farben, and on that day he admitted that he had endeavored his best to get Hitler to use one type of poison gas which was actually deadly, and that Hitler had delayed, and he was rather condemning Hitler for not using it, because he felt it might have contributed to winning the war. Although he was always claiming loss of memory, like Hess, and others, for certain details, and always calling on his lawyer for advice before answering certain questions, he did admit that he had urged and insisted that it be used and rather resented the fact that Hitler had not used it.

Colonel BERNSTEIN. We apparently also heard some rumor to that effect and we are asking our people who are remaining on the other side to see what they can do to run it down.

The CHAIRMAN. There was an English major——

Colonel BERNSTEIN. I think it was Major Tilley who was examining Schmitz on that, and we are going to see if we can run down that information.

The CHAIRMAN. They didn't have an interpreter except Tilley and he was the only one who could talk to him.

Colonel BERNSTEIN. Major Tilley was doing a good deal of examination on that particular point. I might say our experience indicated that these key Farben officials were quite conscious of the iniquity of what Farben was doing in the field of poison gas, because the Farben officials tried to keep knowledge of the production by Farben of poison gas and its uses by the German Government as secret as possible, even in certain parts of its own organization, and it was only after rather intense investigation that we were able to get the information on poison gas out of these Farben officials.

The CHAIRMAN. I think they had been examining him for 3 or 4 days when I was there.

Colonel BERNSTEIN. Schmitz was a very difficult witness.

The CHAIRMAN. The major told me he had to get most of his answers through Schmitz' lawyer.

Colonel BERNSTEIN. That is right. Schmitz was almost one of the most recalcitrant of the witnesses that we had to deal with there.

The CHAIRMAN. He feigned senility several times.

Colonel BERNSTEIN. He was a man who was well informed on these things, as the head of the company. We feel that more recently we have had a little better luck in getting him to explain some of the transactions to which he was a party, which he instigated, particularly the role he played in some of the international cloaking transactions.

I. G. Farben's part in supplying the German armed forces with such weapons makes it clear that Dr. Von Schnitzler was not boasting when he stated in an address of welcome to the Spanish Ambassador on February 10, 1945:

But only during the war could German chemistry prove itself worthy of the task. It is no exaggeration to say that without the services of German chemistry performed under the "Four-year plan" (sic) the prosecution of modern war would have been unthinkable.

V. FARBEN WAS A NAZI AGENCY FOR WORLD-WIDE MILITARY AND ECONOMIC ESPIONAGE

I. G. Farben served the Nazi government as a principal agency for military and economic espionage throughout the world.

Farben's N. W. 7 office in Berlin was originally organized in the 1920's as I. G.'s liaison office with the various governmental agencies in Berlin. The organization of this office is shown on this chart which is chart No. 13 in the Farben report. This organization was transformed by Dr. Max Ilgner into the economic intelligence arm of the Wehrmacht.

The CHAIRMAN. That is the point I want to get to. Through the various cartel arrangements, one of the most valuable parts of German intelligence came through the German cartel group, particularly Farben, in the gathering of information from countries that they might seek to invade; isn't that right?

Colonel BERNSTEIN. That is correct, sir, and the organization that they set up to gather in this intelligence was simply an enormous one, and one that doesn't normally form a part of a business enterprise. It was so large as to cause one to believe that it was developed in conjunction with governmental authorities as a device to get intelligence in ways that the German Government itself could not get the intelligence. Farben, being a business enterprise, could more apparently legitimately get this intelligence, than could the Wehrmacht or other parts of the German Government.

The organization, although it engaged in many other activities relating to Farben, devoted a very large part of its effort and personnel to the collection of statistical and other intelligence.

The CHAIRMAN. Testimony introduced, I believe, at the rubber hearings was very illuminating on one point. Prior to our entry into the war, Standard had refused to sell toluene to Remington Arms on the grounds that Farben objected that the ammunition manufactured would go to England which was then at war with Germany, and later they objected to relinquishing secrets because the Government objected in their correspondence. In other words, when asked for certain secret information about rubber, even before we were at war, they objected because the Government of Germany had objected to their turning over the information which they had contracted to turn over.

Colonel BERNSTEIN. Farben would no more give away information that would hurt the German war effort than would the Wehrmacht or the Nazi Party. Their whole action was governed by the German war needs.

The CHAIRMAN. The impression I gained there was that, unlike an American company which would carry through a contract, they were working in full partnership with the Nazi Party, because every time

a request would come from a foreign cartel partner they would apparently submit the question to the General Staff before they would take action.

Colonel BERNSTEIN. What you say is confirmed by what we found in Germany.

The CHAIRMAN. I wondered if you had found confirmation of that.

Colonel BERNSTEIN. We did, sir.

Ilgner was the nephew of Herman Schmitz, I. G.'s president, and was also a member of I. G.'s managing board of directors. Some indication of the tremendous expansion of this office in preparation for and during the war may be gathered from the fact that its expenditures in 1943 were RM. 7,000,000 as compared with RM. 997,000 in 1932.

The largest department of N. W. 7 was the so-called statistical department (VOWI) which was formed by Dr. Ilgner in 1929 under the guidance of Dr. Reithinger. This department compiled comprehensive statistics dealing with the economic, financial, and social life of many foreign countries. Although the workings of the statistical department could not be justified from the standpoint of I. G.'s regular business operations, it was supported by top officials of I. G. and the Government. This department's tremendous compilation of statistical data, most of which obviously had no value to I. G. as a chemical and dyestuffs manufacturer, was invaluable to the government of a country preparing for world conquest.

With the outbreak of war, N. W. 7 became the focal point of requests for economic intelligence from many Nazi agencies. It began to look like what it actually was—an adjunct of the German Government. Many of the VOWI employees were ordered to military service with the Wehrwirtschafts-und Rüstungsamt (Office of War Economics and Armament), but actually continued the performance of their prior duties with Mr. Ilgner's office. The vast fund of information gathered by Dr. Reithinger and his staff proved invaluable to the OKW (Army Supreme Command). In fact, VOWI was so highly regarded by the high command that at the outbreak of war, the high command considered taking over the entire agency. However, this step was resisted so strongly by other government agencies which were also dependent on it for assistance, and VOWI was able to service the requests of the OKW with such rapidity and so completely, that it remained part of the N. W. 7 office.

From 1937 on Dr. Reithinger and his entire staff concentrated on the preparation of maps showing strategic factories in foreign countries. These surveys were prepared under direct orders from the Wehrmacht and were used by the Luftwaffe in selecting bombing targets. The VOWI also carried on extremely important investigations with respect to all European industries, particularly in England. These investigations concerned themselves, in the main, with the capacity and location of facilities for the production and transport of aircraft, munitions, and other armaments; the raw materials situation in these industries; and oil imports, exports, and refineries. This information was also used by the Nazi High Command for bombing and other purposes. Said Dr. von Schnitzler, "For all European countries they made up plans"—plans of death, destruction, complete annihilation, which almost achieved complete success.

In order to carry out its many tasks, VOWI needed a well-organized international intelligence network. This it possessed in Farben's vast

empire of foreign holdings and connections. With German ownership carefully concealed in most cases, it furnished an ideal organization for the super spy job assigned to it. In some cases, Farben's foreign subsidiaries were owned outright. More often, however, I. G. strived to maintain a semblance of legal independence though, in fact, it exercised complete control over the firm. The company cloaked its direct and indirect ownership and control of its foreign subsidiaries by utilizing every conceivable device known to the legal and "extra-legal" mind, including the use of nominees, option agreements, fictitious or intervening transfers, dividend and loan agreements, pool agreements, endorsements in blank, escrow deposits, pledges, collateral loans, rights of first refusal, management contracts, service contracts, patent agreements, cartels, and withholding know-how. Geheimrat Hermann Schmitz, I. G.'s president, was known throughout the industrial world as "the master of financial camouflage." He more than justified this designation. In 1940, I. G. Farben was able proudly to inform the German Government that "our measures for camouflage have proved to be very good during the war, and have even surpassed our expectations in numerous cases."

The CHAIRMAN. Were you successful, Colonel Bernstein, in uncovering the camouflaged assets, particularly in the United States?

Colonel BERNSTEIN. Yes, Senator, we were successful to a great extent.

The CHAIRMAN. You couldn't hope to be 100 percent successful.

I say that because, unfortunately, there are still people in all countries who want to try to get back to the old prewar cartel arrangements they were mixed up with, and some of them are helping considerably in that. Isn't that a fact, sir?

Colonel BERNSTEIN. That is right.

The CHAIRMAN. Americans and other nationals assisted in the concealment of camouflaged assets.

Colonel BERNSTEIN. The wealth of material which we have now accumulated tells a fascinating story of Farben's efforts to conceal ownership in assets held abroad, particularly in assets held in the United States and Latin America. Part of that story has already been disclosed by the Department of Justice and other interested agencies of the Government. However, these governmental agencies have requested that we refrain from disclosing at this time the balance of materials which we have turned over to such governmental agencies because of the possible prejudice which may result to other investigations and litigation in which the Government has an interest. I am constrained to point out to this committee that one of the main difficulties that we continue to run into in attempting to locate Farben's overseas assets has been the unwillingness of Swiss banks and companies and even the Swiss Government to make available to us files located in Switzerland and belonging to Farben and to Hermann Schmitz, the president of Farben, who was the one man most responsible for devising the system of hiding the true ownership of Farben's overseas assets.

After the outbreak of war in September 1939, the Anglo-French navicert control system threatened to cut off German exports to South America and other parts of the world, thereby depriving Germany of foreign exchange, and also of imports vitally needed for the prosecution of the war. The manner in which I. G.'s hundreds of ostensibly

independent foreign concerns having no apparent ties with the Axis were used to combat this blockade is by now fairly well known.

The CHAIRMAN. Did any American concerns—and by that I mean United States of America concerns—help Germany combat the blockade?

Colonel BERNSTEIN. Yes, sir. In fact, the principal manner in which Farben combated the blockade was by arranging to have American firms make direct deliveries to Farben's South American firms. Farben was represented in all these transactions by Alfredo E. Moll who acted as its undercover purchasing agent. In the early part of 1940, at the request of I. G., Moll and Ernest K. Halbach, an American citizen and president of General Dyestuffs, went to Milan for the express purpose of discussing the manner in which Farben's sales agencies in South America were to be supplied with dyestuffs and chemicals formerly obtained from Europe. Halbach agreed that General Dyestuffs would forward the merchandise through Fezandie & Sperrle, an American export firm. In addition to furnishing supplies from his own firm, Halbach agreed to procure merchandise from other American dealers. Many of the firms for whom the merchandise was destined were on the British blacklist. Accordingly, Moll gave Halbach a list of third-party consignees who received the merchandise under an explicit understanding that they were to resell the bulk thereof to I. G. blacklisted firms. Hugh Williamson, another American citizen and an attorney and director and officer of General Aniline and Film, also lent the services of his corporation in supplying South American firms. In a report which Moll sent I. G. from Mexico he also mentioned how very helpful Advance Solvents and Chemical Corp. of New York had been in maintaining deliveries to Farben's Latin-American houses. According to a report which Moll sent to Farben from Mexico during the period from March to November 1940, well over a million dollars' worth of exports were shipped from New York to Latin America.

I might add, Senator, that here again we feel that we have got documentary evidence which we found in Germany to support the points I have just been making.

What is not so well known is the role these I. G. cloaked companies played in supplying VOWI, and thereby the Nazi High Command, with economic and political intelligence.

Chemnyco, Inc., Farben's American economic intelligence services, is an excellent example of these effective espionage methods. In the guise of an American company, Chemnyco was able to supply the Wehrmacht with facts and figures concerning the American economy. Utilizing normal business contacts Chemnyco was able to transmit to Germany tremendous amounts of material ranging from photographs and blueprints to detailed descriptions of whole industrial developments.

Originally, this material was sent to I. G. Farben directly. After the outbreak of war, it was routed through I. G. offices and associates in Italy and Portugal. How invaluable this intelligence was considered is indicated in a letter dated August 3, 1940, from N. W. 7 to the Minister of Economy, which stated:

Extensive information which we receive continuously from the Chemnyco about the American company, is indispensable for our observations of the American conditions, especially with a view to the technical development, the possi-

bilities for export and the competition of foreign countries and companies, especially England. Moreover, this material is, since the beginning of the war, an important source of information for governmental, economical, and military offices.

In 1939 in the midst of a United States Government investigation, Chemnyco's vice president, Rudolf Ilgner, a naturalized American citizen and brother of Max Ilgner, ordered the destruction of a considerable part of the company's files. Ilgner pleaded guilty to the charge of obstructing justice and was convicted.

The CHAIRMAN. And Max Ilgner was the one who ran the VOWI? Colonel BERNSTEIN. He ran the whole N. W. 7 set-up.

The CHAIRMAN. And this was his brother?

Colonel BERNSTEIN. His brother.

As I say, Ilgner ordered the destruction of a considerable part of the company's files.

The CHAIRMAN. Do you know what happened to him? He isn't the one who is up on a chicken farm in Connecticut now?

Colonel BERNSTEIN. I understand he is.

The CHAIRMAN. So many of those fellows are operating chicken farms in Connecticut; some of them in New Jersey.

Did you secure any more information on this subject in Germany, Colonel?

Colonel BERNSTEIN. Unfortunately, all of the files on this particular subject were destroyed before we could get to them. We did, however, cross-examine over there, and the information we got was that the only reason the files were destroyed in this country must have been because the officials of Chemnyco were worried about violating United States security statutes.

I. G. Farben had contact men all over the world called the I. G. Verbindungsmänner. The Verbindungsmänner, in the main, were officials of the leading I. G. firm in the particular country.

The CHAIRMAN. They had one in each country where they had a few firms?

Colonel BERNSTEIN. That is right.

One of the principal duties of these Verbindungsmänner was to submit monthly reports pertaining to economic, political, and military matters. With respect to politics, the reports included such subjects as internal political developments, the composition of new governments, the effects of the Proclaimed List and the British blacklist, inter-American security, labor, immigration, political reactions within the respective countries to current events, pro-Axis and anti-Axis propaganda, and the purposes of special diplomatic missions.

Matters of vital military interest contained in these reports included a discussion of additions to the merchant navies in various Latin-American countries, a reporting of ship movements (including convoys), statistics concerning tonnage in ports, port facilities, construction of new highways and bridges, the condition of rail transportation between the Latin-American countries, the operations of Pan American Grace Air Lines, shipments of war materials to the United States and Great Britain, the Argentine military mission to the United States, rearmament in Chile, and the acquisition of air and naval bases by the United States.

The CHAIRMAN. Colonel, did you run into any information abroad or here as to whether or not the profits of American ventures, or South American ventures, were available to the espionage system of Germany in the countries in which the profits were, particularly after Germany had been blockaded?

Colonel BERNSTEIN. I think we did. I think we ran into a good deal of information in that regard, and I think a little later in my statement we can indicate how the system of the agencies throughout the Western Hemisphere that Farben had was used by Farben and by the German Government to provide funds for espionage and propaganda activities in this hemisphere.

VI. FARBEN WAS A SPEARHEAD OF THE NAZI ECONOMIC WARFARE PROGRAMS

I. G. Farben performed tremendous services for the Nazis in financing and disseminating propaganda designed to create disunity among various foreign nations and among various political, religious, and racial groups within such countries. I. G. Farben performed equally great services for the Nazis in undermining the war potential of foreign countries by means of its cartel agreements, monopoly position, and its penetration of the chemical and related industries throughout the world.

(a) Dissemination of propaganda

I. G. organized for its large-scale part in the Nazi propaganda program in the same careful, efficient way it had organized for other war operations. It first acted to assure that all I. G. Farben agents abroad were thoroughgoing Nazis. On September 10, 1937, Farben's commercial committee passed a resolution which stated in part as follows:

It is hereby understood that in no case will men be sent to our foreign companies who do not belong to the German Labor Front and who do not possess a positive attitude toward the New Order.

The CHAIRMAN. The German Labor Front was not a labor organization; it included management and at one time it included even technicians, did it not?

Colonel BERNSTEIN. The German Labor Front was the device used by the Nazi government to crush the labor unions in Germany.

The CHAIRMAN. That is the point I wanted to get at.

Colonel BERNSTEIN. One of the first things the Nazi Party did was dissolve the labor unions. It set up its Labor Front. One of its high officials was Robert Ley, who recently committed suicide. It stole all the funds of the labor unions. After our Army came into Germany, one of the first things that we did was to take over the Labor Front, dissolve it as the organization that then existed, and then we proceeded to deal with the properties that it had.

It had simply an incredible amount of property throughout the length and breadth of Germany. It also had within its organization, an extensive banking system, the German Labor Bank, which was so much a part of the Nazi system that we had no choice but to shut it down completely and liquidate that bank.

Other parts of the German Labor Front are being liquidated. They owned an enormous number of houses. My recollection is that

military government was attempting to develop a policy of using much of the houses and other properties belonging to the Labor Front to house men who were definitely anti-Nazi or were displaced persons. You are quite right, Senator, when you say the German Labor Front was not a real labor organization.

The CHAIRMAN. They used the name Labor Front to try to appease some of the labor unions?

Colonel BERNSTEIN. I don't know whether they were appeasing them or trying to throw sand in the eyes of a lot of people.

The CHAIRMAN. That may have been it.

Colonel BERNSTEIN. I continue the quotation:

The men who are to be sent should make it their special duty to represent National Socialistic Germanhood. Especially are they to be instructed that upon entering our companies they are to make contact with the Ortsgruppe of the respective Landesgruppen (organizations of the Nazi Party within the various countries) and regularly participate in their meetings as well as in the Labor Front. The sales departments should also see to it that an appropriate amount of national socialistic literature is given to them. The cooperation with the A. O. (Auslands-Organization, the foreign organization of the Nazi Party) must become more organic. It appears practical, together with the A. O., to work out a uniform plan, for the purpose of detecting defects still existing in our foreign companies to the end that they can be eliminated.

The CHAIRMAN. Anybody sent to these countries had to be a Nazi in good standing?

Colonel BERNSTEIN. Not only a Nazi in good standing, Senator, but a Nazi with what they called a positive attitude, an active Nazi.

The CHAIRMAN. Was that Farben people?

Colonel BERNSTEIN. Yes, sir. They were Farben officials, Farben employees.

I might say, Senator, in the many months I have spent in Germany, aside from the people now being tried as war criminals, I met only one man in the middle of Germany who admitted he was a Nazi.

The CHAIRMAN. They all think there are some in the next town but there are none in the town they live in.

Colonel BERNSTEIN. They all disclaim it now.

Needless to say, this policy was faithfully executed. Moreover, as I have already pointed out, the Verbindungsmänner were, in all cases, highly trusted agents carefully selected by N. W. 7 and approved by the Auslands Organization.

A few examples of I. G.'s propaganda operations will suffice to indicate the nature and importance of its services to Nazi psychological warfare.

I. G. worked directly with the "Aufklärungs Ausschuss," the overseas propaganda department of the German Government, in disseminating anti-American propaganda in Argentina. In 1939, Farben reviewed for this German propaganda organization a series of 381 articles against the United States for publication in Argentine newspapers, suggesting the names of newspapers in Buenos Aires which could be used effectively for the dissemination of such articles. For this purpose, Farben made available to the German propaganda department the services of Heinrich Homann, I. G. Verbindungsmann for Argentina.

Farben, which had for years been engaged in the dissemination of pro-German propaganda in Latin America through the schools, the press, and libraries, was particularly effective in securing wide distri-

bution of Nazi propaganda. One of its customary devices for obtaining publication of propaganda was the club of its advertising. Thus, for example, in February 1938, the pharmaceutical department of I. G. agreed on the following advertising policy:

Advertising in journals hostile to Germany shall on all terms be avoided.

The CHAIRMAN. From a commercial aspect that wouldn't be considered good trading practice by an American business house, would it? In other words, they wouldn't issue such an instruction to their advertising agencies?

Colonel BERNSTEIN. I am sure they wouldn't.

The CHAIRMAN. By the way, do you know where Homann is?

Colonel BERNSTEIN. I don't know. As you have undoubtedly seen in the press recently a great deal of difficulty exists in rounding up many of the German propaganda agents, and espionage agents in Argentina. It is a matter I should think of considerable concern to our Government.

(b) Furnishing other propaganda agencies with foreign exchange

Not only did I. G. engage directly in the dissemination of propaganda, but it was also a principal agent for furnishing foreign exchange to German governmental agencies engaged in this and related psychological and economic warfare operations abroad. In Brazil alone, during 1940 and through January 1942, the agencies of the Bayer division of Farben furnished the equivalent of RM. 3,639,343 to the German Embassy and to representatives of the NSDAP. In Spain, when the German Embassy wanted Spanish pesetas, Farben raised credits from the Spanish banks and paid back these credits with subsequent peseta receipts. A telegram dated September 2, 1939, from Cia. General de Anilinas, S. A., Mexico City, to I. G. stated:

In case of war I. G. legation asks firms Mexico to let them have moneys on a loan basis. Amounts shall be refunded by German Government. Please authorize monthly payments P. 10,000 on behalf of all I. G. agencies. Mexico press must be influenced. * * *

A notation on the bottom of this telegram states: "Board agreeable; Dr. Overhoff informed." Such payments abroad were important to the German Government in acquiring critical raw materials and in financing sabotage, espionage, and propaganda.

All of the I. G. Latin American firms maintained unrecorded in their books, secret cash accounts in banks in the names of their leading officials. These accounts were used to receive and to disburse payments of a confidential nature as, for example, the proceeds of sales to firms who did not want to be discovered dealing with the Proclaimed List I. G. companies. These are the famous S accounts and S. finance offices. The assets thereby secreted, ostensibly unaffected with an Axis taint, were free to finance espionage and propaganda, to bribe, to pay the salaries of Nazi foreign agents and to give them the wherewithal to carry out their work.

The CHAIRMAN. That is the use of private funds for governmental purpose, not in the form of taxation or tax credits, but just actual advances; isn't that right?

Colonel BERNSTEIN. Yes, sir; having the advantage, of course, that by using these private funds, they were able to cloak the purposes to which the funds were being used?

The CHAIRMAN. The point I am making is that Farben was really a part of the German Government and not a private business at all.

Colonel BERNSTEIN. I quite agree with that.

I would add perhaps one thing to it, Senator, that Farben was a part of the governmental system, with the people in Farben playing roles comparable to the top governmental people. It isn't easy to say who owned whom, as it were.

The CHAIRMAN. No, but in a similar situation, if, shall we say, du Pont in this country did the same thing abroad, why foreign countries would blow up, and we would blow up in this country, too, I say this shows the connection of Farben with this whole war program as a real partner in it.

Colonel BERNSTEIN. I agree with that, sir. I might say that in 1941, I believe, when I was with the Treasury, and when General Aniline & Film Co., was investigated by the Government, many of these points were made at the time. Some information was available in this country as to the role that Farben was playing on behalf of the Nazi government along these lines, but we have been able now to get what we hope is proof that will convince our people here that Farben would leave no stone unturned, on behalf of the Nazi government, and I believe on behalf of any future government, to carry on its espionage activities, its propaganda activity, and whatever other activity a government wanted to see performed through the world.

The CHAIRMAN. But, following through on that logically, we must reach this conclusion: No private capital would do that unless they had been promised things. Is that right?

Colonel BERNSTEIN. Yes, sir.

The CHAIRMAN. And in the event of the successful conquest of the world, by the Nazi government, which they set out to accomplish would we then not have found Farben in control of all that phase of industry? They invested in an adventure in world conquest there.

Colonel BERNSTEIN. Both as a matter of promise, and as a matter of knowledge Farben knew that if its gang was going to win, Farben was going to get its part of the booty.

The CHAIRMAN. That is why any American corporation that wants to go into a cartel shows a lack of foresight, because what would have happened is that they would have taken over their cartel partners and operated them. That was their ambition, that was one of the purposes of forming the cartels.

Colonel BERNSTEIN. That is right. From the point of view that we have been discussing here of the information becoming available to the German Government and the cartel being worked in a way to assist the German Government in an aggressive program, a U. S. concern might just as well have been making a cartel arrangement with the Wehrmacht.

The CHAIRMAN. That is what puzzles me when I find alleged businessmen still thinking they ought to reenter cartel arrangements.

Colonel BERNSTEIN. I agree, sir.

(c) *Economic warfare through cartel connections*

Germany's foreign economic policy was aimed at undermining the economic strength of countries with which Germany "anticipated" conflict. In direct testimony, high Farben officials not only admitted to that policy, but also stated that they had played an important

part in its formulation and execution. As succinctly stated by one of these officials:

The foremost purpose of the Nazi government and I. G. and all other industrialists was to keep the Wehrmacht all powerful vis-à-vis all other countries, including the United States of America.

The CHAIRMAN. In previous hearings this committee has heard much evidence showing how cartel agreements with German firms affected our national security. In this evidence only one conclusion can be reached, namely, that German companies, in conspiracy with the Nazi government, purposely crippled our war production. This statement bears out those statements. Don't you think so—that it was intentional, sir?

Colonel BERNSTEIN. I agree, sir.

The CHAIRMAN. And the machinery used was the cartel agreement?

Colonel BERNSTEIN. That is right, sir, and one would hope that our business enterprises would learn that fact now.

As has already been demonstrated before this and other congressional committees, I. G. used its extensive cartel connections with foreign firms to further this policy of the German Government. The dangers inherent in such monopolistic agreements take on a new significance when the activities of one of the parties are subordinated to the over-all policy of its government.

I. G. Farben acted in a representative capacity for the Nazi Government in its relations with its cartel partners. By virtue of its dominant position in the world chemical industry, Farben was in an excellent position to use its numerous cartel connections to prepare Germany for war. To recite the examples of such use would be to recapitulate material which is already, for the most part, public knowledge. An outstanding example, however, is Farben's successful effort, by means of cartel agreements with Standard Oil, to delay the development and use of buna rubber in the United States until at least 1940 while at the same time producing sufficient buna in Germany to make the German Army and German industry independent of rubber imports. This investigation has confirmed certain data heretofore presented to the Truman, Bone, and Kilgore committees by the Department of Justice with respect to this transaction which so seriously imperiled the war preparations of the United States. The story, in short, is that under the so-called Jasco agreement, synthetic rubber was to come under Farben's "sphere of influence." Standard was determined, however, to have an absolute monopoly of synthetic rubber developments in the United States, if and when Farben released the American rights to its process to Standard in accordance with the Jasco agreement. Accordingly, Standard fully accomplished I. G.'s purpose of preventing United States production by dissuading American rubber companies from undertaking independent research in developing synthetic rubber processes.

The CHAIRMAN. And, incidentally, by blocking the use of the alcohol process and various others that had been developed in other countries too.

Colonel BERNSTEIN. That is right.

The CHAIRMAN. By the way, do you know we are going right back in the same track again? We recently shut down all our alcohol synthetic rubber plants in the United States and are operating only Standard's petroleum plants.

Colonel BERNSTEIN. This Standard accomplished by falsely creating the impression that it had already received the buna process from Farben and was attempting to work out a scheme for licensing the process to the American rubber companies. As a matter of fact Farben had no intention of divulging the process. One conclusion which can be drawn from Standard's "stringing along" of other companies is that it did not want them to proceed with independent research thus preventing Standard from ever having a monopoly in the field. Thus, Dr. Loehr indicated that, pursuant to conversations between Mr. Howard of Standard Oil and I. G., Standard had agreed to keep American firms out of the synthetic rubber field and would let them enter it only if compelled to do so by forces beyond its control.

The CHAIRMAN. In other words, had agreed to block research in this country?

Colonel BERNSTEIN. Yes, sir; at a time when war was in the air.

By 1939, however, synthetic rubber development had reached a stage where Mr. Howard of Standard Oil stated that it would no longer be possible for him to keep the information in regard to the buna processes from the American companies. Nevertheless, he assured I. G. that Standard would manage to stay "on top of the whole scheme." As time dragged on and the licenses were not forthcoming, the clamor of the American rubber companies became so intense that Standard, not wanting to reveal the true situation, turned to Farben for an excuse to give the rubber companies. Howard of Standard, in October 1939, at a meeting with I. G. representatives in Basle, stated that he had to be provided with an excuse for not getting the know-how. I. G. obligingly cabled Standard Oil to the effect that the authorities would not permit the information to be given to the American firm. "These are the conclusions," said Dr. Loehr, "which seem to disclose that I. G. impaired the military strength of the United States," which I would have called an understatement.

The CHAIRMAN. That identical excuse was furnished in the courts of the United States when Standard was being sued. It was furnished before the Truman committee as an excuse for not releasing the patent, as an excuse for saying they had no know-how, because Farben refused to give them the know-how, and on a statement that they had nothing but the right to operate under a patent with which they had no know-how, and Farben would not give it to them, showing a conspiracy between Mr. Howard of Standard, the vice president, and Farben, to still hoodwink and stay on top, and apparently Standard is still able to stay on top, as evidenced by the shutting down of these other independent plants.

At that point in the record I want to introduce some testimony taken at a previous occasion with reference to the question of alcohol and petroleum and the way that has been manipulated in the past 6 months.

(The testimony referred to will be inserted in a later volume of the printed record.)

VII. FARBEN WAS GERMANY'S GREATEST SINGLE SOURCE OF FOREIGN EXCHANGE

Mr. BERNSTEIN. I. G. was the dominant factor in the important German chemical export trade. It accounted for approximately 10 percent of the country's total exports of all products and approxi-

mately 50 percent of Germany's total exports of chemicals and allied products. In the different sectors of that trade its position varied considerably, being strongest in pharmaceuticals, dyestuffs, and photographic materials in the order named. In 1937, 70 percent of I. G.'s total production of pharmaceuticals, 65 percent of its dyestuffs, and 40 percent of its photographic materials were exported. Its exports greatly exceeded its imports, and its net income from royalty payments and sales of patent rights also was considerable.

These transactions made Farben Germany's largest single earner of free foreign exchange. Without this foreign exchange (a) Germany could not have purchased the strategic raw materials, equipment, and technical processes unavailable in Germany and essential to Germany's rearmament, and (b) the German Government could not have financed its espionage, propaganda, and other military and political activities abroad in the preparation for and prosecution of the war.

Government pressure on German industry, and in particular on I. G., to increase their procurements of foreign exchange was always strong. With the beginning of the Four Year Plan this pressure became acute; but I. G. cooperated fully with the government in making available all possible foreign exchange for government purposes. The numerous examples of this have been set forth previously. Finally, when the foreign exchange situation became absolutely desperate, I. G. even sold some of its investments abroad.

Von Schnitzler testified in an interrogation conducted in July 1945, that it was especially important for the Nazi government to control I. G.'s policies with respect to its foreign participation and its foreign economic relations, if only from a standpoint of foreign exchange.

The policy followed was this, and I quote: "Export only what is not necessary for the Wehrmacht; import only what is absolutely necessary for the Wehrmacht."

The CHAIRMAN. Thank you, Colonel. If you will be back tomorrow morning at 10:30 a. m. we will reconvene then.

(Whereupon the hearing adjourned until 10:30 a. m., Wednesday, December 12, 1945.)

ELIMINATION OF GERMAN RESOURCES FOR WAR

WEDNESDAY, DECEMBER 12, 1945

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
SUBCOMMITTEE ON WAR MOBILIZATION,
Washington, D. C.

The subcommittee met at 11:02 a. m., pursuant to adjournment on December 11, 1945, in room 104-B, Senate Office Building, Senator Harley M. Kilgore, West Virginia, chairman, presiding.

Present: Senator Harley M. Kilgore, West Virginia.

The CHAIRMAN. The committee will come to order.

I was called to the White House unexpectedly this morning and therefore found it necessary to postpone the hearing to this hour. I also have to be at the Supreme Court in about 30 minutes, so we will get under way now. Will you please go ahead Colonel Bernstein.

TESTIMONY OF BERNARD BERNSTEIN, COLONEL, GENERAL STAFF CORPS, DIRECTOR, DIVISION OF INVESTIGATION OF CARTELS AND EXTERNAL ASSETS, OFFICE OF MILITARY GOVERNMENT, UNITED STATES (GERMANY)

Colonel BERNSTEIN. In yesterday's discussion we described certain cartel arrangements and their use by Farben as a means of strengthening the war potential of Germany. I should also have mentioned the use of the cartel arrangement for the purpose of getting around decrees of foreign governments, governments which were both enemy governments to Germany at the time or neutral governments. We have a document which I would like to introduce as an exhibit to the Farben report which indicates how Farben used that technique for the purposes that I mentioned.

This is a letter of the 5th of October 1939, written by Farben to the Ministry of Economics in Germany. It discussed the arrangements which Farben had made with Standard Oil to hide the true ownership of Farben-owned patents throughout the world. The device to be used was the Jasco company, to which the ownership of the patents would be transferred. Farben, in its letter to the Ministry of Economics, says:

After the outbreak of the war we have carried on negotiations with Standard Oil with the aim in the interest of both parties to prevent the passing of laws concerning patent ownership in favor of a third party through governmental interference in the enemy countries and also in the United States of America, should the political relations with the United States develop unfavorably.

The CHAIRMAN. They meant that even in the event we might go to war?

Colonel BERNSTEIN. Yes, sir.

At another point in the same letter, Farben states:

In this way it is accomplished that our patents in enemy territory, which today are no longer at our disposal and could be confiscated at any time, are placed in the hands of a large indisputably neutral undertaking but with which we are connected by manifold interests and relations, so that at the end of the war—it makes no difference what position the United States takes—friendly cooperation will again result. Otherwise the danger exists that these patents may be confiscated and transferred by the enemy government to such transferees as might give us difficulties at the end of the war, or make impossible an exploitation of the processes developed by us.

The letter further indicates:

We have already reported to the high command of the armed forces and have received appropriate approval.

The CHAIRMAN. Showing that that plan was approved by the German General Staff?

Colonel BERNSTEIN. The German General Staff, the German Government. It was patently a plan to attempt to forestall action by the British and American Governments dealing with Farben-owned patents throughout the world.

The CHAIRMAN. Jasco was really a patent-holding corporation?

Colonel BERNSTEIN. Organized under the laws of Louisiana, and jointly owned by Standard Oil and Farben, although Farben tried to conceal its interest.

The CHAIRMAN. But there was joint ownership there?

Colonel BERNSTEIN. Yes, sir.

The CHAIRMAN. And the ownership of the patents referred to the ownership of patents in America?

Colonel BERNSTEIN. In America and throughout the world, including the British Empire. They were to use this device not only to defeat the efforts of the United States to seize the patents but it was also a device to defeat the efforts of the British Government, or any other Allied Government that would go to war with Germany.

The CHAIRMAN. What is the date of that letter?

Colonel BERNSTEIN. Fifth of October 1939.

This morning's radio carried the story of evidence being produced at the Nuremberg trial with respect to the use of slave labor by Krupp. Krupp was not the only big industry that used slave labor. We were able to find in the files of Farben a document marked "Secret" dated the 8th of January 1945, which lists the people working for Farben. Over 63,000 foreign slave laborers worked in the Farben plants and constituted about 35 percent of the total labor force of Farben. In that number were included over 45,000 men and over 17,000 women. In addition to that, Farben employed about 9,500 prisoners of war, consisting mainly of Englishmen, Frenchmen, and Russians, and also people of other nations.

The CHAIRMAN. Were they employed, or did they just use them?

Colonel BERNSTEIN. They used them as slave laborers.

The CHAIRMAN. What remuneration was made?

Colonel BERNSTEIN. This document indicates the nature of the remuneration and the amount of food which these categories of laborers were to be given. It indicates how the laborers from the East, in particular, were required to work under even more onerous conditions than the slave laborers of the West.

I might add that in addition to what I mentioned before, Farben employed about 7,000 prisoners from concentration camps, including the camp at Auschwitz. I have no doubt that many of these slave laborers, who were prisoners of war, were engaged in the production of war goods in complete violation of international law.

The CHAIRMAN. What I am getting at is this: Did you find any records there to indicate whether or not Farben was selling their material to the German Government, or what the financial dealings were between Farben and the German Government during the war?

Colonel BERNSTEIN. There were numerous dealings because the bulk of Farben's output was for the German Government and because of the tremendously important role of Farben in the war economy. For these reasons, Farben was able undoubtedly to get this huge amount of slave labor. It was just one more method whereby the Reich facilitated the production of war material in the carrying on of the war, and also managed to kill off the slave laborers, ultimately.

The CHAIRMAN. My point is this: Was Farben charging for the material they sold, or was it being done as a seized plant by the German Government? Were they paying for their labor to the German Government or were they paying the workers? For instance, if we used prisoners of war on farms in this country we paid so much a day to the account of the man who did the work, plus the food and clothing, and so on. I was wondering whether the same thing was done by them.

Colonel BERNSTEIN. There was a certain amount of payment directly to the workers. Even then the payment was subjected to substantial taxes. The workers from the east were being subjected to a special tax.

At one point here, it says,

As it is usual for normal workmen, eastern workmen get installments insofar as wages are paid monthly. A special note of settlement, however, shall not be made for the eastern workmen. Applications on the part of firms and workshops for payment of extra pay for surplus labor, extra pay for heavy and dirty work or granting of works bonus have to be addressed in a given case to the Sozialabteilung Arbeiterangelegenheiten and all data in support of the application shall be furnished. The eastern workmen have not to pay neither tax on wages nor Bürgersteuer (civil tax). The employer, however, is bound to pay for each eastern workman the so-called Ostarbeiterabgabe (duty for eastern workmen) in accordance with the schedule attached in annex 1.

The amount of their pay was very low. The amount of their food rations was very low.

The evidence at the Nuremburg trial is applicable to the whole use of slave labor throughout Germany, and the picture given at the trial was simply terrific.

The CHAIRMAN. What the Government really did was paid a little bit and collected most of it back in taxes?

Colonel BERNSTEIN. That is right. And when the men were about to die off, they were sent out of the factories and back into the concentration camps to die.

The CHAIRMAN. I see.

Colonel BERNSTEIN. Yesterday I referred to the group of big industrialists who designated themselves as "The Circle of Friends of Himmler." I would like to put into the record, if I may, one or two of the translations of the letters which we found at the J. H. Stein Bank in Cologne during the course of one of our examinations.

This letter is from von Schroeder to an official of one of the Siemens firm and is dated March 15, 1944:

DEAR DR. BINGEL: Again this year I call on the friends of the Reichsführer with the request that, as in these past years, a sum of money be placed at his disposal to contribute to his work. May I ask that this year's contribution be, if possible, at least as much as the previous ones and that it be paid into the special account "S" with the Bankhaus Stein, Cologne, thereby expressing our faith in our Reichsführer. You know how much our Reichsführer appreciates your support and you may be assured that he is very grateful. Thanking you in advance, Heil Hitler. (Signed) von SCHRÖDER.

Copies of the identical letter were sent to a list of about a dozen representatives of the big industries. The first name is that of Dr. Bütefisch, one of the important officials of Farben.

Another letter is to the Reichsführer, S. S. Heinrich Himmler, Berlin from von Schröder:

MY VERY HONORABLE REICHSFÜHRER: With great joy I learn of your nomination as Reichsminister of the Interior and take the liberty to wishing you good luck on assuming your new post. A strong hand is now very necessary in this post and it is highly welcomed especially by our friends that it was you who were chosen for this by the Führer. I take this opportunity to inform you that your circle of friends has again placed at your disposal this year the sum of reichsmarks one million for "special purposes." An exact list showing the names of the contributors will be sent to you shortly. Again all my best wishes—as well as those of my family.

I remain yours, loyal and advising, Heil Hitler. (Signed) VON SCHRÖDER.

That is dated August 27, 1943.

As I mentioned yesterday, von Schroeder was a lieutenant general in the SS. He played an important role in the banking house of J. H. Stein which had its head office in Cologne. That bank was intimately related with the iron and steel and coal business of the Ruhr and von Schroeder played an active role in that connection.

The CHAIRMAN. Rather a nice size campaign fund?

Colonel BERNSTEIN. And to be able to be sure to get it each year, also.

I would like, if I may, to be able to indicate a few additions, but perhaps I will be able to cover them in any questions that you might like to put to me, Senator.

VIII. FARBEN'S DREAM OF WORLD CONQUEST

From the day of its accession to power the Nazi government planned and prepared for a war of world conquest. This investigation has demonstrated beyond all doubt that the policy of the Nazis was not only known to I. G. Farben and its officials but that it was always a policy with which I. G. fully agreed and which it supported to the full extent of its power and resources. This active support and cooperation can be traced back to the autumn of 1932, when I. G. seriously considered the desirability of discontinuing its costly experiments in hydrogenation. At that time leading Farben officials were split into two camps, those believing the experiments should be continued, the others, that they be discontinued in view of the losses which were running into hundreds of millions of reichsmarks. I. G. sent two of its leading officials to Hitler to determine his attitude toward retention of the protective duty on imported natural oil. Hitler assured the I. G. delegates that the duty would be retained and that the experiments fitted into his program.

Several months later, in February 1933, a meeting of 20 of Germany's leading industrialists was called by the President of the Reichstag, addressed by Hitler, and solicited by Dr. Schacht. The funds so collected, amounting to RM. 3,000,000, were used to finance the election campaign of the Nazi Party. Dr. von Schnitzler attended this meeting and arranged for the I. G. contribution to be made by Hermann Schmitz, the chief financial officer of I. G., later president of the firm. Subsequently, Schmitz was appointed to the Reichstag.

After the advent of the Nazi regime in Germany, the close relationship of I. G. to the Wehrmacht was visibly strengthened.

In 1934 the Wehrmacht became important and with increased tempo after 1936 the Wehrmacht became the prominent factor in the whole picture. Since 1934 a strong movement for investments in our plants for commodities of decisive military importance became more and more pronounced with the main objective of increasing the military potential of Germany. At first autarchic principles to make Germany independent of importation from abroad was one of the leading objectives. Since the declaration of the 4-year plan in 1936, the movement took an entirely military character and military reasons stood in the foreground. Hand in hand with this, the relations between I. G. and the Wehrmacht became more and more intimate and a continuous union between I. G. officials on the one side and the Wehrmacht representatives on the other side was the consequence of it.

One of the first steps taken by Farben in this regard was the establishment of an office which concerned itself entirely with military liaison. This was the so-called Vermittlungsstelle W. In a report on the functions of this organization, dated December 31, 1935, it was clearly stated that:

The aim of this work is the building up of a tight organization for armament in the I. G. which could be inserted without difficulty in the existing organization of the I. G. and the individual plants. In the case of war, I. G. will be treated by the authorities concerned with armament questions as one big plant which in its task for the armament, as far as it is possible to do so from the technical point of view will regulate itself without any organizational influence from outside [the work in this direction was in principle agreed upon with the Ministry of War (Wehrwirtschaftsamt) and from this office with the Ministry of Economy] * * *. To the field of the work of the Vermittlungsstelle W belongs besides the organizational set-up and long range planning, the continuous collaboration with regard to the armament and technical questions with the authorities of the Reich and with the plants of the I. G.

By the admission of I. G. officials, this office was established because, by 1934, transactions between I. G. and the Wehrmacht had become so numerous and the I. G.-Wehrmacht relationship had grown so intimate that coordinated liaison was required. It also was established at the suggestion of the German military authorities and "occupied itself principally with problems in connection with a possible war." Prior to the Allied occupation, I. G. officials destroyed the files dealing with Vermittlungsstelle W matters.

At approximately the same time that the Vermittlungsstelle W was established, I. G. received orders from the Government to prepare production plans in the event of war. As Dr. Struss said:

I know that a representative of the Ministry of Economics, Dr. Lenz, and a representative of the Ministry of War, Dr. Mureck, assisted in the making of these plans. I remember that Dr. Mureck often told us that the Ministry of War wants the plans drawn up in such-and-such a way.

Pursuant to these instructions I. G. Farben in 1934 began to mobilize for war. Every I. G. plant prepared its production plans for war and turned them over to the Vermittlungsstelle W, which submitted them to the Ministries of War and Economics. By early 1939,

these plans, the so-called MOB plans for the production of essential military goods, were approved by the Ministry of War and ready to be executed. According to Dr. Engelbertz, manager of I. G.'s plant in Griesheim, which produced many vital war chemicals such as intermediates for explosives, carbon electrodes for aluminum, and chlorine electrolyses, his plant received the approved MOB plans for its products in March or April 1939 with the understanding that they were to be put into operation at the outbreak of war.

By the middle thirties I. G. had become so preoccupied with war that the facilities of all its plants were devoted to "war games" (Kriegsspiele) and to "maneuvers in the technical problems which may come up" in the event of war. According to Dr. Struss, the war games or Kriegsspiele began in 1934 or 1935 under the supervision of Wehrmacht officials. These games were described in detail by Dr. Struss as follows:

It is true that since 1934 or 1935, soon after the establishment of the Vermittlungsstelle W in the different works, theoretical "war plant games" had been arranged to examine how the effect of bombing on certain factories would materialize. It was particularly taken into consideration what would happen if 100- or 500-kilogram bombs would fall on a certain factory and what would be the result of it. It is also right that the word "Kriegsspiele" was used for it. The "Kriegsspiele" were prepared by Mr. Ritter and Dr. Eckell later on partly by Dr. v. Brunning by personal order, of Dr. Krauch. Whether these "Kriegsspiele" originated from Professor Krauch's own initiative or by order of the Air Force, it is not known to me. The tasks were partly given by the Vermittlungsstelle W and partly by officers of the Air Force. A number of officers of all groups of the Wehrmacht (Navy, Air Force, and Army) participated in these "Kriegsspiele." The places which were hit by bombs were marked in a map of the plant so that it could be ascertained which parts of the plant were damaged, for example, a gas meter or an important pipe line. As soon as the raid finished, the management of the plant ascertained the damages and reported which part of the plant had to stop working; they further reported what time would be required in order to repair the damages. In a following meeting the consequences of the "Kriegsspiele" were described and it was ascertained that in the case of Leuna (plant) the damages involved were considerably high; especially it was found out that alterations of the pipe lines were to be made at considerable cost.

It is significant to note that in all these preparations for war I. G. Farben did more than merely comply with orders and requests of the Wehrmacht and Nazi government agencies. It functioned, in fact, as though it were a research organization of the German Government, itself charged with the responsibility of discovering all possible means of increasing the military might of Germany. Farben voluntarily initiated many projects for the Wehrmacht and then proceeded to convince the Wehrmacht of the importance of such projects. This aspect of I. G. Farben's operations is clearly disclosed in a report of Farben's development and experimental work. The report states that—

A whole range of problems has been worked at by the I. G. for its own account and only later, after certain results of experiments could be established, the offices of the Army were interested in these problems * * *. The cases were respectively rare where the Army for its part approached the I. G.

The report estimates that about 30 to 40 percent of the military projects worked on by I. G. "were submitted to the Army by the I. G. on its initiative."

Farben's active cooperation with the Wehrmacht was not confined to the assumption of the initiative on the part of I. G. technicians. With the appointment of I. G.'s chief technical man to the Four-Year

Plan, the aims and purposes of I. G. Farben merged with and became an integral part of the Nazi plans for aggressive war. In 1936 Dr. Carl Krauch, with the approval and encouragement of the Farben central committee, was selected by General Milch, on behalf of Hermann Goering, to head up the research and development section for the chemical industry in the Four-Year Plan. The duties attached to this post required the collection of statistical data and the exploitation of new processes.

Krauch continued these duties in the Four-Year Plan until 1938, always keeping his colleagues in Farben informed of his activities, while still performing his Farben duties as chief of Division I.

As the result of an unusual incident in June 1938, Goering appointed Krauch chief of all chemical expansion and construction under the Four-Year Plan. A report on certain technical processes was submitted to Krauch's office for examination and approval. Contained therein, and not intended for Krauch's approval, was a list of production quotas which the German chemical industry would meet in the years 1938-39. Krauch realized that these were hopelessly optimistic figures and could not possibly be realized by the chemical industry. He immediately went to Goering and convinced him of that fact. At that point, Goering appointed Krauch chief for the entire chemical industry under the Four-Year Plan.

When questioned about his knowledge of Hitler's intention to wage war, Krauch stated:

Question. Didn't it become apparent to you first in 1935, when the Wehrmacht exhibited great interest in your buna, and later after you assumed your job with the Four-Year Plan in 1936 to increase the chemical capacity of Germany, that the Nazi government was on the road to war?

Answer. I had the feeling that they were going to war, as Dr. Bosch told me in June 1938, and that was when I went with the wrong figures of Loeb to Goering and said to him we can't go to war because the figures are all wrong. We will lose the war on this basis.

Thus, Krauch, Bosch, and leading I. G. officials had specific, affirmative information of the Nazi plan of aggression at least as early as June 1938, 15 months before the invasion of Poland on September 1, 1939. It had been Krauch's job to help make Germany ready for war. From the German aggressors' point of view Krauch did his job well.

Thus, before the Nazi army attacked Poland, I. G. and the rest of German heavy industry was mobilized and ready after long years of preparation. In describing how perfectly the "MOB" plans worked when put into operation, Dr. von Schnitzler stated, in part, as follows:

All the German industries were mobilized in summer 1939 and in the summer 1939 the Wirtschaftsgruppe Chemie issued an order that the plans for war were in action. In June or July 1939 I. G. and all heavy industries as well knew that Hitler had decided to invade Poland if Poland would not accept his demands. Of this we were absolutely certain and in June or July 1939 German industry was completely mobilized for the invasion of Poland."

These activities of I. G. standing alone would leave no room for doubt that Farben knew for many years that the German Government intended to wage aggressive war. In addition, I. G.'s leading officials assisted in the formulation and execution of the internal and external policies of the Nazi regime to promote that end. Its president was a member of the Reichstag. Its leading scientist was one

of Goering's chief assistants under the Four-Year Plan. Its statisticians and economists prepared intelligence for the Nazi high command. Scores of its technicians were constantly on loan to the Air and War Ministries. According to Dr. von Schnitzler, the war was "only the last step of a long-prepared evolution" of the Nazi policies.

Months before the attack, I. G. was officially informed by Goering's office that the Nazi war machine would invade Poland in September 1939 if Poland did not accept Hitler's demands. Before Hitler's moves against Czechoslovakia, I. G. had completed its preparations to take over its leading competitor in that country.

Farben not only planned and prepared for war, but it also planned and prepared for the future when Germany would have conquered the world. In particular, it planned for Farben's part in the New Order and for the use of the spoil which Farben was to receive.

In June 1940, with half of Europe already under the Nazi heel and with the downfall of France imminent, Hitler's plans to conquer the world seemed capable of early fruition. I. G., too, had dreams of world empire, dreams which it translated with painstaking clarity into a document appropriately entitled "Neuordnung" (New Order). The document was submitted to the Ministry of Economics. The letter of transmittal which accompanied the document stated that I. G. anticipated the German conquest of Europe, felt that a new order for the chemistry industry of the world was required to supplement Hitler's New Order, and rationalized its purposes in the light of the "unfair" activities taken by the Allies against Germany after World War I.

Today's extent of non-German production, however, is distinctly the result of the political and politico-economic forces which have been directed against Germany for the last 20 years.

The immediate objective of the document was to insure the full cooperation of the chemical companies of the conquered countries in producing for the Wehrmacht. The second objective envisaged the complete incorporation of the chemical industries of Europe, including the British Empire, within the framework of Hitler's New Order. The third objective was to eliminate United States competition in the world market. Finally, Farben was preparing to utilize again its vaunted economic warfare weapons, cartels, capital investments and know-how, in anticipation of a possible conflict between Germany and the United States of America.

I. G. proposed to accomplish the subversion of the European chemical industry by absorbing companies, eliminating plants, and controlling production and distribution through the medium of German-dominated cartels.

Under Farben's contemplated new order trade relations between Europe and other countries in the chemical field would have been completely reserved to I. G. and Germany. I. G. planned to accomplish this complete control of the European economy by the use of import duties, quotas, licenses, export regulations, certificates of origin, foreign exchange controls, tax policies, and patents and trade-marks. The charts, numbered exhibit 8 to chapter VI of the Farben report, demonstrate the painstaking detail with which Farben drew up its specific plans for each country. Particularly noteworthy are the number of items of which local production was to be completely

forbidden, and the number of items the production of which was to require prior German approval.

The charts attached hereto illustrate graphically the nature of Farben's specific plans for a new chemical order in individual countries. They present some indication of the painstaking detail with which Farben prepared these plans. In the extreme left column are listed chemical products, trade in which was presumably of particular interest to Farben. The next column lists the major producers in each country of the itemized product. There then follows an indication of the present import duty and of the new schedules proposed by Farben. I. G. proposed three separate duty schedules: (1) For imports from Germany; (2) for imports from other European countries within the German orbit; (3) for all other countries including the U. S. A. Products coming in under the first schedule were to be either free or dutiable at a token rate. Products imported under the second, for the most part, were to be dutiable at 30 percent of value. Products imported under the third schedule were to be taxed at 50 percent or more of their value. These schedules thus assured that all imports would be from Germany and virtually prohibited importation from the United States. In addition, I. G. advocated that the construction of additional capacity within the various countries for the production of most of these products should require German approval and that restrictions be placed upon the export of these products by the listed producers.

Also of particular significance are the new import duty schedules proposed by Farben. Products from Germany were to be completely duty free, or dutiable at a token rate only. Imports from countries within the German orbit were to have a duty amounting to 30 percent of their value. Imports from all other countries, however, including the United States, where permitted, were to be taxed at 50 percent of their value. These schedules alone assured that all imports would be from Germany and virtually prohibited the importation of products from the United States.

With respect to England, the I. G.'s new order contemplated that Great Britain would be required to guarantee Germany at least a 30-percent participation in the British dyestuffs turn-over and that products not produced by the British industry would be imported only from Germany. Furthermore, I. G. proposed that British dyestuffs companies be prohibited from exporting directly or indirectly to Europe (including Asiatic Russia), the American Continent (with the exception of Canada), China, Japan, Dutch East Indies.

Farben's economic blitzkreig of the United States was specially planned. Said Dr. von Schnitzler:

It must be remembered that in preparing the Neuordnung we were following the lines of the so-called Gross-Raum-Politik laid down by the Government.

We were looking to the overwhelming downfall of France and eventual capitulation of England when we prepared the document. It must be remembered that we knew well the aims and policies of the Government and we knew that it was the intention of the Government to improve its strength in relation to the countries outside of the European sphere. This meant, of course, the United States because outside of Europe the United States was the only strong country with which Germany had to reckon. Therefore, we wrote in the Neuordnung that we intended to keep Germany as strong as possible militaristically in relation to the United States. We could accomplish this only by limiting the production of armaments in Latin America. We did not want in the event of an eventual conflict with the United States to permit Latin America to supply the United

States of America with war materials. It should be remembered that I. G. had to follow the lines of the Nazi Government.

Partially explaining the methods I. G. would use, Von Schnitzler wrote:

It is obvious that the Government's first interest was a militaristic one. Therefore the main points in the "Neue Plan" will have been: no licenses or know-how for such chemicals should be given to the chemical industry outside of Europe without before having asked I. G. of their opinion. This measure, of course, can be understood as being directed against the United States because United States remained apart from Russia the only country with a great economic potential in the outside world.

Farben linked the entire success of its Neuordnung to the outcome of its struggle with the United States.

The principal weight of the discussion bearing on a new arrangement of the world market will rest on the relationship with the North American concerns.

With covetous eyes, Farben emphasized that pan-Americanism had been strengthened by the war and that this would hamper the Neuordnung program.

The strengthening of pan-Americanism will coincide with the effects of the fact that England will now completely lose her role as financier of the Latin-American countries * * * and that the United States of America will take her place. * * * It will, therefore, depend on the degree of order or disorder of the European economic sphere and on the creation of a determined commercial policy, in how far and at what pace Europe, and more particularly Germany, will be able to rebuild, maintain, and develop its position as a regular trade partner in the Latin-American continent.

I. G. also laid special emphasis on driving the United States from the European market. For example in regard to nitrogen products, it proposed:

For the future, it is desired that—in a manner similar to that proposed for other market—Germany be given priority for (the supplying of) all additional requirements of nitrogen of any kind. This stop shall be designed, in particular, to exclude or control North American imports. * * *

Farben also urged and the Economic Ministry agreed that—

It is necessary to remove the Americans from French production scene with every means at our disposal.

Commenting upon the Economic Ministry's views in this matter, I. G. stated:

The determination with which he (Schlotterer) expounded this thesis leaves no doubt that we ought not be too much concerned as to the means we are to be allowed to use.

Having made a major contribution to the Nazi war potential, I. G. reaped the profits of aggression. Even prior to the Nazi conquest, Farben was the major chemical firm on the continent. Yet its acquisitions as a result of conquest were tremendous. These acquisitions of chemical and dyestuffs firms in the conquered countries totalled approximately 350,000,000 reichsmarks.

One after the other, it absorbed or eliminated its competitors in the dyestuffs field in the conquered countries until not a single independent dyestuffs company remained. This looting was characterized by (1) the planning engaged in prior to each Nazi aggression; (2) the ruthlessness and speed which was exhibited in taking over and managing such plants; and (3) the fact that the transactions were executed under duress and that rightful owners often did not receive any compensation whatever.

After the occupation of Poland, for example, Farben acquired, among other firms, Boruta, the largest Polish dyestuffs plant in that country with full knowledge that the Polish owners would receive nothing for this property. Farben did make payment for this particular property; but it was to the SS organization which took charge of allocating the loot in Poland. It should also be noted that Farben's ability to obtain concessions of this type from the SS was undoubtedly facilitated, by its large annual contributions to Heinrich Himmler, Reichsführer SS.

In the case of Czechoslovakia, I. G. Farben was determined that the dyestuffs industry of Czechoslovakia would not fall into the hands of some third party thereby impairing the world position of Farben. Accordingly 3 months before the occupation of the Sudetenland a meeting was called between Farben's Berlin personnel and the managers of its Czech agencies to decide upon a course of action. On July 28, 1938, a monograph on the structure of the Prager Verein was issued. By September 23, 1938, Farben officials had conducted successful negotiations with the Nazi government for the appointment of two of its directors as commissars of the Prager Verein's two largest plants, the two dyestuffs plants (Aussig and Falkenau) in the Sudetenland. A Farben report describes subsequent events as follows: •

On October 1 the entry of the German troops began, on October 3 Falkenau was occupied, and on October 9 Aussig [was occupied]. All Sudeten factories of the Prague Verein were entrusted to a commissar, Director Dr. Kugler (I. G.).

Farben President Hermann Schmitz was quick to pay off for such lightning service. He sent a wire to Hitler:

Profoundly impressed by the return of Sudeten-Germany to the Reich, which you, my Fuehrer, have achieved, the I. G. Farbenindustrie puts an amount of one-half million reichsmarks at your disposal for use in the Sudeten-German territory.

The Prager Verein objected strongly to Farben's commissars and to Farben's efforts to negotiate the purchase of the plants. However, it had no alternative but to sell out for a price equal to only 1 year's annual sales turn-over.

Commenting on the speed of the negotiations Dr. von Schnitzler stated:

Seldom has a great international economic agreement containing so many clauses and covering so many domains been concluded so speedily as this. In 1 day the agreement in principle was reached and the lump sum was fixed. In the 30 days following all clauses were prepared and in another 2 days negotiations in Berlin about December 7, the agreement and all its bylaws were signed.

In answer to a query as to what would have happened to the plants if the owners had refused to sell, Dr. von Schnitzler replied:

* * * no doubt the German Government would have sequestered the property and installed commissars to manage it on a permanent basis.

With respect to France Farben at first expected to purchase the local chemical companies at knock-down prices from the SS or the Wehrmacht. It soon became apparent to the Nazis, however, that many French industrialists were willing to join forces with the Germans against the Allies rather than lose their property; and, in fact, that certain French chemical leaders, notably Joseph Frossard, the head of Etablissements Kuhlmann, which was the dominant chemical

company in France and next to I. G. was the largest chemical company on the European continent, were extremely anxious to open negotiations with the Germans. Dr. von Schnitzler said:

Frossard consequently started nearly at once—I think it was in August—with his endeavors to come on speaking terms with us, he not only addressed Dr. Kramer in Paris, but he let me know through Mr. Koechlin of I. R. Geigy in Basel that he was desirous of a conversation with us. We saw Mr. Koechlin in October 1940, in Zurich. Notwithstanding the applications made by I. G. to the German Government I was not in a hurry to react on their suggestions, as we were not prepared to renew our relations with the French group on the basis of the old cartel agreement but aspired to a much deeper rooted agreement. I thought it advisable to let them simmer in their own juice and to wait till they asked for such private negotiations through the official channel of the armistice commission.

Many months before the meeting of Hitler with Petain and Laval placed German-French collaboration on an official basis, the French chemical industry was pressing for an understanding with I. G. Farben. The nature of the understanding finally reached is described in a report from the Farben agent in Paris who stated:

One sees absolutely clear at Kuhlmann's that Germany will win the war and that the organization of the European economy will be made under the leadership of Germany. Frossard offers to put his whole industry into the services of Germany to strengthen the chemical potential for the continuance of the war against England.

Kuhlmann would be prepared to produce all preliminary and auxiliary products for the I. G. which would be desired from the German side. He, Frossard, wants a confidential collaboration—closer connection by marriage in the dyestuff and chemical field, enclosure of the French industry in the European economy under German leadership.

Not only was Frossard himself anxious to work for the Nazis, but he also promised that he would see to it that any other leading men of the Kuhlmann concern who might prove intractable would be dismissed. In addition, he offered to secure the collaboration of other French industrialists. Frossard also assisted I. G. greatly in the transfer of French labor to Germany. Even before this transfer was officially agreed to by the Vichy government, Frossard offered to arrange for the transport of such laborers to German factories.

You can be convinced [wrote Dr. von Schnitzler] that General Director Frossard handles the question of sending workmen in closed units to works of I. G. with just as much understanding as good will * * *

Frossard was not the only example of French collaboration. French chemical companies showed a similar disposition. Dr. von Schnitzler testified that only one chemical company in the whole of France showed a refractory attitude. With this cooperation it was not very difficult for Farben to secure effective control of the French dyestuffs industry through the creation of Francolor in which Farben took a 51 percent interest.

Francolor, created in 1940-41, absorbed substantially the entire French dyestuffs industry. In return the French companies received less than one-half of 1 percent of the common stock of Farben.

These were the fruits of conquest which Farben earned as a fellow conspirator, with knowledge of and participation in the crime. As stated by Dr. Gustav Küpper, chief counsel of Farben's dyestuffs department:

To my knowledge, I. G. Farben, its directors and officers, fully approved the Nazi aggression against Austria, Poland, Czechoslovakia, and France. * * * I. G. profited considerably from these conquests.

X. THE MENACE OF I. G. FARBEN

To summarize, the I. G. Farben report has confirmed what heretofore have been mere speculations; and has uncovered a wealth of evidence proving conclusively: (1) that without I. G.'s immense productive facilities, its intensive research and vast international affiliations, Germany's prosecution of the war would have been unthinkable and impossible; (2) that Farben not only directed its energies toward arming Germany, but concentrated on weakening her intended victims; and (3) that this double-barrelled attempt to expand the German industrial potential for war and to restrict that of the rest of the world was not conceived and executed in the normal course of business. For the proof is overwhelming that I. G. Farben officials had full prior knowledge of Germany's plan for world conquest, promoted those plans, planned their own operations accordingly, and anticipated expanding their empire on the plunder acquired.

As an example of an aggressive management which disregarded all human values and committed itself to a program for world domination, Farben is symbolic of the role played by the large industrial firms of Germany. The proposition must be recognized that giant industry, throwing all its weight behind a despotic government, actually holds the balance of power in the conduct of successful warfare. As stated by Dr. von Schnitzler:

Thus, in acting as it had done, I. G. contracted a great responsibility and constituted a substantial aid on the chemical domain and decisive help to Hitler's foreign policy, which led to war and to the ruin of Germany.

Thus, I must conclude that I. G. is largely responsible for Hitler's policy.

As of VE-day, Farben officials themselves estimated that 87 percent of I. G.'s wartime (1943) capacity remained intact. This is much larger than I. G.'s war potential as of the outbreak of war in September 1939. In order to resume large-scale operations these plants require only the necessary fuel and raw materials. Practically all of the technicians necessary to the successful operation of these plants are available in Germany. I. G.'s war potential in terms of production on VE-day is shown graphically on this chart which is chart No. 16 to the Farben report.

If allied policy is that "Germany never again will threaten her neighbors or the peace of the world" then Farben must be destroyed together with its capacities for war production.

The CHAIRMAN. I have noted a few questions that I want to ask you.

For instance, can you furnish a general statement as to what your investigations of Farben and other German business, industrial and financial, enterprises indicate as to the role they played in Germany's conspiracy to wage aggressive war? You covered it partly yesterday, but I wonder if you have anything more.

Colonel BERNSTEIN. I would like to say this, that in addition to our investigation of Farben we have been investigating a number of other concerns, particularly, the iron and steel companies, the electrical companies and the big banks. We hope to prepare reports which we feel would be of equal significance to the report we have prepared on Farben. I think generally it might be said that what we found Farben doing was also being done by other big industrial and financial enterprises in Germany. We also find an interrelationship between the financial and industrial firms which was very close

and intimate and reflects an identical spirit and point of view on the subject of aggression.

The CHAIRMAN. In other words, this was not what you might call a national security agreement at all. It was really an agreement for conquest. The plans were based on conquest and aggression and not merely to safeguard the German Reich?

Colonel BERNSTEIN. Absolutely. It was a question of loot as a result of aggression; a desire to dominate the world from a political, military, and economic point of view.

The CHAIRMAN. This I. G. Farben, your testimony shows, had cartel relations with Standard Oil of New Jersey, and also with Ethyl Export Corp. and through these relationships Farben was able to obtain some five hundred tons of tetraethyl of lead. This portion of the report brought to my attention some paragraphs from the over-all report recently issued by United States Strategic Bombing Survey. I would like to read to you one paragraph from the report:

Eliminating from consideration the Heydebreck and Brixlegg plants, which were only projects, and the two Italian plants, whose production was unavailable, there were only three plants supplying ethylene dibromide. These plants were not bombed, although the equipment and processes used were such as to make them highly vulnerable to air attack.

Colonel Bernstein, I should like you to comment on the failure to bomb the only tetraethyl plants available to Germany.

Colonel BERNSTEIN. I am in no position to comment on that. My main work was in the field of civil affairs and military government and I am not familiar with the programs of the Air Force in their bombing.

The CHAIRMAN. You have been around the Farben offices in Frankfurt quite a bit haven't you?

Colonel BERNSTEIN. Yes, sir. I have been around the Farben offices in Frankfurt and the Farben plants in the Frankfurt area, Griesheim, and other places.

The CHAIRMAN. You noticed the bombing limits around the Farben offices?

Colonel BERNSTEIN. The Farben offices were not hit by bombs.

The CHAIRMAN. There was a rather definite line around them at which bombing ended.

Colonel BERNSTEIN. Sir, I am not sufficiently expert in the functioning—

The CHAIRMAN (interposing). I am talking about demolition.

Colonel BERNSTEIN. Actually, large parts of Frankfurt, including portions fairly close to the Farben building, the main headquarters, were bombed. Farben in Frankfurt itself did not appear to have been hit by any bombs. However, I have no significant information on that subject.

The CHAIRMAN. I was very much interested in Farben's so-called "new order," document which described plans for its own expansion after a German victory. Would it be correct to say that if Farben's "new order" for the chemical industry had been placed in effect American chemical industries would have been limited to United States markets? Can you describe in some detail just how the "new order" scheme would have operated with reference to American industry?

Colonel BERNSTEIN. Senator, I feel that the "new order" document is a tremendously significant document to American business. It

gives them, as clearly as I have ever seen anywhere, a picture of what would have happened to American industry had Germany succeeded in winning the war. I think pretty clearly the chemical companies of the United States would have been completely frozen out of European markets, and, by and large, out of world markets. The detail with which this plan was prepared is simply incredible. This document that I have here is a translation of the "new order" document. It reveals a knowledge of conditions in the chemical field throughout the world that could only have resulted from the expressed desire to formulate a plan for the absorption of most of these chemical companies, and for the drastic reduction of the role which the remainder would be permitted to play.

The charts, which we have over here [indicating] which we have attached as exhibits to the Farben report indicate also the techniques that Farben intended to follow in order to expand its own control and reduce the role played by chemical companies in Europe and in the United States.

I think Farben clearly recognized that its main opponent would be the American chemical industries and its program was formulated in such a way as to be ready to take on the American chemical companies in a life-and-death struggle and Farben anticipated it was going to be the victor.

I, myself, feel that a great service would be done to American business concerns, not only in the chemical field, but in other fields, if organizations such as the Chamber of Commerce and the National Association of Manufacturers were to take this "new order" document and out of it write a brochure which they could circulate to their membership, so that their membership could, without having to read a several-hundred-page document, get the most essential points of the program of Farben to dominate the world chemical industry. And Farben was dealing only in chemicals. Undoubtedly the other great German industries were preparing comparable plans for their fields of activities.

Farben makes a point of the fact that its plan is simply a translation into the field of chemical industry of the whole "new order" philosophy of the Reich, and we may assume that that philosophy would be translated in industry after industry.

The CHAIRMAN. You noticed, Colonel, did you not, in the various files in Frankfurt that there would be a folder file, one on the techniques in dealing with North American businesses and another labeled Information with Reference to Certain Phases in the United States, and another one, Information on Brazil. There seemed to be a most exhaustive survey of conditions.

Colonel BERNSTEIN. It was, sir.

The CHAIRMAN. And all carefully tabulated and filed.

Colonel BERNSTEIN. It was, undoubtedly. I would like, if I may, to mention one or two other items in connections with the "new order" document. I think, Senator, you mentioned yesterday reading an article which contained the remark that in Holland they cannot get along without cartels. Farben had something in store for our friends in Holland should Germany have succeeded in winning the war.

For Holland, Farben's "new order" document envisioned the complete elimination of the photographic industry since (and I quote):

In our future business with Holland in photographic materials it would be desirable if the requirements of the Dutch market can entirely be satisfied by the German photographic industry.

The French and Norwegian photographic industries were to be treated similarly.

With regard to the French pharmaceutical industry, I. G. proposed (and I quote):

On the French side this "new order" established in our mutual relations would have to be supplemented by a decree forbidding the construction of plants producing pharmaceutical products. In addition, a number of small and unimportant laboratories, most of which are of local importance only, should be closed.

Further with respect to the exclusion of all other countries from the French domestic market, I. G. proposed (and I quote):

Enforcement of a French quota and licensing system in favor of Germany which will have as its purpose that French demands for imports will be supplied by Germany only.

With respect to the United States, and particularly the special emphasis which Farben placed on driving the United States from the European market, the "new order" plan says with regard to nitrogen products (and I quote):

For the future, it is desired that in a manner similar to that proposed for other markets, Germany be given priority for the supplying of all additional requirements of nitrogen of any kind. This step shall be designed in particular to exclude or control North American imports.

This was typical of the injunctions laid down with respect to specified products too numerous to mention.

With respect to dental products, a large part of which France had received from the United States, German supplies were to be substituted. Not only did I. G. intend to drive the United States of America and other free countries from the European markets; it also expected and prepared to compete strongly with the American industry for the remaining free markets of the world.

Forced away—

says the "new order" document—

from European business for reasons which were effective already prior to the war and which will become increasingly effective after the war, the Americans will do everything within their power to maintain and promote the development of their exports of chemicals.

The CHAIRMAN. It was interesting to me in studying various cartel agreements to discover how German companies had played upon the whole theory of ours of a high tariff to protect American industry, by agreeing to grant exclusive grants in the United States and at the same time excluding us from the rest of the world, with the idea of letting us exploit our own markets only. Have you noticed that in any of their cartel agreements? They played on that theory of ours that the one way to build prosperity in the United States was to erect high tariff walls forbidding others to come in, realizing at the same time that they would forbid us from trading in other markets.

Colonel BERNSTEIN. Incidentally, in their "new order" plan Germany was going to force other countries to reverse some of their high tariff policies. The "new order" document provided that as far

as German products are concerned, a free trade policy was to be followed. Tariffs and duties were to be eliminated entirely as far as German imports from Germany were concerned; or if there were any kind of a duty it would be a nominal one of 2 percent.

They thought it desirable to maintain a high tariff policy in the countries of the world with respect to chemicals that came from sources other than their own.

The CHAIRMAN. In other words, they were using the selective tariff system also.

Colonel BERNSTEIN. It was a rather new way of using the selective tariff system.

The CHAIRMAN. It is my understanding that among the functions you have been charged with as head of DICEA is the uncovering of the foreign assets of various German companies and industrialists, including I. G. Farben. Can you give us some picture of the success of I. G.'s penetration in Argentina?

Colonel BERNSTEIN. I might say with respect to that, sir, that we have been asked by the agencies of the Government to refrain from making public here a considerable amount of material that we have obtained on the penetration of Farben into Latin America, particularly into Argentina. It was quite clear, though, that Farben had agencies there through which it not only could carry on the Nazi propaganda line but also could carry on espionage activities for the Wehrmacht and the German Government, and be a source through which a vast amount of information of value to the Wehrmacht and the Nazi Government could be obtained from the whole Western Hemisphere.

The CHAIRMAN. General Hildring testified yesterday that a decree had been passed by the Control Council ordering the seizure of such German external assets to be used as reparations as well as to destroy German's economic reserve throughout the world for another war. How does this affect Argentina? By that I mean this could only be done if Argentina would acquiesce in the seizure, is that right, and that applies to any other nation?

Colonel BERNSTEIN. Well, it raises some of the legal questions arising under the decree, plus, of course, political questions. This is a matter, I suppose, on which State Department will have the final word for our Government as to whether Argentina will be treated more like a neutral country such as Switzerland, or whether it would be treated more like an Allied country such as Brazil.

The basis on which that decision would be made is, I believe, at a high level.

The CHAIRMAN. However, the point I am getting at is this: As with all sovereign countries—either neutral or Allied countries—the only way the Control Council can operate is with the consent of the country involved, and it is a question of internal or domestic negotiations with that country to get us the right to go in there, in the courts, and by taking judgments, and so forth, seize these assets; isn't that right?

Colonel BERNSTEIN. That is correct.

The CHAIRMAN. It couldn't be handled by decree, it wouldn't be binding on any country as far as it invades their sovereignty.

Colonel BERNSTEIN. I would be unwilling to say that a decree is not binding on the countries. I think the Control Council would want to take the position that under the decree it has a legal right to Germany's external assets. Of course the enforcement of that right

would require cooperation from the government of the countries where the assets are.

The CHAIRMAN. That is right. That is not effective unless the other countries will cooperate, and then only to the extent with which they will cooperate.

Colonel BERNSTEIN. As a practical matter, that is substantially correct.

The CHAIRMAN. I am late in court now. If you don't mind waiting 30 minutes, we will conclude this after I get back.

(A recess was taken from 11:40 a. m. to 12:10 p. m.)

The CHAIRMAN. Now, Colonel Bernstein, I would like to call your attention to an item which is appearing in Scripps-Howard newspapers today charging that in China the man who is directing liquidation of I. G. Farben's vast holdings in the Far East is a well-known Nazi, S. Gadow, who is being assisted in this work by 22 other German nationals, many of them active Nazis as well, I should like to know, Colonel, whether this situation has any parallel in Europe, that you know of.

Colonel BERNSTEIN. I hope it doesn't sir. I am quite sure those people are not functioning on behalf of the Control Council in attempting to deal with those assets, and I will do everything I can to get that information sent over to the Control Council with a view to seeing whether some action can be taken on it.

The CHAIRMAN. Are there any other instances that you know of where Nazis or collaborationists have been installed in positions of control in the industrial disarmament program, particularly with respect to any I. G. Farben properties?

Colonel BERNSTEIN. Sir, I think there has been a good bit of criticism about using Nazis and people who were associated with the Nazis in carrying on industrial activities in Germany. My own organization, my own staff working together with a group of British personnel out of Düsseldorf gathered together a great deal of information of a very telling character with respect to some 80 industrialists in the Ruhr area who were active, particularly in the iron and steel business. Some of those people were getting ready to reopen their plants and put them all in running order. They felt that it wouldn't need more than 3 to 6 months to put some of their plants in running order. Others were ready to be put in operation immediately.

We gathered together this information. These 80 industrialists have now been arrested. Many of them seem ripe for treatment as war criminals. They are not working in their factories now.

The CHAIRMAN. I want you to understand, Colonel, I fully realize what you were up against in Europe. In fact, I don't see how, with the small staff over there, you accomplished as much as you did, even with the cooperation of others. As you well remember, when I discussed it with you at one time, I thought you needed about 1,000 people over there until you got this mess straightened out.

I am not criticizing you, and I also realize, having been there, that you have to use German personnel sometimes to do the classifying jobs, under supervision of American personnel and sometimes ideas get out, of that kind.

Colonel BERNSTEIN. Senator, I would like to say one thing, if I may.

The CHAIRMAN. Yes?

Colonel BERNSTEIN. I want to express my appreciation to you for the support that you have given continuously for many, many months, both abroad and here, to the effort to get at the story of the role played by German industry, German cartels, in carrying out Germany's program for aggressive war. I know of no one, sir, on the Hill who has been as active and effective and helpful to our organization on the other side in the work that we have been doing.

The CHAIRMAN. Thanks very much, Colonel Bernstein. I have been interested and I would like to explain in the record one of my interests in this: In studying the cartel picture from the American side before we got in there, I felt that the other side of the picture ought to be brought to American industry, in the hopes that American industry will see the dangerous situation they place not only the Government but themselves in, and cooperate with the Government in preventing such future situations from arising.

I think this historical and legal and economic research into those records will make one of the greatest contributions to the welfare of business in this country that can be made, when it is finally published and given to the public in such a way that they can understand and read it, because apparently we are utter amateurs in dealing with the cartel organizations such as they have abroad.

At my request, General Hildring was good enough to furnish the subcommittee with copies of the general and special orders issued by the military government with respect to I. G. Farben. I observe that special order No. 2 issued July 7, 1945, created an advisory board for I. G. and that you were one of the officials appointed to it. Can you describe for us the activities of this board, stating particularly what your functions were, what have been the achievements of the board, and whether it is still functioning today?

Colonel BERNSTEIN. Well, sir, I believe this past June General Clay asked General Draper and myself to draft an order setting forth a program to deal so effectively with Farben that the company would never become a menace again. We got to work on it.

There were certain differences of view as to what was the desirable thing to do. There were some of us who felt that the role of Farben had been such that its war potential had to be destroyed or transferred as reparations. There were others who had grave doubts as to the desirability of that kind of approach and who felt that Farben should be allowed to function without substantial reduction of its war capacity. In any event, General Clay had caused to be signed the order of the 5th of July which on paper prescribed a program for the reduction of Farben's war potential.

An advisory committee was established, of which I was one of the members; other members included General Draper, and Rufus Wyszor, a legal adviser, and a man who was the property control officer. We used to have periodic meetings to discuss the Farben program. The dominant philosophy appeared to be at the time that Farben and the Farben plants were to be dealt with substantially in the same way as other factories in Germany.

The Industry Branch and the Production Control Agency, which were parts of the military government organization in Germany, felt that their responsibility for getting German industry producing required that they see to it that Farben be permitted to produce in the same way as other industries in Germany were producing; and they con-

tinued to oppose singling out Farben for special treatment insofar as reduction of war potential was concerned.

Accordingly, despite repeated suggestions as to what was the true objective of the July 5 order, much time was spent in the weeks and months after July to see how various plants could be gotten going. One must bear in mind the point of view expressed by a leading member of the Industry Branch and Production Control Agency in that period of time when he expressed distress at some of the suggestions that were being made as to the need of going forward with the denazification program. He said "After all, how could I be expected to get German factories to produce if I am not allowed to use Nazis and German cartels?"

I think General Clay has from time to time made clear, and General Eisenhower has every time I have heard him made perfectly clear, the American policy to root out nazism in government and in private enterprises, regardless of whether it meant a less efficient working of Government and industry.

I think it has undoubtedly taken some time for those views to seep through to all places, but I am sure that was General Eisenhower's and General Clay's point of view. But it took some convincing. Actually, sir, we found ourselves one day being approached by representatives of the control officer of Farben, who asked us if we would release from prison, or arrange for the release from prison, of some of the key Farben officials, whose activities we have been describing during the last 2 days, in order that such Farben officials might be employed at very high salaries to carry on the activities of the Farben plants.

We were also asked if we could devise some method whereby the salaries that would be paid to these Farben officials would not have to be blocked in accordance with General Eisenhower's orders which blocked the funds of certain categories of people, in which this group was included.

My division, the Finance Division, at that time advised we would not be party to any system of evading General Eisenhower's orders, and we didn't think it appropriate that these people be employed at such salaries and have their funds unblocked. That was part of the problem that one faced.

I just wanted to mention one further thing. General Hilldring put in evidence yesterday a transcript of a conversation that I had with members of my staff—I believe just a week ago—in which they had furnished to me, in anticipation of these hearings, a statement of the way things were currently going in connection with Farben. I think a reading of that statement shows what progress has been made and what progress has not been made. Although I. G. Farben plants in the United States zone are now available for reparations, no such plants in the United States zone have, as yet, been removed. No I. G. Farben-owned plants in the United States zone have, as yet, been destroyed. Substantially all Farben plants and other Farben installations in the United States zone are now operating with a minimum of managerial supervision from any higher level. As far as dispersing ownership is concerned, no transfers of ownership have been made.

I think here we have a clear case—bearing in mind the American Directive 1067, the Potsdam agreement, the orders of July 5, and

now more recently the orders of November 30—we have a case of a clear statement of the American policy with respect to Farben. The problem now is to get on with the job of effectively carrying out that policy so that Farben ceases to be a war menace.

The CHAIRMAN. Of course, I realize that Farben, even more so than we in this country in our chemical industry, followed the system of having just a few keymen who knew certain factors and those were not, shall we say, a matter of record, but carried in the minds of those men and their assistants; for instance, in setting up some of the German-controlled industries in the United States and getting into our own chemical industry—du Pont, Carbon Carbide Chemical, and various others—they followed that system. Nobody else in the plant knows anything about it except one or two keymen. Put you in the position of getting in those few men to tell you what made things click and that sometimes puts you in an embarrassing situation.

Colonel BERNSTEIN. Yes. Sometimes the men were retained because it was easier to get along with them.

The CHAIRMAN. General Aniline Film was a Farben subsidiary in this country and was very powerful in the chemical dye industry. There is a great discussion now with the Alien Property Custodian and various other groups as to whether or not it should be broken up or whether it should be retained intact with some kind of voting trust to control it so that foreign control never comes in. One school of thought being—which is quite correct—that there are a number of other powerful dye industries in this country and if it is broken up in small segments it will disappear and will not furnish the competition that it has furnished in the past, whereas in the breaking up of Farben abroad there is no competitor at all, and in order to make things click you have to break it up.

I think that parallels General Aniline Film in this country and the proposition of whether or not it should be broken up or allowed to operate as a competitor, shall we say, to Eastman and to du Pont and Carbon Carbide Chemical and a few more of our large outfits, to furnish competition in the field rather than take it out as a competitor completely and remove a source of competition that exists, now that the Government owns a controlling interest in it through the acquisition of the stock.

Colonel BERNSTEIN. One way to insure that nothing happens in the next 25 years for General Aniline to pop back into German hands is to carry out effectively a program of the destruction of Farben.

The CHAIRMAN. That is right. If that can be carried out completely so that it has no foreign connection, General Aniline Film will not furnish any menace to anything in this country at all. It may be a rather helpful organization, if American-controlled with no foreign affiliations.

Colonel BERNSTEIN. That is correct.

The CHAIRMAN. It seems to me from what you say that, although the governments controlling Germany have had for some time the material which you gathered showing Farben as a menace to the peace of the world, the steps which have been taken to deal with the problem are largely so far on paper, are they not?

Colonel BERNSTEIN. The effective work still has to be done.

The CHAIRMAN. Still has to be done in the future?

Colonel BERNSTEIN. Still has to be done in the future and that is why one becomes concerned with stories one hears in different places expressing the attitudes of various people. Take the statement made last week that appeared in the American press, the statement of Lord Riverdale, a leading British industrialist, particularly in the field of iron and steel, who is quoted as saying that he felt that Germany must be allowed to have a strong industry, and that this is the view generally held by British industrialists.

If, in fact, that is so, one wonders how effective a program with respect to Farben will be accomplished.

The CHAIRMAN. You remember, don't you, that just before Munich the Federation of British Industries met with a similar organization in Germany and, in spite of the menace of Munich, entered into an accord with them in which they agreed that they would join together in getting their respective governments to force—they didn't name the United States but they appropriately described us—to join in with them in a world domination scheme on industry?

Colonel BERNSTEIN. Yes, sir.

The CHAIRMAN. You know also that the British newspapers, headed by the Manchester Guardian, took the hide off the British industrialists for getting themselves into such a mess, by the way.

Colonel BERNSTEIN. I think the "school tie" tradition is not limited to the British public school system. That point of view is expressed in other ways and sometimes unfortunately influences in an unsound way governmental policies.

The CHAIRMAN. Yes; because it is so easy to slip by. Cupidity gets the better of judgment and past experience all too frequently.

Colonel BERNSTEIN. One thing that governments should have learned, bearing in mind the enormous costs of war in terms of human beings and money—is that security ought not be sacrificed for the sake of profits, where the making of those profits results in the retention of a mechanism that has twice almost caused our destruction.

The CHAIRMAN. Don't you think, then, that unless steps are taken for immediate action to destroy Farben, not merely as a legal entity but also as a physical fact, by transferring plants, some of them as reparations, and destroying those that cannot be transferred and cannot be utilized in maintaining the minimum economy in Germany, and leaving for Germany itself only that part of the chemical industry which is essential for the maintenance of the minimum standard of living, we will have gained nothing from our lessons?

Colonel BERNSTEIN. I agree with that fully.

The CHAIRMAN. And from all the information that has so painstakingly been gathered?

Colonel BERNSTEIN. I agree, sir, with your analysis.

The CHAIRMAN. Why has the progress been so slow in the Control Council in taking the measures necessary for the break-up of the cartels and monopoly industries in Germany and the carrying out of the economic disarmament program?

Colonel BERNSTEIN. Well, sir, I think I have mentioned a little bit of what has happened in Farben. Farben was our first case and we had quite a few problems even dealing with Farben.

The CHAIRMAN. For your guinea pig there you picked a full-grown hog. [Laughter.]

Colonel BERNSTEIN. We picked what we thought would be the clearest case, but it has gone very slowly. Therefore, one can understand why the going is even slower in other fields. Effectively to destroy Germany's cartel arrangements and its concentration of economic power and to reduce its industrial capacity so as to minimize Germany's war potential, requires a considerable organization of people who are fundamentally sympathetic to such a program and who are strongly supported by the Government in this effort to carry out such a program.

I think, furthermore, we have to realize that we are dealing with three other countries and that differences of views exist, particularly on this problem of what to do about cartels. The London Economist, I think, had a rather interesting series of articles during the months of September and October, in which they were bitterly critical of the Russian and American point of view in dealing with industry in Germany. It said that the British point of view was very different, regardless of what was said at Potsdam, and came awfully close to saying that the British ought to go along and carry out their point of view regardless of what Russia and America desired to see done about industry.

That merely is reflective of a type of thinking which you meet with and which makes carrying out a decartelization program difficult, to put it mildly.

The CHAIRMAN. You know there is also wide divergence of opinion in different sections of New York.

Colonel BERNSTEIN. Yes, sir; and perhaps Washington.

The CHAIRMAN. I think the parallel of the Düsseldorf meeting was the Rye conference last year in New York while the war was going on. They held a conference in Rye, N. Y., and they tried to institute a plan to bring about the very system that brought about the war, after the war was over. That was attended by many of our leading American citizens. I think they were misguided. I don't accuse them of anything. I think you made good progress over there, but I do think that the heat must be on to complete the job for which the foundation has been laid. I think you do have a sufficient foundation from which to operate now. Is that right?

Colonel BERNSTEIN. Well, sir, a considerable number of the men I had in my division will be returning very shortly and whoever becomes responsible for doing the work of that division will find it necessary to get together an additional group of people, one would hope a group of people who would both understand the cartel and industrial problem in Germany and believe in the American policies of dealing with those things in an effective way. Otherwise, much of the program will never effectively be carried out.

The CHAIRMAN. When did you come back from Germany, Colonel?

Colonel BERNSTEIN. At the end of September.

The CHAIRMAN. We have heard in this country a great deal of contradictory evidence on present economic conditions in Germany; standard of living, extent of the destruction of the German economy, and so forth. I wonder if you would be good enough to give me your impressions—I am asking you for these unofficially, not as head of DICEA—of the present-day Germany, the conditions of the German economy and the present state of Germany's economic disarmament.

Colonel BERNSTEIN. I have been in Germany a good bit since November of last year, when I first went into the area around Aachen. I have seen a good deal of the agricultural areas and the industrial areas. I have talked to a great number of people in our military government organizations and in the British, French, and Russian military government organizations. We have made studies by our own staff. I have read many of the reports that have been written, including the very excellent reports that are in the process of being written and issued by the United States Strategic Bombing Survey. I myself feel that many of the people in the United States have been led to believe that the world need no longer fear the warlike potential of the German economy because of the damage to Germany from air attacks and from the fighting that took place within Germany's borders.

Mr. Byron Price in his report a short while ago made the remark that "all but comparatively few of the great German industrial plants still lie under the rubble" and that "there certainly is not the slightest evidence that German industry can become within the foreseeable future sufficiently strong to permit diversion of production for German war purposes."

A Member of the Senate last week, I believe, said on the floor of the Senate that most of the factories in Germany are in ruins.

I respectfully submit that such is not the condition of German industry today. It is quite true that, for example, in the American zone at the current time production is perhaps no more than 5 to 10 percent of capacity; but that is purely a temporary condition and, as the recent report of the Economic Division indicates, is due to the lack of fuel and transportation. It does not result from a lack of plant capacity, facilities, trained personnel, or know-how. Germany still has the substantial part of all of these elements of its industrial economy.

I think part of the confusion also stems from the fact that people think that in the bombing we just about destroyed all of German industry. As I understand what the Air Force was attempting to accomplish—and I think they did a perfectly magnificent job in the role they played—they weren't attempting to destroy all of German industry. They wanted to assist, so far as they were bombing industrial targets—in causing a break-down in the economy for a period of time. That they succeeded in doing. They not only effectively knocked out the synthetic-oil production so that the German Air Force was to a large extent grounded, but in the closing months of the war they so effectively bombed the transportation facilities, particularly the transportation facilities in and out of the Ruhr, that the transport of coal was enormously reduced, and the effect of reducing the transport of coal was to reduce what could be produced by the existing industrial plants in Germany.

When the war finished the German economy had about come to a stop, because transportation facilities were smashed up sufficiently to prevent movement of coal and the transportation and coal difficulties prevented all activities in the factories. But, for example, even in the case of the synthetic-oil factories where the air force did such a magnificent job of bombing, the information seems to indicate that in about 6 weeks almost any one of the synthetic plants that was bombed was back in production.

When you are dealing with the attack on the transportation system, obviously you are dealing with something that is repairable within a limited period of time. A recent report of the transportation division indicates that 92 percent of the railway trackage in the United States zone is usable.

The United States Strategic Bombing Survey stated:

The Allies did not attempt to destroy the German economy as a whole or even the war economy as a whole. The bombing offensive sought rather to stop it from operating by damaging key points.

I believe that at prior hearings of your committee evidence was produced or statements were made, based on investigations, indicating that as much as 75 percent of Germany industry was intact or readily repairable. My own investigations and studies would indicate that that is really a minimum figure. It is a minimum figure in Farben, where we have ascertained that probably as much as 87 percent is ready to go, and if the Germans were given 3 to 6 months' time for repairs, far more than that would be completely capable of operating. And I say that of Farben even though the first view one has of the enormous Farben plant at Ludwigshafen is that it looks just smashed. But when you spend some time and the experts spend some time going through the plant, they find it is nowhere near smashed, that it is nowhere near completely destroyed. The Ludwigshafen plant of Farben is working today without even the damage being significantly repaired.

The Germans themselves in the iron and steel industries mentioned that not more than 3 to 6 months were needed to get their plants going. I remember at one time when I was in the Ruhr, in Duisburg, and I asked to be taken to plants that were really hit hard—smashed.

The British officer who was dealing with the industrial problems said he was going to take me to one. The town of Duisburg was hit to a considerable extent; that is, the residential areas. So we went to the outskirts of the town to a huge plant which was a part of the Thyssen enterprise. This was going to be a place that was really hit.

Well, we spent quite a bit of time going through the plant, being taken through it by the two German managers of the plant. The vast bulk of the plant wasn't hit at all and was ready to go that very day I was there, provided it had the raw material and the coal. But when they took me to the part that looked like quite a shambles I asked them how long it would take to put that part in repair. The Germans consulted among themselves for a period of time, and they said it would take as long as 3 months before they could get into operation. "Oh, no," insisted the British officers, "they are overly optimistic. It would take at least 6 months to put that plant in repair."

Now we must also remember with regard to German plant capacity during the war that that capacity was so great that it was never fully utilized during the war. Although in this country and in Great Britain it was found necessary to work plant capacity two and sometimes three shifts—by and large, war plant capacity in the United States and Great Britain had to be worked 24 hours a day for 7 days a week in order to produce the necessary war equipment—in a very large proportion of the German industrial set-up throughout the war, they worked on a one-shift basis. That information is brought out in the over-all report recently published by the United States Strategic

Bombing Survey that made these very extensive studies of the German industry.

At one point the United States Strategic Bombing Survey says that—

production capacity, except in specific instances, was never really short; Machinery capacity was never fully utilized. Manpower, particularly womanpower, was never fully mobilized. * * * The output of civilian consumption goods, after the restriction in the initial years—which still left the standard of living at a fairly comfortable level and well above that of the depression years in the early thirties—was maintained virtually stable until well into 1944 * * *.

As a matter of fact, I recall somewhere having read the statement that Germany was able to maintain throughout the war years a higher standard of living for civilians than Germany had in 1929; and that Germany, instead of being forced into a “guns or butter” position, throughout the war years was basically enjoying a “guns and butter” position.

In many other ways the evidence appears to be indicating that Germany's industrial capacity was far greater than we realize.

The CHAIRMAN. Let me ask you a question at that point. German plant capacity had reached such a stage in the war that it was one of the contributing factors that made them want to go to war—they were top-heavy with plant capacity—

Colonel BERNSTEIN. And wanted more markets to sell their goods. Studies have shown that through the war the German economy does not appear to have suffered from any shortage of machine tools or general machinery or plant facilities except temporarily and in a few isolated cases. As a matter of fact, the Strategic Bombing Survey states that in the 3 years under Speer, beginning with 1942, Germany was able to increase its armament and munitions production three times—three times within 3 years during the war when the bombs were raining down on them. And in the case of tanks, I believe there was a sevenfold increase in production during this 3-year period.

The German labor force was never used to the limit, or even to the limits that it was being used in Britain. The German tool capacity exceeded even our own up until sometime well into the war. The German tool industry is simply enormous. The damage to it as a result of the war is slight, very slight.

The CHAIRMAN. By the way, I heard there—I didn't see it—of a machine operating by the use of some photographic methods in the making of steel dies for stamping plates, in which 1 die maker would turn out about 15 times as much in the same time as he could in the United States.

Colonel BERNSTEIN. I have no doubt it is there. The machine-tool industry is just enormous, and they never came anywhere near exhausting their capacity. As a matter of fact, I understand they took 30 percent of it and used it, not for the production of machine tools but directly for the production of munitions; they had that much of a surplus in the machine-tool industry.

The CHAIRMAN. Isn't there one thing we must watch, also, and you brought it out, that it must be stressed that our bombing was intended to delay operations in order to let the Army get in, not with the idea of destroying everything for the future? And there is one other thing that I am going to ask you about that impressed me. Germans impressed me as the best-organized group on the Continent, even after

defeat. They had been so perfectly regimented that they naturally fell into an organizational set-up just automatically.

Colonel BERNSTEIN. I think the view generally expressed in the military government circles is that the German industry and Germans generally were very efficient.

The CHAIRMAN. And highly nationalistic.

Colonel BERNSTEIN. Highly nationalistic and war-minded. What I would say about German war industry is that if it is our policy to see that Germany's industrial capacity is reduced so that it is not able to wage a war again, then we must take action to see that that is done. That situation has not yet been brought about. It was not brought about by the war, by the bombing or by the shelling. If it is to be accomplished, it will be accomplished only by positive action to be taken in the future in carrying out the Potsdam agreement and our country's directives.

The CHAIRMAN. And the manufacturing potential of a country is really a war potential. You use practically everything you produce in the plants in war, isn't that right?

Colonel BERNSTEIN. Yes.

The CHAIRMAN. So that things must be brought back in balance.

Colonel BERNSTEIN. Yes, sir.

The CHAIRMAN. Do you know whether the poison gas plant I. G. had is still in operation or is capable of being operated?

Colonel BERNSTEIN. It is capable of being operated.

The CHAIRMAN. That is in the Russian zone, I believe?

Colonel BERNSTEIN. I have a recollection that one of the plants that was producing poison gas is in the American zone. That is the Gendorf plant operated by Anorgana G. m. b. H., a wholly owned Farben subsidiary. The plant was constructed underground during the war and specialized in the production of mustard gas. This would clearly seem to be a plant that should be destroyed if anything in Farben was to be destroyed. Nevertheless, the plant is now in active operation producing pharmaceuticals which, it is claimed, are essential for the maintenance of the German economy.

You asked me earlier in the hearing a question or two about the employment policies with respect to foreign labor, and I want to mention Carl Krauch, the chairman of the I. G. supervisory board, who, as Goering's assistant, was in charge of recruiting slave labor for the German chemical industry. The guiding rule laid down by the industrialists in the German Government was to give the workers only enough food so that you could get whatever work you wanted out of them.

The CHAIRMAN. Wasn't food used as a reward and punishment, too?

Colonel BERNSTEIN. The standard was only, what did you want out of them. That was the standard. Slave labor obtained from concentration camps and used by Farben did not receive payment from Farben; that is, the slave laborers didn't receive payment from Farben. Farben paid their salaries to the SS who operated the concentration camps. This was especially true in the case of the thousands of slave laborers that worked at the Farben buna plant near Auschwitz.

The CHAIRMAN. But Farben did go through the motions of paying to the SS group who ran the camp so much per diem for the laborers?

Colonel BERNSTEIN. Sometimes they did. They did do that.

The CHAIRMAN. And then the SS group could pay the laborers or not pay them to fit the occasion; is that right?

Colonel BERNSTEIN. I don't believe the SS paid the laborers.

That is all I have.

The CHAIRMAN. We are probably going to have one hearing next week, and I may ask you for a little more information before that time and ask you to come up then.

Colonel BERNSTEIN. If I can be of help, I will be glad to.

The CHAIRMAN. Thank you very much, Colonel. I want to say I am very proud of any little part I had in getting you on that detail out there, because I feel what little efforts I did put out are very well repaid.

Colonel BERNSTEIN. Thank you, sir. Senator, your help on this has been simply tremendous, and the men on the staff know it.

The CHAIRMAN. Thank you very much.

We will recess, then, until tomorrow morning at 10:30.

(Whereupon, at 1 p. m., the hearing recessed until 10:30 a. m., Thursday, December 13, 1945.)

ADDITIONAL MATERIAL SUBMITTED BY THE WAR DEPARTMENT FOR THE RECORD

SUBCOMMITTEE ON WAR MOBILIZATION,
November 8, 1945.

Maj. Gen. JOHN H. HILLDRING,
Director, Civil Affairs Division, Washington 25, D. C.

MY DEAR GENERAL HILLDRING: There has recently appeared in the press an account of the discovery in Germany of 20 tons of Nazi Party records, including the names of Nazis in the Western Hemisphere. Would you please make available to the subcommittee the list of 200 names of Nazi agents listed as functionaries of the German-American Bund? Would you also be good enough to notify the subcommittee when all of the materials, including letters and several million index cards, have been classified and transported to the United States, so that the subcommittee may have access to them?

Most sincerely yours,

H. M. KILGORE, *Chairman.*

WAR DEPARTMENT,
Washington, November 21, 1945.

Hon. HARLEY M. KILGORE,
*Chairman, Subcommittee on War Mobilization,
United States Senate.*

DEAR SENATOR KILGORE: This will acknowledge your letter of November 8, addressed to General Hilldring, in which you request the names of 200 Nazi agents and ask that you be notified when the Nazi Party records have been transferred to this country.

It is impossible for us to provide you at this time with any of the information desired. Action is being taken, however, through appropriate channels in an effort to obtain the names requested and to ascertain the plans for shipment of the records to this country. I shall be glad to keep you informed of our progress in this connection.

Sincerely yours,

DONALD P. BOOTH,
*Brigadier General, United States Army,
Special Assistant to the Under Secretary of War.*

WAR DEPARTMENT,
THE CHIEF OF STAFF,
Washington, December 21, 1945.

Hon. HARLEY M. KILGORE,
United States Senate.

DEAR SENATOR KILGORE: I have looked very thoroughly into the matter of providing you with a list of the names of Nazi Party members in America, and find that Brigadier General Booth, special assistant to the Under Secretary of War, is working very diligently on your request.

The desired records were found in a disorganized condition at a factory near Munich where they had been taken by the Germans for pulping in order to deny them to the Allies. It has been necessary to perform considerable work on these files in order to put them in a usable condition. Upon receipt of your letter of November 8 we cabled the European theater and directed that appropriate action be taken to make available in Washington the list of names requested by you. Word has recently been received from the theater that the documents have arrived in Berlin, where they will be used by all four Allies in the administration of Germany, and that the list requested by you is being forwarded to Washington via air mail.

I understand that the above information has been telephoned to Mrs. Frank Manuel of the investigating staff, Subcommittee on War Mobilization. Due to the fact that General Booth is the officer most familiar with the case, I have asked him to continue to keep your subcommittee informed of the progress made on the procurement of the documents.

Sincerely,

DWIGHT D. EISENHOWER.

WAR DEPARTMENT,
Washington, D. C., January 5, 1946.

Hon. HARLEY M. KILGORE,
*Chairman, Subcommittee on War Mobilization,
United States Senate.*

DEAR SENATOR KILGORE: This is written with further reference to your request of November 8, 1945, for the names, which were found in the United States zone, of 200 persons in the United States apparently having Nazi affiliations.

As was indicated in my letter of November 23, 1945, it was necessary for the War Department to obtain from the theater the information which you requested. The theater has now provided a list, a copy of which is enclosed, which contains names and United States addresses of persons designated by official titles in German. The War Department has been advised that this list was not prepared by Allied personnel from a canvass of records in Germany, but was discovered by United States troops. The origin of the list, and whether or not it is based on the Nazi Party files which were also discovered by United States troops, is therefore not known.

The War Department will advise you within a few days of the status of the program for exploiting the Nazi Party files.

Sincerely yours,

DONALD P. BOOTH,
*Brigadier General, United States Army,
Special Assistant to the Under Secretary of War.*

ELIMINATION OF GERMAN RESOURCES FOR WAR

THURSDAY DECEMBER 20, 1945

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
SUBCOMMITTEE ON WAR MOBILIZATION,
Washington, D. C.

The subcommittee met at 10:30 a. m., pursuant to call of the chairman, in room 104-B, Senate Office Building, Senator Harley M. Kilgore (chairman) presiding.

Present: Senator Harley M. Kilgore, West Virginia.

Also present: Dr. Herbert Schimmel, chief investigator.

The CHAIRMAN. The committee will come to order.

The witness this morning will be Mr. Henry H. Fowler, Director of the Enemy Branch, Foreign Economic Administration.

Mr. Fowler, you were with the Foreign Economic Administration prior to the transfer of its personnel to the State Department; is that correct?

TESTIMONY OF HENRY H. FOWLER, DIRECTOR, ENEMY BRANCH, FOREIGN ECONOMIC ADMINISTRATION

Mr. FOWLER. That is correct.

The CHAIRMAN. As I understand it, these pamphlets [indicating TIDC reports] are in the nature of monographs written for the Foreign Economic Administration; they are not reports of the Administration, but present the information of the individuals who prepared the studies.

Mr. FOWLER. Yes.

The CHAIRMAN. Now, Mr. Fowler, will you go right ahead with what you have to say.

I may interrupt you with a few questions as you go along.

Mr. FOWLER. Please do so, sir.

I think, for the sake of the record, I will ask your indulgence while I read the memorandum of transmittal, since it clears up some of the detailed questions concerning the origin of this testimony and the report on which it is based, and also clearly defines its present status.

This is a memorandum from me to Mr. Crowley, who was formerly the FEA Administrator.

Subject: Final report on German economic and industrial disarmament.

I am submitting herewith the final report of the FEA Enemy Branch on A Program for German Economic and Industrial Disarmament. This report and the reports on the 31 technical industrial disarmament study projects, now complete, constitute a discharge of the responsibility delegated to the FEA by the late President Roosevelt on September 28, 1944, when he directed the FEA to conduct "studies from the economic standpoint of what should be done after the surrender of Germany to control its power and capacity to make war in the future."

As you know, this function was transferred to the Department of State by an Executive order of September 27, 1945, which directed the dissolution of the entire Foreign Economic Administration. Therefore, this report constitutes a final discharge of the assignment of the FEA Enemy Branch, which was created to carry on these studies.

This report, in process of completion at the time of the transfer to the Department of State and your resignation as FEA Administrator, has been completed under my direction and is, therefore, now submitted as a final accounting for the work of the FEA Enemy Branch, rather than the Department of State.

Arrangements have been made for the adequate distribution of copies of this report to the military and civilian officials in our Government, both here and abroad, who are responsible in policy-making or executive capacities for our German policy and its administration. As you know, mimeographed copies of the reports of the technical industrial disarmament committees (outlined in appendix D of this report) were delivered to the United States Group Control Council and interested officials in the Federal agencies in August of this year. Additional printed copies of these TIDC reports have been prepared and have or will be delivered.

Many of the general principles originally developed in the FEA studies, summarized in this final report, have become adopted United States policy in the Berlin protocol. However, at this writing, the report is not to be characterized as an adopted program of the United States Government. The extent or particulars in which the recommendations in this report or the auxiliary TIDC reports are to become adopted United States policy or program will be determined by the appropriate policy-making and executive officials in the State and War Departments, who have not yet reviewed the document. Therefore, the terms of the report, as presented, are advisory.

I am complying with a request of Chairman Kilgore of the subcommittee of the Senate Military Affairs Committee to supply his committee with a copy of this report and the TIDC reports for public release by the committee. In view of the deep national concern in the prevention of any recurrence of German aggression, I know we are in agreement that this public accounting for our work over the past year and the availability to the public of the information and views we have assembled is in the public interest.

In conclusion, several acknowledgments are in order.

First, to the various departments, agencies, and individuals who participated in the TIDC project which resulted in the 31 auxiliary reports on which this final report is based. The voluntary contribution of the large numbers of experts in other agencies (recorded in appendix D) represents a unique example of the interagency cooperation without which much of the value of this study project would have been impossible of achievement.

Second, to the staff of the FEA Enemy Branch. It is impossible to record here the personal contributions of the many individuals whose work has gone into the collection of the basic information, coordination, and development of the various study projects, and the preparation of this document.

Lastly, I should like to record on behalf of the Enemy Branch our deep appreciation of your support and backing at all times in our work, now complete.

The CHAIRMAN. I think it would be appropriate to put the letter from you to the subcommittee into the record.

Mr. FOWLER. If you will, sir.

(The chairman read an excerpt from the letter dated December 18, 1945.)

The CHAIRMAN. This letter will be made part of the record.

(The letter, dated December 18, 1945, referred to above, follows:)

FOREIGN ECONOMIC ADMINISTRATION,
Washington 25, D. C., December 18, 1945.

Hon. H. M. KILGORE,
Chairman, Subcommittee on War Mobilization,
United States Senate Committee on Military Affairs,
Washington, D. C.

DEAR SENATOR KILGORE: In response to your request by letter of December 14, I will appear before your subcommittee on December 20 in order to summarize the highlights of the final report on a program for German economic and industrial disarmament. I will submit the complete document as an exhibit to my testi-

mony with the understanding that it is submitted on behalf of the former FEA Enemy Branch rather than the Department of State, to which that Branch is now attached. In this connection there are certain facts which should be noted in the record.

The report, initiated in July, was in process of completion at the time of the transfer of portions of the FEA (including the Enemy Branch) to the Department of State by Executive order. I undertook to remain on duty until December 31, deferring a contemplated resignation to enter the private practice of law until the report could be completed, edited, and distributed to the appropriate United States military and civilian officials. The report has not been reviewed by the Department of State and, hence, should not be interpreted as having either the approval or disapproval of the Department. Rather, the report is the responsibility of the FEA Enemy Branch, acting under my direction.

In view of this background, I call to your attention the explanatory note on the inside cover page of the report, which reads:

"The FEA Enemy Branch wishes to make clear that this report should not be characterized as an expression of the adopted policy or program of the United States Government, except as the policy recommended may have been reflected in the Yalta declaration, the Berlin protocol, or public announcements by the President or the Secretary of State.

"This report constitutes a program of recommendations prepared by an official agency charged by the President with the responsibility for making a thorough study of German economic and industrial disarmament. Until or unless the program herein presented is adopted in whole or in part by the appropriate policy determining officials, its terms are purely advisory."

I would appreciate your inserting this letter into the record of your committee in connection with my appearance so that the status of this document may not be misunderstood. I would not want the publication of this report to embarrass either the representatives of the Departments of State or War who are or may become engaged in negotiations on the subject matter. So long as it is submitted on the understanding noted above, I do not believe any such embarrassment will result. In view of the deep national concern in the prevention of German aggression it seems to me to be only fitting that a public accounting for the past year's work of the FEA Enemy Branch be rendered and that the information and views it has assembled be made available to your committee and the public.

Sincerely yours,

HENRY H. FOWLER,
Director, Enemy Branch.

Mr. FOWLER. At this time, Mr. Chairman, I should like to offer for the use of the committee and for such record purposes as it deems suitable the entire report, which is entitled, "A Program for German Economic and Industrial Disarmament. Final Report. Foreign Economic Administration, Enemy Branch," and also, for the record, as exhibits to this statement today, the available numbers of the Technical Industrial Disarmament Committee reports, which are all to be in printed form. Due to some delays in the printing process we have available only 16 of the printed copies. We have available mimeographed sets of the remainder and will furnish your committee with a complete set of these reports for the record today.

(The final report of FEA Enemy Branch, entitled "A Program for German Economic and Industrial Disarmament" and the appendixes to final report, plus the following TIDC project reports: Nos. 5, 7, 9, 10, 11, 8, 12, 14, 15a, 15b, 17, 19, 20-27, 25, 31, 18, and Organization and Personnel, were filed with the committee.)

The CHAIRMAN. These reports are the studies made of the various divisions of German industry, at the request of the FEA?

Mr. FOWLER. That is correct, sir.

With your permission I will proceed to deal rather informally with the highlights of this report, using as textual material some of the material that appears in the first part of the final report, notably the

preface, the summary of the plan, and a summary statement in support of the program.

The CHAIRMAN. You can boil that down in your own words. But I would like to ask you several questions.

From your studies of this, wasn't it apparent to you that German industry, as a whole, was a part of the military program for conquest? In other words, that it was keyed into the armed forces and the two worked as integral units, and that when that industry got abroad it really was an infiltration as a part of the conquest, and would remain so if allowed to exist in that shape. Is that right?

Mr. FOWLER. Indeed, sir.

We have attempted, in a rather limited way, to document the accuracy of the statements that are implicit in your remarks. For the purposes of the record I should like to point out that in section II of this report which deals with the industrial disarmament program, in subsection C, there is a historical analysis of the way in which German industry, particularly the heavy industry, was coordinated with the German General Staff and the other economic ministries of the German Government to form a part of the machine for military conquest.

Also, in section V of the report, and in particular subsections B, C, and D, there is a documentation of the activities of German industry and trade groups outside Germany in extending their controls and their preparation devices to areas beyond the Altreich and, in particular, their efforts to acquire sources of supplies of critical materials, which would be needed in case of war, to enable Germany to withstand a blockade.

Secondly, efforts by these industrial concerns through their handling of exports and through their cartel and trade agreements with other industrial enterprises outside Germany to hold back the development of the industries important for war, while German industry was enabled to expand and take advantage of the market so provided.

The result of that, of course, would have a double impact in the event of war because the industries or economies outside Germany would suddenly feel the shock of a withdrawal of German supply of these critical materials, while German industry would have the benefit of the extra margin of capacity which had been kept alive by reason of these devices for economic warfare.

The CHAIRMAN. And by the, shall we say, arbitrary division of territory, they were able to build up a market far in excess of their needs, so that, if blockaded, their superior grouping, which had taken care of this large market, would be able to take care of expanded needs of war. Is that right?

Mr. FOWLER. Exactly.

The CHAIRMAN. Another thing that has interested me is the fact that at the same time we were making heavy plant investments in Germany itself, building plants, and selling bonds over here for the erection of power dams, German industry was also running out with branches in other countries to pick up additional money and additional territory and filtering into the economy of these other countries. While money was being loaned by our people to help them to expand their local economy, and while investments were being made there, they could find money to invest abroad, if they could control the outlet through which the investment went, and their control was exercised usually through their control of research in Germany, by which means

they exploited the inventions made over there exclusively in the country through which the plan filtered itself.

Mr. FOWLER. I think the comment you made will be stressed as I indicate some of the high lights of the summary program which has been devised. We have attempted to devise measures to meet the type of activities that you have described and to control them through two devices, one an internal control of German activities, and the second, through international agreements between the various nations who have been affected in the past by German aggression, to keep a mutual guard, as it were, against a repetition of such tactics in the future.

The CHAIRMAN. That financial set-up was brought very strongly to my attention some time ago by a man who asked if it were not possible to sequester the value of the German investments in this country and to use those to liquidate a lot of the bonds that had been sold in this country for the building of power units in Germany, and give the Germans the bonds and let the people who had lost their money over here be at least partially reimbursed from the German investments in this country. He had invested his entire savings of some \$15,000 in German bonds at the suggestion of a broker.

Mr. FOWLER. There will be several varieties of claims.

The CHAIRMAN. That was rather a unique picture. He said, "I didn't realize they had money to invest here until this thing came up."

Mr. FOWLER. This is the first public report, or report made outside of the executive agencies on this subject by the Foreign Economic Administration. However, I wouldn't want to leave the impression that we have been wholly silent on the matter during the last 12 months.

Early in the year, in January 1945, we prepared and submitted an interim report which outlined the various areas or fields which it seemed to us, from an initial analysis, needed detailed examination. On the basis of that interim report these 31 separate study projects were launched and the tentative findings, as it were, began to have their impact on the shaping of a Government program in the spring.

Following that interim report of January, the question of reparations came prominently to the fore as a result of the Yalta Conference and a series of informal memoranda dealing with the problem of reparations, which are attached as appendix B to this report, were submitted last March to the United States member of the Reparations Commission for advice.

On in the spring months, particularly in March, it became apparent that the successes of our armed forces would hasten the occasion for a definitive initial policy of Germany much sooner than had been expected, and accordingly, on April 15, 1945, Mr. Crowley submitted a preliminary program for German economic and industrial disarmament, which was an FEA recommendation to the Secretaries of State, War, Navy, and Treasury. That document is also included as an appendix, appendix C, to this report.

Then, on August 12, 1945, following the issuance of the Berlin protocol and the delegation of responsibility for the development, negotiation, and execution of a disarmament program to the Allied Control Council, the mimeographed copies of the individual reports of the Technical Industrial Disarmament Committee were delivered to the United States Group Control Council. Summaries of those docu-

ments appear as appendix D to this report, with a full account of the ways and means in which they were developed, the addition of the various participants from the other agencies, and some notation of the limitations that must be observed in using the reports.

From time to time other documents and proposals bearing on this subject have been communicated to the agencies and departments responsible for policy determination, international negotiations, and administrative execution in this field.

You will recall that I appeared before your committee in June to give a factual background of the problem, and at that time presented various materials and exhibits to my testimony dealing with that subject. I want to make one fact clear for the purposes of the record here, that in dealing with this subject of German economic and industrial disarmament, the FEA, rather than being an operating agency, has been confined in its functions to work in the field of planning and programing. The responsibility at all times for carrying on the negotiations, for administering or executing the decisions on the subject, have been lodged in the State and War Departments and, hence, I am not in any position this morning before your committee to comment, or give any accounting on that phase of the work.

The CHAIRMAN. I understand your position there.

Mr. FOWLER. We have attempted to prepare this final report, Senator, with three things in mind. A great deal has been written and said on the subject; perhaps much that appears in the report, therefore, will seem repetitious or now rather well-accepted dogma. But it seemed to us that before leaving this work, having completed the project, a final recapitulation would be useful, for three purposes.

First, that somewhere there should be provided a supporting brief for the general principles on German economic and industrial disarmament announced in the Berlin protocol. As the report will subsequently indicate, particularly in the section on the development of a disarmament program for Germany, subsection H, which is in the introductory material, the Berlin protocol is fundamentally, in most respects, a product of American policy. I will not attempt to detail the exceptions to that there, but in general the essence and principles of the Berlin protocol are a reflection of a United States point of view, and I think that is a subject or a point that is worthy of emphasis in the future in dealing with the execution and administration of that document.

The CHAIRMAN. And also based on results of our own investigations.

Mr. FOWLER. Of our own findings. In other words, 'it isn't a policy which has been handed to us by some power on whose kite we are riding. It really has been a result, I think, of the combined thinking of the various executive and legislative agencies in the Government who have been concerned with the problem.

This Berlin protocol has taken many of the general principles that are voiced in this FEA program out of the realm of the hypothetical into the area of definite agreement, and yet I have a feeling, which to some extent is borne out by history, that time and time again the underlying principles of this Berlin protocol are going to be subjected to attacks from persons who misunderstand them or who have never understood the basis or the logic of the principles. Some of these attacks will result from propaganda from the pan-German interests

who still, we must anticipate, will have a strong base to speak from at some time in the future.

The CHAIRMAN. And also from that growing group who feel that "Well, we have won the war and with the fighting stopped why should we fool around any more?" There is going to be a constantly growing sentiment in that direction.

Mr. FOWLER. Indeed. And there will be other conflicting considerations which have a valid basis, our concern for reparations or the concern of other nations for reparations, the national anxiety and desire of the entire world to see the liberated and devastated areas rebuilt, concern for the German standard of living itself. Those are economic considerations which, to some extent, impinge upon and cover the same general territory as the principles of disarmament voiced in the Berlin protocol. Therefore, it seemed to use useful to explain the merits of these principles in the roots of history and in the light of the technical realities of total war and more important, the necessities for preserving the peace, which is a consideration which seems to far outweigh any of the other elements that one might mention.

Secondly, we felt that a report providing a specific and detailed program for executing the principles of German economic and industrial disarmament announced in the Berlin protocol might be of use at this time.

If I can interpolate there for a moment, I know my own experience has been to find a good deal of material in the form of assertions of general principles which do not take on their fullest meaning until you see them in terms of concrete figures or concrete industries. To say that we adopt and will follow a program of industrial disarmament, for example, may mean one thing to you and an entirely different thing to Mr. B. It is now important, it would seem, to get the subject matter out of the area of general principle into the realm of concrete decisions.

The CHAIRMAN. Don't you think it is also necessary to give the background reasons for the concrete decision at the present time? That is, give the, shall we say, economic and historical causes for the building up of the program. I say that because you talk to the average American, and may I say the average well-educated American, and it is very hard to get him to think back to Versailles and the mistakes made from the armistice up to the start of this war, which we seek to avoid now. He doesn't realize those mistakes and we are liable to get right back on the same track we traveled before, which will eventually lead to another war unless the facts of the background are rather widely publicized.

Mr. FOWLER. That is why, Senator, we have been not only willing, but in a way felt it was fitting for the Branch in its report to figuratively put ourselves "out on a limb," to provide a target, a program to be shot at.

The CHAIRMAN. We must realize that at the end of the last war, in our haste to get the war behind us, we left the German General Staff intact. We merely disarmed their army and left them a domestic force. We left German industry intact. We left the entire economic set-up intact.

And by the use of inflation and other means they practically washed out the economic losses of World War I and were able to build themselves up, with the help we gave them. We followed at Versailles the

policy that Bismarck had followed in 1870 so successfully in hamstringing the French with cash reparations. We tried to do the same thing with them, and they dodged it.

Mr. FOWLER. General Morgan, who was the British member of the Allied Disarmament Commission, has written a very interesting book, which has recently been published, on his experiences as a member of that Commission. He has commented (and I do not presume to quote him exactly) that by 1923 Germany was in a better position to wage war than she had been in 1914. Now, of course, there are differences this time; the amount of destruction and the disintegration is substantially greater. It is awfully hard, however, to predict just how much effect that change will make.

Of course, with an opportunity to develop, as it will, its new industrial capacity, there are many advantages the Germans would have. There is a great deal of old worn-out plant which, if it had not been damaged or had not been destroyed, might be a incubus to a heavy industry economy, and I think the record will show that the successful efforts of the Germans to redevelop their heavy steel industry in the 1920's through foreign loans and through internal financing devices—

The CHAIRMAN. And through the collection of royalties in the United States from Americans for the use of their processes.

Mr. FOWLER. Yes—you found them much better equipped in terms of their steel industry in 1929 than they were in 1920.

So, to come back to the second purpose of this report, it is to set up a specific and detailed program, with figures, with the names of the particular industries, with a definition of the specific measures that we recommend be employed.

Now, the agreement as to what will be done is, of course, a matter for the four nations who are members of the Allied Control Council to decide and they are now engaged, as you know, in negotiations looking to the removal or destruction of plant and equipment prescribed under the Berlin protocol. That remains as yet in large measure to become an accomplished fact. Likewise, they are considering the institution of disarmament controls (for example, new plant construction in dangerous fields of industry or the excessive importation of critical or strategic materials and products). But this control system which is now under consideration remains to be established in order to prevent a subsequent rearmament of Germany, militarily and industrially.

At this juncture, when these things are in their initial phases of consideration, we felt it appropriate to bring forward a series of recommendations which might be useful, both to the people who have that responsibility and to the general public, in acquiring an understanding of the necessity for some of the measures that undoubtedly will have to be employed.

Thirdly, the report outlines a long-term program for lasting and permanent control of Germany's war-making power. The Berlin protocol makes clear that it constitutes an arrangement for the initial period of occupational control. The preparation of detailed international and Allied arrangements for a long-term control of and an ultimate peace treaty with Germany will involve vital decisions which are to a considerable extent anticipated and developed herein.

Again, it is an attempt to spade up the ground for internal governmental and public consideration and not an attempt to be dogmatic and say, "This is the way it has to be."

As I have indicated to you, the basis of this report is the 31 special study projects which are summarized in appendix D. The conclusions are given there. The names of the experts who participated, and their particular qualifications, are recited. The FEA Enemy Branch, consisting of several hundred persons, has spent the greater part of its time—we have had other responsibilities, but we have given this primary consideration—over the last 6 to 8 months on this matter, and in addition to that we have been afforded the opportunity for consultation with informed people in the various interested agencies, particularly the War and State and Navy Departments. A number of experts in those three agencies have been simultaneously concerned, and we are particularly indebted to the ad hoc committee of the War Department and Navy Department, which was specially constituted by the Secretaries of War and Navy to deal with projects 1, 2, and 4, which were directly related to military armament, arms, ammunition, implements of war, aircraft, and secret weapons, and so forth. We were also able, through the courtesy of the War Department and General Clay, to dispatch a general mission from the staff to the field where we spent approximately a month in observation, or, rather, consultation, with members of the staff of the Control Council who were just then beginning to take hold of the responsibility which had been given to them.

I want to underline particularly those acknowledgements, because it is quite true that we would have been unable to carry on this work in the detail and to the extent we did without the help of these other agencies of the Government.

Lastly, I would like to put at rest any implications that we consider this final report to be the last word on the subject. It is the last response that as an organization we will be privileged to make, but there is a good deal more to learn about this business of preventing and limiting Germany's economic capacity and power to make war. Particularly, we felt that field investigations on the ground of the chemical industries and the common components industries might be undertaken to advantage because the information we have had available here, particularly about the complexity of the German chemical industry and the common components industries, has not been as adequate as we would like for it to have been.

We have come to conclusions on the basis of the information that is available, but a field survey on the ground, I think, would provide the government with a good deal more information than it presently has on the subject. Perhaps that can be done by the Control Council staff, itself, in time.

The entire program, particularly on scientific disarmament, may need to be tightened in view of a fresh examination in the light of new developments in the atomic bomb field. We had practically completed most of the underlying reports and studies at the time the atomic bomb made its dramatic appearance, although some general background of the possibilities had been known.

We have attempted to deal in this report, in section VI, with some of the implications of the atomic bomb in this field, which I think deserves a very careful consideration, but the subject is obviously

by no means exhausted. Hence, although realism may call for some considerable changing of blueprints here in response to conditions and circumstances as yet unpredictable, it has seemed incumbent upon us to submit, as the agency is being dissolved, this final report.

One last word about limitations. I would like to make it clear that this report is not in any sense an outline of a complete and general economic program for Germany. Our terms of reference gave us just one specific job, and that was a limited one—I think the most important one—concerned solely with the study of measures necessary “to control its—Germany’s—power and capacity to make war in the future.” In making this study under this limited mandate we have been conscious of the fact that we have been dealing with one side of the coin; namely, the destruction of German military power, while a related but essentially different task, the planning of positive conditions which will encourage the development of Germany and Europe along peaceful economic patterns, remains to be done. In effect, the FEA program provides an outline for the surgical operations necessary to extract and extirpate the evil growths which have made Germany a force for aggression. The development of a complementary plan or program for the economic and social reconstruction of Germany and Europe along peaceful, democratic lines is a task still ahead. If anything, it will require the same degree of persistent study that has been dedicated to the program of German disarmament.

However, in any subsequent development of this more positive side of United States policy for European peace, we would hope that one condition would always be underscored: that for some decades the existence of economic power and capacity which would enable it to wage effective war alone or in alliance with others will be incompatible with world peace and prosperity.

All of us are concerned with European economic reconstruction. The danger of doing that through too much reliance on German industrial power and development is one that cannot be too often underscored. It would seem, as indicated later in this report, that one of the great objectives to be desired in European economic reconstruction is a better balance between heavy industry in Europe, as between Germany and the rest of Europe.

If you would turn in the text to section II, page 20, you will find a table 2 which illustrates this condition very graphically. This table shows why Germany has been able to dominate the war industries in Europe.

You will note that, possessing only 9.9 percent of the area and 20 percent of the population, it was responsible in 1936 for 64 percent of the coke production, 48 percent of the pig iron production, 48 percent of the steel production, 54 percent of the aluminum production, 50 percent of the automobile and truck production, 82 percent motorcycle production, 64 percent machinery, 35 percent electricity, 35 percent sulfuric acid, 54 percent nitrogenous fertilizer, 23 percent wood pulp, 4 percent natural petroleum, 53 percent bituminous sub-anthracite—that is the Steinkohle—and 82 percent of the lignite or brown coal.

In other words, possessing a much smaller percentage of the area and population, it has succeeded in dominating these heavy industries which are most important for war.

That need for a readjustment of that balance, it seems to me, goes to the root of our problem of both European reconstruction and preservation of peace.

With that brief introduction, I would like to run as hastily as I can through the principal recommendations that are to be made.

The CHAIRMAN. There is another interesting thing. The only real work in ascertaining why Germany lost the first war was done by one of our great foundations, and that was widely publicized and picked up by the German General Staff, and measures were taken to correct that before they went into this war.

After the last war, instead of studying how to keep Germany from getting into another war, we made an exhaustive study on why she lost the war, and told her about it.

Mr. FOWLER. I didn't know that.

The CHAIRMAN. Yes. The German production of protein from wood sugar was a partial result of that very exhaustive report.

Mr. FOWLER. I know, and it is recorded in this report in subsection C of section II, that the General Staff went underground. One of the devices used was the assignment of various former members to the Archives and other Government agencies to study the causes of the loss of the war. The continuity of their concern with war-making was maintained in that fashion, and by the time they were able to come out and assert themselves they had a fairly good blueprint which they proceeded to carry out, almost step by step, as that section indicates, throughout the next 10 years. I didn't know, however, that we had been of such great assistance to them in our own studies.

The CHAIRMAN. We were.

Mr. FOWLER. This summary of the FEA program for German economic and industrial disarmament is based fundamentally on one conclusion, and that is the necessity for internationally enforced economic and industrial disarmament of Germany.

International arrangements for the use of force to prevent future acts of aggression which are generally accepted must be supplemented in the case of Germany by action designed to eliminate or control its economic power and capacity to make war. An essential element in our foreign policy should be to secure the creation and maintenance of all such necessary arrangements.

The achievement of German economic and industrial disarmament will require drastic action over a substantial period of time designed to eliminate Germany's power and capacity to make war and, through controls, prevent its redevelopment. Although Germany is a militarily defeated nation, the economic base of her aggression—the resources, the capacity, the organizing institutions—is still available or can be reconstituted, unless measures are taken toward a fundamental reorientation of the German economy.

The achievement of security from future German aggression should be the primary and controlling element in our foreign policy toward Germany.

Those propositions are, perhaps, redundant here. They are generally accepted, and the only point of emphasis that I would like to make is that it isn't enough initially to disarm Germany. The important and vital problem is the nature, character, and strength of the controls that are established to prevent the redevelopment of a war

potential, which is something that will inevitably, if it is to be effective, be measured in terms of decades rather than years.

The CHAIRMAN. And, in order that that be effective, must not that policy reflect itself also in our dealings with other nations that might have some effect upon Germany's economy?

Mr. FOWLER. Indeed. The question of how other nations can be of assistance to Germany and how we could be of assistance to Germany in helping her to prepare for another war seems to require not only a series of international engagements as to internal controls in Germany of the nature and character that the Allied Control Council represents, but also some corollary international engagements concerning trade, financing, the migration of personnel, the treatment of German assets located in those countries, the treatment of German contractual arrangement, patents. A variety of items which have their fundamental impact outside Germany are not covered and cannot be effectively covered by two or three of the Allies dealing with the internal problem inside that country.

The CHAIRMAN. In the first place, Mr. Fowler, the integration existing between the armed forces of Germany, the German General Staff, the Army, and SS, and various others, and German industry that made it possible to build up this war machine in a relatively small country, were brought about by the internal cartels in Germany which made it easy to integrate the combat machinery shall we say, of Germany with the munitions-making industry of Germany and to convert industries with great rapidity and completely control them, even in peacetime.

Had it not been for those cartel arrangements, Germany would have had a much more cumbersome machine. In fact, she would have been in the position that we were at the outset of the war and even during the war, with a very loosely knit integration between industry and the military forces that we had constantly to protect against. Isn't that right?

Mr. FOWLER. Yes, sir.

The CHAIRMAN. For that reason, the cartels must be broken up if we hope to keep Germany from rearming.

Mr. FOWLER. In section V of this report there is outlined an external security program which is summarized in this summary on pages 25 through 38. It seems that in terms of space, at least, we tend to give an unusual emphasis on the importance of this external security program, and yet on closer analysis it perhaps is an emphasis that is deserved.

Germany as a power to engage in world conquests had necessarily to depend upon the integration of her economy with the economies of a number of her neighbors in Europe and with help, in other words, elsewhere.

It seemed to us that the future threat of German aggression can be greatly minimized if, by international arrangements on the outside between countries outside, the aggressive forces within that country can see that it is hopeless for them to attempt to divide and conquer. That, undoubtedly, is bound to be the tactic that they will attempt. They cannot, in the light of the power that was summoned against them in this war, feel any confidence in their ability within their own power to deal with the forces ranged against them. So they must adopt the strategy of infiltrating through various economic and

political devices to achieve some form of alliance whereby, added to Germany's resources, the resources of the other powers can give them a base on which to play.

The CHAIRMAN. And they are right now being used. Only yesterday I was approached by a representative of American industry seeking to get the German stock of a big company in the United States which was controlled by Germany, asking me to get permission from the State Department for them to get an option from the Swiss holders who now have that stock, which we had hoped the Swiss would cooperate in freezing, but which apparently now has gotten into the hands of Swiss people. I don't think they put up the money that represents the stock or anything.

I still believe that it is merely, shall be say, a trusteeship for profit, thereby getting control of that company back into the hands from which we had to wrest it when we got into the war, showing that our foreign policy must not just look at Germany, but must look, just as you said, at those other nations whose economies would help Germany, and see to it that their economy is conducive to peace and not conducive to building up a war machine in Germany.

Mr. FOWLER. Yes, sir, and in that connection I think the problem of treatment of the neutrals is one of the most difficult.

The CHAIRMAN. It is.

Mr. FOWLER. And at the same time important phases of this whole question. If I may interpolate at this point, since we are dealing with it here, we have felt, on the basis of our studies, and again this is not an official position of the United States Government but only of an agency studying the problem, that the neutrals and some of the late cobelligerents such as Turkey and Argentina, are set apart as a separate category in connection with this problem of German external security.

German economic penetration and influence in these countries was strong, and up until nearly the end of the war it had a very firm footing. This fact, coupled with the known sympathies of many individuals and groups in these countries with the Nazi cause that we cannot be blind to, creates a set of intangibles that must be faced realistically in projecting the external security program.

Questions of national sovereignty of the powers in question are intermingled with the legitimate security and reparations interests of the Allies and the United Nations.

The satisfactory solution of the problem is not likely to emerge except through very painstaking and intensive negotiations, and care on the part of the United Nations to respect the legitimate incidents of sovereignty, but more importantly the understanding willingness of these neutrals and of Argentina and Turkey to accommodate their national interests to the international security from future German aggression, which is a world stake.

Much remains to be done in this field, and in particular on the following: To obtain from the countries in question the information concerning the identity and location of German assets within their territory and any other information they have bearing upon German economic and political penetration. It is very difficult for us to obtain that information completely from outside Germany. We must have the help and cooperation of those governments, and they must know that we value and put store by that cooperation.

Secondly, it would seem important to obtain some agreement of the countries in question on the substantive provisions of an external security program that all of the nations would cooperate together to maintain.

Third, to obtain an agreement from the countries in question concerning the administrative arrangements which they will permit to be followed by the Allies in connection with the treatment of German assets and personnel existing in those countries.

Fourth, to obtain their agreement concerning future trade arrangements between the export and import control authority for Germany and the nations, always for their respective territories, including any further exchange of a financial character.

The administration and disposition of German assets in the neutral countries, Argentina and Turkey, is not likely to be consummated in accordance with the full interests of Allied and United Nations security, except through the operations of a German external assets commission established and manned by the Allies and possessed of substantial authority and operating control of these assets in the neutral countries. Such a commission should be endowed with power and authority of both the German Government and the former German property owners. It should have adequate technical and engineering personnel located in the countries where these assets exist to supervise and check upon their administration and arrange for their ultimate disposition into safe hands.

It should take into primary account the security interests of the Allies in the problem.

Finally coming to the toughest phase of this problem, should any of the countries in question prove unwilling to cooperate with the Allies in their endeavor to suppress the seeds of another war, the employment of existing sanctions in terms of loans, trade agreements, and a number of things which are treated in detail in this report, and the development of new ones, should be aggressively pursued by the Allies, acting in concert until a satisfactory elimination of Germany's economic base in these countries is achieved.

That is our view. It is simply a view based upon a careful analysis of the difficulties that are involved in dealing with complex properties.

The CHAIRMAN. But that is why that entire philosophy must color our foreign policy.

Mr. FOWLER. When you examine the extent and nature, let's say, of the German electrical industry in Spain, it is a very complex and finely integrated affair which it is difficult to extirpate and to remove from German control, from the direction of German managers, from the access of the German technicians, without a firm understanding with the local authorities in question and adequate Allied supervisory personnel on the ground administering those properties and disposing of them on terms and conditions that would guarantee as far as possible against their return into the former German hands.

The CHAIRMAN. You know, Mr. Fowler, my mind goes back to an incident in my own State. The Supreme Court of West Virginia one time handed down a decision on a negotiable banking paper that was very carelessly worded and made the negotiability of paper questionable.

The bankers of the other States of the Union said, "We are not going to take any more negotiable paper out of the banks of that

State," and within 24 hours that decision was straightened out and business went on. Any State or any nation will act when its economy is endangered.

Mr. FOWLER. In the last year the Swiss agreement that you referred to was negotiated in connection with a trade agreement with Switzerland for items that were in short supply and were necessary to their economy. I think an examination of the problem will show that a very fair and understanding case can be made to these neutral governments as to why it is in their interests to join with the Allies in this common international endeavor.

The CHAIRMAN. But we as a nation can't do it by ourselves. We must have the cooperation of all the United Nations.

Mr. FOWLER. Exactly.

The CHAIRMAN. And it does not involve a surrender of sovereignty.

Mr. FOWLER. It is a matter of international agreement.

I have jumped ahead to discuss the external security problem. I will come back now to the second point in this summary program, namely the establishment and execution during the occupation period of a program for German economic and industrial disarmament, to be followed through by the maintenance of controls designed to prevent rearmament in the future. The achievement of German disarmament requires the full-scale military occupation or complete control of the German economy for a period of time. Such a full measure of control for a limited period of time is necessary to the establishment and execution of the initial phases of the program, and that is the period we are in right now.

A military disarmament program designed to stop the production of arms, ammunition, and implements of war, while highly necessary and an integral part of this program, falls far short of being an adequate measure of limitation on the power and capacity of Germany to make war. Military potential in a total war is a combination of modern industrial, scientific and institutional components of such a nature as to make them equally useful for war or civilian production.

Therefore, adequate disarmament measures must touch and concern not only the direct manufacture of military weapons, but also:

(a) The economic and industrial base in terms of facilities and access to materials.

(b) The scientific and engineering research on facilities useful for waging war.

(c) The economic institutions used or usable for the effective mobilization of the resources of war.

(d) The basis for evasion of internal disarmament of Germany existing in German assets and personnel outside Germany.

It should be the principal aim of military government, the occupying authorities, and the Allied Control Council to develop and effectuate these disarmament measures during the period of full-scale occupation and control and provide the basis for the semipermanent maintenance of such controls as may be necessary in the indefinite future.

It should be contemplated that at the end of full-scale occupation and control such features as the elimination of war plants and excessive war industries and the installation of continued control measures should be successfully consummated. Full-scale occupation and control should not be given up until certain assurances of continuing security have been provided.

These assurances, of a semipermanent German disarmament program, should be the subject of agreement between the Allies before they retire from their present position of full-scale control, and should include:

1. The establishment of German governmental machinery of acceptable composition according to political determinations of the Allies concerning the degree of decentralization of political authority necessary and the extent of territory to be maintained under German rule.
2. The successful negotiation of agreement between the Allies including the details of continuing disarmament to which the parties are committed to enforce, and providing for common action in the event of violation of such conditions by Germany in the form of strict military sanctions.

The Controls to be maintained would be established by Allied authority and not by treaty, although acknowledgment of this authority by German governmental machinery should be a condition precedent to the withdrawal of full-scale occupation.

May I interpolate there to say this question of security, according to the notions presented in this report, is not a matter of bargaining between the Allies and a German government. It is a matter of agreement between the Allies which that German government must accept as a condition to the withdrawal of full-scale occupation and control.

It is not a matter of haggling as between the new government and the former Allies. That would seem to have been one of the great weaknesses after the last war, the way the Germans through negotiations were able to interpret or spell out the provisions of the treaty to their own advantage.

The CHAIRMAN. Yes. And also their habit of dealing with individual Allies instead of dealing with the Allies as a group at all times. In other words, the United Nations must force all dealings to be with the composite group rather than to allow them to talk with various members and try to win their support.

Mr. FOWLER. The lodgment of full-scale responsibility in the Allied Control Council by the Berlin protocol seems to have been one of the great advances that we managed to obtain over the last war.

Finally, as a condition to this giving up of full-scale military occupation, there should be the establishment of a semipermanent Allied disarmament commission fully empowered with authority and administrative machinery to maintain the disarmament plan after the Allied Control Council has retired from a position of responsibility for the general control of German affairs.

As the section of this report on administration indicates, there is no reason why the current structure of the Allied Control Council could not evolve into this permanent disarmament commission after it relinquished its responsibilities for some of the normal incidents of government to the German governmental machinery.

The first of these programs that I want briefly to summarize is the military disarmament program. Before doing so, I ought to note that these international agreements, and the administrative machinery that may be established to enforce them on a semipermanent basis, ought to be arranged so that the nature and degree of the control is flexible and subject to change. A measure of control deemed unnecessary today may become highly important tomorrow because of

technological improvements or developments; or a measure of control deemed necessary today may be released at some subsequent time.

For example, in the program that we have developed, a good deal of emphasis is laid on the reduction in capacity of the steel and related heavy industries. A less emphasis is placed upon the control of the manufacture of wood products, which we consider as one of the more or less peaceful industries which Germany could be allowed to develop, particularly to exploit her own forest reserves, which are greatly over-expanded and are indeed being stock-piled as a future source of supply. It might develop that over the next decade technological improvements in the field of plastics or wood products would dictate a different view over the importance of controlling the wood products or wood processing industry than the one we would have today in the light of current technology.

At the same time, developments might occur which would make a control established today seem relatively unimportant or redundant, in the light of other advances that have taken place in the intervening period of time.

So in these permanent controls and measures a certain degree of flexibility, if provided, would be of substantial advantage in adapting the measures to meet technological change; also, the progress of the development of various weapons of war.

Coming to the military disarmament program, I will only give a very brief summary of it here, and you will find a much fuller treatment in section I of the report and in TIDC projects 1 and 2, which were developed by the ad hoc committee of the War and Navy Departments.

I should say there that those two reports, projects 1 and 2, which were prepared by a committee composed of two representatives from the War Department, two from the Navy Department, were among the most useful and valuable of the handbooks that we were able to procure, and I think that the full treatment of this problem of military disarmament in those reports would be worthy of attention.

The elements in the program recommended by these projects and adopted by FEA as part of its final report are as follows:

1. The manufacture of arms, ammunition and implements of war, including aircraft, should be forbidden, and their importation into Germany barred except for permission to import for police purposes granted by the Allied Control Council. Prohibited items should include those defined in TIDC projects 1 and 2, and discussed in section 1 of this report, together with any other items that the Allied authorities may, by agreement, include in this list.

I won't take your time to read the twenty- or thirty-odd specific items that are included in section 1.

2. All facilities specialized for the production of items determined to be within this classification should be removed and the production or importation of additional facilities of that type prohibited. These facilities should include the 11 categories of plants, 40 specified categories of facilities and equipment described in section 1 of this report, and such additional items as the Allied Control authorities may, by agreement, designate as plants or facilities specialized for war production.

If I may, I would like to pause and lay some emphasis on this fact. The facilities referred to here in the military disarmament program

are facilities which, according to our experts, have their only real use in the making of weapons for war. For example, a survey of our machine tool industry as utilized in this war and checked by contacts between the chairman of the Machine Tool Committee and the manufacturers who were participating in our program developed a list of some 36 types of machine tools that it was generally agreed you wouldn't want unless you were making an article for aircraft or an article for guns, a particular type of gun boring, or some defined piece of mechanism that was needed for an armament program.

So, in distinguishing between the quantity of machine tools that would exist in Germany under an industrial disarmament program, it is important to single out these specific types to see that every one of those is eliminated, because they are not useful for civilian production, or at least their use is so limited that the real purpose of any manufacturer in maintaining them would be as an element for the ultimate conversion of his plant to war. They are not the general-purpose, all-purpose, civilian type of machine tool that would be useful.

In that connection—if I may use this chart for a moment—incidentally, sir, I would like it to be noted in the record that these charts were prepared for reproduction in the TIDC reports. I didn't want you to think that we had spent the taxpayers' money in preparing them solely for the purposes of the hearing. They have been photographed and included in order to summarize, and are included in these reports, so that there is no point in offering this material for the record.

In the case of the iron and steel industry, this point I have just explained about the types of steel facilities which are fundamentally armament facilities stands out here. Wholly apart from the question of the capacity of the steel industry that should be left in Germany, there are certain steel facilities which, because of their use, ought to be eliminated completely from the German steel industry. I won't bother to detail those except to say that they have been carefully selected by our experts in our own steel industry here in the War Department, the Navy Department, the War Production Board, and other agencies concerned; the general point, for example, is that steel equipment that is built to produce an ingot in excess of 4,500 pounds in 9 cases out of 10 has an armament use in mind, or electric furnaces are so closely related and so important for the processing of certain ferro alloys which have their primary use through this process in the so-called tough steels for armament purposes, that the electric furnace as an item of steel equipment is considered a part of the specialized equipment for war.

I won't go through the other parts of that, except to say that there are numbers of types of equipment in plants which ought to be eliminated completely, because they fall within that category of specialized facilities. We have tried to detail them.

You will find in this report, in section I, a table which, in terms of the steel industry, indicates the recommended limitations on steel equipment which should be imposed. For example, a crucible pot should be limited to 80 pounds in size because those in excess of that have their normal use in the armament field. So these quantity limitations as to the size of plants and equipment in steel plants have been developed with the military disarmament program in mind; similarly, in

connection with the machine tools, the 36 types of machine tools which have their primary use in aircraft and similar arms plants have been identified.

Certain auxiliary measures will be necessary in addition to the physical removal of these facilities, including the limitation of the governmental institutions which organized and maintained programs of military production of war planning and the prevention of their open or disguised restoration. This will include:

(a) The prohibition of the establishment or maintenance of any department, organization, or agency inside Germany or outside Germany under German control whose practice or purpose it is to plan, design, manufacture, acquire, or operate any arms, ammunition, or implements of war, including aircraft.

(b) The prohibition of the appropriation or disbursement of funds to be used for military purposes, including control of the appropriation of funds by the Government for the establishment or support of laboratories, schools, or other institutions which might be devoted to the development of such activities.

Those auxiliary measures, to parallel it to our own picture here, would add up to providing that the Germans are not to have a department of war, a department of navy, a department of air, and that German taxpayers' moneys are not to be appropriated for that purpose. Their appropriations or funds are to be checked to make sure that the disbursement of funds for the building of a military establishment as distinct from a local police force is prevented. Those auxiliary steps seem quite self-evident and require no further comment.

Special recommendations pertaining to the aircraft industry include:

(a) The limitation of all Government agencies or private institutions in Germany, or outside Germany controlled by Germans, for the development or execution of plans for the design, manufacture, procurement, or operation of aircraft or components as described in section 1 of this report, and the prohibition of their reestablishment.

(b) The prevention of the manufacture, ownership, storage, or operation by the German Government or by any public or private agency under German control, within or outside of Germany, of any aircraft or aeronautical training devices or components thereof (except only such operations of civilian aircraft and facilities therefor as are provided below).

(c) The establishment pursuant to Allied agreement of international arrangement for the control, management, and operation of all civilian flying in and over German territory and for the control of all ground services for aircraft, the making of flights, both civilian and military, subject to a traffic control organization established by and subject to Allied agreement.

Now I come to what is perhaps the most difficult and most controversial part of this disarmament problem, the industrial disarmament program. Most of one's personal experiences I think, will include the finding of easy agreement with the persons on the other side of the discussion on military disarmament, institutional disarmament, scientific disarmament, and the eternal security program we have discussed. On the other hand, the industrial disarmament program has been a subject of a considerable difference of opinion. The FEA has tried to profit by those differences of opinion, and I would like at this point to say that we feel we have greatly benefited by the fact that this part of

the subject has been discussed openly and publicly by outstanding men who have taken the time and trouble to develop analyses of the problem and treat them openly from their points of view. Mr. Morgenthau, Mr. Baruch, the Brookings Institution book, by Moulton and Marlio, the reports of the national engineering societies, Mr. Conant's treatment of the problem, all appeared publicly from time to time. As we will indicate later, we have tried to profit by their views and at the same time to test them and assay them in terms of a practical, detailed program.

The planks in this industrial disarmament program are as follows:

1. The following industries vitally important or useful in war production are to be eliminated or controlled as required by the Yalta declaration and the Berlin protocol. Then there is a listing of these industries. I would like to tell you, Senator, the way we arrived at this list of industries that is vital for either elimination or control.

First we made an analysis in terms of our own war production experience here of the industries which seemed to be most important and vital in terms of our own war effort. Then we checked that list with the ad hoc committee of the War and Navy Departments and they suggested several additional industries, and we created separate projects for those industries. To a considerable extent we defined those industries as specifically as we could in our own terms for the purpose of these individual studies, and it is quite likely that some segment or some additional industry that was not selected for inclusion in this list may at some later time, or even now, be properly included, but we tried to exclude from this consideration at the outset the industries which seemed to be less important and more or less peaceful in character.

To take a simple illustration, the shoe industry has its importance for war. Soldiers need shoes. But we didn't include the shoe industry in this list because we thought that it was fundamentally a civilian type industry which didn't have the rating or priority in its treatment for war that would justify the elaboration of measures of elimination and control.

I won't read the list of the industries because they are treated later.

The CHAIRMAN. Did you look at this in the studies from the question of industrialization? One cause, I believe, of Germans being conquest-minded, aside from the national training and education, is overindustrialization. It is like an abscess. It bursts out into war.

Mr. FOWLER. I share your view that the industries which for the purposes of this current program we have treated as peaceful may at some time take a turn on the road. Let's take, for example, the consumer durable goods industry—the electric iron or a simple household article like the washing machine or vacuum cleaner. The limitation on those industries which we have imposed has been an indirect one. It is the quantity of the machine tools that are available.

The CHAIRMAN. In the plant quality?

Mr. FOWLER. That's right.

The CHAIRMAN. Colonel Bernstein the other day stated that Germany's plant facilities were in excess of her wartime needs in certain categories.

Mr. FOWLER. We found, in this analysis of the events between 1920 and 1939, that the German general staff and its collaborators

had really three targets that they were driving toward. They were endeavoring to build up Germany's heavy industry in excess of her peacetime needs to the greatest extent they could. That is borne out in almost every one of the heavy industries.

The CHAIRMAN. In your charts here it shows the gross, for instance, of ingot tons of steel to the 1938 level, which is terrific.

Mr. FOWLER. The expansion is recited for each one of these: Light metals, petroleum, rubber, electronics, antifriction bearings, common components, machine tools, automotive, shipping, machinery industries, iron and steel, chemical industries, solid fuels, electric power, ferro-alloys, optical instruments and precision equipment, forest products, transportation, and communication. All of those industries were the ones in which there was a tremendous expansion between the twenties and the last war.

The CHAIRMAN. Beyond what the country's real needs were?

Mr. FOWLER. Beyond what it needed.

First, they sought to obtain industrial self-sufficiency in certain of the materials that were important for war. When they found, in World War I, that, for example, they suffered from a lack of oil and rubber because of the British blockade, they began to figure out ways and means whereby the chinks in their industrial self-sufficiency could be filled, and hence the development of these two industries.

Secondly, they began to import excessive quantities of a number of metals and nonmetallic materials that would be necessary in vast quantities in the event of a war program.

Thirdly, they tried to achieve German industrial and economic domination of Europe along the lines that the chart has indicated in terms of physical capacity and then through the cartels, trade agreements, buying of properties in these other countries with foreign exchange, patent controls, and a number of related devices which were used, I think, for two purposes: First, to obtain some political footing and sympathy in those countries; and, second, to mobilize the resources of those countries in a way in which they could be integrated into the German war machine by conquest, so as to give Germany plus Europe a quantitative position in the war industries to stand against the rest of the world.

The CHAIRMAN. And, through the cartel agreements, to create shortages where shortages would be the most damaging.

Mr. FOWLER. The five preliminary measures that we have devised to operate on these three targets of German effort between the wars are designed to effect an initial substantial reduction of Germany's over-all industrial capacity, particularly in the heavy industries, which is far in excess of peacetime requirements, and to prevent a restoration in the future of any rebuilding of a dangerous excess.

Secondly, to permanently eliminate Germany's industrial or material self-sufficiency for war, and the third, to eliminate German economic and industrial domination of Europe.

The particular measures or means that we have chosen to accomplish these objectives are five:

1. The complete elimination of certain key industries of unusual importance for war or which have been created in Germany primarily for the purpose of achieving industrial self-sufficiency.

2. The reduction of excessive capacity in the industries important for war which are not scheduled for complete elimination. A partial deindustrialization of those industries.

3. The establishment of industrial controls designed to control the capacity, rate of manufacturing and exports of the industries important for war which are to be permitted to continue on a substantially reduced scale in the German economy.

4. The removal of the plants and facilities rendered useless by the foregoing measures in such a manner as to make them readily available for reestablishment in the countries entitled to claim reparations.

5. The establishment of a control of the imports and distribution of materials and products that are highly important in quantity for sustained military operations.

If you will turn to page 49a, we have tried to tabulate these measures very specifically.

The CHAIRMAN. You mean in the final report?

Mr. FOWLER. No; it is in the text here. It is also in the final report. On page 49a, there is a tabular summary of this program; 49a lists the industries that are to be eliminated completely and rebuilding permanently prohibited.

Germany is to be made dependent on the outside world for any essential civilian needs she might have of these products. For example, Germany will need some supply of ball bearings, she will need some supply of oil and rubber, either natural or synthetic. But she is to get those materials from the outside world, and those industries are to be completely eliminated.

Abrasives; antifriction bearings; calcium cyanamide; electronics (except civilian radios); light metals, including raw aluminum and magnesium; synthetic methanol; synthetic oil; ocean-going ships; synthetic rubber; technical and scientific optical instruments (except civilian cameras); heavy trucks.

Then on the next page, in category Roman II, industries whose capacities are to be reduced and subsequent capacity rate of production and exports controlled. It is contemplated that this program would be maintained for the duration of reparations or a decade, whichever is longer, at the end of which time appropriate modifications would be the subject of negotiation between the Allied governments.

I pause there to say that this is a short-term program with long-term potentialities. No one, I believe, today could predict what our views should be about the future of these industries, say, between 1955 and 1965, but, as the report indicates, it seems to us to be terribly important at this time, when you are attempting to remove these excess capacities and get these industries reestablished in the other European countries, to have a breathing spell or a static period in which Germans will know that if they want to develop their standard of living, if they want to develop a better economy, they can't hope to do it by a repetition of their maneuvers after the last war in redeveloping great capacities in these heavy industries important for war.

So, in the table, you will see in the first column an estimate of the amount of capacity or production from figures we have obtained through intelligence and other channels.

In the second column, a recommendation for the extent of capacity which is left in Germany.

In the third column, an estimate of the capacity which would be eliminated. There has to be some allowance there for bomb damage, for inaccurate figures, but we try to approximate in those three col-

umns an estimate of what Germany had, an estimate of how much in terms of disarmament, not reparations as such.

The purpose of this is not to fix a standard of living. Its purpose is to disarm Germany.

Then in the third column, the estimates of the amounts of capacity that would be removed, and, finally, in the last column, some indication of the nature of the export control that should be imposed.

The CHAIRMAN. I notice you also have an estimate of labor to be displaced by such changes, which I think is very good, too.

Mr. FOWLER. There is a complete table on that subject in the text of the report, the estimate being that if you take the 1936 labor pattern, the execution of this industrial disarmament program would displace approximately 1,900,000 workers. We have tried to include some of those figures for the convenience of the reader in this table.

The CHAIRMAN. You also have, on 49(h), a list of imports to be prohibited, a list to be licensed, and a list to be kept under surveillance.

Mr. FOWLER. That is right.

I want to note and to read to you the prefatory note to this table, which applies to all of the figures in this industrial disarmament program. First it should be noted that this table covers only the industrial disarmament program. The military items are dealt with in section I.

The tables which have been prepared for the convenience of the reader in order to give him a bird's-eye view of the impact of the industrial disarmament program should be studied in connection with the appropriate sections of the text of the report. The reader should also bear in mind that many of the figures in the tables and in the text of the report are estimates based on the best sources available to FEA. While the estimates represent a careful and painstaking study and have been dovetailed with each other in a comprehensive scheme, which represents FEA's best judgment of the quantitative measures to be taken, they are not offered as absolutes which cannot be changed. Indeed, in the case of the chemicals and common components industries the FEA industrial disarmament program includes recommendations for detailed field surveys to provide accurate detailed data not now available. Therefore, any of the figures may be subject to some adjustment in detail, especially for use in complicated negotiations among the members of the Allied Control Council, without destroying the effectiveness of the program. And, in view of the integrated character of any such program, a change in one part may necessitate adjustments in other related parts. However, the limits on any adjustment should be taken as set by the purposes of the FEA industrial disarmament program which seeks to give practical application to the resolves expressed in the Yalta declaration and the Berlin protocol.

In other words, Senator, I wouldn't want to leave with you the impression that we assume a completely infallible judgment on these detailed figures. In a complicated negotiation, as you will understand, where the views of four countries have to be accommodated, it is quite likely that variations from these figures by all four countries, who might be as purposeful on the industrial disarmament issue as we, could result, and we are submitting these figures as our best estimates not in an attempt to bind or commit anyone to them, but to say that this is the type and character and range of the sort of program that we believe would achieve the purposes of industrial disarmament that have been outlined, eliminating the excess, destroying Germany's industrial self-sufficiency, and eliminating her industrial domination of Europe.

The CHAIRMAN. I remember that after the last war American representatives went to the peace table with no such collection of

information as they will now have. We are now getting very complete information on Germany and Japan and other countries. I am hoping, also, that our representatives will go to the peace table with a very thoroughgoing knowledge of the United States of America, its potentialities and its needs, and their impact upon the world and the world's impact upon them. I think that we also need, shall we say, a DEA, a domestic economic administration, a survey of the United States of America.

Mr. FOWLER. We certainly found plenty of chinks when we started the war-production program.

The CHAIRMAN. I think that a domestic analysis like this is badly needed.

Mr. FOWLER. Yes. I am sure that most of the other countries maintain that kind of information.

The CHAIRMAN. On themselves and on us, too. I think we should do the same thing domestically that your organizations have done and are still continuing to do in the foreign field.

Mr. FOWLER. We found in the preparation of these reports that the war production program had certainly taught us more about our industrial economy and how it worked and how it operated and what purposes it was to be used for.

The CHAIRMAN. I believe that right now the Government officials of the United States know more about American industry than they ever have known in their lives, probably more than a whole lot of the industrialists know, because the average industrialist is in one field and he is watching that field and is not paying much attention to the other fields. That is why, in the building up of the War Production Board and various other agencies, it was so hard sometimes to make one man see the impact of something he did upon some other branch of industry.

Mr. FOWLER. Undoubtedly, the information that will be available in the files of the Board and the War and Navy Departments——

The CHAIRMAN. Will be of tremendous value, but it should be gotten together just like this.

Mr. FOWLER. You have to maintain that information, too.

The CHAIRMAN. It must be maintained. We should have a constant survey.

Mr. FOWLER. Of course, as you know, one of our great problems all during the early period of the war was getting a machine-tool inventory. We just did not know where to put our hands on the particular items that we needed.

The CHAIRMAN. I notice that these reports are marked "Restricted." Are they?

Mr. FOWLER. We are now taking them out of the restricted category.

The CHAIRMAN. So these could be made a part of our record?

Mr. FOWLER. They can be made a part of the record.

I shall take just a few more minutes, if I may, to call to your attention the scientific disarmament program, which I am not going to read the summary of here, but I want to say that it has been one of the most difficult and intangible problems that we have had to try to meet.

I don't feel that any elaboration of the subject before the committee could add any to the sum total of your information on it, but

we have gone out on a limb to recommend a scientific disarmament program which involves, first, the elimination of certain facilities completely, laboratories and installations of described kinds which, according to our information and the advice of the ad hoc committee of the War and Navy Departments, are installations and laboratories fundamentally for the purpose of making war.

The CHAIRMAN. You know, Mr. Fowler, we have information to the effect that Germany has shipped entire laboratories and set them up in neutral countries. She did that in 1942, 1943, and 1944.

Mr. FOWLER. Yes, sir.

The CHAIRMAN. Have any plans been made with reference to what can be done on that?

Mr. FOWLER. That would have to be handled, I think, through the external security program. It is one of the most important phases.

The CHAIRMAN. Do you have any detailed knowledge of how much of that has gone on?

Mr. FOWLER. I am afraid that all we have is the knowledge that enough has gone on to know that it is really a problem, but I don't think we have anything like complete information at hand.

The CHAIRMAN. I think the only way we will ever get the complete information is through a careful study of the German files, which of course we haven't had time to make.

Mr. FOWLER. We have included that as a recommendation in this external security program. The really fundamental part of the program is investigation, because it is awfully hard to convince any of these countries as to the nature of the German penetration problem unless you can lay the facts right out on the table. It is awfully hard to justify the diplomatic representations and the proposals that you make to them to undertake action in cooperation with you unless you can prove your case. If you don't have that data, it will be very difficult to convince a country that it ought to submit to various types of arrangements that might be inconvenient or might interfere with what they consider to be their normal sovereign rights.

The second phase of this scientific disarmament program, after you eliminate the specified categories of laboratories and scientific equipment, the facilities which we have detailed here, is to undertake a licensing system on all research that is to be continued.

The CHAIRMAN. Including inspection with the licensing?

Mr. FOWLER. Right, sir.

Licenses should be obtained from the Allied authorities before any research work is initiated. No licenses should be issued for the study of—then there is listed military products, aircraft or aeronautics, atomic energy, and peacetime research projects related to fields from which future secret weapons may be developed.

Then there is a list of the categories of dangerous research which according to our view now should not be licensed, regardless of the reasons for them.

It is important to include there a prohibition against research in these industries that are to be eliminated from Germany. It is not logical, for example, to eliminate the synthetic rubber industry in Germany completely, to make her buy rubber from the outside world, and allow German chemists to continue to develop synthetic rubber processes. So, the research control program ought to be

coordinated and meshed with the industrial disarmament program in those fields.

The CHAIRMAN. That is right.

Mr. FOWLER. Secondly, after licensing, there should be control of the finance of scientific research. The control of the financing of scientific research and development would include a prohibition against the use of Government or private funds for direct support or subsidy in and out of Germany of military research of all kinds; require as part of licensing system disclosure of sources of all financial backing and use of all funds of all laboratories, Government or private; require disclosure of sources and disbursements of all funds raised by public collection.

The fourth and last phase of the scientific disarmament program concerns the control of scientific personnel now in Germany, which is probably the most intangible and difficult of all. We have recommended that all scientific personnel be registered, including engineers and that licenses to that personnel to continue their scientific work be granted, except to former key individuals in war research, former leading Nazis, and violators of the control regulations.

Secondly, as a measure of controlling scientific personnel, place technical education under the jurisdiction of the Scientific and Research Section of the Allied Control Authority. A good deal of slanting of research and development, as we know, can be accomplished through the technical education that is provided. It can be slanted in a peaceful direction or in a war direction, depending upon upon the schools and universities.

Third, prohibit the migration of German scientists and engineers in all but exceptional cases, and subject their foreign travel to particular scrutiny. The experts on that subject weighed very carefully the advantage of the dispersing of this scientific organization in Germany or of keeping it in Germany under control, and the factors that led to this recommendation, I think, can be briefly summarized that, if you allowed German scientific personnel to migrate freely into all countries of the world, they could there carry on their research without a break in continuity in the laboratories and with the equipment provided by the industrial and governmental concerns in the other countries; and, secondly, would have the advantage of the knowledge, processes, and research that might not otherwise be available to them. Because of those factors, it was felt that a very strict control over the migration of German scientific personnel should be maintained. If you have one opening for them, if they can go to just one country, that is where they are apt to congregate, if you don't have that fundamental Allied control at the outset.

Last, prohibit foreign interests in Germany from carrying on research, and by international agreement curtail or stop similar activities of German nationals abroad.

Accredited foreign scientists should, of course, enjoy freedom of travel within Germany.

The next program, the institutional disarmament program, ties into the other more physical controls. It attempts to list the official institutions in the German Government which were part of the war machine and which should be abolished and their restoration prevented. It deals also with the private organizations that were mobilized as economic institutions for war and recommends in detail

measures for the dissolution of combines, trusts, domestic cartels, through laws, decrees, and administrative organizations.

It then deals with the highly important place which German participation in international cartels has played and recommends measures, including elimination, diligent and painstaking search of company and governmental records in order to ascertain the full story of their operation, and effective diplomatic steps in the neutral and liberated countries to secure similar data.

Finally, it deals with the problem of the German general staff, which is at the root of most of these difficulties, and recommends that it not only be completely and formally dissolved, but that its members be segregated from the civilian population of Germany at least by exile, stripped of titles, rank, and status, and prevented from maintaining contact with each other.

I should note that that measure is not proposed in the nature of a criminal penalty because of some concept of guilt as war criminals. Regardless of the outcome of the war criminal trials, it has seemed to us that in the light of the experience after the last war, there should be some segregation of the members of the German general staff, much as you would treat an individual who was a carrier of disease or infection.

The CHAIRMAN. Have you recommended anything there with reference to the migration of potential general staff members? After the last war they were sent to various nations to work with their armies, ostensibly just as a nice gesture to them to help train their troops, but actually for the experience that could be gained, so they could be brought back to work with the general staff at such time as Germany became strong enough to use them.

Mr. FOWLER. Yes, sir, we have included a recommendation.

The CHAIRMAN. I don't think any of those people should be permitted to work with foreign armies at all.

Mr. FOWLER. In the external security program, which I will not have a chance to read or to treat here, on the question of German personnel, it is provided that:

All German nationals, including Germans who have become naturalized abroad, identified in any substantial way with the Nazi or pan-German activities, and possessing scientific skills or fitted for responsible positions in government, journalism, education, banking, industry, commerce, transportation, or military pursuits, should forthwith be repatriated to Germany.

Then, later, it says that:

The same general problem arises in connection with the future migration of German personnel. Clearly known Nazis or espionage agents or all others who by reason of their previous record are considered dangerous should not be allowed the normal rights of exit from Germany and entrance to the outside world. Moreover, the restrictions on movements of scientific personnel described in section III of this report are also an appropriate part of the external security program.

Clearly, there are questions of judgment and degree, but a former military officer who was obviously of sufficient rank and knowledge to be an important person, who was leaving Germany to go to another country to carry on his profession, as it were, represents something I think it is rather dangerous to turn loose.

The CHAIRMAN. For instance, within 6 months after the armistice, great numbers of German officers of rank equivalent to our grades of captain, major, and lieutenant colonel, were serving with the Mexican

Army, training the troops of Carranza. You would find them in every post and garrison.

Mr. FOWLER. Senator, I am going to conclude now just by calling your attention to the part of the statement which is in support of the program. We have tried to anticipate to some extent the types of objections that will come, which would naturally come to such a program, and we have tried, more or less as an advocate, to state the basis of our case. I won't go through that with you at this point.

The CHAIRMAN. I'll tell you what we want. We want to print this whole study as a part of the record, and have these as exhibits to go with the statement of Mr. Fowler, including those marked "Restricted," which now have been released from restriction so that we can have them.

Mr. FOWLER. We will submit the subsequent copies of these reports to you as they come off the press.

The CHAIRMAN. Do you have an extra set of these that I could turn over to the reporter?

Mr. FOWLER. There is one modification on the restriction. We have not submitted to you copies of reports on projects 1, 2, and 4, which were prepared by the War and Navy Departments. I shall have to obtain permission.

The CHAIRMAN. Are 1, 2, and 4 in this group?

Mr. FOWLER. No; they are not.

The CHAIRMAN. We can print anything that is here?

Mr. FOWLER. That is right, sir.

The CHAIRMAN. As soon as you get the restriction removed from 1, 2, and 4, we can add them?

Mr. FOWLER. Right, sir.

Here is a list of errata—errors that have occurred in the process of mimeographing. I will submit that to you. We will correct your copies of the report so you really don't need that.

The CHAIRMAN. Do you have an extra set of these?

Mr. FOWLER. Yes, sir.

The CHAIRMAN. Please give them to the reporter, so he can keep his record correct.

Mr. FOWLER. I should say that, due to the snow the flu epidemic, we didn't have time for careful proofing of this report, as we would like to have made, and we will correct the initial errors which we have spotted.

(Off the record.)

Mr. FOWLER. I should like to say also that we are especially indebted in this connection to the OSS presentation unit. They have done, I think, a remarkable job in distilling the recommendations in the individual reports in the charts that you see here, which will be duplicated in the individual reports. I know that there is so much for busy people to read these days that visual presentation is quite helpful, and I want to express here our appreciation of their work in preparing the charts for the record.

The CHAIRMAN. We will recess, to meet at the call of the chairman.

Thank you very much, Mr. Fowler. I think you have done a very able piece of work here.

(Whereupon, at 12:40 p. m., the committee adjourned, subject to the call of the chairman.)

5-b. Neuordnung (New Order) for Belgium.....	1476
6. Neuordnung (New Order) for Norway.....	1500
7. Interrogation of Von Heider, dated July 17, 1945, on new order for French chemical industry.....	1516
9. Memorandum for the files on "Planning of the peace", August 7, 1940.....	1517
10. Statement by Dr. von Schnitzler, dated September 8, 1945, on scope of Farben's new order.....	1520
11. Interrogation of Dr. von Schnitzler, dated July 17, 1945, on scope of Farben's new order.....	1521
12. Statement by Dr. von Schnitzler, dated September 5, 1945, on scope of Farben's new order.....	1524
13. Interrogation of Dr. Kruger, July 19, 1945, on scope of Farben's new order.....	1524

CHAPTER VII

1. Estimate of damage to Farben plants.....	1529
2. Statements of September 10 and 12, 1945, regarding decrease of productive capacity by air damage.....	1531

ELIMINATION OF GERMAN RESOURCES FOR WAR

I. G. FARBEN EXHIBITS

CHAPTER I¹

EXHIBIT No. 1

ESTIMATE OF THE NET VALUE OF THE I. G. FARBENINDUSTRIE AG.

(1) In order to get a true conception of the net value of the I. G. Farbenindustrie AG. it is necessary to be acquainted with their components and their earning power. In this examination all war-bound factors are to be eliminated as far as possible. But on the other hand it would not do to treat such factors, representing measures to cover the requirements for civil consumption—measures which are originating from the efforts to make a full use of raw material sources in the home country—as nonexistent. It will be necessary to examine their importance according to the intentions of the future policy in the economic field when turning to effect the respective established figures.

(2) Characteristical for the production programme of the concern is—

Firstly: That it comprises only a few plants for mechanical fabrication.

Secondly: That a considerable part of the excess capacities erected for pure war requirements is not the property of the firm or at least is covered partially by credits providing a war risk clause and

Thirdly: That the nature of the products of its own plants with very few exceptions is destined to supply the manufacturing industry or the consumers for peace requirements.

(3) The excess capacities for the production of high concentrated nitric acid for explosives were the property of the state owned "Wifo" and were run by I. G. only on lease. There were similar conditions as regards the Ethylene production in Gendorf and the other plants carried on by "Anorgana" on a lease-basis. In the field of the D. A. G. Troisdorf according to my knowledge the plants built for own account for war requirements were written down substantially, whereas a far superior number of such plants was not the property of the concern at all but was run by the "Verwerchemie" on lease. Plants for aviation benzine and lubricants of the concern were financed partially by indirect credits of the Reich as well as other plants similar as to the aim of production, as Magnesium and Buna plants. The production of spun rayon was favoured by tax reductions and by the consent of tax authorities to higher amortisation.

(4) In the status of the works of the concern, damages to a larger extent by air raids only occurred from the second half of 1943 onwards. A greater part of them has not yet been restored. The German regulations regarding the refunding of war damages provide the right to claim the restitution of the rebuilding costs which in all cases exceed the book values and which for the time being must be considered at their full value like any other claim founded on a performance of securities acquired in a legal way.

(5) The published balance sheet of a stock company show the net assets, which are existing at all events because their valuation is limited by regulations only as to the maximum valuation admissible but leaving a free hand for undervaluation.

To book hidden reserves under liabilities is not allowed.

The liabilities besides the open reserves can only contain hidden reserves to a certain extent in the items "Rückstellungen" (i. e. amounts set aside for a specific purpose as for instance unsettled pension claims) and "Rechnungsabgrenzungsposten" (i. e. transitory items).

(6) The regulations for the maximum valuation prescribed in the law concerning stock companies based on the principle of prime costs, find a completion in the tax law as regard the lowest limit for valuation.

¹ Exhibits No. 3, 6, 7, 8, 9, 10, 11, 16, 17, 18, 21, 23, 27, 28, 29, 31, 32, 33, 34, 35, 36, 38, 39 are on file with the committee.

But both have in common the line that the prime costs reduced by appropriate amortisations must not be exceeded and that revaluations are not admissible on account of an increase of the value not relying on actual expenses, as for instance the participation in a company on account of undistributed profits or a patent on account of licence contracts.

(7) The published balance sheets of the I. G. are taken from the books. In establishing them, use has been made of the right to form hidden reserves by undervaluating the asset items. These reductions were booked under the denomination "Wertberichtigungen" (value adjustments) because thereby the total figure arrived at by adding up all the single values of the numerous main ledgers, was being adjusted to the figure exhibited in the balance sheet.

These adjustments are split up only for a small part on the individual values which have been totalled up in the said balance sheet position.

(8) According to the official books the net assets of the I. G. are showing the following figures expressed in millions of Reichsmark.

Assets	Dec. 31, 1943	June 30, 1944	Sept. 30, 1944
Real estate and plants.....	1.928	2.055	2.097
Participations.....	783	789	794
Stocks.....	798	868	858
Securities, cash on hand and on bank.....	167	472	493
Accounts receivable and transitory items.....	1.008	1.070	959
	4.684	5.254	5.201
Less:			
Liabilities and transitory positions.....	896	1.328	1.176
Net property.....	3.788	3.926	4.025

exhibit as follows:

Assets	Dec. 31, 1943	June 30, 1944	Sept. 30, 1944
Nominal capital.....	1.400	1.400	1.400
Open reserves.....	444	444	444
Hidden reserves booked.....	1.862	1.832	1.847
Yearly profits.....	82	250	334

¹ After deduction of amounts put in reserve.

² Before deduction of amounts to be put in reserve.

The booked hidden reserves are concerning:

Assets	Dec. 31, 1943	June 30, 1944	Sept. 30, 1944
Plants.....	1.306	1.305	1.320
Participations.....	56	56	56
Stocks.....	411	411	411
Accounts receivable.....	89	60	60
Total.....	1.862	1.832	1.847

These booked hidden reserves are to be completed by hidden reserves which were not passed through the books regarding which the following is to be said:

(9) *Fixed assets (plants and real estates).*—The valuations represent the actual expenses or production costs deducting the yearly depreciations.

These depreciations used to be deducted formerly to their full extent within the year of the first operation of the plants, but from 1941 onwards according to new arrangement with the tax office only half the depreciation was allowed for the first year.

When in the beginning of 1924 the Reichsmark conversion took place, the then existing value of plants, etc., was fixed as being equal to estimated prewar costs although the general price level was then, and with a slow upwards tendency also later on, 50 percent higher and more.

Likewise the landed property was assessed at a corresponding low level, the lignite substance in central Germany being booked with a value of 5 or 6 pf. p. t. surely contained in the lignite fields.

Repairs even of large dimensions were being accounted for as production costs. The depreciations were effectuated starting from the initial costs for each separate object until same was written off entirely. The rates amounted for work buildings to 3 to 5 percent, for machines and apparatuses in general 10 percent and for such installed in the rayon and spun rayon plants 20 percent.

The relatively quick pace of depreciation had the effect that at the end of 1943 plants of an initial cost expressed in millions of Reichsmark were totally written off as follows:

Buildings and railways	329
Machines, apparatuses, and distributing installations.....	737
Other investments.....	102
Total.....	1, 168

In this total one may assume to be contained a hidden reserve not evidenced in the books of probably R.M. 250 millions. As a corresponding amount R.M. 200 millions were entered in the declaration for property tax in the year 1940, an amount which would be higher today as meanwhile further amortisations have taken place.

As super value for landed property lignite and coal fields a sum of approximately R.M. 120 millions can be added to the above-mentioned amount.

(10) *Participations*.—The difference existing between the book value of a participation as shown by the I. G. books and its real value, represents a hidden reserve. The greatest difference exists in the case of the I. G. participation in Ammoniakwerk Merseburg G. m. b. H. which is booked with R.M. 262 millions. Compared herewith an asset exists composed as follows:

Capital.....	288
Open reserves.....	80
Open value adjustments.....	133
Booked reserves for participations.....	30
Hidden reserve for participations not evidenced in the books.....	79
Hidden reserve for plants not evidenced in the books.....	90
Total.....	700

Supervalue thus to be deducted.....	438
I. G. preferential shares in order to avoid double counting.....	38

The supervalue therefore amounts to..... 400

As regard the other participations the estimated supervalues amount to in million Reichsmark:

Dynamit Troisdorf.....	90
Rheinische Stahlwerke.....	90
Kalle & Co. AG., Wiesbaden-Biebrich.....	33
Total of all the others perhaps.....	30

Total..... 243

The insurance reserve of the Pallas G. m. b. H. Konzernversicherung, of about R.M. 65 millions has not been taken into consideration in this estimate nor have I considered a supervalue for participations abroad with the exception of the share of Ammoniakwerk Merseburg in the Norsk Hydro, Oslo.

(11.) *Patents*.—The value of the total patents, processes, and trade marks, has been written down in the books to R.M. 1 for memory's sake but in the tax balance sheet this value in negotiations with the Ministry of Finance had to be assessed with R.M. 65 millions. It is not possible to state an actual value for them as long as the conditions for their application are not known.

Considering on the one side the possibility for licences without damaging the own market position and on the other hand the possibilities for an industrial exploitation in the own works and moreover the yearly expenses for research work amounting to more than R.M. 100 millions, it is not exaggerated to estimate the reserve hidden in patent holding with an amount of R.M. 200 millions. Regarding this estimate one has to have well in view that patents and processes are the basis for their own production and that these holdings cannot be sold

without a corresponding compensation to make good for the depreciation which such a sale would entail for the other assets.

(12) *Stocks*.—The finished and semi-finished products are booked at their cost prices. The value of the stocks can be estimated to be RM. 400 millions. Starting from the assumption that the selling price yields a profit of 20 percent as an average after deducting selling expenses and interest for the time of storing a hidden reserve results from this item to the amount of RM. 100 millions.

(13) *Securities*.—Compared with the actual cost prices or the written down value with which the securities are evidenced by the books, a supervalue of RM. 4 millions has been established when making up the status for property tax. This amount too constitutes a hidden reserve.

(14) *Community of interests contracts (Interessengemeinschafts-Verträge)*.—I am of the opinion that the "Interessengemeinschafts-Verträge" with the Riebeckische Montanwerke AG., Halle/Saale can be put down with a value of RM. 60 millions or more, considering their very substantial lignite fields and the fact that Riebeck was easily in a position to transfer RM. 6 millions yearly out of their own revenues to the I. G. The supervalue of the net assets compared with the nominal capital according to the official income tax balance sheet of Riebeck amounts to more than 80 millions. I abstain from a similar valuation in the case of Dynamit AG. Troisdorf and Gustav Genschow & Co. AG., Berlin, on account of the productions being of quite a different nature as is the case with Riebeck.

The balance sheets of these firms too contain a hidden reserve in the shape of a supervalue ascertained by comparing the book value with the income tax balance sheet. I have taken into consideration these hidden supervalues in my estimate of the I. G. participation value not considered in their books.

The hidden reserves not entered into the I. G. books I have referred to in the above. I may now summarize in millions of Reichsmark as follows in accordance with the attached survey:

I. G. plants.....	250
Landed property and coal fields.....	120
Participations.....	643
Patents.....	200
Stocks.....	100
Securities.....	4
Interessengemeinschaft contract with Riebeck.....	60
	1, 377
+ Booked net assets.....	4, 025
Complete property.....	5, 402

(16) This property did not participate to its full extent in the turn-over as figured below, i. e. the turn-over of the I. G. itself without its participations. An exception is made with Merseburg, Schkopau and Hülz because their sales are handled by I. G. and are therefore included in I. G.'s turn-over.

This turn-over amounts to in millions of Reichsmark:

	1942	1943	1-3. quarter 1944
Turn-over of the I. G.....	2, 904	3, 116	2, 169
Turn-over of the management companies for I. G.....	100	115	80
Turn-over in accessory business.....	294	482	329
Total.....	3, 298	3, 713	2, 578

With this turn-over completed by other incomes the I. G. in 1943 realised a profit in millions of Reichsmark as follows:

Taxable income.....	539
Tax-free income.....	65
Tax privileged extra amortisations.....	144
Total.....	748

It would go beyond the frame of this report to expose in detail the very intricate tax situation. I therefore quote the above figures only as a clue for the control of the valuation of the assets.

In deducting from this amount the expenses imposed upon it namely:

Income tax.....	297. 0
Levy on profits.....	60. 0
Property tax.....	12. 8
Voluntary contributions.....	6. 2
	<u>376. 0</u>

There remains a balance of..... 372. 0

which amount by being compared with the total net assets is equivalent to a net rent of 7 percent.

This of course does not give an indication as to the rent which these net assets might produce in the changed after-war conditions and it is therefore quite uncertain what value the assets may represent under such circumstances.

The stock-exchange quotation was fixed at about 170 percent after the new valuation of the capital in 1942. But this quotation is no sufficient measure for valuation of the existing net assets, for being influenced by regulations of the government to render difficult if not practically impossible an increase of dividends (Dividendenstop) and further by measures by the supervisor of the stock exchange to keep quotations on a low level.

(17) A more reliable estimate than my figures could be attained if the conditions prevailing for each individual work or enterprise of the concern would be investigated as to its technical conditions as well as the future prospects for production and market possibilities. It would be necessary for such an analysis to work out a programme and then compile the separate items to a complete picture of the actual situation.

The greatest uncertainties for establishing an accurate valuation are to be found in the assessment of the plants and the patents of the I. G. and their participations as well as in the question whether it will be possible to carry through its legitimate claims for the restitution of damages caused by the war and all other claims.

PAUL DENCKER.

FRANKFURT/MAIN, August 22nd, 1945.

Estimated value of I. G. Farbenindustrie Aktiengesellschaft on 30th of September 1944

[Amounts in millions of Reichsmark]

EXHIBIT No. 2

DIRECT AND INDIRECT PARTICIPATION OF I. G. FARBENINDUSTRIE A. G. IN GERMANY

KEY TO COLUMN 5

Kind of firm:

- (a) Companies in liquidation.
- (b) Companies not in operation and administrative companies
 - 1. With landed property.
 - 2. Without landed property.
- (c) Manufacturing, mining, and transportation companies.
- (d) Sales companies.
- (e) Social enterprises.
- (f) Banks.

Participations of the following I. G. companies:

- L=Dynamit Aktiengesellschaft vorm. Alfred Nobel & Co., Troisdorf Bez. Köln. Status: 31st of December 1943.
- M=Gustav Genschow & Co. Aktiengesellschaft, Berlin. Status: 31st of December 1942.
- N=Deutsche Grube A. G., Halle/Saale. Status: 31st of December 1943.
- O=Riebeck'sche Montanwerke A. C., Halle/Saale—participation through: Rheinische Stahlwerke Essen. Status: 31st of March 1944.
- P=Gesellschaft für Landeskultur G. m. b. H., Halle/Saale—participation through: Ammoniakwerk Merseburg G. m. b. H. Status: 30th of June 1942.
- Q=Deutsche Gasolin-Aktiengesellschaft, Berlin. Status: 31st of December 1943.
- R=Chemische Werke Hülfs G. m. b. H., Marl Krs. Recklinghausen. Status: 31st of December 1943.
- S=Aktiengesellschaft für Stickstoffdünger, Knappsack Bez. Köln. Status: 31st of December 1941.
- T=Duisburger Kupferhütte, Duisburg. Status: 31st of December 1942.
- U=Chemische Werke Zscherndorf G. m. b. H., Bitterfeld. Status: 31st of December 1941.
- V=Ammoniakwerk Merseburg G. m. b. H., Merseburg. Status: 31st of December 1943.
- W=Kalle & Co., Wiesbaden-Biebrich.
- X=Deutsche Celluloidfabrik Eilenburg, Eilenburg.

EXHIBIT No. 4

HISTORY OF THE FARBE MERGER 1926. STATEMENT BY PAUL HAEFLIGER,
AUGUST 6, 1945

The subject I am requested to write about, namely, which were the reasons why the merger of the I. G. Farben in 1926 took place, is a highly interesting one. But I feel that it would require by far a more inspired and skilled pen than I dispose of to shape such a subject in the form it deserves. For it would not do, to my mind, just to enumerate some plain reasons and let the reader draw more or less his own conclusions from them. It is necessary for his full understanding to convey to him the whole atmosphere existing at that time around this deal, the battles that were fought behind the scenes, the ambitions of some leading men and their aims, and last but not least the economic aspect of the past and the future as seen by the founders, reasons which all combined led to the event of probably the biggest merger in the history of modern chemical industry.

I personally was no party of all the deliberations going on in the really initiated and intimate circles and my role was only the one of an interested spectator, but I had in my former chief, General-director Plöninger a fatherly friend from whom I learned casually many a side light of what was going on internally, and to this information I can of course add my own observations and experience of my daily work. But nevertheless, I feel that my knowledge is rather rudimentary and I therefore beg to look upon my report more in the light of a contribution to a biography still to be written about this big scheme.

The foundation of the I. G. Farbenindustrie was by no means the product of a spontaneous decision, but represents the final phase of an organic development which had been going on for long years. It is therefore necessary for the better understanding to go back to the antecedents and to follow them up to 1926, the year of the merger.

It is as early as 1904 that the first joining of interests by forming an "Interessengemeinschaft" (community of interests) took place. At that time the *Farbenfabriken vorm. Friedrich Bayer & Co.* concluded a contract for a duration of 50 years with the *Badische Anilin & Sodafabrik* according to which these firms conserving their entire independency, pooled their net profits, each partner having share of 50 percent. Some weeks later the *A. G. für Anilinfabrikation, Berlin*, (Agfa) entered this contract too with a share of 14 percent in the profits, so that the quotas in this so-called "Drei Bund" now read 43:43:14. The reasons for the formation of this group was the rivalry between the *Badische & Leverkusen* which would have led to costly fights and further the intention of the Agfa to build an extension dyestuff and chemical plant in the Mannheim district which would have meant additional competition especially for the *Badische* and which by this agreement could be avoided.

In the same year a second group concluded another "Interessengemeinschaft", the *Farbwerke vorm. Meister Lucius & Brüning, Höchst a. M.*, combining forces with the important dyestuff firm, *Leopold Cassella & Co., Frankfurt a. M.* The reasons for this deal were chiefly that without an agreement which too provided the independency of each partner, both these firms in their expansion would have penetrated more and more in the production field of the other. Moreover, there was the fact which weighed even more with this decision, that the *Farbwerke Höchst* produced a number of raw materials—acids and especially intermediary organic products for dyestuff fabrication—which *Cassella* being exclusively a dyestuff manufacturing concern, did not produce themselves, but used to buy to a big extent from *Höchst*.

Dr. Plieninger told me years later, that at that time the owners of *Cassella, Carl & Arthur von Weinberg*, hesitated a long time to take this step because for them another combination was possible; namely, to go together with the *Chemische Fabrik Griesheim-Elektron, Frankfurt*, who had a first-class anorganic basis and moreover an important and specialised production of intermediary organic products for dyestuff manufacture, without at that time producing any dyestuffs themselves. This would have indeed to my mind far much the better solution for *Cassella*. But there the human element entered into the picture overruling purely economic reasonings. The Weinbergs, especially Carl v. Weinberg, were very keen to play a prominent social role in the Frankfurt high society which was known to be very exclusive and for that *Griesheim-Elektron* was not distinguished enough, being conducted by modest but efficient men, whereas the *Meister, von Brüning, vom Rath* etc. being old Frankfurt families and forming part of the "haute volée" presented quite other chances for them in this social respect. I believe that the Weinberg regretted their decision later on because they were disappointed in this unpronounced aim. They very soon compiled huge personal fortunes and then Carl v. Weinberg became the center of a new class of society in Frankfurt which was looked upon by the exclusive circle as the smart-set. One may smile at this human weakness, but had it been otherwise, it is quite probable that another story could have been written of the I. G. Small causes, big effects, as a German saying goes.

I may add here that Carl von Weinberg was a first-class diplomat and a first-rate businessman and organiser, who with a relatively small dyestuff plant at *Mainkur* near Frankfurt a. M. achieved amazing financial results, having created at home and especially abroad a sales organisation who worked for him enthusiastically, as he looked after his employees in a personal and very liberal way. I always admired Carl v. Weinberg for these qualities. His brother Arthur von Weinberg was quite another type, but in his field just as prominent as Carl. He was a scientist and philosopher of nearly universal knowledge and he could talk on all subjects with deeply founded learning. I was a great admirer of him and I will never forget the many conversations I had with him in which he always was the giver. Besides he stood with both legs in the world and was a prominent breeder of race horses, owning together with his brother the famous stud *Waldfried*.

It was Carl von Weinberg by the way who succeeded in 1926 to have the headquarters of the I. G. located in Frankfurt and the big central I. G. building is his idea and work.

I am afraid I am losing myself in reminiscences and therefore revert to the subject of the formation of the so-called "*Zwei Bund*," *Höchst-Cassella*, which too was based chiefly on the then decisive dyestuff interests. The combination

meant for both of them a strengthening of their position vis-à-vis the competition of the "Drei Bund" and afforded them the possibility of the joint purchase of raw material and coals and moreover a cooperation in all patent and licence questions. And last but not least it had the effect to stop the dropping market prices for dyestuffs.

It is a fact that hardly in any other industrial branch competition can assume as violent forms as in the chemical industry. The reason for this is to be found in the continuous changes which new inventions and progress in technique cause in the production of the products.

Science and technique are permanently working on the simplification of producing methods and processes and to bring down the costs of production with all the consequences in a fighting market. It is a further fact that as the raw-material costs in chemical production all round but especially in the organic chemical field constitute a relatively small factor in the cost of the finished article, and this applies to labour too, the chemical industry as a rule not being an intensive labour industry, as for instance the metallurgical and the engineering branch. Thus a chemical firm always has the tendency to work at full capacity because the excess production attained thereby shows an extremely low cost and will reduce the cost price for the whole production very sensibly. Such a state of affairs is apt to bring about especially in times of depression untenable conditions which only can be mastered by mutual understandings.

There is another additional strong incentive for maintaining chemical plants in operation at all events because most of them when being laid idle will suffer heavily from deterioration by corrosive agents which causes expensive repairs when work is taken up again. As to the sudden changes of processes and technique as a characteristic of chemical industry, this fact, too, makes it imperative for sound economics to write off chemical plants at a much quicker rate than is needed in other industries. A chemical firm will therefore always decide on extraordinary amortisation if ever the profits made will allow for it, after providing for normal amortisation. This means, too, that the margin of profit in a chemical concern must be rather high for special fields, as for instance dyestuffs and pharmaceuticals, because in the heavy chemical domain there always is competition going on which forces prices down on a low level. It must not be overlooked that especially in the anorganic field where good processes are mostly available for everybody as well as the respective raw materials the maintenance of too high a price level would in normal times only create competition by newly erected works, within a short time. The I. G. was often reproached by members of syndicates and conventions for various products to insist on too low a price. It is because the I. G. could take a broad view as regards to avoid this danger of an excessive price policy, whereas other smaller firms wanted to harvest in the hay time and did not care much what would happen later on. I am of opinion that the I. G. in all these contentions acted as a brake for the establishing of exaggerated prices and thereby was instrumental in bringing about in many markets a very desirable stability which otherwise would not have been the case. To round up this subject I may point out yet another reflection. As the I. G. was delivering their numerous products to practically all existing industries in Germany, it would never had done to take undue advantage of their strong position by enforcing too high prices, because this would only have had the consequence of impairing the competitive power of their customers especially in the export business with the effect that their requirements taken from the I. G. would have got smaller in volume and in turn would reduce the production of these products which would have meant for the I. G., as explained above, disproportionally higher production costs and probably less profits in spite of higher selling prices.

After this deviation from the subject may I now revert to the old time of 1904.

Soon after the formation of the Drei und Zwei Bund, these two groups approached each other and the Badische Anilin & Soda-Fabrik concluded on behalf of the Zweibund a contract with the Farbwerke Hoechst on the important synthetic Indigo field for the regulation of this production and the market prices to put a stop to the ruthless price fight going on in the market.

In the foregoing I have described what you may call the first phase of the I. G. Farben which lasted from 1904 to 1915. Although the 2 groups had the leading characteristic of an "Interessengemeinschaft" (community of interests) namely the dividing up of the net profits according to agreed quotas, yet the connections established between the said groups were restricted on certain exposed dyestuff fields and competition in other domains also among the groups themselves, especially within the Zweibund Ludwigshafen/Leverkusen was still going on. There neither was any interference into the technical affairs of each firm who retained too in this respect their entire independency in their decisions.

But this important first phase ploughed and prepared the ground for the future, it being only a question of time that the relations between the two groups would have to be revised and regulated on a broader basis. The world war 1914/18 no doubt accelerated this logical development. However, there is another reason which to my mind is even more important and on which I now have to dwell upon at some length.

It is the rapid expansion of the Badische Anilin & Sodafabrik which had set in several years before 1914 in the new field of *nitrogen* which brought about a new situation.

Formerly the Badische was a very conservative firm, the stiffness and the correctness under the conduction of Geheimrat Hüttenmüller and Dr. Brunck being well known throughout the chemical industry. But with the entrance of *Prof. Carl Bosch* there came a change in all this and he managed to turn up the character of this firm within a few years by forcing it into an entirely new track. For curiosity's sake I may mention here that the Badische Anilin & Sodafabrik bear their name quite wrongly, because they are not situated in Baden, but in Bavaria and neither did they produce anilin nor soda. This new direction was the production of nitrogen on the basis of the Haber/Bosch process which within very few years expanded into important new nitrogen and nitrate of soda plants at Oppau. It is the unperishable merit of Professor Bosch to have found the technical solution of this new process which considering the then existing mark of the metallurgical and engineering industry, presented exorbitant difficulties, a solution which allowed to produce nitrogen cheap enough to compete with nitrogen in all forms from the old natural sources. At that time there existed no alloyed steel hard enough to resist a pressure up to 500 atmospheres under high temperature, the highest hitherto having been if I rightly remember about 50 atmospheres. Bosch was a great practical man who formerly had worked too in metallurgical and engineering firms and although there was a cooperation with Krupp A. G. he practically himself had to invent and to build up the suitable special equipment and apparatuses as well as the right sort of alloyed steel which would stand the heat and pressure of the new process.

This impetuous development of the Badische due to the initiative of Bosch, which gave this firm soon another face, was quite sensational and must have given great concern to the jealous rival firm, the Farbenfabriken vorm. Friedrich Bayer & Co. Leverkusen, headed, too, by a very energetic leader, *Geheimrat Dr. Duisberg*. Although the Farbenfabriken Leverkusen were a member of the "Drei Bund" and therefore closely tied to the Badische, yet they still represented an independent firm with the freedom to take up new branches. Geheimrat Duisberg must have been aware and feared that an "Interessengemeinschaft" cannot be enforced for any length of time in spite of a long termed duration when the premises or conditions on which it was founded do no longer exist. It certainly is very dangerous for the continuation of such an agreement when one partner is no longer in harmony with the aims of the original contract for having taken up important new lines altogether different which means for him a new development in which the other has no active part, with the necessity probably of capital extension and freedom to enter into agreements with the competitors in the new field. Furthermore it is a legal question, whether in view of a fundamental change, the accomplishment of a contract can be exacted of a members from his partner or partners under such circumstances. They would probably think it over twice to go to court with such a dispute and prefer to settle it by friendly arrangement. The frame of an "Interessengemeinschaft" is never as tight as the one of a company with its own legal personality (mit eigener Rechtspersönlichkeit).

Geheimrat Duisberg was not the man to remain idle in front of such a danger. He too had achieved a great job in erecting the Leverkusen works on his own plans which up to this day still can be considered as a model plant for the modern chemical big industry. Duisberg would not tolerate to be surpassed by the Badische and one can be convinced that if the first world war would not have interfered, he would have tackled the nitrogen problem, too, which must have been known to the Badische.

During the war 1914/18 the dyestuff business experienced a great reduction and a general reorganization was going on to provide for the wants of the war, which kept all the firms busy and caused them to forget their old struggles and conflicts for the time. Moreover, the uncertainty of the future of how matters were going to develop after the war, was creating too an atmosphere of truce and an inclination to reduce the risks by standing together. As a further reflection it was clear for all the dyestuff firms that whatever would be the issue of the war, the dyestuff competition from other countries would be much stronger as before

and that the organisation of the export dyestuff business would have to be built up anew under much more difficult conditions.

Thus in the war year 1916 the psychological moment was very favourable for serious negotiations amongst the members of the two groups and the leading men did not miss this perhaps unique chance. And so in the said year 1916 the formation of the "*Interessengemeinschaft der deutschen Teerfarbenindustrie*" (community of interests of the (German tar dyestuff industry) took place consisting of the following seven members:

- (a) of the "Dreibund" viz:
Badische Anilin & Sodafabrik, Ludwigshafen
Farbenfabriken vorm. Friedr. Bayer & Co., Leverkusen
Akt. Ges. für Anilinfabrikation, Berlin
- (b) of the "Zweibund" viz:
Farbenwerke vorm. Meister Lucius & Bruning, Hoechst a. M.
Leopold Casella & Co., Frankfurt a. M.
- (c) two outside firms:
Chemische Fabrik Griesheim-Elektron, Frankfurt a. M.
Chemische Werke vorm. Weiler ter Meer, Uerdingen

Now I must say something about these two last-named firms.

The *Chemische Fabrik Griesheim-Elektron*, in which at that time I held the position of a young procurist, did not play a prominent role in these deliberations. I daresay they were rather the object of internal talks of the others, who all agreed that this firm could not be left aside. Griesheim-Elektron had a very good standing in the anorganic heavy chemical production being too the leading firm in the field of the Chlorine/Alkali electrolysis, an invention of their former chief Prof. Dr. Stroof in the nineties of the past century, a major invention by the way. But what was more important in the eyes of the others was the fact that Griesheim-Elektron were big producers of anilin oil and salt and of quite a number of intermediary organic products suitable too for dyestuff production which they sold for the most part in the market which did not please the big dyestuff firms at all. In order to give this organic chemical production a certain steadiness, Griesheim-Elektron had acquired about 1908 a small but technically well conducted dyestuff firm, the *Farbwerke Oehler, Offenbach a. M.*, and this small firm succeeded in 1911 to find an entirely new and peculiar genuine dyestuff called Naphtol A. S., which when introduced on the market caused quite a sensation in the professional circles. But on the other hand there was a very weak point in their important business in intermediary products in as much as this business in its financial result was dependent on the big orders from Cassella and Hoechst. Griesheim-Elektron at that time could not afford to lose these important customers and it was to be expected that if they had not followed the "invitation" in 1916 to join the new "*Interessengemeinschaft*" Cassella and Hoechst would have barred them in future by erecting intermediary products plants themselves. It was therefore for Griesheim-Elektron a question of either war or peace and the decision finally was in favour of the latter. I still can remember of how depressed my chief, Generaldirector Plieninger was the day he entered the deal. He would have personally preferred by far to remain the first man in the medium sized but progressing firm, Griesheim-Elektron, who was the work of his life and to be independent. He certainly was a very respected member in the "Verwaltungsrat", the supervisory board of the new I. G., being a strong personality, but of course he was just one of many with his hands more or less tied.

A similar fate had the *Chemische Werke vorm. Weiler ter Meer, Uerdingen*, who too were producers of organic intermediaries and aniline and moreover a noteworthy manufacturer of various dyestuffs. But contrary to Griesheim-Elektron, they were small in the anorganic sector. *Geheimrat ter Meer sen.*, the father of Dr. Fritz ter Meer, and owner of Weiler ter Meer, was a man of much energy and purpose of aim, who although his firm was small as compared with the others, they would not care to have as an opponent and it may be that at that time already they saw in his son a very able man who would succeed him and with whom had to be reckoned with. The role which Dr. Fritz ter Meer played years later in the present I. G. is well known.

The new enlarged "*Interessengemeinschaft*" was based as the former *Zwei* and *Dreibund* on the principle that all the members were to be independent but that their profits would have to be divided up according to fixed unalterable quotas. To ascertain these net profits a detailed system of bookkeeping, compulsory for all the members, had to be worked out, so that during the life of this "I. G." each firm had two separate balance sheets, the official balance and the internal I. G. balance. It was the question of agreeing on these quotas which had the most prominent place in the negotiations. It was finally agreed to base

them on the results of a period of three consecutive years, if I correctly remember 1911/13, but the figures thus found were being discussed and modified in several instances in some measure, to adjust them to changes that had taken place meanwhile and also in consideration of apparent future prospects. I can remember that for instance Mr. Plieninger succeeded for Griesheim-Elektron that the good prospects for the new dyestuff Naphtol A. S. which did not have a fair chance to show its true value in the few years preceding 1916, be taken into consideration by fixing the final quota, as well as the fact that right in the basic period of 1911/13 a fierce price fight had to be carried through by his firm in the electrolytical chlorine/alkali field which reflected unfavourably on the net profits of these years. Furthermore he succeeded that the Elektronmetal field as a specialty of Griesheim-Elektron was reserved for them exclusively and outside of the I. G. account, although this special field at that time did not yield profits but was thought to hold promises for the future. But by far the most important exclusive field had to be conceded to the Badische, Professor Bosch refusing to throw in the Nitrogen and nitrate of soda interests. Thus this question was not solved definitely at that time and remained a thorn in the flesh of the new I. G. too.

The quotas finally established and agreed upon were about the following:

	Percent
Badische, Ludwigshafen.....	25.5
Bayer, Leverkusen.....	25.5
Hoechst.....	25.5
Cassella.....	8.6
Agfa.....	8.3
Griesheim-Elektron.....	6.0
Weiler ter Meer.....	1.6
Total.....	101.0

For completeness' sake I may add that *Kalle & Co.*, *Biebrich a. Rh.*, an outside dyestuff firm of medium size, could be induced to join with *Farbwerke Hoechst* by special agreement, the same applying to the small dyestuff firm *Farbwerk Mühlheim, Mühlheim a. M.*, who was taken care of by Cassella.

Subsequently, the "Interessengemeinschaft der deutschen Teerfarben Industrie" became more and more known under the abbreviation "I. G." and this denomination came into general use and years later was reserved by a court verdict exclusively to the I. G. Farben.

The formation of the old I. G. in 1916 marks the entrance of the *second phase* of the development towards the final I. G. merger and was to last until 1926.

It is perhaps useful to define hereafter more closely the character of a pure type of "Interessengemeinschaft" and it may be well to point out here, that this legal form of cooperation was already widely spread in Germany as a form of association among numerous important industrial enterprises and financing institutes, the distinction of the dyestuff I. G. thus not being one of principle but only of size.

An "Interessengemeinschaft" (community of interests) is an association in which the partners without any further intention, are willing and agree to do what the name states: they want to treat their interests on an equal footing and in common. They remain before the law and economically independent of each other, because the most important binding characteristics do not exist; namely, capital and personal union. A committee of an I. G. of this kind is entitled to supervise the common financial field but is not entitled to take care of the internal problems of the partner firms or to intervene in their technical disposition and measures. For this separate agreements would have to be concluded in each case.

There was, however, a clause in the elaborate I. G. agreement of 1916 which I must mention especially because it was one which later on was a stumbling block for the individual development of the I. G. firms. Once the I. G. joint account was established and profits adjusted according to the quotas each firm was at liberty to use its financial share for further extra amortisation, for dividends etc. But each member was not allowed to increase its capital without the consent of the I. G. as a whole.

There are many experts who believe that an association in the form of an "Interessengemeinschaft" has always the character of periodicity and is not of a lasting nature. As long as the results are good it will continue but sooner or later conditions are bound to arise which will strengthen or revive the feeling for independency and then there comes the time of the alternative: either dissolution or merger.

I believe they are right in most cases. Don't let us to be deceived if the old I. G. lasted as long as 10 years. It was due in reality to abnormal conditions existing during the whole what you may call the transitory second phase. The old I. G. during this time until 1924 was not in fact put to a real crucial test. To start with the war years 1916-18 can be barred, because no internal conflicts could arise then. In 1919 and 1920 everybody was lamed by the effects of the lost war and was glad to be insured, so to speak, by the I. G. agreement against the individual risks of shortage of coal, strikes, revolution, mutiny, etc. Then the enormous inflation and depreciation of the currency chiefly due to the military occupation of the Ruhr district by France, gained more and more speed and during 1922 and 1923 the making up of the I. G. adjustment account was quite superfluous, because at the time of it being ready, the equalisation amounts did not matter at all for having meanwhile depreciated to a fraction or almost to nought.

It is the event of the creation of the Rentenmark in summer 1923 by Mr. Schacht which contrary to all expectations remained stable, which soon brought along an altogether different situation for the economic and industrial life. All of a sudden the huge possibilities for easy trade at home but especially in the export markets, which an ever-declining currency had afforded to trade and industry, came to an abrupt end and with it the time of testing the solidity of the old I. G. had at last arrived. Difficulties, deficiencies, and other drawbacks which by the hope of an inflated currency were dormant or underrated or misjudged, now soon became apparent and the real situation thus unveiled was indeed of a nature to give great concern to those responsible and caused them to start at once a thorough survey of all contributing factors.

Until then the character of the old I. G. had been chiefly a commercial and financial one, the cost price of the products during the past eight years mattering very little, because the production price was being paid in continuously inflating currency, whereas, for instance, the important dyestuff export yielded for the most part stable money in good foreign currency which when transferred to Germany represented mark amounts quite out of proportion of production costs, so that on paper big profits could be shown even with a much smaller dyestuff export volume as prewar. But after 1923, the German Rentenmark being at par with the pound and dollar, the dyestuff people realised that in order to cope with the stronger foreign competition from the U. S. A., Switzerland, England, and France they could no longer afford the luxury of having each of them a world-wide sales organisation which, in spite of all regulations and collectual agreements at home, were in fact competing with each other in getting orders. The sales regulations and prescriptions which a dyestuff salesman was supposed to observe, was laid down and compiled in a book, being known as the dyestuff bible. The costs of such a dislocated, multiple-sales organisation were exorbitant and had to be cut down radically in view of the new situation. Although in the meantime the turn-over in the nitrogen field may have surpassed the dyestuff figure, the latter still ranked first as regards revenue and dyestuffs were as hithertofores looked upon as the backbone of the I. G.

As to nitrogen about that time Professor Bosch, for the Badische, decided to give up this reserve and to include it in the I. G. account. The reason was that the continuous extension of the nitrogen works necessitated capital increases for the Badische for which they had to ask the consent of the other members, as mentioned previously. Professor Bosch in taking this step must have known that the golden time for nitrogen would shortly come to an end in view of the great efforts abroad to make themselves independent from German nitrogen imports. To this must be added another important fact: the *hydrogenation of coal* was on its way and Professor Bosch needed huge sums for developing this new fundamental process. He always was for doing research on a vast scale, but in this instance I believe he surpassed himself, because he started to build an experimental hydrogenation plant which I was told later ran into fifty million marks. These risks were too great even for a big firm as the Badische and so he handed these exclusive domains over to the entire I. G. At the same time Griesheim-Elektron relinquished too its exclusivity for Elektronmetall, which had given so far disappointing financial results.

Professor Bosch was to my mind quite beyond so-called capitalism. He used this instrument because it gave him the means to carry through his big technical ideas for which he would have sacrificed everything.

As to commercial questions he had hardly any interest and on more than one occasion he quite openly avowed that he did not understand much of it. He only expected of this commercial people that they should contrive to make as much money as to keep things going in a sound shape and to allow him to draw the necessary amounts for his big experiments. The total amount spent by him

for developing coal hydrogenation, by the way, finally ran into several hundred million stable marks which were never retrieved.

When I told above that up to 1923 it mattered little whether the production costs were high or low, one can easily understand that the works did not turn a coin twice before spending it. Indeed, they were very liberal, to put it mildly, in their expenditures for costly research laboratories and other auxiliary institutions, there being, as afore-mentioned, no interference in the technical field by the supervisory board of the old I. G. But the worst was that each big firm had with the time taken up the production of nearly all I. G. dyestuffs and other organic products, so that when the crisis broke out in 1923 and the volume could no longer be maintained such a decentralised production programme was by far too costly and had to be altered, i. e., to be concentrated in the works best placed for them. But with this necessity an entirely new element entered the picture, which could not be dealt with in the frame of the old I. G. based on the fundamental principle of the conservation of independent firms.

Other necessities, moreover, turned up in this survey which had to be attended to without loss of time.

I may summarise the most important of all these necessities as follows:

I. Commercially

(a) Concentration of the various departments of each firm for the different fields, into centralised departments in new headquarters to be decided upon, the maintenance of 7 different staffs for the same kind of products being far too costly.

(b) Radical concentration of the individual representations of the different dyestuff firms abroad and at home.

(c) Reorganisation and concentration of the purchasing departments of the different firms. Central buying especially for raw materials means cheaper prices. Hitherto all the firms had been purchasing such materials each of them individually with some exceptions where existed separate agreements.

(d) Concentration of the various patent offices on a reduced number and new regulations to enforce economy of avoidable patent expenses which had grown into big figures and furthermore the avoidance of internal duplicities.

II. Technically

(a) Power to enforce a production plan for the old and future products. As a rule the work who develops a new product has the preference for subsequent production unless conditions in another plant are distinctly better, it being further a rule that the more important products should be produced at least by two plants in order to keep the competitive spirit alive.

(b) Revision and reorganisation of research by establishing and carrying through the principle that on the same subject not more than two laboratories should be engaged as a rule, whereas hitherto almost every firm had the ambition to take up costly research work on all developments they heard of from the others, irrespective whether they were suited for the particular case.

(c) Free exchange of all experience and know-how in the different domains for processes and technical questions.

It is obvious that all these important exigencies could not possibly be carried through in a mere "Interessengemeinschaft." They were breaking the frame and the character of such a form of organisation and as a dissolution never entered into question because it would have meant ruinous competition for all, the only solution was the natural and often predicted decision to merge into one concern the seven firms forming the old I. G. Deliberations of this big scheme weighing pro and contra had taken place internally from 1924 onward and in 1926 everything was ready to proceed to the foundation of the *I. G. Farbenindustrie A. G. Frankfurt a. M.* by the six firms being merged in the seventh, the *Badische Anilin & Sodafabrik* which thereupon changed its name to the above-mentioned. The denomination of "I. G." was preserved in it for being known all over the world and the word "Farbenindustrie" once more showed that the dyestuffs were at that time still considered as the most important branch.

But let it be laid down here, that with the foundation of the *I. G. Farben*, the center of gravity which formerly had rested on the commercial side, now definitely shifted over to the technical side, because from then onward in front of the heavy competition going on at home and especially abroad in many domains, the decisive factor for the final financial result was to be found in the low costs of the productions. This technical domination became even more pronounced after the crisis which shock world economies in 1929 and later on. I beg to refer here to my statement dated 17th June 45 in which I gave a number of inside facts as

to the inner construction of the I. G. Farben. Special sacrifices had to be imposed at that time on the technical field which in their opinion gave them also the moral right to claim control for all important commercial and economic questions and decisions.

Retrospectively one may say that the I. G. in their old form never could have survived the crisis 1929/31 and that the revised organisation of the I. G. Farben had just matured until 1929 to a point which allowed them to endure this very dangerous set-back.

It may be worth mentioning finally in order to show the spirit in which technical problems were being dealt with by C. Bosch and Duisberg that in 1926 when decisions regarding the concentration of productions had to be taken, great care was observed in spite of the serious situation to offer the works which suffered by it, a chance to take up new lines, although the temptation was great to close them down for good. Thus for instance Uerdingen whose dyestuff production was absorbed by Leverkusen, was financially helped to find within a relatively short time in the manufacturing of mineral iron red colours, new binding agents for prints and especially later on in synthetic adhesives a more than full compensation. The same applies to Kalle, Biebrich, whose dyestuff production too was stopped and who went in the manufacturing of cellophane on a French license and somewhat later developed the very interesting novel field of Ozalite, a new kind of tracing paper, both new productions allowing them by their result to forget about the loss of their former dyestuff production. Other works whose equipments especially as regards steam, energy, transport means etc. were granted the necessary credits to modernise their plants although at that time, it would have been better from a purely financial point of view to stop them.

FRANKFURT A. M., 6th August, 1946.

EXHIBIT No. 5

AUGUST 20, 1945.

STATEMENT BY DR. VON SCHNITZLER ON FARBEN'S WARTIME EXPANSION AND INDUSTRIAL SIGNIFICANCE

The I. G. is what is called in German language a "concern." The term "concern" means that an enterprise has taken up an evolution that it comprises not only different domains, but that different firms of a varied character are united under the heading and the guidance of the controlling enterprise. Apart from I. G., the best known old established concerns in Germany are Vereinigte Stahlwerke and Siemens-Schuckert. The development of I. G. from a number of independent firms to a concern was performed in a relatively short time. It is publicly known that I. G. had been constituted in 1925 by a merger of six chemical firms which took over the shares of the seventh one, "Cassella." Even at that time although the bigger ones of the so-called mother houses represented a huge potential of economic power—the term "concern" did not apply to the whole combine. The activities of I. G. could be strictly distributed in the (1) inorganic chemistry (acids, caustic soda, etc.) (2) the aromatic organic field (dyestuffs and pharmaceuticals) and (3) the high pressure industry (nitrogen and methanol). Thus I. G.'s activity was strictly limited to the purely chemical domain and had not yet entered the many new fields which led her on the way of the metallurgical as well as of the oil, and the domain of plastic masses, including rubber. The germs of the new developments were laid, but had not yet come to blossom and nobody could foresee how fantastic the results of the development would be. Retrospectively seen, the growing to a concern was a continuous and uninterrupted one year after year even in the time of the deepest depression. In the years of the world crisis of 1931, the technical progress did not come to a standstill and when the program of autarchy and rearmament came to execution, the speed of the expansion became an overwhelming one. The aliphatic chemical industry which had been developing as a third big part of chemical activity and which apart of the limited quantities of ethylene made by coke gases entirely reposes on carbide reached a volume in weight ten times as big as was represented by the aromatic organic chemistry. This aliphatic chemical industry was only taken up in 1917 and up to that time, the aromatic industry represented practically alone the organic chemical industry.

The main products in this aliphatic domain were Buna and different new plastics, but the progress made was not smaller in the domain of the electrochemical field where Bitterfeld and its affiliations realized an enormous expansion in aluminum and magnesium and exactly the same happened in the cellulose

chemical field where rayon and photographic articles showed a continuously climbing turnover, in the synthetic fabrics altogether where indeed I. G. had a relatively small share (18 percent), but for which I. G. had to supply the bulk of the raw materials—caustic soda and sulphur S.C. 2, a development from nil to nearly 300,000 tons a year was realized. It cannot be the object of this statement to enumerate the different endeavors which succeeded in the bringing up of so vast an expansion. The laboratory work prepared and continued since decades, the property of a huge range of patents and a staff of highly trained and gifted chemists cooperated to constitute the basis for an industrial achievement, which, in this country, had no parallel. The economic result for the company was no less brilliant than the chemical achievement. Up to the end of 1943, not only the turn-over but just as well the profit figures showed an upward trend. In the meantime, following the decree of the first days of the war regarding prices, at least 120,000,000 M. per annum were sacrificed on the original prewar prices and all that was achieved notwithstanding that equipment and material during the war always became more expensive and that the quality of the workmen showed a decrease, instead of the skilled men who more and more got to be mobilized, women and foreign workmen became employed and it was inevitable that they could not realize the same performance as the men whom they had replaced. It had often been complained of in I. G. circles that I. G. practically alone showed in the chemical field an activity in inventing and carrying through technical processes which met the corresponding efforts of the American chemical industry, where at least half a dozen big firms were devoting themselves to new inventions and processes.

The poor endeavors and the feeble results of the other chemical industries (partly due to a lack of enterprise and readiness to take over substantial commercial risks) meant for I. G. a strong obstacle in her relations with them. Notwithstanding that, I. G. always had to protect that industry by the most varied methods in supplying them with raw materials, intermediates, licenses and know-how. The jealousy of this industry was never to be quieted and the unpopularity of I. G. to a large extent was due to that jealousy which never or seldom openly came to expression but was always like a gleaming fire under the surface. However it was, I. G. could not bring science to a standstill because the smaller chemical industrialists would have liked her to do so and the progress of science brought up another development in an additional field. In former times, I. G. always had taken the standpoint that it should limit its activities on the proper domain of chemistry and not interfere with their customer's business. Thus I. G. never took an interest in textile factories or in dyer's trade and even refused every participation in the lacquer and varnish industry, although some of the pigment dyes were made simultaneously by those producers and by I. G. itself. The newly developed products in the field of aliphatic chemistry as well as in the light metal field demanded a change of this policy. In order to teach the consumers industry the employment of these new products, I. G. had to erect or to buy entire plants in which these products were transformed into the finished articles, the fabrication of which normally would have been the task of the consumers. As to an example, I may only refer to the tire factory in LEV, which had to play a pioneer's role in the employment of Buna, and in the great laboratories of Bittenfeld as well as in the Dynamit A. G. works in Troisdorf, a substantial manufacturing of finished articles in all kinds of plastics, tubes, wires, entire parts of machinery, etc., was done. In the light metal field, a great firm Megu in Leipsig was acquired which was in the first line a foundry in order to give practical application for magnesium alloys and even a rolling work in Lethmathe was taken over jointly with Vereinigte Stahlwerke for rolling tentatives of such alloys. I. G. had to engage specialists for these different tasks, men who were not acquainted with I. G.'s main activities and only could have a loose connection with the chemical field in general.

The more I. G. became a concern in the aforementioned way, the less efficient became the power and survey of the central administration. Bookkeeping and financial control more and more replaced the immediate knowledge of the technical and commercial methods in which one was engaged and the central committees developed to registry offices where scientific reports were given and where one took notice of figures. The management of I. G. was in no way satisfied with that development and for years the question was discussed if by splitting up I. G. and creating new independent companies one could not achieve the following three aims: (1) to withdraw from I. G. the reproach to be a "state within the state," (2) to separate the original old business of dyestuffs, pharmaceuticals, and chemicals from the newly developed great commodities like nitrogen, Buna, and oil over which perpetually the danger of nationalization was pend-

ing, (3) to have the newly put factories of Auschwitz and Heydebrek with the coal mines united in Ost-Chemie A. G. None of these aims ever materialized and even from the Nazi government, also being strongly opposed to I. G. as an institution, never came any suggestions as to what in their opinion I. G. should do. The difficulty of splitting up augmented from year to year as the inter-connection of the factories became more and more complex. Heydebrek, for instance, is practically a repetition of Oppau, the whole scientific work being done in Oppau, and even for Leuna up to now Oppau is to a large extent the scientific brain center. Generally speaking, the historical evolution from the Rhine to middle Germany and Upper Silesia materialized in such a way that a new works always were a kind of colonies of the old ones and a great responsibility would have to be taken over when one would have tried to separate the young works from the old ones. Also from the aspect of the shareholder it was extremely difficult to find an equitable solution. In offering him, for instance, shares of a newly built Ost-Chemie, A. G., had I. G. not to take a guarantee for the dividends and would such guarantee not make any illusion the whole construction of the new so-called independent company?

Thus everything as far as the general structure of I. G. was concerned remained unchanged and every month added something new to the existing potential. The industrial position of I. G. in Germany had no parallel with any other enterprise. Vereinigte Stahlwerke employed more people and the state-owned Hermann Goering Works had collected so many different enterprises that their capital and their turn-over might even have been higher than that of I. G., but both their domains of activity, their earning capacity and scientific performance, was incomparably smaller than what I. G. could show in these domains. Compared with the great companies abroad, even in United States, no single individual company had so large a field of progressive scientific enterprise as I. G. Dupont, next to I. G., the greatest chemical combine in the world, has the great merit to have brought out the first marketable synthetic rubber, neoprene, and was just as active in the whole chemistry of polymerization as I. G. Apart from that, Dupont invented the nylon fiber and realized substantial progress in the field of vat dyestuffs in bringing them into new and efficient forms. Also in the general chemical field, Dupont was highly progressive; the same applies to the Union Carbide, the American Celanese, as well as to Eastman Kodak, but all these enterprises were much more specialized than I. G. and did not cover so large a field as I. G.'s research work did. Of course one must not forget the entirely different structure of the American and of the German economy. Germany was a small country, was of relatively poor soil having only a strong coal basis and relatively strong basis in water power. Transportation was well developed and the distances short. Thus the inducement to produce commodities, which in countries being larger and richer than Germany were available by the gift of nature, was far bigger in this country and it is not a pure hazard that nitrogen as well as buna has come from Germany, the traditional country of the synthesis. The predominant role which I. G. had to play in this development was indicated by the fact that I. G. represented the combined force of the firms which even before the merger were the strongest and the most active ones in the chemistry of all Europe, if not of the world. It is the Badische Anilin and Soda-Fabr. and Farbenfabriken in Leverkusen, the laboratories of which constituted the cells from which the whole technical expansion originated.

G. VON SCHNITZLER.

AUGUST 21, 1945.

STATEMENT BY DR. VON SCHNITZLER ON FARBEN'S WARTIME EXPANSION AND INDUSTRIAL SIGNIFICANCE

When one tries to compare the I. G. with the rest of the chemical industries of Germany, one should never forget that the mother houses of I. G. which constituted the merger in 1925 themselves were by far the biggest enterprises in the chemical domain in Germany. After the revaluation of the mark in 1923 and 1924, the three greatest of the I. G. firms, Badische, Bayer, Hoechst each had a share capital of 160,000,000 marks and by capital turn-over, earning capacity, or by whatever aspect is being taken were each at least three to four times bigger in size than anyone of the other chemical firms. It has always been characteristic for the German chemical industry that there was on one side this huge agglomeration of industrial power called I. G. and on the other hand an extremely great number of small enterprises split over the whole country. Wigru-Chemie

gathered four thousand firms and very few of them had a turn-over of more than RM. 1,000,000. I. G., at the top of her activity, showed a turn-over of three billion marks and their subsidiaries including Dynamit A. G. had a turn-over of another billion marks. Of this latter billion marks, of course half at least can be considered as typical ammunition business without importance for peacetime. Compared with this, three and one-half or four billion marks, the next one on the list, the so-called Henckel concern of Dusseldorf, manufacturers of soap and other washing products, figures only with a turn-over of somewhat two hundred million marks and this gives a true picture of how outstanding I. G.'s position was. As a third firm, the Deutsch Solvay Werke and Schering A. G. of Berlin in fourth place has a turn-over of between one hundred and two hundred million marks and that probably closes the list of the combines with over one hundred million marks of yearly turn-over. Altogether the German chemical industry in the top year of 1943 including Austria and Sudetenland might have had a turnover of approximately ten billion marks. But if one only compares the six and the four billion, one is far from a true picture of what the real potential of I. G. in relation to the combined total of the other German firms represented. Not only that new inventions of outstanding importance practically were alone made by I. G. and that research work on a large scale was exclusively done by I. G., the real importance of I. G. in her qualities as a supplier of all basic products to the other chemical industries was even much higher.

Entire groups of chemistry like the varnish and the lacquer industry in dyestuffs and solvents were entirely dependent on I. G. and in the pharmaceutical domain even firms like Schering and Merck also possessing a big share in the pharmaceutical business of finished products depended on I. G. in her basic organic products like aniline and the different derivatives of acetic acid. It has once been made an analysis which part I. G. had in the pharmaceutical business and as a test case one has analyzed the turn-over of two Krankenkassen in different parts of Germany. The analysis only showed a share of I. G. of somewhat as 20 percent, but on the one hand the Kassen did not take articles with a standard name like Aspirin, buying as little as possible and trying to place their orders in the market of the products without the special brand of a firm so that practically I. G.'s share will have to be much bigger (but it must not be forgotten that practically all pharmaceutical products as before said are based on raw materials and intermediates bought from I. G.). It is not exaggerated to make this statement that the entire pharmaceutical industry literally would come to a standstill if I. G. would stop production. The same applies to the entire textile industry which reposes on I. G. for dyestuffs and all kinds of auxiliary products including the cleansing and wetting process. There is only the soap industry, properly speaking, which to a large extent is self-supporting on their own basis and then of course Solvay and the other less important producers of carbonate of soda and chlorine and caustic soda.

To summarize I may give some samples of I. G.'s relative share in the different key domains of chemistry: Dyestuffs, 100 percent; auxiliary products at least 50 percent, probably in pharmaceuticals at least one-third, the other two-thirds all depend on the supply of basic organic products through I. G.; nitrogen, before the war, 70 percent; general chemicals apart from I. G.'s own consumption between 20 and 80 percent; photographic articles, 80 percent; carbides at least 80 percent; buna, 100 percent; plastics, etc., modern thermoplastics made by polymerization, 100 percent; the old products, phenoplast, 30-50 percent; light metals, magnesium at least 90 percent; only one small producer apart from I. G., Wintershall, aluminum only, a modest participation. Thus from whatever angle one takes up the problem, I. G. has the key position as producer in the whole range in inorganic and aromatic organic products and a walkover position in the aliphatic field. This taken together with the overwhelming position I. G. has in the field of photographic products and the strong majority in nitrogen, one has to make the statement that chemistry in Germany and I. G. is to a great extent synonymous. But it does not cover the entire position of I. G. in the chemical field, if one does not analyze the interconnection between the German chemistry and that of the neighboring countries. None of these countries including France is self-supporting in such a sense that they under normal economic circumstances can get rid of I. G.'s supplies and the intercourse with her. Not only the textile industry of Scandinavia, Holland, France, Czechoslovakia can be separated from the supply of dyestuffs, auxiliaries, etc., from I. G., but also the chemical industry of these countries is closely related to her and it is fairly unimaginable that for instance Holland, Belgium, and Scandinavia will renounce to any intercourse with the I. G.'s chemical works located on the borders of the Rhine River. Also the pharma-

ceutical products of "Bayer" cannot be thought of away from a Belgian or Dutch or Swedish dispensary. Even in France where a much stronger chemical industry exists than in the afore-mentioned other countries, I. G.'s products as well as I. G.'s licenses will be needed in many important domains and as well the Kuhlmann group as Rhone Poulenc will be only too glad to reassume those relations.

I cannot imagine that England or United States can entirely replace this position which had been held for such a long time and which is based upon scientific and business relations as well as the reciprocal knowledge of the language. After World War I, relations with Holland were being resumed at once, with Belgium after a very short interval, and with France in a slowly climbing tendency up to 1927 when Germany became the first industrial supplier of France and this without competing against the domestic industry in France. The business done in those countries by I. G. was not directed against the English and American importation, which only partly materialized in the same fields and which as far as the English were concerned were mostly protected by cartel agreements. Speaking generally of exports, I. G.'s share in the export of German chemical industries can be considered as being the half of the total export. Exact figures were never available because the official figures did not always coincide with the figures made up by the individual firms and as the handling of turn-over figures of subsidiaries of I. G. was not identical in the official way compared with the handling inside of I. G.

EXHIBIT No. 14

I. G. PRODUCTION 1937 AND DEPENDENCY OF OTHER GERMAN INDUSTRIES ON I. G. FARBENINDUSTRIE

Enclosed please find a summary of I. G. productions for 1937 which is made up in a similar way as the list of August 13, 1945. Compared with that list major changes appear with the following items:

	Percentage of I. G.	
	1943	1937
No. 5. Calcium carbide.....	61	52
No. 11. Rare gases.....	55	33
No. 22. Detergent raw materials.....	100	
No. 26. Insecticides and fungicides.....	55	40
No. 29. Synthetic gasoline.....	33	50
No. 30. High-octane gasoline.....	46	
No. 31. Synthetic lubricating oil.....	100	

The productions of detergent raw materials, high-octane gasoline, and synthetic lubricating oil did not exist in 1937.

As regards the additional dependencies of other German industries on I. G. shown in the statement of August 31, 1945, the following is to be said:

No. 24. Pharmaceuticals.—The dependency of other pharmaceutical products on intermediate supplies of I. G. was in 1937 somewhat less than in 1943 as they could to a certain extent procure intermediates abroad. The decline of total dependency from 60 to 55 percent is mainly due to the fact that the production of new chemotherapeutics such as sulfa drugs was not yet fully developed.

No. 26. Insecticides and fungicides.—In 1937 copper and other metal salts were sufficiently available to that a number of independent producers were in the market; owing to lack of suitable raw materials their customers were partly supplied with I. G.'s substitute materials during wartime. Including Intermediate supplies of I. G. to other firms, I. G.'s share was 45–50 percent in 1937.

No. 42. Paint and varnish industry.—Owing to the fact that in 1937 a number of natural products such as drying oils, natural resins, turpentine oil were available to the paint and varnish industry, the dependency on I. G. was far less than in 1943: at most 35 percent.

No. 43. Soap industry.—No dependency on I. G. with respect to raw materials existed in 1937.

No. 44. Tanneries.—In 1937 the synthetic tanning agents were almost entirely confined to auxiliary tanning agents particularly for cutting down tanning time and giving the leather a particular tanning effect. These auxiliaries may amount to about 10 percent of the total requirements of tanning agents. As far as chrome leather is concerned, the dependency was 100 percent owing to the fact that I. G. was the sole producer of chrome salts in Germany.

No. 45. Glues and adhesives.—The importance of the synthetic adhesives was much less in 1937; these may have in 1937 been a dependency on I. G.'s supplies to the amount of 10 to 15 percent.

No. 46. Rubber industry.—In 1937 synthetic rubber production amounted to about 5 percent of the German rubber consumption. The dependency on I. G. in supplies of accelerators and other auxiliaries was 95 percent. In all other materials necessary for processing rubber no dependency on I. G. existed in 1937.

For items not mentioned above the remarks of August 31, 1945, hold good also for 1937.

OSKAR LOEHR.

FRANKFURT A/M., September 8, 1945.

DEPENDENCY OF OTHER GERMAN INDUSTRIES ON I. G. FARBENINDUSTRIE

SUPPLEMENT TO LIST "I. G. PRODUCTION 1943" OF AUGUST 13TH, 1945

In a number of cases the percentage figures given for I. G. share in total German production have to be supplemented by additional data which show how far other German industries are dependent on I. G. for supplies of important raw materials or intermediates.

No. 6. Aluminum.—I. G. is producer of synthetic Kryolith and probably produces far more than half of this product, needed in considerable quantities for the electrolytical production of aluminum.

No. 16. Plastics.—Exceeding the 90 percent of the I. G. share, I. G. supplies the firm Röhm & Haas, Darmstadt, with intermediates. Thus the share of I. G. in the field of plastics comes up to 93-95 percent.

No. 20. Dyestuffs.—By supplying the firm Geigy, Grenzach, with intermediates it can be assumed that I. G.'s share in the German dyestuffs industry is increased from 98 to 99 percent. On the other hand it must be stated, that in peacetimes foreign firms participated with about 10 percent in the sale of dyestuffs used in Germany.

No. 24. Pharmaceuticals.—The share of 55 percent given in the list is somewhat amply calculated, because the higher value of I. G. products compared with those of firms of medium and smaller size especially has been taken into calculation.

Important intermediates such as phenol, salicylic acid and aniline could be purchased on the open market in quantities sufficient for the production of large products such as aspirine and pyramidone by firms outside I. G. Furthermore, the German pharmaceutical industry is almost entirely independent of I. G. as far as products made from natural drugs or animal glands are concerned (Morphiates, insuline and other hormones). Nevertheless there is an additional dependency on I. G. with respect to important synthetic pharmaceuticals, insofar the other German products rely on the supply of essential intermediates. Examples for this dependency are:

Firm	Name of product	Name of intermediate
C. H. Boehringer Sohn, Ingelheim....	Sympatol (curative for cardiac trouble).....	Methylamine.
E. Merck Darmstadt.....	Ephedrine (curative for diseases of circulatory system).	Benzylchloride.
Goedecke & Co., Magdeburg.....	Gelonida antineuralgica (antirheumatic).....	Phenacetine.
Schering A. G., Berlin.....	Antipyrine (antipyretic).....	Dimethylsulphate.
Do.....	Globucid albucid (chemotherapeutics; sulfa drugs).	Sulphanilic acid.

Taking all circumstances into consideration, the dependency of the remaining pharmaceutical industry on the supply of intermediates by I. G. will probably amount to another 5 percent at most and thus I. G.'s share will be increased from 55 to 60 percent at most.

No. 26. Insecticides.—I. G.'s share of 55 percent will be increased by 5–10 to 60–65 percent by the supplies of intermediates to medium-sized and smaller firms, which work in this field.

FIELDS OF PRODUCTIONS NOT MENTIONED IN THE LIST

No. 37 (h). Photochemical products.—By its organic intermediates I. G. was leading in this field. Its share can be estimated at 70–80 percent.

No. 38. Bichromate.—In the field of chrome salts I. G. was controlling 100 percent of the German manufacture. However, the figures of production declined in recent years owing to lack of chrome ore.

In normal times the outlets of the production were as follows:

	Percent
Export (mostly consumed in leather industries).....	51
Germany:	
(a) Leather industry.....	21.0
(b) Textile industry.....	6.0
(c) Mineral colors.....	6.0
(d) Preserving mixtures for timber in mines.....	5.0
(e) Catalysts for chemical syntheses, particularly gasoline.....	4.5
(f) Metal industry (Chrome plating).....	1.5
(g) Various industries.....	5.0

49

In the leather industry chrome salts are used for manufacturing chrome-tanned leather, in the mineral color industry for producing chrome yellow and other chrome colors, in the textile industry particularly in the dyeing of woollen goods. In preserving timber chrome salts can be replaced by other chemicals to a certain

extent, but they are indispensable for catalysts particularly in the production of synthetic gasoline.

No. 39. Phosphoric acid.—I. G. did not produce crude phosphoric acid, but it was the only producer of pure phosphoric acid (by combustion of phosphorus) at Piesteritz. A large part of this production was consumed by I. G. works making mixed nitrogen fertilizers. The remainder was consumed by the soap and detergent industries, by manufacturers of foodstuffs and baking powders, for treatment of hard water and for de-rusting purposes.

No. 40. Hydrocyanic acid and cyanides.—I. G. is the largest producer of hydrocyanic acid and cyanides. Part of its production is for own consumption to produce intermediates for plastics and synthetic rubber. I. G.'s share of the market is estimated to be 40 to 50 percent. Sodium cyanide is mainly used in mining, particularly for flotation of ore and for tempering or hardening steel. Hydrocyanic acid and some cyanides are used for fumigation purposes, pest control, etc.

No. 41 Mineral colors.—(a) Titanium dioxide: The Titangesellschaft m. b. H., Leverkusen (50 percent owned by I. G., 50 percent by National Lead) is the only producer of titanium dioxide in Germany.

(b) Lithopone: The production of Leverkusen including its participations is about 38 percent of the German production.

(c) Remaining white colors (white lead and zinc white): In this field I. G. did not participate.

(d) Iron oxides: By its extensive production in Uerdingen I. G. was leading in this field. Share probably by 90 percent.

(e) Remaining fancy colors: Participation of I. G. quite insignificant, but a certain dependency of other producers from I. G. exists with respect to chrome salts. (See No. 38 above.)

No. 42. Paint and varnish industry.—This industry needs the following products:

18. Synthetic resins, on the average about 35 percent of the total quantity.

13. Solvents, on the average about 62 percent of the total quantity.

17. Plasticizers, on the average about 3 percent of the total quantity. Total 100 percent.

The domination in percentage of the German market by I. G. in the 3 groups, results in a dependency of about 65 percent of the paint and varnish industry.

No. 43. Soap industry.—In the last period of the war the soap industry by way of the group 22, "Detergent raw materials" nearly entirely depended on the I. G.

No. 44. Tanneries.—By the synthetic tanning materials of group 19, a strong dependency on I. G. of the tanneries has developed—at most 50 percent. As far as chrome leather is concerned, the dependency is 100 percent. (See No. 38 above.)

No. 45. Glues and adhesives.—The old glues such as rye products, casein glue, and animal glues were to a considerable extent replaced by synthetic glues, for example: Kaurit, a urea formaldehyde condensation product marketed by I. G.; a phenol formaldehyde condensation product marketed by Dynamit A. G., Troisdorf; Tegoleim, a phenol formaldehyde condensation product marketed by Theodor Goldschmidt A. G., Essen.

The share of I. G. and DAG together in the market amounts to about 50 percent.

No. 46. Rubber industry.—(a) Concerning the main product caoutchouc the industry manufacturing rubber articles depended nearly entirely on the I. G. in the last period of the war.

(b) Accelerators, antioxidants, plasticizers and similar auxiliaries: This field was controlled by I. G. to about 95 percent.

(c) Carbon black: In this field I. G.'s own production was quite insignificant, but by adding the productions of Chemische Werke Hüls and Bayerische Stickstoffwerke, Piesteritz, I. G.'s share will come up to 20–25 percent of the German production.

(d) Sulphur: The greater part of sulphur was imported from abroad.
